Finance, meetings, etc.	430
Wages, working conditions, etc.	101, 532, 575, 629
Canadian Electric Railway Association.	205, *260, 307, *364
Activities.	633
Annual meeting.	45, 100, 118, 258, 315, 375, 480, 531, 576, 634
Can. Traction Electric Co.	257, 631
Development.	531
Earnings, expenses, etc.	46
Chatham, Wallaceburg & Lake Erie Ry.	147
Finance, meetings, etc.	371
Future of.	206, 265
Common carrier, electric railway declared to be a.	
Customs duty on railway intersections.	206, 265
D	
Detroit United Ry.	96, 143, 205, 256, 312
Dominion Power & Transmission Co.	147, 204, 257, 311
Wages, working conditions, etc.	
E	
Edmonton Radial Ry.	150
Development.	631
Fares.	205, 316, 376
Finance etc.	
F	
Fenders and pilots on electric railway cars.	98
Finance, meetings, etc.	118, 207, 257, 316, 375, 428, 480, 531, 576, 634
Flat wheels on street railway cars.	*96
Furt William Municipal Ry.	42, 97, 206, 315, 428
Development.	531
Finance, meetings, etc.	42
One man car operation.	531
Operations.	376
Port Arthur mileage.	93, 147, 208, 259, 311
Freight and passenger rates.	
G	
Grand River Ry. development.	258, 375, 429, 479
Gushp Radial Ry.	97, 371, 429
Development.	631
Fares.	
H	
Hamilton, Grimsby & Beamsville Electric Ry.	94
Passenger service.	477
Sale reported.	
(See also Dominion Power & Transmission Co.)	
Hamilton Radial Ry. development.	375
Hamilton St. Ry.	42, 258, 429, 633
Development.	148, 207
Earnings.	47, 93, 147, 253
Finance, meetings, etc.	95
Passenger, fares.	
Wages, working conditions, etc.	
(See also Dominion Power & Transmission Co.)	
Herit. C. A. Valuation of street railway assets, their maintenance and depreciation.	368
Hull Electric Co.	315, 375, 429, 581
Development.	312
Fares.	531
Finance, meetings, etc.	432
Future.	475, 530
One-man car.	
Power project.	
Wages, working conditions, etc.	43, 94, 117, 204, 181
Hydro Electric Power Commission of Ontario.	161
trucks, trolley buses.	42, 97, 258, 315, 375, 429, 479, 633

Canadian Railway and Marine World

January, 1922

The United States Railways' Financial and Regulatory Problems.

By Edwin Winfield, Assistant Editor, Canadian Railway and Marine World.

Despite a maximum of regulation, and of governmental intervention in the business of rail transportation, the railway problem in the United States is, and has been for years, one of the most important facing the Government and industry in that country. While the Transportation Act of 1920 represented a genuine effort to remove mistaken regulatory policies of the past, and to place the railway industry on a proper permanent basis, there is yet a great deal of friction in the field of regulation, and the financial problem is apparently as far from solution as ever. Up to the end of 1917, railway regulation was featured by the application of the Sherman anti-trust law, and the anti-pooling clauses of the Interstate Commerce Act, to the railway business, which meant that competition as between railways was enforced. Uniformity in competitive rates being in the nature of an essential, however, the competition was primarily one of service and solicitation. In addition to regulating rates, the Interstate Commerce Commission, and the various state commissions, undertook to regulate operation, and in that connection wrong policy was introduced, that of regulating authorities attempting to unduly usurp the functions of management. Other wrong policies included too much interference with the regulating commissions, by courts and state legislatures; lack of a dividing line as between the authority of the Interstate Commerce Commission and that of the state commissions; incorporation of large systems under the laws of one state; lack of a central authority in connection with the issuance of railway securities; the introduction of political considerations into regulation; the appointment of inexperienced and incapable men to regulating commissions; the enforcement of so great a degree of competition as to produce economic wastes in transportation, and the absence of adequate machinery for the settlement of labor disputes. The greatest mistake of all lay in the attitude of the public, and of regulating authorities, toward the railways, and in a failure to recognize that railway rates could be too low as well as too high. The tendency, which was a growing one up to the end of 1917, was to hold rates down to a minimum, and demand the maximum in service.

In 1912, the class 1 roads, i.e., those with annual operating revenue over \$1,000,000, had 249,192 miles of main track, and the investment in road and equipment was \$14,632,497,022. In the year ended June 30, 1912, gross operating revenues were \$2,805,006,544, of which 69.84% went for operating expenses. The net operating income was \$708,484,383, the rate of return on investment being 4.84%. The accompanying table 1 shows corresponding figures to the end of 1920.

It is not necessary to detail the decline in traffic and consequent decline in net earnings from 1913 to 1915; the increase in traffic and net earnings in 1916; the

increases in expenses beginning with 1917; the Interstate Commerce Commission's refusal to increase rates by 15% in that year; the increase in, or rather the congestion of, traffic beyond the railways' capacity, and the inauguration of

operating expenses were increased in far greater proportion, and net returns fell to 0.32%. But it must be remembered that while, despite increased traffic and increased rates, the railways had faced greater increases in expenses and an al-

1920	270,334	19,100,000,000

Federal control when a financial and physical breakdown of the railways seriously threatened. It is sufficient to say that when, in Dec. 1917, the Interstate Commerce Commission informed Congress that it had two alternatives, either the repeal of the Sherman anti-trust law, and the anti-pooling clauses of the Interstate Commerce Act, so far as they affected the railways (which were hampering the railways in their efforts to co-operate), together with large financial assistance, or else Government operation, the latter alternative was chosen, and at the beginning of 1918 operation of the railways was placed in the U.S. Railroad Administration's hands. The Government contracted to pay the owners of the railways, for the period of Federal control, a rental based on the average return for the preceding three years, and to return the properties in as good physical condition as when taken over.

The earnings of the railways under Government operation were such that the contract required the payment of considerably over a billion dollars from the U.S. Treasury to the railway owners, to make up the operating losses incurred by the Railroad Administration. As shown in table 1, the roads earned at the rate of but 3.51% in 1918, and 2.46% in 1919. Expressed in another way, in 1918 the railways earned for the Railroad Administration 76.8% of the income which was paid over to them, and in 1919 they earned but 57.8% of it. Federal control ended Feb. 29, 1920, when the roads were handed back to their owners, with a six months extension of the Government guarantee to such of them as cared to accept it, on condition that any net income earned in excess of that guaranteed should go to the Government. The majority of the railways took advantage of this and at the end of the period, Sept. 1, 1920, the Government owed the railways an additional \$620,000,000, to make good the provisions of the six months extension of the guarantee.

The year 1920 was the most remarkable in the history of U.S. railroad-
ing. More freight and passengers were moved than ever before; gross operating revenue was the highest on record; but

Table 1.

Gross operating revenues	Operating ratio	Net operating income	% of return
\$2,805,006,544	69.84	\$708,484,383	4.84
3,108,361,215	69.92	787,610,435	6.13

most total disappearance of net operating income, their financial returns were protected by Government guarantee until Sept. 1, 1920, the Government absorbing the loss occasioned by the difference between net income earned and rental paid. During the six months guarantee period the Transportation Act was passed; the Railroad Labor Board, brought into being by it, established in July a new and increased scale of wages, and in August the Interstate Commerce Commission established a new and increased scale of rates, planned to afford the railways an adequate financial return on the basis of the new level of expenses. On Sept. 1, 1920, the guarantee period having expired, the railways were once more in the position of having to look after themselves financially.

Table 2.

Month	Net Operating income	Equivalent rate of annual return
Sept. 1920	\$75,310,311	4.1%
Oct. 1920	\$6,435,487	4.6%
Nov. 1920	\$4,343,793	3.3%
Dec. 1920	10,225,583	0.7%
Jan. 1921	\$58,339	
Feb. 1921	\$7,378,307	
Mar. 1921	30,695,192	2.2%
Apr. 1921	29,218,874	2.1%
May 1921	\$7,000,654	2.3%
June 1921	31,641,014	3.0%
July 1921	69,298,521	4.5%
Aug. 1921	90,241,103	5.0%

Table 2 shows the operating results, by months, for the year ended Aug. 31, 1921. In Sept., Oct., Nov. and Dec. 1920, the railways earned at a rate representative of an annual return of 4.1%, 4.6%, 3.3% and 0.7% respectively, on the basis of their value as prescribed by the Interstate Commerce Commission in accordance with the Transportation Act, and which corresponds closely to investment in road and equipment. Almost coincident with the removal of the Government guarantee, world wide economic conditions caused the beginning of a large traffic decrease, which continued throughout the winter, and in some degree, to the present time. In Jan. and Feb. 1921 the railways experienced operating deficits, and in March, April, May and June, as shown by table 2, they earned at the annual rate of 2.2%, 2.1%, 2.3% and

3.0% respectively. During these months, settlements with the Railroad Administration on account of the six months guarantee were held up by the refusal of the Treasury officials to honor certificates of indebtedness to the railways issued by the Railroad Administration until the accounts had been finally adjusted. Final adjustment as between the Government, as represented by the Railroad Administration, and the railways was impossible in so short a time. While the Winslow Act, passed in Feb. 1921, authorized the Treasury to make partial payments on account of the guarantee, the payments were made slowly. Many of the railways advanced claims against the Railroad Administration, alleging that their properties had been undermaintained during the period of Federal control, and handed back in poor condition. These claims were contested by the Railroad Administration, adding to the delay in determining balances.

During the period of Federal control, the Railroad Administration advanced \$1,144,000,000 for additions and betterments for the railways. Of this sum, \$381,000,000 spent for locomotives and cars was funded by the railways issuing equipment trust certificates, maturing serially. An additional \$71,000,000 was funded by individual roads, and in the course of the settlements between the Railroad Administration and various railways, \$137,000,000 of the railway debt to the Government was set off against an equal sum owed by the Government to the railways. On Oct. 1, the Government, as represented by the Railroad Administration, owed the railways \$835,000,000, the debt arising out of the period of Federal control, and the unfunded debt of the railways to the Government was \$555,000,000. In connection with the settlement of accounts arising out of Federal control, as between the railways and the Government, the Transportation Act of 1920 stated that after the Government's debt to the railways is set off against what the railways owe the Government, the railways' remaining indebtedness may be funded. In view of the railways' financial condition, and of the fact that the railways contracted these debts through the making of capital expenditures, which would ordinarily have been made in connection with security issues, legislation has been introduced in Congress with a view to enabling the railways to fund their remaining indebtedness to the Government to the extent of \$500,000,000, and which would authorize the Railroad Administration to sell the railway securities now held, and pay the Government's debts to the railways as quickly as settlements are arrived at. Although it is probable that not more than \$150,000,000 of the railways' debts to the Government would be funded under this legislation (the remainder of the debts being set off against the amounts owed the railways by the Government), the bill embodying the legislation has met great opposition in the Senate, although it passed in the House of Representatives some time ago. Senators hostile to the railway interests are attempting to use the bill as a vehicle for amendments to the Transportation Act, further delaying its passage into law.

The average return earned by the railways during the first six months of 1921 was at the rate of 1.8% annually, and during this period they were in a precarious financial condition, and maintenance suffered greatly. In May 1921, 26.9% less was spent on maintenance of way

than in May 1920, and in June 27.3% less than in June 1920. Corresponding reductions are shown in the maintenance of equipment accounts. The proportion of bad order equipment at the end of the year has been abnormally high, and the situation to the end of June may be described by stating that what income the railways did earn was secured only by deferring expenditures for maintenance which should have been made.

1920	3,698,216,451
1st 3 mos. 1921	757,825,353
2nd 3 mos. 1921	690,488,795
At present	1,570,000(c)

(a) On basis of 1st quarter.

(b) On basis of 2nd quarter.

(c) After 12¹/₂% reduction of July 1, 1921.

The increases in the U.S. railway payroll from 1916 are shown in table 3. The last increase was that given by the Railroad Labor Board's decision 2, in July 1920, retroactive to May 1, 1920. These rates were in effect during the first six months of 1921, and under them the average earning per employee in the second quarter of 1921 was at the rate of \$178.475 annually. While this figure does not support the prevailing public impression that railway wages are excessively high, it nevertheless represents an increase of 108% over the average earning in 1916. The Labor Board's decision 147, effective July 1, 1921, may be expected to bring the average annual compensation per employee down to about \$157.0. The recent threatened strike was influenced largely by the railway executives' intention of applying to the Labor Board for a further reduction in wages, sufficient to restore the 1919 standard. While it is evident that the rates of wages in effect prior to the reduction of July 1 were relatively higher than commodity costs, as compared to the relationship in 1916, railway employees maintain that the wages paid prior to Federal control were entirely inadequate, and not in keeping with the hazards, responsibilities and discomforts of the work, and therefore not applicable as a basis for comparison with the railway executives are going ahead with requests to the Labor Board for further wage reductions, and in view of the fact that the Board is now about ready to consider the disputes which will inevitably follow, it is evident that the wage question will again be an important issue in the near future.

Coincident with the application of the wage reduction in July, traffic conditions began to improve somewhat. In July the railways earned at the rate of 4.5% annually, in August at the rate of 5% annually, and in September the net operating income was \$87,000,000, representative of a return of 1.8% annually. While apparently the railways at the end of August had about turned the corner financially, as a matter of fact they are as a whole still faced with grave financial problems. Demands for freight rate reductions have been insistent in all parts of the U.S. since early spring, and there appears to be a popular tendency on the part of the public to blame all the economic ills peculiar to the country on financial deflation and economic reaction on the present scale of freight rates. A large portion of the public believes that rate reductions would automatically increase tonnage, and thus benefit the rail-

ways in the end. The railways, while making individual rate reductions, which aggregate a large total reduction, regard the public belief as an economic fallacy and an invitation to them to commit financial suicide.

Table 4.

	Average receipts per ton mile	Per passenger mile
Period	1910	1912
Year ended June 30, 1912	0.730c.	1.978c.
1913	0.719c.	2.002c.
1914	0.723c.	1.976c.
1915	0.722c.	1.960c.
1916	0.707c.	2.002c.
1917	0.707c.	2.042c.
1918	0.715c.	2.090c.
1919	0.849c.	2.414c.
1920	0.973c.	2.540c.
1921	1.052c.	2.747c.
1st quarter of 1921	1.036c.	3.127c.

Table 4 shows the fluctuations in freight and passenger rates since 1912. As a matter of interest it may be stated that freight rates were lower in 1917 than in 1891, in which year the average charge per ton mile was 0.9c. No comment is needed concerning the relative change in commodity prices as between the two years, and no explanation is required to show that the ratio of the annual national cost of rail transportation to value of annual national production of wealth had decreased materially. This can be set down as due in part to traffic increases, involving smaller unit costs in handling; in the main, however, it has been due to the efficiency with which railroading has been carried on. A study of the table shows that freight rates were 74% higher in the first quarter of 1921 than in 1912, and passenger rates 58% higher. It will also be seen that rates were not increased in 1919 and 1920 in accordance with the increase in commodity prices. One cannot help feeling that if Government interference in the field of economics had not resulted in this restriction of the price of transportation, while all other prices reflected the effects of inflation, and that if rates had moved up and down in company with all other costs, instead of having to be increased at a time when other costs had passed their maximum, there would not be the degree of complaint concerning them that there is today.

As between 1912 and the first part of 1921, it is probable that charges for transportation service were not out of line with costs and commodity prices generally. It must be admitted, however, that rates were comparatively high for certain classes of traffic, notably agricultural products. Farmers have experienced deflation in probably greater degree than any other class, and it is evident that their reduced purchasing power has been a great factor in the industrial depression, probably a greater factor than has been the almost total elimination of purchasing power on the part of U.S. railways. Regarding the matter from a public viewpoint, it is essential that transportation costs for the farmer be made as low as they can be; this has been recognized by Canadian railways in the rate reductions voluntarily made by them, and in the U.S. the Interstate Commerce Commission recommended substantial reductions in western rates on grain, grain products and hay. While these reductions had not been put into effect at the end of November, the railways have announced their intention to make a 10% reduction in the rates on all agricultural products, effective at once.

Regarding the matter again from the railway viewpoint, the Transportation Act states that the railways in each rate

territory shall be granted rates which shall yield them, after honest, efficient and economical management, a return of 5½%, or, at the discretion of the Interstate Commerce Commission, 6%, this standard of what constitutes a fair return being subject to future variation, however. To earn at the rate of 6% during the year immediately following the assumption of purely private operation (the year ended Aug. 31, 1921), the railways have earned a net operating income more than twice as large as they did earn. The net operating income earned was \$530,665,927, which was \$571,342,073 less than they should have earned to secure 6% on their valuation as determined by the Interstate Commerce Commission. Instead of earning 6%, they earned 2.9%.

While, of course, 1921 has been a year of business depression, in which many businesses and makings have done well and break even is nevertheless evident that under the first year of the Transportation Act's operation the credit of U.S. railways has not been protected as the act was designed to protect it. While it may be expected that some further downward adjustment in railway expenses may be made, to the end that further rate decreases may be given where most needed, it would appear from this distance that if the Transportation Act is to be lived up to at all, transportation rates must be on a higher basis and bear a higher ratio to commodity values generally than in pre-war times. Various interests are at work in the U.S. to have the rate making clauses of the Transportation Act (which also contain provision for repayment to the Government of one half of all earned over 6%), repealed, but it would not seem to make much difference whether they are repealed or not. If the U.S. people want adequate transportation facilities, the railways will have to be allowed to earn adequate revenues. Irrespective of whether legislation contains a standard of what the railways should earn, or not, if they are not allowed to earn sufficient to maintain their credit, and provide necessary new capital, a natural and economic law is being violated, and the community will suffer in the end. The rate making clauses of the Transportation Act of 1920 merely incorporate an important natural and economic law in legislation applying to railways. As just stated, it appears immaterial whether the measure of adequacy of earnings is specifically provided or not, as long as the standard is well to have that measure stated plainly and recognized by all. Perhaps it would be well if the rate making clauses remained in the act, simply as a permanent reminder to the regulating authorities of the economic law which gave rise to the insertion of those clauses, and it would certainly be well, in the effort to get cheap transportation, this law be not violated unduly.

In addition to providing for the settlement of accounts arising out of Federal control of the railways, and for a policy of rate regulation based on a just and reasonable return on the value of railway property used in the public service, the Transportation Act of 1920 made other considerable changes in railway regulating policy. To provide for the settlement of labor disputes, it created the Labor Board, consisting of three public, three management, and three labor members, to hear and decide disputes between railways and their employees which direct negotiation might fail to settle, and

also, taking into consideration various conditions prescribed in the act, to state just and reasonable rates of pay and working conditions. The act affects the regulative power of the state commissions by giving the Interstate Commerce Commission power to remove discriminations caused by intrastate rates which are out of line. Generally, the act greatly increases the Interstate Commerce Commission's powers and duties. The application of the Sherman anti-trust law and anti-pooling clauses of the Interstate Commerce Act to the railways has been largely removed, and it is provided that railways may consolidate their properties, if it can be shown to the Interstate Commerce Commission's satisfaction that such consolidation would be in the public interest. The act further provides that the Commission shall prepare a tentative plan for the consolidation of the U.S. railway systems into a limited number of large systems. The regulation of railway securities has also been given to the Commission.

Opinions differ as to the value of the regulative policy thus introduced. It is felt by many that a policy of regulation wherein revenues (rates) are controlled by one regulative body, while wages, representative of the greater part of operating expenses, are controlled by a totally independent tribunal, automatically creates an impossible situation. In its recent decision on western grain rates, the Interstate Commerce Commission practically said that wages as fixed by the Labor Board were of no importance to it in arriving at rate decisions. One member stated that the rates prescribed by the Interstate Commerce Commission, after expert study of the situation, should be accepted by the Labor Board as a condition to be given consideration in determining wage scales; in other words, he considered it the Labor Board's duty to adjust wages in accordance with rate adjustments as made by the Interstate Commerce Commission. A public member of the Labor Board has stated that that body cannot undertake to regulate wages on the basis of prevailing rates, and in a recent decision of the Board it is stated that the financial position of a railway is entitled to merely "secondary" consideration in arriving at a determination of just and reasonable scales of wages for its employees. We have said that the railways must be better paid for their transportation service if the Transportation Act is to be lived up to, but it is evident that these wages while receiving inadequate revenues. If the Labor Board is right, and maintains wages that are economically justified, while the Interstate Commerce Commission puts in rates that are lower than they should be, the public gets the benefit of these low rates for the time being, but loses in the end through poor service and a breakdown of railway credit. If the Labor Board and Interstate Commerce Commission correspond in their views concerning wages and rates, which are both

economically justified, the railways and the public are protected, but if the Board and the Commission disagree, and either one or the other is not justified in its stand by prevailing economic conditions, the public is not protected, in the final analysis. As stated above, many are of the opinion that this dual system of regulation is valueless, and it is evident that the enunciation of a definite policy involving correct principles and co-operation in putting them into effect is a necessity.

Further, the feeling is prevalent in railway circles that regulation has usurped more of the functions of management than ever, and that a continuation of the present system will have a tendency to check initiative and development in railway operating methods. The state commissions have opposed, by every means at their command, the removal of their control over intrastate rates, a test case now being before the U.S. Supreme Court, and an amendment to the Transportation Act, which would practically remove the Interstate Commerce Commission's power to interfere with state rates, is being considered. The passage of such an amendment would be a great backward step. It was expected that the consolidation plan would go far in removing the "strong and weak road problem" (some roads earning good returns, with others in the same rate territory continually on the verge of bankruptcy, on the same rates), and although the Interstate Commerce Commission has already advanced a consolidation plan, consolidation is not compulsory under the act, and the attitude of the railways remains to be seen. It is difficult for any law to restrain the natural human tendency to attain to power, and for that reason the temptation to inject politics into regulation will still exist, as will also the temptation for unqualified men to attain to places on regulating commissions, and to assume the functions of railway managers when they attain them. The view may be taken that, despite the best that public regulation can do, the railway industry is so large and important that the railway problem is inseparably connected with all the financial, economic and social problems of the country, and therefore incapable of final settlement. However that may be, it is now recognized by thinking citizens that national progress and development are connected with, and largely dependent on, progress and development in the railway industry, and that the railways cannot be again regulated into poverty without a repetition of the near-breakdown of 1917, and the financial disaster of Federal control. When it is realized, in the U.S. or in any other country, that the mere fact of it being in the public power to regulate rail rates does not mean that transportation service can be bought for less than its economic value, over a period of time, the railway problem of that country will be much nearer a final solution than prior to the realization of that fact.

Transportation Lodge, A.F. and A.M., was inaugurated at Toronto, Dec. 13, when the following officers were installed:—John Boyd, W.M.; J. W. Hickson, I.P.M.; W. Tansley, S.W.; L. C. Groom, J.W.; G. A. Hoag, chaplain; L. D. Labill, Treasurer; H. R. Butterill, Secretary; T. J. Gracey, J.D.; P. V. Lord, I.G.; H. C. Kendall, S.S.; A. R. Curran, J.S.; C. G. Smith, D. of C., and B. Spence, organist.

New Method of Handling Express Matter in Montreal.

The Dominion Express Co.'s Montreal office has had in operation for the past few months a unique and interesting system for the conveyance of express matter in transfer between stations in the city, and the distribution of delivery and collection pick-up in districts situated four and five miles from the railway stations. Some idea of the volume of

ter of seconds only. The driver never leaves his seat. In coupling he backs his tractor into position in front of the trailer, raises a lever, backs into the trailer, which rides up on to the rear of the tractor, the trailer front wheels are pushed up, brakes released and coupling locked automatically and it is ready for the road. In uncoupling, the driver raises

dent is minimized, by the fact that the tractor cannot become separated from the trailer without the trailer front legs being pulled down and the brakes set, in which case the trailer would run along only a few feet before it stopped.

The station staffs attend to the loading and unloading of the trailers, which handle 40 to 50 loads daily. The two tractors are continually in motion, hauling these six trailers (one at a time) from one station to another and traveling from 90 to 100 miles each daily. The whole system is operated on a regular schedule, which is as strictly adhered to as a train schedule. By this system the movement of transfer has been expedited, stations have been kept clear of transfer matter and economies effected over the relatively slower movement and smaller capacity of wagon transfer.

For delivery and pick up the trailers are used as substations. They are filled with delivery at the station and moved to certain designated points in outlying districts, where wagon equipment is kept and horses boarded. Distribution of delivery is made from these points, outward shipments picked up by these wagons, are loaded into the trailer, which is then removed to the station for billing and forwarding. The result is earlier and more satisfactory deliveries, better connections with outward shipments arriving earlier at stations and again the economy of quicker movement and larger loads than with wagons.

Hopper and Gondola Cars.—The American Railway Association, Mechanical Division, has issued the following circular. In April, 1919, the Division of Operation, U.S.R.A., requested the regional directors to issue instructions to the railways with reference to U.S. standard hopper and composite gondola cars which were built without sheave wheels on the brake shaft end of the hand brake rod, which cause considerable reduction in hand brake power. It is desirable that this work should be brought to a conclu-

Loading Dominion Express Co.'s Trailer at Windsor St. Station, C.P.R., Montreal.

transfer passing through Montreal can be gathered from the fact that every shipment moving from east to west of Montreal and vice versa must be handled by the Montreal staff, and a large proportion of it in cross town transfer from one depot to another. A large number of manufacturing concerns, many of them most important express shippers, are situated four and five miles from the stations. The expeditious and economical handling of these two classes of traffic has been a problem for a number of years, which has been solved to a large extent by the tractor trailer system.

The two tractors are simply 2-ton trucks, with a fifth wheel or turning plate mounted on the chassis, in place of the ordinary truck body, and in the center of this fifth wheel is one portion of the automatic coupling device. The five trailers are large completely enclosed bodies, with a capacity of $3\frac{1}{2}$ tons, or 518 ft. cubic measurement, each mounted on two rear wheels, with solid rubber tires, and two small front wheels, with folding legs, to hold the trailer up and permit the movement to any desired position when free from the tractor. On the front of the chassis of the trailer are two small wheels for mounting the track of the fifth wheel on the tractor, and permit turning of the equipment within a small radius when coupled up; also the other portion of the coupling device, by which the tractor and trailer are coupled up.

The coupling and uncoupling is a mat-

another lever, which unlocks the coupling, and moves the tractor forward, this operation pulling the trailer front wheels down, setting the brakes automatically and the trailer is left standing for loading or unloading.

Dominion Express Co.'s Tractor, in position for coupling up with Trailer.

The safety features on the road are important. The trailer brakes itself automatically just to the extent that it overrides the tractor, avoiding the overloading of the 2-ton tractor brakes on a $3\frac{1}{2}$ -ton load behind it. Should anything happen to the coupling device while the tractor trailer is in motion, the danger of acci-

sion at the earliest possible date and the handling lines should arrange to make this change on any of the cars involved which may be located on their line without sheave wheel. Charge should be made against the car owner for the expense, for which the car owner in turn should render bill against the U.S.R.A.

Joffre Locomotive House, Yards, Etc.

Joffre is the junction point between the Diamond and Bridge Subdivisions, Levis Division, Quebec District, Canadian National Rys. The Bridge Subdivision extends from Quebec via the Quebec bridge to Joffre, 14.6 miles, and the Diamond Subdivision extends from St. Charles Jct. west to West Jct., being what was known as the Intercolonial freight line, cutting out Levis from a through east and west haul. Joffre is 16.04 miles west of St. Charles Jct., on the Diamond Subdivision. As shown by the inset on the accompanying map, the National Transcontinental Ry. main line leaves the joint I.C.R. and N.T.R. line at Diamond, and the recently built Quebec Central Ry. line from Scotts Jct. connects with the Canadian National lines at that point. The name Joffre Terminals is commonly applied to the system of yards and tracks west of Diamond and centering on Joffre, West Junction and Charny.

Consequent on the Canadian National Rys. management's decision to consolidate at Joffre the locomotive house work carried on previously at the National Transcontinental locomotive house at Bridge, the Grand Trunk house at Point Levis, and the Intercolonial house at Joffre, in order to effect economies in

heating the locomotive house is carried under ground, in a main concrete duct, with branch ducts of tile pipe to the locomotive pits.

All buildings have tar and gravel roofing.

A new ash pit, having a total capacity of 100 cu. yd. of cinders, has been located 650 ft. east of the center of the turntable. This consists of two separate pits, 50 ft. long, built of concrete, and strengthened by old steel rails, and lined with firebrick.

A new coaling plant, 350 tons capacity, has been located 400 ft. east of the ash pits. Two new standpipes were installed east of the new coaling plant.

Four new main locomotive tracks, two cinder sidings, one storage siding and one hopper track were built, involving the laying of 20 turnouts and more than 10,000 ft. of track. A subway, of concrete abutments and steel girders, was built over St. John St. An additional 10,000 ft. of track was laid to serve coal piling grounds. The east cluster of Joffre yard, which consisted of 15 body tracks, with a capacity of 775 cars, is being extended by building three new long tracks which will raise the total capacity of the yard to 985 cars.

The work was carried out by railway

Birthdays of Transportation Men in January.

Many happy returns of the day to:—

W. U. Appleton, Mechanical Superintendent, Eastern Lines, Canadian National Rys., Moncton, N.B., born there, Jan. 29, 1878.

R. Armstrong, Superintendent, Brandon Division, Manitoba District, C.P.R., Brandon, born at Kingston, Ont., Jan. 27, 1865.

L. E. Ayer, General Agent, Canadian National-Grand Trunk Rys., Kansas City, Mo., born at Henderson, Ia., Jan. 11, 1877. F. X. Belanger, ex-General Freight and Passenger Agent, Temiscouata Ry., Riviere du Loup, Que., now Traffic Manager, Fraser Companies, Ltd., Edmundston, N.B., born at Chloiydormes, Que., Jan. 20, 1876.

Sir George McLaren Brown, European General Manager, C.P.R., London, Eng., born at Hamilton, Ont., Jan. 29, 1866.

J. E. Dalrymple, Vice President, Traffic, G.T.R., and Central Vermont Ry., Montreal, born there Jan. 1, 1869.

G. J. Desbarats, C.M.G., Deputy Minister of Naval Service, Ottawa, Ont., born at Quebec, Que., Jan. 27, 1861.

J. E. Everett, Superintendent, Montmorency Division, Quebec Ry., Light & Power Co., Quebec, Que., born at Cap Rouge, Que., Jan. 1, 1863.

Locomotive terminal layout at Joffre, Que., showing location of terminal.

operation, it was necessary to provide additions to the terminal facilities at Joffre. The old locomotive house, which consisted of 24 stalls, was enlarged by the addition of 15 stalls, making the house a complete circle, with the exception of the openings for inbound and outbound tracks. Four stalls in the old house were extended to a total length of 120 ft. each, and drop pits, with pneumatic wheel jacks, were installed. An 85 ft. turntable was replaced by an 85 ft. table, to provide for the efficient handling of mikado and Santa Fe locomotives. The new locomotive house extension is of brick construction, on concrete foundations, and consists of 100 ft. stalls, each provided with a 65 ft. concrete locomotive pit. A new machine shop, 140 x 52 ft., also of brick construction, and with steel roof trusses, was built adjoining the back of the extended stalls. The fan room, blacksmith shop and lavatories are located adjoining the machine shop. The old machine shop was re-arranged to provide for the installation of additional hoists.

The locomotive house and machine shop are heated by hot air supplied by one 90 in. Manoidal Canadian Buffalo fan, which will work in conjunction with the Sturtevant fan in the old portion of the locomotive house. The hot air for heating the machine shop is carried to distributing points in galvanized iron pipes, painted overhead. The hot air for

forces, under the supervision of L. Brousseau, District Engineer, Quebec District, and J. E. Gibault, Division Engineer, Levis Division, Quebec District, Canadian National Rys.

Railway Accidents Throughout Canada. The total number of accidents, during November, reported to the Board of Railway Commissioners was 142, resulting in 20 persons being killed and 144 being injured. Of the killed, 10 were employees and 10 were others. Of the injured, 13 were passengers, 115 were employees and 16 were others. Under others are included 4 persons killed and 10 injured in 11 highway crossing accidents. In 2 of these accidents the crossings were protected by gates, in 1 by a bell and 1 by wigwag signal, while in 7 cases there was no crossing protection. In all of the highway crossing accidents, automobiles were concerned.

Pere Marquette Rd., Suggested Electrification.—The Chatham, Ont., City Council decided, Dec. 12, not to join the Sarnia, Ont., City Council in petitioning the Hydro Electric Power Commission of Ontario to take over the Pere Marquette Rd. lines in Canada and electrify them. The Pere Marquette Rd. Co. some years ago acquired the Lake Erie & Detroit River Ry., extending from Walkerville to St. Thomas, 127 miles, and from Sarnia via Chatham to Eriean, 73 miles.

Gordon Grant, Chief Engineer, Dominion Highways Commission, Ottawa, Ont., born at Dufftown, Scotland, Jan. 2, 1861.

G. F. Hichborn, formerly Agent, Great Eastern Fast Freight Line, New York, born at Boston, Mass., Jan. 13, 1875.

C. Hood, Grain Agent, C.P.R., Winnipeg, born at Edinburgh, Scotland, Jan. 20, 1864.

D. W. Houston, Superintendent, Regina Municipal Ry., Regina, Sask., born at Bathurst, N.B., Jan. 3, 1879.

H. J. Humphrey, Superintendent, Trenton Division, Ontario District, C.P.R., Toronto, born at Berrys Mills, N.B., Jan. 26, 1879.

P. A. Keeler, Treasurer, Dominion Express Co., Toronto, born near Prescott, Ont., Jan. 18, 1867.

H. G. Kelley, President, G.T.R., Montreal, born at Philadelphia, Pa., Jan. 12, 1858.

W. A. Kingsland, General Manager, Eastern Lines, Canadian National Rys., Montreal, born at New York, N.Y., Jan. 5, 1869.

W. J. Lynch, General Manager, Quebec Ry., Light, Heat & Power Co., Quebec, Que., born there, Jan. 17, 1882.

G. E. McCoy, Master Car Builder, Eastern Lines, Canadian National Rys., Moncton, N.B., born there, Jan. 8, 1886.

C. R. Mackenzie, Assistant to General Manager, Canadian National Rys., Montreal, born at Toronto, Jan. 10, 1883.

John Macrae, Locomotive Foreman, C.

P.R., Sutherland, Sask., born at Springburn, Glasgow, Scotland, Jan. 30, 1879.

P. A. Macdonald, Manitoba Public Utilities Commissioner, Winnipeg, born at Gananogue, Ont., Jan. 6, 1857.

G. C. Martin, General Traffic Manager, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., born at Creemore, Ont., Jan. 2, 1866.

William Phillips, European Manager, Canadian National-Grand Trunk Rys., Canadian Government Merchant Marine, and Canadian National Express Co., London, Eng., born at Toronto, Jan. 31, 1870.

W. Pratt, Manager, Dining and Parlor Cars, Hotels and News Department, Canadian National Rys., Toronto, born at Sibbertoft, Northamptonshire, Eng., Jan. 18, 1870.

John Pullen, President, Canadian National Express Co., Montreal, born at Shepton Mallet, Eng., Jan. 23, 1863.

R. Mayne Reade, Superintendent, City Division and Quebec County Railway, Quebec Railway, Light & Power Co., Quebec, born at Llanelly, Wales, Jan. 1, 1868.

L. J. Rouleau, Commercial Agent, Canadian National-Grand Trunk Rys., Sherbrooke, Que., born at Montreal, Jan. 6, 1879.

A. F. Stewart, Chief Engineer, Canadian Government Rys. and National Transcontinental Ry. east of Armstrong, Ont., Moncton, N.B., born at West Bay, N.S., Jan., 1864.

J. G. Sullivan, ex-Chief Engineer, Western Lines, now Consulting Engineer, C.P.R., Winnipeg, born at Bushnells Basin, N.Y., Jan. 11, 1863.

T. H. White, Chief Engineer, Canadian Northern Pacific Ry., Vancouver, B.C., born at St. Thomas, Ont., Jan. 27, 1848.

J. Wilcox, General Superintendent, Central Division, Canadian National Rys., Winnipeg, born at Kincardine, Ont., Jan. 2, 1865.

T. A. Wilson, Superintendent, Sudbury Division, Algoma Division, C.P.R., Sudbury, Ont., born at Stratford, Ont., Jan. 27, 1872.

F. A. Nancekivell Co. Ltd. has been incorporated under the Ontario Companies Act, with \$100,000 authorized capital, and office at Brantford, Ont., to carry on business as dealers in automobiles, motor cars, aeroplanes, steam and other ships, etc. The provisional directors are: F. A. Nancekivell, E. A. Drake and H. Rush, Jr., Windsor, Ont. F. A. Nancekivell was, until April 1917, General Agent, Minneapolis, St. Paul & Sault Ste. Marie Ry., Toronto.

Transcanadian Finance Ltd. has been incorporated under the Dominion Companies Act with \$25,000 authorized capital and office at Montreal, to carry on a general mercantile business, and to act as general ticket agent, for transportation by land and water. The incorporators are:—V. Subosits, Welland, Ont.; Z. Fay, S. Lavery, M. Demers and H. Prieur, Montreal.

British-Pacific Terminals Ltd. has been incorporated under the British Columbia Companies Act with \$250,000 authorized capital and office at Vancouver, to carry on business of storing, warehousing, forwarding, the docking of ships of all descriptions, to own and operate all kinds of ships, drydocks, etc., and carry on a general transportation business.

The C.P.R. Telegraphs service has been extended to Waterways, Alta., the Alberta & Great Waterways Rys. present terminus.

Canadian Pacific Railway October Earnings and Expenses.

The C.P.R.'s gross earnings for Oct. 1921, viz., \$22,089,624, showed a decrease from Oct. 1920 of \$2,711,008, and net earnings, \$6,711,486, showed a decrease of \$989,335. Gross earnings and net for Oct. 1921 were, however, the largest for any of the first 10 months of 1921, the gross being \$2,139,863 greater than that of September, the next best month, and net being \$2,391,437 greater. Notwithstanding the fact that the net was by far the largest earned in the first 10 months of 1921, and that gross earnings, taking into consideration the rate reductions in effect as compared with Oct. 1920, compared favorably with the Oct. 1920 gross earnings, many daily newspapers referred to the Oct. 1921 results as being "less encouraging than those of preceding months." An examination of the facts, however, shows that this view is without justification.

Oct. 1920, was an exceptionally good month for the C.P.R. Always a month of heavy traffic, it was marked in 1920 by the application, throughout the entire month, of the full increases in rates allowed by the Board of Railway Commissioners in Sept. 1920. The new rates, combined with the heavy traffic and the consequent low unit cost of handling, gave the C.P.R. an operating ratio in that month of but 68.55. In previous months, due to inadequate rates, the ratio had been running at about 85, and in the months following, due to falling off in traffic, the operating ratio again attained and averaged this figure. The improvement evident during recent months, however, as given in Canadian Railway and Marine World, has been steady, and the operating ratio of but 69.62 for Oct. 1921 shows that this improvement was more evident in that month than in any of the preceding ones. While the net was smaller than in Oct. 1920, and the gross was only two thirds of 1% greater, this fact should not be held "less encouraging," because Oct. 1920 was such an exceptionally good month, comparatively speaking—making up, in a sense, for the months of low rates, high expenses and low net earnings which preceded it. Rather should the results be considered most encouraging, as showing, first, that traffic is increasing in volume and that there is an improvement in the general economic position is evident, second, that the C.P.R. was able to attain the favorable operating ratio for the month at rates much lower than those prevailing formerly, and third, that the improvement in the railway situation continued through October, leading to the belief that this improvement is of a permanent nature. It may be said that the increase in traffic which led to the large increase in C.P.R. gross earnings in Oct. 1921 was seasonal, but while it must be admitted that a large part of it was seasonal, the mere fact of the proportional increase in traffic being as great as in 1920 indicates that general conditions are approaching normal. As a matter of fact, if due consideration be given to the 20% decrease in passenger rates, to the decreases in freight rates effective Jan. 1, 1921, and to the freight rate decreases since made voluntarily, it would occasion no surprise if statistics show that the C.P.R. handled as much business in Oct. 1921 as in Oct. 1920.

In illustration of the improvement which took place in the company's posi-

tion during the first 10 months of 1921, it may be pointed out that the net earnings for them were \$1,754,196 greater than for the corresponding 10 months of 1920. These increased net earnings were secured on gross earnings \$13,760,784 smaller than in the corresponding 10 months of 1920, which amply demonstrates the fact that some progress has been made in bringing earnings and expenses into more proper relationship. While the improvement in net earnings is gratifying from a purely railway viewpoint, yet the fact of the gross earnings having decreased to so great an extent, while for the greater part of the first 10 months of 1921 the rates in effect were much higher than in the corresponding period of 1920, is not gratifying from either the railway or public viewpoint, because it means higher unit transportation expenses for the railway, and higher unit transportation costs for the public. While an expectation, based on business handled by the C.P.R. in Oct. 1921, that traffic had permanently regained its former large volume would probably be unjustified, as is indicated to some extent by unofficial preliminary figures to hand for November, the October figures nevertheless afford some encouragement to business generally, in view of the fact that the volume of railway traffic is a remarkably faithful indicator of business and economic conditions.

The most important indication of the October figures, however, is that the C.P.R., on the volume of traffic handled during the month, was able to show an operating ratio of less than 70, and consideration of that fact brings us back to the underlying principle of the entire Canadian railway industry, viz., that the great need of Canadian railways is more business, and that until a business more nearly approximating the normal capacity for handling it is furnished, decreases in the costs of transportation service (outside of those directly brought about by changes in wage scales and in material prices) cannot be obtained by the Canadian people. After all, the railway business is similar to most other businesses; when enough of the product is sold to look after the overhead costs and place the business on a paying basis, the product sold after that pays greatly for itself. In the case of a business, the business is railroading and the product transportation, and because the product is transportation and the railway a quasi-public institution, it follows that regulation would soon translate greatly increased profits into lower charges for the public. Canadian industry looks to the railways for efficient transportation at as reasonable a price as it can possibly be obtained. The point we would emphasize is that the cost of transportation to Canadian industry depends to a large extent upon the amount of traffic which industry, in all its various forms, furnishes to the railways. The overhead and fixed costs of the railway business form a large part of the total costs, while many other costs do not increase at all proportionately to increases in traffic handled. Continuing efficiency in the operation of the railways being urged or granted, it is evident that the more traffic there is over which to distribute these overhead costs and proportionately decreasing costs, the smaller will be the unit costs of transportation to the public.

Track Section Prize Competition on Canadian Pacific Railway Eastern Lines.

For the past nine years an annual track section prize competition has been carried out on the C.P.R. Eastern Lines, which has aroused a healthy spirit of rivalry and keen competition among the section forces of the different divisions and districts. Sixty-three prizes are awarded in the competition, as follows:—A General Manager's prize to the foreman having done the best season's work on Eastern Lines; four general superintendent's prizes, to the foreman on each district who has done the best season's work, exclusive of the winner of the General Manager's prize; eleven division superintendent's prizes, to the foreman on each division who has done the best season's work, exclusive of winners of higher prizes; forty-five roadmaster's prizes, to the foreman on each roadmaster's territory who has done the best season's work, exclusive of winners of higher prizes.

Under this system no man can win more than one prize, and all foremen have an equal chance, as the quality of the work done throughout the season is the deciding factor, and not the actual physical condition of the section at the end of the season. The basis on which the sections are judged is entirely efficiency, and careful consideration is given throughout the season to the condition of, and work done on, ditches, gauge, spiking, line, surface, bolts, rail wear, so far as it can be controlled by the section forces, switches, sidings, right of way and station grounds, track signs, cattle guards and fences. The amount of work done and the hours of labor put in, both by regular force and extra gang, are also carefully considered, and the foreman accomplishing the best work with the least amount of labor—the physical condition of the section, as to grade, alignment, drainage, and character of roadbed being considered—wins the first prize.

The number of hours of regular labor and the number of hours of extra labor on the section are figured against the number of ties renewed, tie plates installed or changed, rails changed over on curves and ditching done, etc. The amount of track handled, right of way, spikes and bolts, is fairly uniform on all sections, so that the condition with respect to these items at the end of the season is usually a criterion of the amount and quality of the work done throughout the season. Where special conditions affect such work they are taken into consideration. Some idea of the care exercised in judging a foreman's work can be formed by following the work in connection with the selection of a prize section. Towards the end of the season, on each of the 45 roadmaster's territories, a section is picked out as the most deserving in point of work done during the season with the material and labor available. These are carefully inspected by the superintendent and resident engineer, who select the best one on each district for inspection by the general superintendent and division engineer. All divisions of a district are covered by these two officers, and the section selected which they consider eligible for the General Manager's prize. The judging for the General Manager's prize is done personally by the General Manager, the Engineer of Maintenance of Way, the Assistant Engineer of Maintenance of Way, and district officials.

Following is a list of the successful section foremen for 1921:—General Manager's prize, \$100—H. Benoit, Sec. 19, Sherbrooke Subdivision, Farnham Division, Quebec District.

New Brunswick District, General Superintendent's prize, \$50—F. Dickinson, Shogomoc S'd., Woodstock Division.

Brownville Division, Superintendent's prize, \$25—F. Ferland, Moosehead S'd., Roadmasters' prizes, \$10 each—C. C. Tracey, St. John S'd.; W. Gamble, Shore Line S'd.; W. E. Nason, Mattawamkeag S'd.; P. Nadeau, Moosehead S'd.

Woodstock Division, Superintendent's prize, \$25—H. McLaughlin, St. Stephen S'd., Roadmasters' prizes, \$10 each—S. R. McCrum, St. Andrews S'd.; E. A. King, Southampton S'd.; A. Peluso, Aroostook S'd.

Quebec District, General Superintendent's prize, \$50—A. Giroux, Sec. 4, St. Agathe S'd., Laurentian Division.

Farnham Division, Superintendent's prize, \$25—P. W. Delaire, Roadmasters' prizes, \$10 each—A. Bourdeau, Sec. 1, Drummondville S'd.; F. Gadley, Megantic S'd.; Jos. Partridge, Newport S'd.; E. St. Jacques, Sherbrooke S'd.

Montreal Terminals Division, Superintendent's prize, \$25—A. Durand, Sec. 10, Adirondack Subdivision. Roadmasters' prize, \$10—G. Clement, Adirondack S'd.

Laurentian Division, Superintendent's prize, \$25—V. Carpentier, Three Rivers S'd., Roadmasters' prizes, \$10 each—C. Denoncourt, Piles S'd.; A. Morin, Ste. Agathe S'd.; J. McLeod, Lachute S'd.; A. Pelland, St. Gabriel S'd.

Ottawa Division, Superintendent's prize, \$25—M. Gauthier, Sec. 3, Montreal and Ottawa S'd., Roadmasters' prizes, \$10 each—E. Boileau, Prescott S'd.; N. Huro, Montreal and Ottawa S'd.; A. Robillard, Sec. 1, Maniwaki S'd.

Smiths Falls Division, Superintendent's prize, \$25—C. Burgess, Sec. 9, Chalk River S'd., Roadmasters' prizes, \$10 each—H. Foster, Carleton Place S'd.; A. Rozon, Winchester S'd.; A. Weisenburg, Chalk River S'd.

Ontario District, General Superintendent's prize, \$50—D. Parsons, Sec. 18, Galt S'd., London Division.

Trenton Division, Superintendent's prize, \$25—J. Dowdell, Sec. 1, Belleville S'd., Roadmasters' prizes, \$10 each—G. Dowall, Sec. 14, Havelock S'd.; T. Wilson, Sec. 8, Peterborough S'd.; H. Roberts, Sec. 5, Port McNicoll S'd.; C. McCullough, Sec. 10, Kingston S'd.; J. Wickens, Sec. 12, Belleville S'd.; E. Osborne, Sec. 10, Oshawa S'd.

London Division, Superintendent's prize, \$25—T. Rath, Sec. 13, Galt S'd., Roadmasters' prizes, \$10 each—A. Fairbanks, Sec. 4, Windsor S'd.; X. Mathies, Sec. 9, Galt S'd.; F. H. Plain, Sec. 10, Hamilton and Guelph S'd.; J. Cox, Sec. 15, St. Marys S'd.

Bruce Division, Superintendent's prize, \$25—H. Richards, Sec. 1, Owen Sound S'd., Roadmasters' prizes, \$10 each—W. Bell, Sec. 16, MacTier S'd.; J. Telford, Sec. 14, Owen Sound S'd.; J. Iliscov, Sec. 2, Teeswater S'd.

Toronto Terminals Division, Superintendent's prize, \$25—F. Tuckley, Sec. 14, Owen Sound S'd., Roadmaster's prize, \$10—M. Powell, Sec. 5, Teeswater S'd.

Algoma District, General Superintendent's

ent's prize, \$50—A. Cannon, Sec. 15, Thessalon S'd., Sudbury Division.

Sudbury Division, Superintendent's prize, \$25—J. Whyatt, Sec. 12, North Bay S'd., Roadmasters' prizes, \$10 each—S. McCarthy, Sec. 2, North Bay S'd.; G. Greenacre, Sec. 3, Timiskaming S'd.; J. Penfold, Sec. 6, Parry Sound S'd.; J. Sayers, Sec. 26, Thessalon S'd.

Chapleau Division, Superintendent's prize, \$25—E. Pearson, Sec. 27, Nemegos S'd., Roadmasters' prizes, \$10 each—S. Danyluk, Sec. 10, White River S'd.; A. Nutlika, Sec. 20, Nemegos S'd.

Schreiber Division, Superintendent's prize, \$25—J. Michaud, Sec. 22, Heron Bay S'd., Roadmasters' prizes, \$10 each—Z. Ogrodnik, Sec. 7, Heron Bay S'd.; B. Michaud, Sec. 19, Nipigon S'd.

Locomotive Houses at Hornepayne and Sault Ste. Marie.

R. S. McCormick, General Superintendent and Chief Engineer, Algoma Central & Hudson Bay Ry., has written Canadian Railway and Marine World as follows:—"The locomotive house built at Hornepayne, Ont., by Canadian National Ry., as described and illustrated in Canadian Railway and Marine World for Aug. 1921, is a duplicate, in general design, of the locomotive house at the Algoma Central & Hudson Bay Ry. terminals at Sault Ste. Marie, Ont., built in 1912 by me, and described in an article on those terminals in Canadian Railway and Marine World for Feb. 1913, and the general idea covering this locomotive house was original on this railway. It was designed by P. L. Battey, then Chief Engineer of the Arnold Co.'s industrial department, in conjunction with me, and was constructed by the Arnold Co., as general contractors for the A.C. & B. Ry. terminal buildings at Sault Ste. Marie."

Locomotive Boiler Explosion at Alcona.

As stated in Canadian Railway and Marine World for December, G. C. McNab, locomotive man, was killed, and G. Reid, fireman, was badly scalded, in a locomotive boiler explosion at Alcona, 186.2 miles northwest of Fort William, on the Lake Superior Subdivision, Fort William Division, Central District, Canadian National Ry. We are officially advised that the locomotive was no. 2394. At Superior Jet., four miles northwest of Alcona, the water glass broke, but the train proceeded to Alcona, where the locomotive man intended to take water, the try cocks being used for the indication of the water level in the boiler. On arrival at Alcona, the locomotive man decided to go on, but the train had proceeded only a quarter of a mile further when the locomotive boiler exploded.

Observation of the boiler after the accident showed that the water was low. The demarcation lines showed that the surface of the water in the boiler was 4½ in. below the highest point of the crown sheet, which would be about 7½ in. below the bottom reading of the water glass. The verdict of the coroner's jury placed the responsibility for the accident on the locomotive man.

New Station at Hornepayne, Ont., Canadian National Railways

A new station has been completed recently by the Canadian National Rys. at Hornepayne, Ont., which is 572.4 miles northwest of Toronto, on the main line to Winnipeg, and is the headquarters of the Superior Division, Ontario District. The building is 134 x 34 ft. Basement walls are 18 in. thick and walls of ground floor to height of window sills are of Portland cement concrete. The balance of the ground floor walls are of red pressed brick 13 in. thick, and the first floor walls are of the same brick 9 in. thick. Basement walls are waterproofed on the outside with pitch, and weeping tile are laid around both exterior and interior of the walls and carried out of the building to the main conduit and drain. This drainage system is very necessary, as the basement is in a water-bearing mixture of clay and sand.

The basement has concrete floor laid on gravel, and is 8 ft. high to the ceiling. It includes boiler room, coal storage and chute, record storage, battery storage, restaurant storage, kitchen and cold storage in connection with the lunch room above. The boiler room has a brick

fixed around the counter, constructed of iron pedestals with oak tops and nickel plated rims around the edge. A flight of stairs and a dumb waiter communicate with the kitchen immediately below. This room has three pairs of double doors to the main platform and a single door at the rear. All windows, doors, etc., are trimmed in Douglas fir. The smoking room, 14 x 21 ft., and general waiting room, 21 x 31½ ft., have concrete floor and base. All walls and ceilings are plastered, and the doors and trim of windows are of Douglas fir. Both men's and women's lavatories have concrete floors, plastered walls and ceilings, and have porcelain and nickel plated fittings with automatic flush tanks and washout drains to floors. The Canadian National Telegraphs office is 14 x 20½ ft.; it has ¾ in. hardwood floor laid on top of the concrete and is equipped with counters and tables for operators, all of Douglas fir. The dispatcher's office is I-shaped, the main part being 12½ x 20 ft. and the smaller part 8 ft. 1 in. x 8 ft. 5 in. It is finished and equipped similar to the C.N. Telegraphs office. The con-

ing. The height of the story is 10 ft. All outside walls are strapped, lathed and plastered on the inside. Floors are of ¾ in. maple on ¾ in. sub-floor and 2 x 10 in. pine joists. Ceilings are of lath and plaster on 2 x 8 in. joists supported from the roof. No support is given by the partitions. All of the trim and finished woodwork on windows, doors and partitions, are stained dark brown and varnished. Hardwood floors are filled an oiled. Doors are fitted with combination locks and brass hinges.

The roof is of B.C. shingles, laid on ¾ in. t. & g. sheathing on 2 x 6 in. pine rafters, with 30 in. projection all around the walls. The collar ties are also 2 x 6 in. Shingles are stained with creosote stain. A canopy roof at the front and ends of the station is constructed in a similar manner and is supported on 6 x 6 in. built-up brackets and 6 x 6 in. purlins. Galvanized iron eavestroughs and conductor pipes take care of the roof water and all chimneys, hips and valleys are flashed with galvanized iron.

The building is heated by steam, the pressure being reduced to ½ lb. for heating the station and offices, with a 2-pipe gravity return system and Cole trap automatic boiler feed. The boiler also supplies steam for heating 11 passenger car points, which are in front of the station. These are fitted with 2½ in. steam return. The water mains are 4 in. They are laid in conduits, with valves and hose connections at the manholes. The points are 85 ft. apart. Water is supplied from the tank at about 40 lb. pressure. The condensation from the steam pipes is taken back through the Cole trap in boiler room and automatically fed into the boiler.

The platform, which is of plank, is approximately 1,000 ft. long. In front of the building it is 25 ft. wide and beyond the ends of the building 12 ft.

The main drain from the station is of 20 in. vitrified pipe, with concrete manholes at suitable distances apart. This drain takes care of the surface water, under drainage and water from roofs of buildings. The sanitary sewage is taken to a septic tank and discharged into a separate drain.

The station is lighted throughout by electric light with semi-indirect fixtures, the wiring being carried in conduits. The power is supplied by a dynamo in the engine house, but there is also in the basement of the station an auxiliary gasoline engine and dynamo, in case of failure of the other source of supply.

A London, Eng., press dispatch states that in consequence of the great increase in the use of the all British cable between Great Britain and Australia, via the Canadian land line, a proposal is under official consideration for the duplication of the Pacific cable, at an estimated cost of £4,000,000.

The Australian House of Representatives is considering the details of a direct wireless telegraph system between Australia and the United Kingdom. It is proposed that the work be carried out by the Amalgamated Wireless Co., in which the Australian Commonwealth would have a controlling interest, and that high power stations be erected for direct commercial service between Australia, the United Kingdom and Canada.

Hornepayne Station, Canadian National Railways.

chimney 60 ft. high. The ceiling of this room is covered with heavy galvanized sheet iron.

The ground floor rests on construction of reinforced concrete slab and beams throughout. A concrete base, with cove at concrete floor, is run around all rooms. The brick walls are strapped and plastered on the inside. The ceilings are of lath and plaster, with beams to support the floor above. The height from floor to ceiling is 10 ft. All posts and pilasters supporting the beams are plastered and have ornamental plaster capital at the top.

The ground floor is divided into lunch room, lavatories, smoking room, general waiting room, Canadian National Telegraphs room, railway operator's room, yard and agent's office, employees' lavatories, baggage room and entrance vestibule with stairs to first floor. The lunch room is 28½ x 31½ ft., and has concrete floor and base, with horseshoe shaped counter, which has continuous veneered front in Douglas fir, a birch top and shelves, with interior sliding doors, drawers, tills, etc. There is also a center serving counter or urn stand constructed similar to the outside counter. Seats are

ductors' enquiry office, 7 ft. 9 in. x 8 ft. 2 in., is connected with the agent's and ticket offices by sliding wickets, with counter space sufficiently large to allow of register books being conveniently handled. All partitions between the railway operator's office, conductor's room and yard and station agent's office, are of Douglas fir, framed and panelled, and with chipped glass on the upper half. They are so constructed that they can be taken down, and alterations made, without destroying or injuring any part of the partition or the building. The baggage room, 15 x 20 ft., has concrete floor and painted woodwork walls and ceilings. Employees' lavatories have concrete floors and plastered walls, and the woodwork is of Douglas fir.

The stairway from the ground floor to the first floor is built of Douglas fir strings and risers, with maple treads and birch hand rails and newel posts. The first floor is devoted entirely to the divisional offices, which are partitioned off with Douglas fir partitions, framed and panelled, with the upper part in chipped glass. Partitions are so constructed that they can be changed without injury to either partitions or build-

Orders By Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have this paper have a continuous record of the Board's proceedings. No other paper has done this.

Important traffic orders made by the Board are given in full on special pages of this issue.

General order 347. Nov. 2.—Amending general order 258, Nov. 25, 1918, re display of blue signals required by General Train and Interlocking Rule 26. This order is given in full on another page.

General order 348. Nov. 10.—Amending general order 271, Sept. 10, 1919, by adding Canadian Traffic League to parties to receive proof copies of Canadian Freight Classification and Express Classification.

General order 349. Nov. 23.—Amending general order 201, Aug. 1, 1917, by providing new schedule of charges for demurrage to be charged.

General order 350. Nov. 24.—Ordering railway companies to file tariffs, effective Jan. 1, providing for certain reductions in domestic freight rates within Canada.

General order 350. Nov. 26.—Amending general order 350, Nov. 24, restoring rates on cordwood, slabs, edgings and mill refuse for fuel purposes, to take effect prior to Sept. 13, 1920.

General order 352. Dec. 1.—Approving a number of reduced standard freight tariffs of maximum mileage tolls to become effective Dec. 1, 1921.

31,709. Oct. 26.—Ordering C.P.R., G.T.R., Pere Marquette Rd., Chatham, Wallaceburg, Lake Erie Rys., Wabash Rd., and Michigan Central R.R. to substitute new scale of mileage rates on such seats in Canada.

31,710. Oct. 25.—Amending order 21,670, Oct. 19, re application of North Dumfries Tp., Ont., to extend Martin Ave. across G.T.R.

31,711. Oct. 26.—Approving location of C.P.R. station at Carleton Place, Ont., and authorizing C.P.R. to build passing siding at grade across Park Ave. and Franktown Road, and to close within right of way limits portion of Queen St.

31,712. Oct. 26.—Dismissing Alberta Railways and Telephones Department's application for privilege of stopping in transit carsloads of telephone poles for treatment.

31,713. Oct. 26.—Ordering Canadian National Rys. to fence right of way in n.e. $\frac{1}{4}$ Sec. 30, Tp. 8, Range 26, west 1st meridian, Man., by Nov. 30.

31,714. Oct. 26.—Declaring that for the present G.T.R. highway cross (Lake Shore crossing west of Victoria Harbor, Ont.), is protected by Board's satisfaction.

31,715. Oct. 26.—Approving revised location of C.P.R. Rosestown Southeasterly Branch, from mile 44.37 to 64.47.

31,716. Oct. 26.—Ordering C.P.R. to cut down embankment at first public crossing east of Rock Forest station, Que., to give clear view of railway 500 ft. east from highway and for 200 ft. north on highway.

31,717. Oct. 27.—Ordering Great Northern Ry. to fence right of way through n. $\frac{1}{4}$ Sec. 20, Tp. 8, Range 5, west 1st meridian, Man., by Nov. 30.

31,718. Oct. 27.—Declaring that for present Canadian National Rys. St. Charles crossing, at Loudville, Que., is protected to Board's satisfaction.

31,719. Oct. 28.—Dismissing Inlemer Golf and Country Club's application for order requiring Canadian National Rys. to remove crossing at Inlemer station, Que., to Cadatal Lot 236, adjacent to clubhouse.

31,720. Oct. 28.—Ordering Canadian National Rys. to build standard fifth class station at St. Genevieve, Que.

31,721. Oct. 31.—Approving agreement between Bell Telephone Co. and Nelson Telephone Co. and Western Counties, Ont.

31,722. Oct. 20.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Mayerthorpe, Alta.

31,723. Oct. 26.—Authorizing C.P.R. to build spur for Holland Varnish Co., Montreal.

31,724. Oct. 31.—Approving Brandon, Saskatchewan and Hudson Bay Rys. bylaw 12, authorizing A. J. Dickinson, Passenger Traffic Manager, to issue tariffs of passenger tolls.

31,725. Nov. 2.—Authorizing Canadian National Rys. and Timiskaming & Northern Ontario Rys. to operate train through crossing at intersection at North Bay, Ont., without first stopping.

31,726. Oct. 28.—Approving Hull Electric Co.'s application for protection at crossing of Chelsea Road, Hull, Que.

31,727. 31,728.—Approving Bell Telephone Co. agreements with Hyndford-Douglas Telephone Association, and Lightning Telephone Co., Renfrew County, Ont.

31,729. Nov. 2.—Rescinding orders 30,327 and 31,734, Nov. 15, 1920, and June 17, 1921, re-

spectively authorizing C.P.R. to build spur for Dominion Sugar Co. in Lot 24, Cont. 1, Chatham Tp., Ont., and extending time for construction.

31,730. Nov. 2.—Authorizing Michigan Central R.R. to build crossing at interlocking plant at crossing of G.T.R., Hagersville, Ont.

31,731. Nov. 2.—Approving proposed alterations in G.T.R. station at Bridgeburg, Ont.

31,732. Nov. 2.—Ordering that all C.P.R. and G.T.R. locomotives and trains be stopped before proceeding over crossing at Park St., Peterborough.

31,733. Nov. 2.—Authorizing C.P.R. to install automatic bell and wigwag signal in lieu of cars and watchmen at crossing of Hope and Woodstock Rys., Tavistock, Ont.

31,734. Nov. 3.—Authorizing C.P.R. to build spur for W. J. Hood, Winnipeg.

31,735. Nov. 3.—Authorizing Grand Trunk Pacific Branch Lines Co. to build its Outkale Sub-division across highway at mile 44.6 between Sec. 30, Tp. 44, and Sec. 2, Tp. 45, Range 23, west 3rd meridian, Sask.

31,736. Nov. 3.—Authorizing Canadian National Rys. to cross highway between Secs. 22 and 23, Tp. 45, Range 23, west 4th meridian, near Alexis.

31,737. Nov. 3.—Authorizing Grand Trunk Pacific Branch Lines Co. to cross highway at mile 44.6 between Secs. 40 and 41, Tp. 23, Range 23, west 3rd meridian, in Hillsdale rural municipality, n.e. 40, Sask.

31,738. Nov. 3.—Approving Toronto, Hamilton & Buffalo Rys. clearances of water stand pipe between John and Catharine Sts., Hamilton, Ont.

31,739. Nov. 2.—Amending order 17,397, Sept. 4, 1918, re cranes Co. to build its National Rys. by three additional C.P.R. tracks near Woods, Man., by providing that watchmen be appointed by C.P.R.

31,740. Nov. 3.—Approving agreement between Bell Telephone Co. and Sunny Valley Telephone Co., Grey County, Ont.

31,741. Nov. 4.—Approving location of Canadian National Rys. 4th class station at St. Walburg, Sask., and freight and passenger shelter at St. Walburg, Sask.

31,742. Nov. 4.—Declaring that for the present C.P.R. crossing near Alexander station, Man., is protected by Board's satisfaction.

31,743. Nov. 5.—Dismissing complaint of Town of Fort Frances, Ont., that Ontario & Minnesota Power Co., International Bridge & Terminal Co., and Fort Frances Pulp & Paper Co. have not, have not carried out terms of agreement made in Sept. 1917, and that they have violated conditions of crossing at Church St. in that they have not provided for purposes other than hauling log fuel, for delivery to Fort Frances Pulp & Paper Co., and dismissing application of Russell Bros., for order directing International Bridge & Terminal Co. to build bridge over its railway immediately south of their property in Fort Frances.

31,744. Nov. 5.—Declaring that for the present G.T.R. Governor's Road crossing, 2 miles east of Eastwood station, Ont., is protected to Board's satisfaction.

31,745. Nov. 5.—Dismissing complaint of Town of Fort Frances, Ont., that Ontario & Minnesota Power Co., International Bridge & Terminal Co., and Fort Frances Pulp & Paper Co. have not, have not carried out terms of agreement made in Sept. 1917, and that they have violated conditions of crossing at Church St. in that they have not provided for purposes other than hauling log fuel, for delivery to Fort Frances Pulp & Paper Co., and dismissing application of Russell Bros., for order directing International Bridge & Terminal Co. to build bridge over its railway immediately south of their property in Fort Frances.

31,746. Nov. 5.—Declaring that for the present G.T.R. Governor's Road crossing, 2 miles east of Eastwood station, Ont., is protected to Board's satisfaction.

31,747. Nov. 5.—Authorizing Canadian National Rys. to build spur for Alex. Young, Ltd., Regina, Sask.

31,748. Nov. 5.—Dismissing complaint of Town of Fort Frances, Ont., that Ontario & Minnesota Power Co., International Bridge & Terminal Co., and Fort Frances Pulp & Paper Co. have not, have not carried out terms of agreement made in Sept. 1917, and that they have violated conditions of crossing at Church St. in that they have not provided for purposes other than hauling log fuel, for delivery to Fort Frances Pulp & Paper Co., and dismissing application of Russell Bros., for order directing International Bridge & Terminal Co. to build bridge over its railway immediately south of their property in Fort Frances.

31,749. Nov. 5.—Approving Expedited Traffic Association's Supplement 2 to tariff C.R.C. no. E.T. 694 covering revised rules in connection with carriage of electrolyte.

31,750. Nov. 5.—Approving order 23,933, July 2, 1915, authorizing Edmonton, Duvegan & British Columbia Ry. to build across certain highway at intersection of 2nd and 3rd Sts., Edmonton.

31,751. Nov. 6.—Authorizing Kettle Valley Ry. to build the Mill spur, Copper Mountain Branch, at Copper Mountain, B.C.

31,752. 31,753. Nov. 8.—Declaring that first public crossing east of Marshallville station, Ont., and crossing at Courtland, Ont., over G.T.R., is protected by Board's satisfaction.

31,754. Nov. 8.—Approving agreement between Bell Telephone Co. and Bolton Telephone Co., Bolton, Ont.

31,755. Nov. 11.—Approving C.P.R. plan showing changes in interlocking plant at crossing by London St. Ry. at Richmond St., London, Ont.

31,756. Nov. 11.—Amending order 18,550, Nov. 16, 1912, authorizing Edmonton, Duvegan & British Columbia Ry. to build across certain highways in Alberta.

31,757. Nov. 16.—Amending order 31,674, Oct. 15, authorizing C.P.R. to build spur for Carbon Coal Co., Carbon, Alta.

31,758. Nov. 10.—Approving revised location of Canadian National Rys. Acadia Valley Branch through Twp. 23, Range 22, west 2nd meridian, Alta., mile 23.90 to 42.23.

31,759. Nov. 9.—Authorizing Saskatchewan Highway Department to make highway crossing over Canadian National Rys. Price township, Sask.

31,760. Nov. 11.—Ordering G.T.R. to repair and rebuild bridge on Turner St., Ottawa, Ont., by Dec. 1.

31,761. Nov. 11.—Authorizing Canadian National Rys. to open traffic revised crossing between mile 338.2 and 338.1, Drumheller Sub-division, Alta.

31,762. Nov. 10.—Approving agreement between Bell Telephone Co. and Tilbury West Telephone System, Essex County, Ont.

31,763. Nov. 11.—Authorizing London St. Ry. and C.P.R. to operate trains over crossings at Richmond St., London, Ont., without first stopping.

31,764. Nov. 11.—Declaring that first crossing northwest of Rock Island station, Que., over Boston & Maine Rd., is protected to Board's satisfaction.

31,765. Nov. 11.—Extending to June 1, 1922, time within which C.P.R. may build spur for St. Maurice Paper Co., Cap de la Madeleine, Que., authorizing order 31,764, Nov. 11, 1921.

31,766. Nov. 11.—Declaring that for the present Canadian National Rys. crossing near Pelly station, Sask., is protected to Board's satisfaction.

31,767. Nov. 11.—Authorizing use of bridge carrying Main St., Watford, Ont., over G.T.R.

31,768. Nov. 11.—Authorizing Grand Trunk Pacific Ry. to build Y at Mirror, Alta., across certain highways.

31,769. Nov. 11.—Authorizing G.T.R. to build spur for Campbell & Lattimore, near Fiddle station, Ont. A. E. Jupp Construction Co., Sault Ste. Marie, Ont., and Myers Lumber Co., York Tp., Ont.

31,770. Nov. 12.—Authorizing C.P.R. to build spur for Toronto Transportation Commission north of G.T.R. between Christie and Bathurst Sts., Toronto.

31,771. Nov. 12.—Dismissing application of Town of Bridgeburg, Ont., for order directing G.T.R. to build crossing at intersection of Main St. and Highway 10, near Bridgeburg, Ont., and Black Rock, N.Y.

31,772. Nov. 11.—Amending order 19,329, Dec. 31, 1909, authorizing C.P.R. to build branch connecting with G.T.R. at Camps Jet, Etobicoke Tp., Ont., by providing that interlocking plant, etc., be maintained by C.P.R.

31,773. Nov. 12.—Authorizing C.P.R. to build spur for Laval Quarry Co., St. Martin Parish, Que.

31,774. Nov. 12.—Authorizing L'Enfant Jesus Parish, Que., to build highway crossing over Quebec Central Ry.

31,775. Nov. 17.—Authorizing Toronto, Hamilton & Buffalo Ry. to build two branches for Cole Lumber Co., Barton Tp., Ont.

31,776. Nov. 15.—Authorizing Saskatchewan Highway Department to make highway crossing over Canadian National Rys. in n.e. Sec. 2, Range 45, Range 12, west 2nd meridian.

31,777. Nov. 15.—Dismissing Esquimaux & Nanaimo Ry.'s application to remove access at Cowichan station, B.C.

31,778. Nov. 16.—Authorizing C.P.R. to build spur for St. Maurice Lumber Co., Three Rivers, Que.

31,779. Nov. 16.—Declaring that for the present first public crossing south of Delson, Que., over C.P.R. is protected by Board's satisfaction.

31,780. Nov. 16.—Authorizing G.T.R. to rebuild bridge 93 over Coldwater River, milepost 146.8, from Belleville, Ont.

31,781. Nov. 17.—Extending time when men in charge of interlocking plant be appointed by Pointe St. Maurice Parish, Que., in Pointe St. Maurice Parish, Que., until disposition of appeal by R. from R.C. 31-2, July 26, provided that Montreal Harbor Commissioners' review be allowed to pass over crossing in the meantime.

31,782. Nov. 17.—Approving Supplement 18 to Canadian National Rys. Classification.

31,783. Nov. 17.—Authorizing Richmond Tp. R.C., to make highway crossing over Vancouver Island Rys. (British Columbia Ry.) along Patterson St., in Secs. 22, 23, Block 6, North Range 6, West Lulu Island.

31,784. Nov. 17.—Dismissing application of Village of Tuxford, Ont., to refuse to cross over C.P.R. opposite Olevie elevator.

31,785. Nov. 18.—Authorizing G.T.R. to build spur for St. Lawrence Lumber Co., Ltd., in Lot 23, Con. 5, Humberton Tp., Ont.

31,786. Nov. 18.—Authorizing Canadian National Rys. to connect Edmonton, Yukon & Pa-

the Ry. with Grand Trunk Pacific Ry., and to cross Main St., Stony Plain, Alta.

31,789. Nov. 19.—Authorizing Toronto, Hamilton & Buffalo Ry. to build spur for Martin Bros. in Brantford, Ont.

31,790. Nov. 19.—Authorizing Brantford Municipal Ry. to open for traffic portion of track from St. Paul St. to Burwell St., to Morrell St., and to connect with track of the C.P.R. also spur from Main St. to Ontario St., to Port St. and to connection with track on Erie Ave. at corner of Port St., Brantford, Ont.

31,791. Nov. 19.—Amending by-law 1,723, Ont. authorizing C.P.R. to build spur for Holland Marsh Co.

31,792. Nov. 19.—Dismissing application of Secretary Traffic Bureau St. Paul, Minn., re classification of iron wares shipped with hancings lanes from Duluth, Minn., to Winnipeg.

31,793. Nov. 19.—Authorizing G.T.R. to build spur for Rastall Lumber Co., Toronto.

31,794. Nov. 21.—Authorizing Lake Erie & Northern Ry. to operate cars over crossing at interlocking plant, within three months from date.

31,795. Nov. 19.—Relieving Ottawa & New York Ry. and G.T.R. from maintaining signalman at crossing at Hawthorne, Ont., 3.3 miles west of Central Station, Ottawa, to operate as present character of movements continues.

31,796. Nov. 19.—Authorizing Vancouver, Victoria & Eastern Ry. & Navigation Co. to build spur for W. H. Haicht, Pipersiding, B.C.

31,797. Nov. 19.—Authorizing C.P.R. to build spur for W. A. Denby, Calgary, Alta.

31,798. Nov. 19.—Authorizing C.P.R. to build spur for Brooks Electric Co., Fort William, Ont.

31,799. Nov. 23.—Declining.

31,800. Nov. 19.—Authorizing Toronto, for order directing railway companies to carry raw wood material for manufacture of lath at rates published for carriage of cordwood.

31,801. Nov. 21.—Declaring that increases in tolls authorized to be charged by British Columbia Telephone Co. under order 31,139, July 27, 1921, should be allowed only in Vancouver, North Vancouver, Victoria, New Westminster and Nanaimo, B.C., and ordering the company to reduce tolls. Tariffs showing such increases refused, effective Dec. 21.

31,801. Nov. 19.—Authorizing C.P.R. to divert road allowance between Sec. 2 and n.e. ¼ Sec. 12, Range 23, west principal meridian, at Harding, Man., by extending John St. northerly across its tracks to join and cross the C.P.R. tracks on road of sections 2 and 3; to build tracks across road allowance, and to close diverted portion of road within right of way line.

31,802. Nov. 19.—Recommending to Governor in Council for approval Brantford & Hamilton Electric Ry. bylaw, amending bylaw 11, regulating travel on cars.

31,803. Nov. 19.—Authorizing G.T.R. to build spur for Hamilton Cotton Co., Hamilton, Ont.

31,804. Nov. 19.—Approving provision relating to signals and crossing of St. John Bridge & Railway Extension Co.'s tracks by St. John Ry. on Douglas Ave., St. John, N.B., in consequence of building of new concrete bridge over St. John River and revised location of track.

31,805 to 31,807. Nov. 21.—Approving Bell Telephone Co. agreements with C.P.R. at Yorkmouth, N.S., System, Lambton County, Ont.; Yarmouth Rural Telephone Co., Elgin County, Ont., and Glenora Municipal Telephone System, Grey County, Ont.

31,808. Nov. 23.—Authorizing C.P.R. to use bridge 1.8 over St. John River, St. John Subdivision, N.B.

31,809. Nov. 24.—Ordering British Columbia Telephone Co. to make effective by Dec. 1, certain tolls between Kerisdale and Fraser, B.C., and Elkhorn and Kelowna, B.C., to Kerisdale, B.C. and Elkhorn.

31,810. Nov. 24.—Recommending to Governor in Council for sanction rules for government of Michigan Central R.R. crossing of St. John Bridge & Railway Extension Co.'s tracks by St. John Ry. on Douglas Ave., St. John, N.B., in consequence of building of new concrete bridge over St. John River and revised location of track.

31,805 to 31,807. Nov. 21.—Approving Bell Telephone Co. agreements with C.P.R. at Yorkmouth, N.S., System, Lambton County, Ont.; Yarmouth Rural Telephone Co., Elgin County, Ont., and Glenora Municipal Telephone System, Grey County, Ont.

31,811. Nov. 23.—Authorizing C.P.R. to use bridge 1.8 over St. John River, St. John Subdivision, N.B.

31,812. Nov. 24.—Ordering British Columbia Telephone Co. to make effective by Dec. 1, certain tolls between Kerisdale and Fraser, B.C., and Elkhorn and Kelowna, B.C., to Kerisdale, B.C. and Elkhorn.

31,813. Nov. 24.—Recommending to Governor in Council for sanction rules for government of Michigan Central R.R. crossing of St. John Bridge & Railway Extension Co.'s tracks by St. John Ry. on Douglas Ave., St. John, N.B., in consequence of building of new concrete bridge over St. John River and revised location of track.

31,805 to 31,807. Nov. 21.—Approving Bell Telephone Co. agreements with C.P.R. at Yorkmouth, N.S., System, Lambton County, Ont.; Yarmouth Rural Telephone Co., Elgin County, Ont., and Glenora Municipal Telephone System, Grey County, Ont.

31,811. Nov. 23.—Authorizing C.P.R. to use bridge 1.8 over St. John River, St. John Subdivision, N.B.

31,812. Nov. 24.—Ordering British Columbia Telephone Co. to make effective by Dec. 1, certain tolls between Kerisdale and Fraser, B.C., and Elkhorn and Kelowna, B.C., to Kerisdale, B.C. and Elkhorn.

31,813. Nov. 24.—Recommending to Governor in Council for sanction rules for government of Michigan Central R.R. crossing of St. John Bridge & Railway Extension Co.'s tracks by St. John Ry. on Douglas Ave., St. John, N.B., in consequence of building of new concrete bridge over St. John River and revised location of track.

31,805 to 31,807. Nov. 21.—Approving Bell Telephone Co. agreements with C.P.R. at Yorkmouth, N.S., System, Lambton County, Ont.; Yarmouth Rural Telephone Co., Elgin County, Ont., and Glenora Municipal Telephone System, Grey County, Ont.

31,811. Nov. 23.—Authorizing C.P.R. to use bridge 1.8 over St. John River, St. John Subdivision, N.B.

31,812. Nov. 24.—Ordering British Columbia Telephone Co. to make effective by Dec. 1, certain tolls between Kerisdale and Fraser, B.C., and Elkhorn and Kelowna, B.C., to Kerisdale, B.C. and Elkhorn.

31,813. Nov. 24.—Recommending to Governor in Council for sanction rules for government of Michigan Central R.R. crossing of St. John Bridge & Railway Extension Co.'s tracks by St. John Ry. on Douglas Ave., St. John, N.B., in consequence of building of new concrete bridge over St. John River and revised location of track.

then Ontario Ry. to build spur for Harvey & Adams, Vancouver, Ont.

31,819. Nov. 23.—Authorizing G.T.R. to build spur for London Shipping Containers Ltd., London, Ont.

31,820. Nov. 24.—Dismissing application of National Dairy Council of Canada for order cancelling the 20% increase in express rates on cream by order made by the Board of Railway and Re-establishing special commodity rates on cream in existence prior to said order.

31,821. Nov. 24.—Dismissing complaint of Montreal and Quebec Boards of Trade and Canadian National Millers' Association against tariffs filed by railways showing reduced rates on hay, cereals, feed when shipped to Department of Agriculture, Quebec, for feeding purposes.

31,822. Nov. 23.—Authorizing Mervin rural municipality to divide road allowance between north boundary of Sec. 12, Tp. 31, Range 21, west 3rd meridian, southeasterly through Sec. 12, to connection with Railway Ave., Turtleford, Sask.

31,823. Nov. 26.—Approving Canadian National Ry. plan showing proposed layout of bridge over Red River, at mile 33 Hanna, Medicine Hat Branch, and crossing Government Forced Road on south side of river.

31,824. Nov. 26.—Amending by-law 25,699, Mar. 13, 1921, of the Canadian National Ry. crossing of Main St., Vegreville, Alta., by providing that watchman be appointed by the town.

31,825. Nov. 26.—Authorizing C.P.R. to build spur for W. A. Denby, Calgary, Alta., on 9, 1922, time within which C.P.R. may install wigwag signal at crossing of Dundas St., Woodstock, Ont., as required by order 31,680, Nov. 19, 1921.

31,826. Nov. 28.—Recommending to Governor in Council for sanction Canadian Northern Ry. rules for prevention of accidents, passed Nov. 3, 1921.

31,827. Nov. 28.—Authorizing Canadian Northern Ry. to open for traffic portion of its line from Preceeville and Lintlaw, Sask., mile 72.5 to 100.3.

31,828. Nov. 28.—Approving agreement between Bell Telephone Co. and Prescott Rural Telephone Co., Prescott County, Ont.

31,829. Nov. 28.—Extending to July 1, 1922, time within which C.P.R. may build siding for Canadian National Ry. at Milverton, Ont., authorized by order 30,379, Nov. 29, 1920.

31,830. Nov. 24.—Authorizing Saskatchewan Highways Department to build highway crossing over Canadian National Ry. tracks, between n.e. ¼ Sec. 16, Tp. 14, Range 8, west 2nd meridian, Sask.

31,831. Nov. 28.—Authorizing Grand River Ry. to build spur for Lang Tanning Co., Kitchener, Ont.

31,832. Nov. 28.—Dismissing complaint of Atlantic Coal Co., Drumheller, Alta., against proposed closing of spur by Canadian National Ry. pending payment of certain accounts for repairs of tracks.

31,833. Nov. 28.—Authorizing Canadian Northern Ry. to open for traffic portion of its line from Turtleford to St. Walburg, Sask., mile 57 to 73.7.

31,834. Nov. 28.—Dismissing G.T.R. application for order amending order 9,609, March 1, 1910, by authorizing it to substitute electric alarm bell with wigwag signal for flagman at crossing of Echo Drive, Ottawa, Ont.

31,835. Nov. 28.—Ordering that cost of repairs to subway crossing Forestry St. under C.P.R., Montreal, be paid, two-thirds by city and one-third by Montreal Tramways Co.

31,836. Nov. 30.—Authorizing Canadian Northern Western Ry. to connect its Brazeau Subdivision at mile 24.39 with Grand Trunk Pacific Ry. at Three Hills Subdivision at mile 79.06 near Alia, Alta.

31,837. Nov. 29.—Authorizing C.P.R. to build spur for British American Nickel Corporation, Deseronto, Ont.

31,838. Nov. 30.—Authorizing Canadian Northern Western Ry. to connect its Brazeau Subdivision at mile 24.39 with Grand Trunk Pacific Ry. at Three Hills Subdivision, mile 79.07, near Alia, Alta.

31,839. Nov. 28.—Authorizing Canadian Northern Ontario Ry. to operate branch line from Canada Wire & Cable Co., York, Ont.

31,840. Nov. 30.—Authorizing Canadian Northern Ry. to build across Spryfield road, in ½ of Sec. 31, Tp. 33, Range 8, west 3rd meridian, Sask.

31,841. Nov. 30.—Authorizing Canadian Northern Ry. to connect its Drumheller Branch with Grand Trunk Pacific Ry. at Three Hills Branch at mile 73.3.

31,842. Nov. 29.—Authorizing Canadian National Ry. to connect its tracks from about 360 ft. E.R. spur serving St. Fort William, Ont., with E.R. spur serving Western Terminal Elevator Co.

31,843. Nov. 29.—Authorizing Canadian Northern Ry. to open for traffic portion of its line to Onoway Subdivision, from Robinsons to Whytecourt, Alta., mile 33.8 to 72.3.

31,844. Nov. 30.—Authorizing G.T.R. to build spur and sidings south of Spring St. and east of Lancaster St., Kitchener, Ont.

31,845. Nov. 29.—Amending order 31,795, Nov. 19, re Ottawa & New York Ry. and Grand Trunk Ry. crossing at Hawthorne, Ont.

31,846. Nov. 30.—Authorizing C.P.R. to make highway crossing at Parkboro, Sask.

31,847. Dec. 2.—Authorizing Canadian National Ry. to build across C.P.R. in the Canadian Greenstone Co.'s yards, Trenton, Ont.

31,848. Dec. 2.—Authorizing C.P.R. to remove automatic electric bell wipers from track at crossing of 11th Ave., Saskatoon, Sask.

31,849. Dec. 2.—Declaring that for the present, Brantford & Hamilton Electric Ry. crossing at 11th Ave., Brantford, Ont., is protected to Board's satisfaction.

31,850. Dec. 2.—Authorizing C.P.R. to remove stationer from Monarch, Alta., caretaker agent to be appointed.

31,851. Dec. 2.—Approving clearances at overhead 1 beam on Crane Ltd. spur, Calgary, Alta., subject to certain conditions.

31,852. Dec. 2.—Authorizing Canadian Northern Ry. to connect its Craik Subdivision, mile 5.40, with Grand Trunk Pacific Ry. at Riverhurst Subdivision, mile 3.83, near Regina, Sask.

31,853. Dec. 2.—Authorizing Canadian Northern Ry. to connect its Vegreville Subdivision with Grand Trunk Pacific Ry. Viking Subdivision in n.e. ¼ Sec. 13, Tp. 53, Range 24, west 4th meridian, crossing Main St., Vegreville, Trail and Norton (66th) St., Edmonton, Alta.

31,854. Dec. 3.—Declaring that for the present G.T.R. crossing at 59.1 Mile Subdivision, mile 1st, Ont., is protected to Board's satisfaction.

31,855 to 31,868. Dec. 3.—Authorizing Canadian Northern Western Ry. to cross 14 highways in Alberta.

31,869. Dec. 3.—Authorizing Canadian Northern Ontario Ry. to move its station at Wanhago, Ont., to cross 59.1 Mile Subdivision, mile 1st, Ont.

31,870. Dec. 3.—Dismissing J. L. Debrunski's application for separation of grades at farm crossing over Canadian National Ry. at Roseburg, Alta.

31,871. Dec. 7.—Approving Grand River Ry. Supplement 1 to standard mileage freight tariff C.R.C. 57.

31,872. Dec. 7.—Approving Lake Erie & Northern Ry. standard mileage freight tariff C.R.C. 165.

31,873. Dec. 7.—Ordering G.T.R. to build siding for Ontario Highways Department at West Hill, Ont.

31,874. Dec. 6.—Authorizing Canadian Northern Ry. to build across three road allowances on line of its co-ordination with Grand Trunk Pacific Branch and Line Co. at Riverhurst Subdivision, at mile 5.40 Craik Subdivision, near Regina, Sask.

31,875. Dec. 6.—Authorizing Canadian Northern Ry. to cross Highway at Henribourg, Sask.

31,876. Dec. 6.—Authorizing C.P.R. to install half interlocking plant at crossing of Peterborough Radio Ry. at Peterborough, Ont.

31,877. Dec. 6.—Dismissing complaint of McCollum Lumber & Supply Co., Winnipeg, Man., against advanced charges for heat, or supplying heaters without heat, in refrigerator cars for apples moving from British Columbia to the Prairie provinces.

31,878. Dec. 6.—Authorizing C.P.R. to make highway crossing its track at Ste. Madeleine St., Cap de la Madeleine, Que.

31,879. Dec. 6.—Authorizing C.P.R. to build spur for J. J. Macdonald, Ltd., Montreal, Que.

31,880. Dec. 6.—Authorizing G.T.R. to close its station at Rockland, Ont., on condition that it keep open tracks between Y. switch and station, and to keep open tracks there for unloading, if so consigned by owner.

31,881. Dec. 9.—Recommending to Governor in Council for sanction rules for government of Michigan Central R.R. crossing of St. John Bridge & Railway Extension Co.'s tracks by St. John Ry. on Douglas Ave., St. John, N.B., in consequence of building of new concrete bridge over St. John River and revised location of track.

31,882. Dec. 9.—Authorizing Canadian National Ry. to make highway over its tracks at Three Hills, Sask., between Sec. 18, Tp. 64, Range 23, west 4th meridian, Alta.

31,883. Dec. 6.—Authorizing Inter Departmental Canadian National Ry. (to make highway over C.P.R. at Banff, Alta.)

31,884. Dec. 9.—Ordering that when signals are shown G.T.R. trains may be operated over crossing at Main St., York, Ont., without first stopping, also that when derails are closed, Hamilton, Grimsby & Beamville Electric Ry. cars may be operated over crossing without first stopping; speed of trains and cars not to exceed 6 miles an hour.

31,885. Dec. 9.—Authorizing Alberta Public Works Department to make highway over Canadian National Ry. in s.e. ¼ Sec. 22, Tp. 31, Range 16, west 4th meridian, Alta.

31,886. Dec. 9.—Authorizing C.P.R. to connect its Canadian National Ry. crossing near Preceeville, Sask., is protected to Board's satisfaction.

31,887. Dec. 9.—Amending order 31,765, Nov. 11, authorizing G.T.R. to cross over road over crossing at Richmond St., London, Ont., without first stopping.

Handling Scrap on C. P. R. at West Toronto

It is a fact, not commonly appreciated, that the scrap business is one of the best organized lines of trade carried on in Canada or the United States. Railways are necessarily large contributors to this trade, on account of the large quantities of material used by them, and the railways themselves are in a position to save a great deal of money, or lose a great

ment, with little or no classification, on orders from the purchasing officials. The advantages of a central scrap yard, operated in conjunction with the stores department, and in charge of a man experienced in handling material, are many. In the first place it presents an opportunity for saving, and returning to use, a great deal of good material which finds

R. at West Toronto. Fig. 1 is a general view of a portion of the scrap platform, which is divided into sections, for the temporary storage of certain classes of materials, and which has tracks at both sides. The incoming material is unloaded at one side; material which is to be reclaimed is piled for the time being in the various compartments on the plat-

Fig. 1. General View of Scrap Platform.

Fig. 2. Cars of Scrap arriving for unloading.

deal, in accordance with the methods adopted in handling their scrap material. The idea that the department which uses certain materials in its work is best qualified to handle and dispose of the scrap arising from the use of that material, has been demonstrated as most fallacious, and it is now generally recog-

nized that the handling of scrap material is purely a stores department function. The Railway Storekeepers Association has standardized recommendations for the classification and handling of scrap, which include the central scrap yard, designed to supplant a system in which each large shop or department collected its own scrap and loaded it up for ship-

ment, and the scrap proper is loaded into cars on the opposite side. The height of the platform is such that it comes even with the car doors. Fig. 2 shows several cars of scrap on hand to be switched into place for unloading. The cars shown are used exclusively in the collection of scrap within the Toronto terminals.

Fig. 3. Reclaiming couplers and pockets.

Fig. 4. Bent and twisted tie plates.

Fig. 5. Tie plates reclaimed.

nized that the handling of scrap material is purely a stores department function. The Railway Storekeepers Association has standardized recommendations for the classification and handling of scrap, which include the central scrap yard, designed to supplant a system in which each large shop or department collected its own scrap and loaded it up for ship-

ment, and the scrap proper is loaded into cars on the opposite side. The height of the platform is such that it comes even with the car doors. Fig. 2 shows several cars of scrap on hand to be switched into place for unloading. The cars shown are used exclusively in the collection of scrap within the Toronto terminals.

A central scrap yard, in charge of H. Brooks, District Storekeeper, and J. E. McEwan, Scrap Foreman, where scrap is received from points on the Ontario District lines, is maintained by the C.P.

In a carload of scrap, as it arrives, is old material of all descriptions, from steel turnings up to castings weighing several hundred pounds. Included in this incoming scrap are many articles which can be used again, either with or without a certain amount of fixing up, and it is one of the most important functions of the yard to keep this material separate

from that which is to be offered for sale as scrap. Pieces of pipe, with fittings attached, are common; the fittings are taken off, and soaked in oil (the oil being obtained when tank cars are cleaned out, with a small amount of coal oil added) to remove rust and scale, after which they may be re-used. Short pieces of steel are set up for making nipples, while many long pieces of good pipe are salvaged. Many brake beams arrive in a badly bent condition. They are straightened and returned to use. If a brake beam is past redemption, the heads may be removed, and applied to a beam lacking these parts. Many good brake shoes find their way into the incoming scrap; they are taken out and returned to service. Bent brake shoe keys are straightened and returned to use.

Fig. 2 shows a portion of the space provided for couplers and coupler pockets which are taken out of the incoming material. It may happen that a good coupler may come in with a broken pocket. The pocket is taken off, and furnishes material to make either one or two draw-bar carrying irons, while a good pocket is taken off a broken coupler and put in its place. The good parts of freight car door hangers are matched up in the same way, so that out of the scrap many good ones are returned to service. Carrier irons, and angle irons, as used on dead-woods, are straightened up and returned to service, while castings which arrive

attached to pieces of timber, such as car slits, draft timbers, etc., are taken off, to be returned to service.

In connection with the yard is a small shop for handling bolts, which are reclaimed in large numbers. It is provided with an air operated straightening hammer, shears, and threading machines, and from the thousands of worn bolts which come in, thousands of good bolts are turned out, in lengths according to stores department orders. Corresponding numbers of nuts are cleaned and rethreaded. The plates are reclaimed in large numbers. Figs. 4 and 5 show plates before and after straightening by an air hammer.

Space does not permit a full account of the many classes of material which may be salvaged from scrap as it arrives at the reclamation yard. In any railway scrap pile one may expect to find such things as locomotive springs, coupler springs, truck springs, bolts, nuts, couplers, knuckles, chain, track jack parts, gearing, car replacers, angle cocks, brake wheels, worn train line and steam heat hose, with good fittings, and so on ad infinitum, all of which represents good material, and from the above few examples it is seen that great savings in material can be effected by a proper system of reclamation.

The material which is reclaimed for further use, having been sorted out of the scrap received, that which is left is

scrap in the true sense of the word. This is loaded into cars at the opposite side of the platform, each class being kept separate, and is then ready for shipment. The classification includes nos. 1, 2 and 3 wrought, nos. 1 and 2 cast, malleable, with separate classes for cast steel, spring steel, pipe, etc. From West Toronto, certain classes of material are sent to the yard at Angus, Montreal, the yard at West Toronto bearing the same relation to the yard at Angus, so far as these particular materials are concerned, as the many points on Ontario lines where scrap is first collected bear to the yard at West Toronto.

In the West Toronto yard the foreman and 11 men, 8 of whom do the unloading, sorting and loading, the other operating the various machines used in the reclaiming work, operate the entire plant. From 40 to 50 cars a month of scrap are received, and in addition to great deal of rails which have been taken up are unloaded, classified, sorted, and distributed. On seeing the vast amount of material, for practical purposes as good as new, which is reclaimed, and on considering that, lacking such a system, it would be sold for ordinary scrap prices, one is convinced that such a scrap handling yard is an investment which yields large returns, and that the stores department men in charge of the reclaiming operations certainly deserve the title of the "economy men" of the railways.

The Container Car.

Walter C. Sanders, of the New York Central Lines' Equipment Engineering Department, read a paper, "Avoidable Waste in Car Operation—The Container Car," before the American Society of Mechanical Engineers at New York, recently. Following is a summary:—

The container car was the result of U. S. war time railway congestion, caused in part by the inability of getting cars placed for unloading, and by manufacturers and others using cars as storage warehouses, despite high demurrage. This type of equipment was introduced on the New York Central Lines by A. H. Smith, President, and at present there are three container cars in operation, one of the mail or express type and two which are being used for high class freight. Three mail container cars now being built will be equipped with all-steel containers of improved type, and a new freight container car is being designed, while refrigerator and tank container cars are contemplated.

The container car is nothing more than a long car with a steel side or fence, similar to a low side gondola, loaded with large steel safes or containers, made as light as possible, in which commodities of all kinds travel from consignor to consignee, protected against thieves, fire, weather and breakage. The safes or containers are lifted on or off the car by cranes or hoisting devices, permitting the "parent" rolling stock to continue in immediate transportation circulation. In appearance the loaded car seems to be a solid load of safes, or steel vaults, set aboard a steel underframe with a low protecting steel fence. The container system provides that the portable container shall be loaded and locked at the shipper's own store door, conveyed by motor truck to the railway yard, and lifted by crane aboard the container car,

where steel bulkheads and sides form absolute protection against goods going into container in transit. At the destination the locked container is unloaded by a crane, and carried by motor truck directly to the warehouse or consignee's door, to be unloaded at his convenience. This simple system of handling goods will make it possible to greatly reduce the force of employees now necessary.

The two freight type container cars are 50 ft. long, which is exceptional for a car used in freight service, being 9 ft. longer than the longest New York Central box cars. Each car carries six containers, length 6 ft. 7 in., width 7 ft. 1½ in., and clear height 7 ft. 7½ in., all inside measurements. Each container has a steel frame, base, and roof of open hearth steel, sides of fire wood, and a radial roof so that water will shed off. All joints are double riveted. The door in the freight type of container is located in the width side and is of standard refrigerator design. As the door is in the end, or width side, of the container, five 12 in. x ¼ in. steel plates are riveted to the sides of the car, extending across the inside of the car, through the open clearance spaces between containers, so in case one or more containers are removed from the car, the doors of the remaining containers cannot be opened.

The express container car now in use is 61 ft. 3 in. long, with trucks and fittings which make it interchangeable with standard passenger equipment for use in any passenger train. All modern safety appliances for a special type of car are installed, such as air brakes, hand-hold irons, sill steps, etc. This car carries nine containers, each 9 ft. wide by 6 ft. long, with an inside clear height of 7 ft. 4 in., and a door 3 x 6 ft. The containers are as nearly burglar, fire and weather proof as it is possible to make

them, and have a carrying capacity up to 7,000 lb. They have wood floors, and are arranged with four eyelets or hooks, one at each outside top corner, for convenient lifting and handling. The doors are of standard refrigerator design, and are arranged with a hasp and staple for the shipper's padlock, also with pin and slot for standard freight car seal. The steel sides of the car are spaced to suit the width of the containers, with a clearance of ¼ in. on each side. The containers cannot be made as wide as the car itself, because of the various state highway laws which regulate the width of motor trucks.

In the interior of the body of the gondola part of the car are sectional guides, made of ¼ in. steel, resembling channel steel, with the laps projecting out from the open ends, to enable them to be riveted to the sides of the car. There are guides at each place on the side of the car where the corner of a container will lie. At each corner on the length side of each container there is a shoe, also of pressed steel, which will fit into the socket formed by the two guides. This arrangement guides the containers to the floor of the car, and holds them in place while it is in transit, without additional blocking or fastening. If it is found necessary to move the car over the road after one or more containers have been removed, it is unnecessary to put in any kind of blocking, because the guides and shoes are arranged to hold the containers and prevent them from shifting or falling over owing to the oscillations of the car.

The three new mail type container cars will be equipped with 8 containers each, length 7 ft. 2½ in., width 9 ft. 3½ in., and clear height 8 ft. 2 in., with a 5 ft. 9 in. x 3½ ft. door on the length side. Cubic capacity will be 438 ft., light

weight 3,000 lb., and capacity 7,000 lb.

In a test run with mail from New York to Chicago in May, 1921, with the express type of container car, the nine containers were unloaded on to waiting post office motor trucks in 21 minutes, or one-fifth the time used in unloading an ordinary mail car. This enabled connections to be made with western mail trains

A summary of the prime advantages claimed for the contained car system is as follows:—It will furnish a means of expediting delivery of less than carload lots of commodities by eliminating the time and expense of rehandling, checking and trucking. It will eliminate costly crating and packing. The immediate unloading and loading of containers at

The increased service capacity of each unit by the development of the container car system is thought to hold far-reaching economic possibilities in railway operation of the future, as well as in the co-ordinated use of the motor truck and the electric railway.

The foregoing matter cannot fail to be of interest to anyone connected with railway transportation. Many of the advantages claimed for the new type of equipment are at once evident, particularly the safeguard provided against freight loss and damage en route, the elimination of costly packing and crating, and of handling and checking expense. For the handling of mail, the container car apparently fills a long felt want. For a shipper who sends out a large quantity of l.c.l. freight daily, with comparatively large consignments to individual customers, the container car system would appear to be particularly well suited, and with suitable loading and unloading apparatus to handle the containers to and from the cars at the shipping and receiving points, would seem to possess a good degree of flexibility.

While car movement would undoubtedly be speeded up, and other expenses decreased, the greatest economy possible in connection with the container car system would not be obtained until it was so nearly universally in operation that the necessity for operating l.c.l. freight houses would be practically non-existent. While it is evident that the advantages claimed for the container car are real and practical, it would nevertheless seem that further development is needed before it can be described as being entirely suitable for the handling of l.c.l. freight, and express matter. The containers would no doubt be suitable for shipments which would fill one or more of them to capacity, but it is probable that in operation the need would arise for smaller containers than have yet been tried, to take care of the smaller l.c.l. shipments. It is evident that some arrangement would have to be made for the railways to exercise some sort of supervision over the

Unloading Container from Freight Type of Container Car.

which had never before been made. On the return trip, the containers were unloaded from the car in New York in 18 minutes. It is believed that the use of containers in mail service will prevent

terminal points eliminates demurrage, at the same time promptly releasing rolling stock, clearing the yards of cars and reducing congestion. It will eliminate the piecemeal loading of cars at railway sid-

Express Type Container Car, with Containers in place.

loss of mail; mean a saving to the Government in the handling of mail, and a saving to the railways in the use of equipment; make possible a quick transfer at important gateway points and the maintaining of close railway connections otherwise impossible, and afford an increased weight and capacity over the average load now handled in mail cars.

ings in exposure to all kinds of weather. It will tend to keep the car moving at all times, making possible double the mileage as made now by an ordinary piece of rolling stock. Containers are fire and weather proof, and also burglar proof, as they cannot be opened while on the car, or while being transferred by handling device to and from it.

filling of the containers, to be assured that the goods being transported were as represented. It is also probable that some facilities for storage of the containers would have to be made at freight stations, to provide for cases where consignees would not be in a position to accept delivery immediately on arrival, if the cars are to be kept in continuous

operation and a better average car mileage per day obtained.

The introduction of the container car system to the railway business, like the introduction of any other method or device which promises to promote economy, would necessitate immediate capital expenditure, and for that reason its adoption would be gradual, even with its desirability fully demonstrated. Capital expenditure in this case would involve the construction of new cars, or the re-modeling of existing cars to receive the containers, the acquisition of the containers themselves, and the installation of loading and unloading cranes. Whether the container car system will be generally adopted by railways, either in something like its present form, or after great change and modification, must remain to be seen, but it is evident that the system is the result of a frank recognition of the economic wastes existing in transportation, and that it is representative of a genuine attempt to remove some of these wastes and introduce more efficient methods. For this reason, the article is deserving of all our readers' full attention.

Freight and Passenger Traffic Notes.

The Pacific Great Eastern Ry. Co. on Dec. 2 ran its first train through from Squamish to Quesnel, B.C., since the flood of Oct. 28.

The Canadian Freight Association on Dec. 3 submitted for the Board of Railway Commissioners' approval Supplement 19 to Canadian Freight Classification 16.

The total catch of halibut landed at Prince Rupert, B.C., during November, is stated in a press report to have been approximately 3,900,000 lb., the record for the season.

The Dominion Atlantic Ry. is reported to have carried 3,713 cars of apples to Dec. 8 for the 1920 season, against 2,575 cars to the same date in 1921. There were reported to be about 900,000 barrels in storage in the Annapolis Valley and North Mountain districts on Dec. 1 awaiting shipment.

A Winnipeg press dispatch of Dec. 14 stated that grain was being loaded at stations in the prairie provinces at the rate of 800 cars a day for eastern points. The clean up of grain for shipment on the last day of navigation is reported to have left a total elevator capacity of 20,000,000 bush, at the head of the lakes.

A meeting of men interested in mining held in Toronto, Dec. 19, passed a resolution calling Hon Mackenzie King's attention to the fact that the mining industry is responsible for 35% of the railway freight revenue of the Dominion, or double that of agriculture, the next most important freight producer, and asking that a Minister of Mines be appointed in the new government.

Shipment of grain from the Columbia River and Puget Sound ports show, according to a press report, an increase of 54% for July, August and September, over those for the corresponding three months of 1920, and the shipment to United Kingdom and European continental ports from Pacific ports during September are said to have been 7,843,000 bushels. S. McCay, one of the Vancouver harbor commissioners, is reported

to have said at Winnipeg recently that more than 1,000,000 tons of space had been booked at Vancouver for grain shipments to foreign ports.

Canadian National Rys. Traffic Officials met in Winnipeg during the third week of December, and discussed passenger traffic matters, service, etc., the meeting being attended by representatives of the passenger, baggage, advertising, industrial, and resources departments from all parts of the system. Among those present were C. A. Hayes, Vice President in charge of traffic, and H. H. Melanson, Passenger Traffic Manager, Toronto; R. Creelman, A.P.T.M., Winnipeg; W. E. Duperow, G.P.A., Winnipeg; Osborne Scott, P.G.A., Vancouver; G. A. McNichol, A.G.P.A., Prince Rupert; C. E. Jenney, G.A., New York; J. Madill, D.P.A., Edmonton; W. J. Quinlan, D.P.A., Winnipeg; W. Stapleton, D.P.A., Saskatoon; W. L. Crighton, General Advertising Agent, Toronto; W. C. Riddell, Advertising Agent, Toronto; C. W. Higgins, Advertising Agent, Winnipeg; C. A. Skog, D.F. & P.A., Duluth; K. E. McLeod, D.P.A., Vancouver; J. F. McGuire, G.A., Seattle; W. F. Barry, G.A., San Francisco. These meetings are held yearly, the last year's having been in Toronto, the idea being to visit a different portion of the system each year.

The Importance and Value of Railway Statistics.

The following extracts from an address by L. F. Loree, President, Delaware & Hudson Co. to the Railway Accounting Officers Association, Atlantic City, recently, are well worth remembering by every railway man. "Statistics cannot take the place of judgment, but they are most valuable aids to judgment. They serve as instruments to be sought, to be known, and to be used, and when compiled in the clearest, the briefest and the most compact form. The ramifications of railway operations are so widespread, the sources of possible wasteful expenditures, or possible economies, so numerous, that if a railway is to be managed with a maximum of efficiency, it is important that all information bearing on work done, and cost of operation, be drawn together and tabulated on uniform bases; that is, there should be adequate statistical information. If sufficiently comprehensive, statistics will aid in the solution of problems and enable conclusions to be drawn and judgment measured. Constant usage cultivates a sense of arithmetical values, to which the mind becomes responsive in a way analogous to that in which the trained ear becomes responsive to values in harmony. Statistics should be as few as will cover the essential items, and contain the details that explain the fluctuations which have taken place and where they occur. They are exposed to the danger of a careless assumption of data, without testing their correctness, and to undue refinement in the calculations based thereon. They should be kept so that information can be condensed, from period to period, on statements that will enable comparison of cumulative periods. Time is of the essence of all statistical data. Careful study should be made of the dates upon which statistical data are to become available, and resolute discipline imposed so that they be produced on time."

Railway Finance, Meetings, Etc.

Canadian Pacific Ry.—An issue of \$25,000,000 of C.P.R. perpetual 4% consolidated debenture stock was sold recently to the National City Co. in association with a number of banking houses, in connection with which the following announcement was made Dec. 19:—"This is the first issue of the premier security of the C.P.R. to be sold in the United States, all previous issues having been made in London, Eng., and it therefore marks an important step in American finance. The exceptionally high character of the security is indicated by the fact that the average price of the issue on the London Stock Exchange for the 14 years preceding the outbreak of the world war was 106%. This price compares with the average prices of American railroad bonds as follows: Atchison, Topeka & Santa Fe general 4's, 97%; Union Pacific first mortgage land grant 4's, 100%; Northern Pacific prior lien 4's, 96%. The high price reached by the consolidated debenture stock on the London Stock Exchange was 118½ in 1902."

A New York dispatch of Dec. 21 stated the bonds were offered to the public to yield 5.13%, which is said to be the lowest yield for a railway bond since the war, and that the issue was oversubscribed.

Pacific Great Eastern Ry.—The British Columbia Legislature on Dec. 1 voted \$500,000 to cover deficiencies in P.G.E.R. operation.

Timiskaming & Northern Ontario Ry. The net results of operation for the year ended Oct. 31, 1921, are stated to have been an excess of earnings over expenses of \$181,778.89, and the Commission at the close of the year paid the Ontario Government \$200,000 in connection with surplus earnings.

The Transportation Club of Toronto held its annual dinner and general meeting at the Prince George Hotel, Toronto, Dec. 16, the President, M. McIlroy, General Agent, Passenger Department, C.P.R., Detroit, Mich., being in the chair. The members elected the directors for the ensuing year, and at a subsequent meeting the directors elected the following officers and chairmen of committees:—President, Thos. Symington, Superintendent, Canadian Cattle & Storage Co.; Vice President, G. W. Vaux, General Agent, Union Pacific Ry.; Treasurer, Murdo MacDonald, Assistant Superintendent, Weighing, G.T.R.; Secretary, W. J. Hotrum, chief clerk, local freight office, G.T.R. Chairmen of committees:—Membership, A. M. Adams, Local Freight Agent, G.T.R.; Entertainment, G. S. Donaldson, General Agent, Chicago & Northwestern Ry.; Publicity, J. J. Rose, General Agent, Robert Reford Co.; Sick, W. M. MacPherson, Canadian Agent, Delaware & Lackawanna & Western Ry.; Reception, W. J. Moffatt, City Passenger Agent, G.T.R.

The Future of British Railways, was the title of a paper read before the Institute of Transport in London, Eng., recently, by Sir George Paish. Speaking of the grouping of railways, he pointed out that while in the United States it had been a gradual process of nearly 40 years, it had sprung up, as it were, over night, in Great Britain. British railways were built on a cheap labor basis, and now that labor is dear, past methods will need constant revision and adaptation.

Railway Mechanical Methods and Devices.

Reclaiming Brake Beams from Scrap.

The accompanying illustration shows a device designed and built at C.P.R. Angus shops, Montreal, for straightening brake beams which have become bent in various ways in service. A good many of these old beams come in from time to time, among the scrap which is shipped in from various points on the system, and though some of them are bent or twisted, they are a great deal more valuable as brake beams than they are as scrap, hence the incentive for reclaiming them. The way in which the straightening device is assembled is shown in the illustration. The two vertical cylinders, supported as shown, have attached to their piston rods a steel beam, of sufficient length and with a flat surface, for straightening the brake beam vertically; the two horizontal cylinders are arranged similarly for straightening the brake beam horizontally. The coil spring, set vertically between the two vertical cylinders, is to lift the straightening beam up when pressure above the pistons in the vertical cylinders has been relieved. The pistons are operated by air pressure, the pipe conveying the air to the back of the pistons in the horizontal cylinders being shown in the illustration. The valves for the horizontal cylinders are arranged so that when the air is exhausted from behind the pistons, enough is admitted in front of them to force the horizontal straightening beam back to position. In the vertical cylinders, the spring does this as noted. The two straightening beams may be operated simultaneously, making it possible to straighten a brake beam very quickly.

Reclaiming Brake Beams from Scrap.

Before straightening, the brake beams are stripped of all fittings. The savings possible by this device, one of many used in reclamation at Angus shops, are large.

Chuck for Machining Main Rod Brasses.

The accompanying illustration shows a chuck used in connection with the machining of rod brasses, set up in the

Chuck for Machining Main Rod Brasses.

set-up, with only an adjustment which is very quickly made between the machining of each side of the brass. A large bolt, the head fitting in the opening A as shown in the illustration, passes through the center of the brass, the brass being

secured by the nut B, on the end of the bolt, as shown. The circular portion of the chuck may be revolved on the axle, the end of which is countersunk into it, with a nut on the end at the extreme right, below the pin C. When one face of the brass has been machined, the pin C is withdrawn from the hole in which it fits, in the circular portion of the chuck, and the brass and circular portion of the chuck are given a quarter turn, the nut on the end of the axle for the circular portion being first slacked off a turn. The pin C is re-inserted in another hole in the circular portion, 90 degrees from the preceding one. The third and fourth faces of the brass are put into position for machining in a similar manner, by loosening the nut on the extreme right, withdrawing pin C, turning the circular portion through 90 degrees, re-inserting pin C, and tightening nut at extreme right. We are indebted for this information to M. J. Hayes, General Foreman, Locomotive Department, T. H. & B.R.

The American Wood Preservers Association's last report stated that 112 wood preserving plants throughout the U.S. used 50,000,000 lb. of zinc chloride and 69,000,000 gall. of creosote in the treatment of over two billion board feet of timber. The treated material consisted mainly of railway ties, construction timbers for wharf, bridge, highway, mining and building purposes, piling, telephone and power poles, fence posts, wood blocks for street paving and for factory floors, and lumber for miscellaneous uses.

shaper at the Toronto, Hamilton & Buffalo Ry. shops at Hamilton, Ont. The construction is such that the four sides of the brass can be planed with the one

Timiskaming & Northern Ontario Railway Extension.

The T. & N.O. Ry. was projected as a colonization railway by the Ontario Government in 1902 to open up for development and settlement the district north of North Bay. Surveys were completed and construction was started at the end of that year, track laying was started in 1903, and the section of the line from North Bay to New Liskeard, 113.9 miles, was put in operation at the end of 1904. The work of construction was carried out under the T. & N.O.R. Commission, which was also given the operation of the line.

The discovery of silver and cobalt in the vicinity of Haileybury, etc., during the construction of the line, resulted in a large influx of population, of a kind that was not anticipated at the time the construction of the line was decided upon. The mining area developed faster than the agricultural area of territory opened up, and the southern part of the district attracted large numbers of tourists during the summer. The inception of the project of the National Transcontinental Ry. by the Dominion Government in 1903 led to the undertaking of a T. & N.O.R. extension northerly from New Liskeard to a junction with the N.T.R. at Cochrane, 139.7 miles from New Liskeard and 253.6 miles from North Bay, which was put in operation Nov. 25, 1908. Since that time the line from North Bay to New Liskeard has been brought to the higher standard to which the extension to Cochrane was built. A number of branch lines have also been built to serve the mining and forest territory opened up for development.

The objective of the line has always been the James Bay area of Hudson Bay, and the country between Cochrane and the Bay has been thoroughly surveyed as to possible routes, and the natural resources to be developed. Early last autumn the Premier of Ontario announced that construction would be started on the extension of the line northerly for about 70 miles, and towards the end of October the clearing of the right of way was begun. Tenders will be received by the Commission to Jan. 9 for the construction of the roadbed ready for ties and rails, and also for the track laying, ballasting and fencing of the extension, which will be from Cochrane to a point on the west side of the Abitibi River, about 10 miles southwest of New Post, which is on the east side of the river. The present extension will leave about 100 miles of the line to be built to reach Moose Factory on James Bay. The contractor, it is stated, will be required to complete the first 40 miles from Cochrane to the Abitibi River by Dec. 31, 1922, and the remaining 30 miles by Dec. 31, 1923. Tenders for steel bridges will be invited later. The Commission will provide ties, rails and fastenings. The estimated cost of construction is about \$3,500,000.

The route of the extension has, we are officially advised, been located with a view to opening up for settlement and development the largest possible area, and the ultimate extension of the line to Moose Factory at tidewater. The line is being located to a comparatively high standard of gradients and curvature. The maximum gradient is 0.05 of 1%, fully compensated for all curvature, the maximum being 4 degrees. Grading will be comparatively light. Two crossings of the Abitibi River will be necessary, one

at the Long Sault, mile 11, and the other at mile 47, near the Carrying Place. A number of smaller bridges will also be required. As far as possible permanent structures will be built, without unduly increasing the cost of construction. The track will be laid with 80 lb. steel rails, 6,000 tons of which have been ordered from the Algoma Steel Corporation, which it is expected will be ample for 1923 construction. Contracts are reported let for 75,000 ties, the order being divided among R. S. Porter, Matheson; P. McCool, North Bay; and the Harris Tie & Timber Co., New Liskeard.

Two location parties are in the field completing the location work, under the direction of W. R. Maher, who has had

Route of T. & N.O.R. Extension from Cochrane Northwesterly.

general charge of the exploratory and location surveys under S. B. Clement, Chief Engineer. The engineers in charge of the parties are A. A. Fraser and A. Sunstrum. The construction engineering staff has not yet been organized. (Dec. 1921, pg. 646.)

Pacific Great Eastern Ry. Accounting. The British Columbia Legislative Assembly passed two resolutions affecting the Pacific Great Eastern Ry. recently, directing that all financial accounts between the province and the P.G.E. Ry. Co. respecting construction and all receipts and expenditures of the company be subject to the scrutiny of the Public Accounts Committee in the same manner and to the same extent as are the ordinary public accounts of the province. The P.G.E. Ry. is owned and operated by the province.

President Hanna's Christmas Message

D. B. Hanna, President, Canadian National Ry., issued the following message, Dec. 22, 1921: "In my first Christmas message to Canadian National Ry. employees three years ago, I asked for your co-operation in making a success of Government owned railways, and stated that our duties to that end should be regarded as a public trust. I am glad to say that I feel we have had the loyal support of all employees in our efforts to make the Canadian National Ry. an efficient transportation system. The improvement in operating results in the last few months, and the better relative position which the National System enjoys, are gratifying to the management and reassuring to the Canadian public, and I desire to express my hearty appreciation of the co-operative efforts of officers and employees. We can only hope to succeed through the whole hearted efforts of our organization, and the work in the main must be done by those in the field. In the spirit of the season's goodwill, I desire to extend the wish that happiness attend you at Christmas and throughout the new year."

Cattle Guard Types to be Decided by Railways.

The Alberta Association of Municipal Districts, at its annual convention in Nov. 1921 passed the following resolution:—"Whereas there is a great need for more adequate cattle guards on the railways of this province; therefore be it resolved that this convention is in favor of the establishment of the pit system of cattle guards, and request our executive to press this matter on the Board of Railway Commissioners."

The resolution was submitted to the Board at its sittings in Edmonton, and the following notice of ruling was given: "Under date of Nov. 25, 1921, the Board ruled that the Railway Act provides by sec. 274, subsec. 1 (c), for the installation of cattle guards on each side of the highway, at every highway crossing, at rail level with the railway; that the act does not specify the type of cattle guard to be installed; that the burden is upon the railway company as to the efficiency of the type; and that if a specific type of cattle guard is to be indicated, it would appear to the Board to be a matter for legislation and not for action of the Board."

Air Service Between Newfoundland and Canada.—An experimental mail air service has been inaugurated between Newfoundland and Halifax, N.S. The first flight was to be made from Botwood, Nfld. Dec. 10. Major Cotton had charge of the aeroplane, which, however, developed engine trouble and had to descend near Deer Lake, Nfld., after completing about 200 miles of the trip, which was apparently then abandoned. The Canadian Postmaster General authorized the carrying of mail from Halifax to Newfoundland, by the route, but declined to take any risk in connection with letters dispatched by the mail. Such letters were in addition to being prepaid at the regular rate of 4c, an ounce, to have an additional 30c. worth of stamps affixed, and were to be handed in to the post offices, and not to be mailed in the regular way.

Canadian Pacific Railway Construction, Betterments, Etc.

Common Carriers' Liability for Goods in Quebec.

Bridge at Reversible Falls, St. John, N.B.—The Board of Railway Commissioners passed order 31,808, Nov. 23, authorizing the C.P.R. to use and operate bridge 1.8 over the St. John River, St. John Subdivision, which was built under authority of order 30,709, March 5, 1921. It also passed order 31,815, Nov. 26, authorizing the company to open for traffic the approaches to the new bridge, viz., the deviation of its railway between miles 1.38 and 1.93, St. John Subdivision, New Brunswick District. All traffic between St. John and Fairville is being carried over the new bridge, the use of the old one having been discontinued.

The New Brunswick Government has taken proceedings against the C.P.R. Co. and the St. John Ry. Bridge & Extension Co., in the Supreme Court of New Brunswick's Chancery Division, to determine whether the province or the Dominion has the right to regulate navigation on the St. John River. It is claimed that under the Ashburton treaty of 1842, between Great Britain and the United States, the regulation of navigation on that river was vested in the Province of New Brunswick. The British North America Act vested the regulation of navigable waters in the Dominion Government. The question to be decided is whether the B.N.A. Act overrides the provisions of the treaty of 1842. The railway bridges across the St. John River have, it is claimed, been erected without the New Brunswick Government's consent or authority; it is claimed that they are an obstruction to free navigation and should be either removed or raised so as to afford the same clearance and fairway as is given by the highway bridge.

St. John West Trestles.—The St. John, N.B., City Council on Dec. 7 approved of a draft agreement between the city and the C.P.R. with respect to the west end trestles. The agreement is for 10 years from Nov. 1, 1920, unless in the meantime the property should be taken over by the Dominion Government, in which case the C.P.R. is to be reimbursed for material placed in the structures. The C.P.R. agrees to do certain repairs and renewals to the property, the tracks on which give access to sheds 1, 2, 3, 4, 5 and 6 and to the potato warehouse; and not to make any extra charge against traffic on account of the agreement. The city gives the company the right to keep its rails on certain streets during the existence of the agreement, and to cancel its bylaw requiring car rental for the use of the trestles, etc.

Windsor St. Station, Montreal.—The remodeling of the main entrance to the station on Osborne St. was reported to have been completed on Dec. 13. For some years there has been an open space on each side of the main entrance, which at one time was part of the ticket office. This space was converted into a service depot for the convenience of passengers coming off or going on trains.

Interprovincial & James Bay Ry.—We are officially advised that about two miles of grading has been completed on the 68 mile extension of the Interprovincial & James Bay Ry., from 10 miles beyond Kipawa towards the Des Quinze River, and the branch to Ville Marie, Que.

Peterborough Union Station.—A draft agreement with respect to the erection of a union station in Peterborough, Ont.,

was reported on Dec. 10 to have been forwarded to the City Council by the C.P.R. The proposed site of the station as agreed upon by the C.P.R., the Canadian National Ry. and the City Council is near the intersection of Townsend and Bethune streets.

London Division Improvements.—A press report states that about 80 miles of track on the London Division will be relaid with 100 lb. rails, and that a considerable amount of other maintenance work is planned for this year.

Windsor Freight Sheds, Etc.—A Windsor, Ont., press report says that a new city freight shed and team tracks are to be built there by the company at an approximate cost of \$250,000.

Schreiber Station.—We were officially advised Dec. 2 that no decision has been reached as to building a new station at Schreiber, Ont., which had been mentioned in press reports.

Moose Jaw Station.—The opening of the new station at Moose Jaw, Sask., for all traffic purposes, took place Nov. 20, 1921, although it had been used in part for over a month previously. Construction was started on the new building in August, 1920, by the contractors, Curtis, Halls & Aldinger Co., Winnipeg. An illustration of the front of the new building was given in Canadian Railway and Marine World for June, 1920. The main entrance to the building, which is on Main St., leads to a concourse, to the right of which are the ticket office, information bureau, parcel check room and baggage room, and to the left is the news stand and behind it the section of the waiting room reserved for passengers awaiting departure of trains. The exit to the trains is directly opposite the main entrance and is 20 ft. wide. The waiting room is 124 x 50 ft., with a vaulted ceiling; and off it separate men's and women's rooms, each with lavatory accommodation. The dining hall and kitchen are south of the waiting room.

Cochitlam Flooded Again.—Another flood on the Cochitlam River on Dec. 11 washed out the temporary bridge erected to carry the railway over the river at Cochitlam, B.C., after the flood of Oct. 28, and necessitated the routing of the C.P.R. trains over the Canadian National Ry. between Hope and Vancouver. A new temporary pile trestle was put in place Dec. 13, and through traffic was resumed.

Aid for Alberta Farmers.—An Ottawa press dispatch of Dec. 25 stated that an order in council had been passed providing \$25,000 to the Dominion Government's share towards assisting farmers in the dry area of Southern Alberta. A joint agreement has been reached between the Dominion and Alberta Governments and the railways whereby feed will be transported free into the districts which suffered from drought during last summer, and cattle will be shipped out to feeding points and returned freight free. Each party to the arrangement will contribute equally.

The Dominion Atlantic Ry. is reported to have put a daily freight service in operation between Yarmouth and Middleton, N.S.

The Pacific Northwest Passenger Association will meet at Victoria, B.C., Jan. 12.

An important case affecting the liability of common carriers for lost baggage was decided in the Quebec Superior Court, Dec. 2, 1921, by Justice Dulos. The action was brought by Mrs. Chambers of Ottawa, to recover \$1,745 from the Canadian Transfer Co., as the value of a trunk lost after being deposited with the company for transfer from Bonaventure station to Windsor St. station, Montreal, on Dec. 2, 1920. Mrs. Chambers was travelling from Ottawa to New York, via G.T.R. to Montreal, and thence by C.P.R. and Delaware & Hudson Rd. On reaching Bonaventure station she gave her baggage check to a Canadian Transfer Co.'s agent and asked to have it transferred to the C.P.R. Windsor St. station. The evidence showed that the transfer company obtained possession of the trunk, and left it unguarded at the station, from which it disappeared, and all trace of it was lost. The company tendered \$50 as damages, and submitted that this was the limit of its liability.

Justice Dulos held that this contention could not be upheld, as the ticket given by the company's agent was not a contract between the parties, but was merely a receipt for the goods, given by universal custom to enable the owner to redeem his or her property at destination. Even if it was a contract, it contained no express contract; and the statement as to the \$50 limit was not binding upon the owner of the property deposited. The company came within the definition of a common carrier, and the liability of such a company in Quebec is fixed by the Code's article 1675, which releases a company from liability if it can prove that the loss or damage is caused by a fortuitous event, or irresistible force, or arises from a defect in the thing itself. The Code's article 36 provides that notice by a carrier's limitation of liability is binding upon persons to whom it is made known, but it is further provided that the carrier is liable whenever it is proved that the damage was caused by carrier's fault or the fault of those for whom it is responsible. In the present instance the company had failed to prove a fortuitous event or irresistible force, or a defect in the trunk, or even that the plaintiff had knowledge of the condition alleged to limit the company's liability. Even if such knowledge could be presumed, he failed to see how it could, the evidence showed that the trunk was lost through the fault of the company's agent in allowing it to remain, without a proper guardian, at a railway station where everybody had free and easy access. Judgment was therefore given for the amount claimed with costs.

Another almost similar action came before Justice Dulos, Dec. 1, 1921, when the Redmond Co. sued the Dominion Transport Co. for \$357.25 for loss of a consignment of hats delivered to the company for delivery to the C.P.R. freight sheds. The consignment was delivered to a man named Trembley, who was driving a Dominion Transport Co.'s lorry. It transpired that Trembley was a discharged employee of the D.T. Co., who had borrowed the lorry from another driver, and collected the goods, which were subsequently traced to a receiver of stolen property. The court found negligence on the part of the company by its agent, and gave judgment for the Redmond Co. for \$282.25.

Railway Wages and Working Conditions in Canada and the United States.

The negotiations concerning wage reductions, between the G.T.R. and its employees, who are members of Canadian Brotherhood of Railway Employees, International Brotherhood of Railroad Stationmen, International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, and Brotherhood of Stationary Firemen and Oilers, and the progress of the dispute before the board of arbitration in the matter, were dealt with fully in Canadian Railway and Marine World for Dec. 1921, pp. 648, and the board's majority report signed by J. M. Godfrey, the chairman, and H. H. Vaughan, for the minority report of Peter Bercevitich, K.C. for the employees, was received containing the following recommendations: That the reduction to monthly paid employees made effective July 16 be approved, where it was not greater than 10%, and if greater than 10%, the amount involved to be restored to the employee. That the reduction in hourly paid employees should not exceed 5c an hour, and that where a greater reduction was made, the amount deducted by a reduction greater than 5c an hour be restored to the employee. That in view of the different rates of pay for the same character of work, uniform minimum rates should be established for each class; that no change be made in working conditions which would constitute a further reduction in wages or less favorable conditions for the employees; and that the railways, and out from the employees among four different employees organizations, what organization they want to represent them, and that the single organization receiving the support of the largest number of employees be the one organization recognized by the railway in dealing with all employees, of the classes affected.

Mr. Bercevitich stated in his report that, in his opinion, the U.S. Railroad Labor Board's decisions should not arbitrarily apply in Canada, and claimed that the cost of living in Canada is 10% higher than in the U.S., on the average, and that the employees of the classes affected by the dispute receive a higher minimum wage on U.S. railways than do those on the G.T.R. He also stated that "there was nothing put before the Board of Arbitration to show that the U.S. Railroad Labor Board seriously considered before handing down decision 147, and that on behalf of the employees it was urged that the U.S. Railroad Labor Board passed over the various factors very lightly." The factors referred to as "hereinbefore enumerated" were the conditions to be given consideration by the U.S. Railroad Labor Board in arriving at wage reductions, and were given well in Canadian Railway and Marine World for Dec. 1921, pp. 649. It is evident from the above statement that there must have been, at the arbitration meetings, a lack of thorough acquaintance with the enquiries conducted by the Labor Board in Chicago prior to the issuance of order 147, by which the wage reduction on U.S. railways was made effective July 1, and it may be stated that the study and enquiry into all conditions affecting wages conducted by the U.S. Railroad Labor Board, on which decision

147 was based, was most thorough.

As stated in Canadian Railway and Marine World for Dec. 1921, the International Brotherhood of Railroad Stationmen, International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, and Brotherhood of Stationary Firemen and Oilers had arrived at an agreement with the G.T.R. concerning the wage reduction of July 16, 1921. The reduction, with some modification to secure more equitable distribution among the employees concerned, has been in effect since that date, and is applicable to the members of the three above named organizations, and similarly to the members of the C.B.R.E. engaged in similar work.

The reports of the members of the board of arbitration dealing with the dispute between the Canadian National Rys. and the C.B.R.E. were summarized in our Dec. 1921 issue, the employees' report recommending some modification of the wage reductions as applied July 16, 1921. The railway has not adopted the majority report in so far as the making of any retroactive payments is concerned, but it is probable that where examination proves it desirable, changes in the reductions will be made so as to secure more equitable distribution.

Members of the Longshoremen's Union in the G.T.R. employ at Portland, Me., ceased work Dec. 21, 1921, after failing to reach an agreement with the company on working conditions. Between 200 and 400 men are affected. After considerable negotiation, the men agreed to adopt a reduction in wages proposed by the company, but would not agree to changes in working conditions which the company proposed. It is stated that an embargo has been declared on export freight for Portland, and that the G.T.R., New Bedford, N.S., Boston, Mass., and New London, Conn., for loading export freight until the dispute is settled.

December saw the formation of another "outlaw" union, this time among the membership of the Commercial Telegraphers Union of America, to which organization many of the commercial telegraphers employed by the Canadian Pacific and Canadian National Telegraphs belong. C. W. Mitchell, a telegrapher employed until recently by the Canadian National Telegraphs, at Toronto, but now laid off on account of a reduction in staff, started a movement to form a Canadian union of commercial telegraphers. The international union has taken measures to prevent Canadian members from leaving its ranks, and at a meeting in Toronto in December, at which P. Schnur, Vice President of the union, was present, the advantages of international unionism were pointed out by him and by Jas. Simpson and Controller Jos. Gibbons, of Toronto. The Toronto branch of the international union was reorganized, and it is stated that Mitchell has but very few followers in his attempt to form an independent union.

Following the lead of shopmen employed on U.S. railways, members of the federated shop crafts employed on Canadian railways have declared their intention of applying for increases in pay averaging 35% when the question of wages is next reopened with the railway managements. It is commonly felt that the demands for increases which will be made by em-

ployees' representatives when they meet the railway executives in the U.S. will be merely counter demands with which to meet the demands for wage reductions, and the same view may logically be taken of the demands for increases which shopmen on Canadian lines state they intend to make.

United States.—The U.S. Railroad Labor Board has finally disposed of the multitude of disputes before it, concerning the rules and working conditions affecting shopmen. An agreement of nationwide wide application concerning wages and working conditions was made with the shopmen employed on the U.S. railways during the period of Government control, and, after private operation was resumed, the railway managements petitioned the Labor Board to have the national agreement abrogated, claiming that the rules contained in it were destructive of efficiency and were imposing a large financial drain on the companies. After protracted hearings before the Board in Chicago, a decision was given Apr. 14, 1921, directing the railways and their shop employees to come to agreements among themselves concerning rules and working conditions. In very few cases were agreements arrived at, however, the negotiations leading to further disputes which were referred back to the Board. This resulted in the Board declaring a national agreement in effect until further notice. Subsequently, judgments were issued by the Board concerning overtime, Sunday work, seniority in departments, requirements for tradesmen, etc.

On Nov. 29, 1921, the Board issued addendum 6 to decision 222, designed to clear up all controversy in connection with shop working conditions, the decision being effective Dec. 1, 1921. The decision is essentially a compromise between the railways and the employees; it involves, in effect, a new national agreement, in that the rules given are meant to be applicable to railways throughout the entire U.S. In this respect, the decision is unfavorable to the railways, as they had consistently argued that conditions differed so greatly in different parts of the country that it was impossible to apply the same wages and rules in all parts, with equal justice to all employees. However, the railways have been favored in that the greater part of the rules which they claimed were either wasteful, destructive of efficiency and discipline, or absolutely unfair, have been cancelled. The rules regarding overtime have been modified to suit the railways' objections concerning those formerly prevailing; rules concerning piecework provide that it may be introduced into the shops by agreement between individual managements and their employees. Employees who are not members of the recognized organizations which comprise the American Federation of Labor's railway employees' department can pick their own representative when it is necessary to take up grievances or other matters with the management, this provision showing clearly that it was not the Labor Board's intention to make the closed shop the rule on the railways. Provision is made in the new rules for the employment of special apprentices, who will, however, as concerns the application of the rule limiting the number of apprentices in each trade, be counted among the regu-

ler apprentices. The rules have also been so modified that it will not be necessary for half a dozen men, all concerned in seeing that they do nothing the night come under the work of a man in another craft, to work on a job which any one of them could complete. While the railways would have preferred to have rules of national application done away with entirely, and be left free to negotiate working conditions with their own employees, it may be stated that while the new rules constitute a national agreement in the same way as did the original ones, they remove the most objectionable features of the original agreement. It is also provided by the decision that if rules had been agreed on by any individual road and its employees, they may remain in effect.

The Labor Board has also issued a ruling concerning rules and working conditions affecting men employed in the maintenance of way department. This decision, effective Dec. 16, 1921, practically provides for a new national agreement to take the place of the old one; although it is stated that where agreement has been reached, the rules agreed upon may be continued in force. It is evident that the rules prescribed by the Board will be standard for the U.S., so that, as in the case of the shopmen, they will be practically national in scope. The most notable feature of the new rules is that punitive overtime will not be paid to maintenance of way employees till 10 hours work have been completed. While the former national agreement contained this ruling as to extra gangs, regular maintenance forces were paid punitive overtime after 8 hours. This change does not mean that the standard work day is

to be considered as 10 hours, however, as the Board specifically states that 8 hours shall constitute a day's work. The new rules are applicable to more employees than were those in the former national agreement, signal men and certain classes of employees formerly affected by the shop crafts' agreements being brought under the maintenance of way classification. No change was made in the rules concerning promotion, seniority, or the disposal of grievances.

The U.S. railway managements are going ahead with notices to their employees that further wage reductions are contemplated, and the employees on the majority of the roads have been asked to meet representatives of the managements to discuss the matter. When the recently threatened strike was called off by the brotherhoods, the Labor Board assured the labor leaders that no further action on the wages of any class of railway employees would be taken until the question of rules and working conditions for that class had been finally settled. As is seen, the rules and working conditions affecting shopmen and maintenance of way employees have been disposed of, and there remains but little for the Board to do till it will be in a position to consider the railways' applications for further wage reductions. The leaders of the shopmen whose six organizations are affiliated with the American Federation of Labor have prepared demands for wage increases, to be presented to the railway executives when they are met in connection with the railways' intention of further reducing wages. The increase to be asked for will be 5c. an hour over the rate established by the Labor Board's decision 2, which would make the wages

sought 13c. an hour greater than at present, in view of the fact that shopmen's wages were cut 8c. an hour July 1 by decision 17. A press report states that the Brotherhood of Railway and Steamship Clerks, Freight Handlers and Express and Station Employees will also demand increases in wages when its representatives meet the railway executives.

The controversy between the Railroad Labor Board and the Pennsylvania Rd., as to the Board's powers in connection with the methods used in selecting representatives of the railway's employees to negotiate rules and working conditions with the company's officers, has not yet been settled. Full particulars of this controversy were given by Canadian Railway and Marine World in previous issues. A temporary injunction to prevent the Labor Board from issuing an order in which it was expected that the Pennsylvania Rd. would be directly charged with violation of the Board's rulings, was issued in a Federal court at Chicago Dec. 9. Argument concerning the differences in the interpretation of the labor clauses of the Transportation Act, as between the railway and the Labor Board, was set for Dec. 21, 1921.

On Dec. 2, 1921, the Labor Board issued a decision by which the rates of certain classes of clerical labor on lines in the New England territory were adjusted, the hourly rate for men who work six days a week being made identical with that for those working seven days a week. The ruling became effective Dec. 16 and affects the Boston & Maine Rd., Maine Central Rd., New York, New Haven & Hartford Rd., Central New England Ry., and the Portland, Maine, Terminal Co.

Traffic Orders by Board of Railway Commissioners.

Reduced Standard Freight Tariffs.

General order 352, Dec. 1, 1921.—Re application of railway companies for approval of reduced standard freight tariffs of maximum mileage tolls to become effective Dec. 1. Whereas standard freight tariffs have been filed by the undementioned railway companies, to become effective Dec. 1, 1921, on the reduced basis prescribed by general order 350, Nov. 24, 1921. The Board orders that the following standard freight tariffs of maximum tolls be approved; the rate scales of the said tariffs to be published in at least two consecutive weekly issues of The Canada Gazette, preceded by the following notice:—"The undementioned standard freight tariffs having been filed for the approval of the Board of Railway Commissioners for Canada, and having been found by the Board to be in accordance with its general order 350, dated Nov. 24, 1921, and having been approved by general order 352, dated Dec. 1, 1921, the rate scales thereof are hereby published."

Passenger rates between Bridgeburg and Black Rock.

31,773, Nov. 12, 1921.—Re application of Town of Bridgeburg, Ont., under Secs. 235 and 359 of the Railway Act, 1919, for an order directing the G.T.R. Co. and the International Bridge Co. to reduce the tariff on dummy service across the bridge between Bridgeburg, Ont., and Black Rock, N.Y. Upon hearing the application at Niagara Falls, Ont., June 27, 1921, the applicant and the railway being represented, and what was alleged; and upon reading the further submissions filed, the Board orders that the application be refused.

Express Rates on Cream.

31,820, Nov. 24, 1921.—Re application of National Dairy Council of Canada for an order cancelling the 20% increase in express rates on cream, allowed by general order 327, Feb. 2, 1921, and re-establishing the special commodity rates on cream in existence prior to the said order.

Upon hearing the application at Ottawa, Nov. 15, 1921, the National Dairy Council of Canada, the Express Traffic Association of Canada, and the Dominion Express and the Canadian National Express Companies being represented, the Board orders that the application be refused.

Hay, Corn and Feed Rates.

31,821, Nov. 24, 1921.—Re complaint of Montreal and Quebec Boards of Trade and Canadian National Millers' Association against tariffs filed by railway companies showing reduced rates on hay, corn, and feed when shipped to the Department of Agriculture, Quebec, for feeding purpose. Upon hearing the complaint at Ottawa, Nov. 15, 1921, the Montreal and Quebec Boards of Trade, the Canadian National Millers' Association, Grain and Provision Association, the Quebec Department of Agriculture, the Canadian Pacific, the Grand Trunk and the Canadian National Railways being represented, the Board orders that the complaint be dismissed.

Grand River Railway Freight Tariff.

31,871, Dec. 7, 1921.—Re application of Grand River Ry. under Sec. 330 of the Railway Act, 1919, for approval of its Standard Mitigate Freight Tariff, C.R.C. 57, Supplement 1. Upon its appearing that the said tariff is on the basis of the rates authorized under general order 350, Nov. 24, 1921; and upon the report and recommendation of the Board's Traffic Officer, the Board orders that the com-

pany's said supplement be approved; the tariff, with a reference to this order, to be published in at least two consecutive weekly issues of The Canada Gazette.

Lake Erie & Northern Railway Freight Tariff.

31,872. Dec. 7, 1921.—Re application of the Lake Erie & Northern Ry. under Sec. 330 of the Railway Act, 1919, for approval of its Supplement 2 to Standard Mileage Freight Tariff C.R.C. 165. Upon its appearing that the said tariff is on the basis of the rates authorized under general order 350, Nov. 24, 1921; and upon the report and recommendation of the Board's Traffic Officer, the Board orders that the company's said supplement be approved; the tariff, with a reference to this order, to be published in at least two consecutive weekly issues of The Canada Gazette.

Charges for Heat or Heaters in Refrigerator Cars for Apples.

31,877. Dec. 6, 1921.—Re complaint of McCollom Lumber & Supply Co., Winnipeg, against the advanced charges for heat, or supplying heaters without heat, in refrigerator cars for apples moving from British Columbia to the prairie provinces. Upon hearing the complaint at Winnipeg, Nov. 9, 1921, in the presence of counsel for the railway company, no one appearing for the complainant, and what was alleged, the Board orders that the complaint be dismissed.

Switching Charges at Prince Rupert.

31,895. Dec. 6, 1921.—Re application of Canadian Fisheries Association for an order reducing the switching charge of \$15 at Prince Rupert, B.C. Upon hearing the application at Prince Rupert, Oct. 6, 1920, the applicant, being represented at the hearing, and what was alleged, and upon reading the submissions filed, the Board ordered that the application be refused.

Dominion Atlantic Ry. Terminal Charge at Halifax.

31,927. Dec. 20, 1921.—Re application of Nova Scotia Shippers' Association, of Kentville, for an order suspending Dominion Atlantic Ry.'s Supplement 7 to C.R.C. 375. Upon its appearing that the effect of the said supplement is to re-establish the terminal charge at Halifax, on export and import traffic, of 1½¢ per 100 lb., minimum \$5 a car, which was suspended by the Board on Nov. 27, 1920, the Board orders that the said supplement issued to become effective Jan. 5, 1922, be suspended pending hearing on a date to be fixed by the Board.

The Canadian Council of Agriculture passed a resolution at Winnipeg Dec. 22, recommending in connection with the operation of the Canadian National Railways that most rigid economy be practiced, duplication eliminated, unnecessary mileage abandoned as far as possible, unprofitable and expensive train service eliminated or greatly reduced, and every possible effort made to diminish the "enormous annual deficit being added to the public debt from this source."

Pacific Great Eastern Ry. Pay and Classification. — The British Columbia Government's order in council 1136, which provided that the rates of pay and the different classifications in force from time to time in respect to the C.P.R. lines in B.C. should apply in like manner to the Pacific Great Eastern Ry. lines, has been rescinded by order in council 1537, dated Nov. 29, 1921.

Removal of Transportation Taxes in the United States.

Under the Revenue Act of 1921 the taxes on railway transportation in the U.S. are to be removed, effective Jan. 1, 1922. The tax, applied by the Revenue Act of 1918, was 3½¢ on freight charges, 8¢ on passenger charges, and on express it was 1¢ for every 20¢, or fraction thereof in charges. It is evident that the repeal of these taxes will mean a large decrease in the annual cost of transportation service to the U.S. people, and at the same time will exert a favorable influence on the railways' business. In Sept. 1920 the gross earnings of U.S. railways from freight were \$354,000,000 and the tax was \$10,620,000; passenger earnings were over \$100,000,000, and the tax was over \$8,000,000. While undoubtedly the revenues lost through the repeal of these taxes will have to be made up from other sources, the fact remains that the people in paying the taxes have not differentiated the amounts so paid from ordinary transportation charges, so that the effect of the repeal of the tax will be to create the impression in the public mind that a substantial reduction in transportation rates has been secured.

Geo. C. Taylor, American Railway Express Co., says the elimination of the tax will take \$1,500,000 monthly from express charges borne by the public. The tax during 1920 was \$17,502,918. The average charge for each express shipment in the U.S. during that year was \$1.50 and the average tax on each shipment was 8¢. The elimination of the tax will virtually amount to a reduction in express charges of a little over 5%, which should have a tendency to stimulate express business. The elimination of the tax will relieve the American Railway Express Co. from an immense amount of labor which has been involved in calculating, way-billing, accounting, and checking on account of the tax, and will have a similar effect in reducing the amount of labor in the railways' freight and passenger accounting departments.

A Newfoundland Industrial Development Proposal.

An extensive plan for the development of the natural resources of the Humber River valley of Newfoundland has been arranged between the Reid Newfoundland Co. and Sir C. G. Armstrong, Whitworth & Co., Newcastle-on-Tyne, Eng., by H. D. Reid, President, Reid Newfoundland Co., during his recent trip to England. He is reported to have stated on his return to St. John's, Nfld., on Dec. 14, that it is proposed to spend about \$7,000,000 during the next two years. The plans include the development of a water power at Grand Lake, estimated to produce 235,000 h.p.; the erection of a paper mill with a capacity of 1,000 tons a day; an aluminum plant; and other industrial concerns. It is estimated that permanent employment will be found for about 1,500 men, with some 2,000 men in the bush during the lumbering season.

Two of the Armstrong-Whitworth Co.'s engineers are reported to be making surveys in connection with the proposed development operations. It is stated that the Newfoundland Government will be asked to guarantee the interest on the debenture bonds and sinking fund of the development corporation.

A St. John's press report of Dec. 16 states that this Humber valley development proposal is evidently another name for the corporation intended to be created under the Newfoundland Products Corporation Act of 1915, which confirmed an agreement signed by Hon. R. Bennett, Colonial Secretary for the Newfoundland Government, and by H. D. Reid and R. G. Reid, directors on behalf of the Newfoundland Products Corporation. The agreement grants the company land and other rights on the east coast of Newfoundland, in the Humber River area, and in Humber River valley, with numerous privileges, upon condition that \$15,000,000 was to be expended within five years, and an additional \$5,000,000 within a further five years. It is stated that beyond some surveys nothing has been done.

Proposed Electrification of Timiskaming & Northern Ontario Railway.

In connection with the proposals to electrify the T. & N.O. Ry. and its branches, either as a whole or in part, the T. & N.O.R. Commission has authorized S. B. Clement, Chief Engineer, and J. G. Kerry, Consulting Engineer, to report as to the power possibilities along the route, the power requirements for operation, and the general feasibility of electrification. They are authorized to utilize the services of A. L. Mudge, electrical engineer, and A. G. McMaster, hydraulic engineer, in preparing the report, which is to be ready about the end of March.

There are some very extensive water power on the Abitibi River, which can be reached for development with the completion of the extension of the T. & N.O. Ry. from Cochrane for 70 miles northwesterly, for which tenders have been asked. It is estimated that approximately 300,000 h.p. can be developed at two of the falls alone.

Russian Railway Material at Coquitlam, B.C.—A Vancouver press dispatch says:—"Forty thousand tons of railway material are to be sold by the British War Munitions Board to Russia. Practically all of this equipment is at Port Coquitlam, and a small army of men has been engaged for several months repairing minor defects resulting by long exposure to rainy weather, as well as painting and greasing preparatory to moving the immense bulk. Included in the lot are 4,000 box cars, of a broad gauge type, not suitable for the railways of this continent. The material will be shipped as soon as satisfactory financial arrangements can be made." We are advised that the matter is in the hands of the British War Mission's Disposal and Liquidation Commission, New York, N.Y., and that the material consists of approximately 4,000 Russian box cars of 1,200 pond capacity and 5 ft. gauge, which were bought by the Committee of Russian Ways and Means during the war from Canadian Car & Foundry Co., and Eastern Car Co., and paid for by British credit.

Winnipeg Traffic Club.—The following have been elected directors of the Winnipeg Traffic Club:—C. A. Fullen, A. J. Barber, H. A. Stinson, R. H. Smith, R. M. Millan, M. Wood, H. C. Hodgson, A. N. Nicolson, and C. S. Oswald.

Canadian National Railways Construction, Betterments, Etc.

Atlantic Ports Live Stock Shipping Facilities.—We are officially advised that the C.N.R. has enlarged its live stock shipping facilities at Richmond, Halifax, N.S., to accommodate 280 head, instead of 140 head as formerly. The Dominion Public Works Department is fitting up shed 15 D. at West St. John, N.B., with additional facilities for handling live stock, to be used jointly by the Canadian National and the Canadian Pacific Rys.

Telephone Dispatching.—The installing of a telephone dispatching system on the Maritime Division is being extended from Newcastle to Campbellton, N.B., 106.9 miles, and we were officially advised that it was expected to have it completed by Dec. 31, 1920. With the completion of the work the following sections of the Maritime District will be equipped for telephonic operation:—Moncton St. John, N.S., 89.03 miles; Moncton to Truro, 124.8 miles; Truro to Halifax, N.S., 64.4 miles; Moncton to Campbellton, 186 miles, a total of 464.23 miles.

East Burrill Viaduct.—We are officially advised that the steel viaduct on the East Burrill deviation, between Glenaida and St. Boniface, mile 87.6 to 91.6, St.

ture was manufacturer and erected by the M. Gregor, McIntyre Co., Toronto.

Canadian Northern-Grand Trunk Pacific Track Connections.—The Board of Railway Commissioners has authorized the connection of the Canadian Northern Ry. tracks with those of the Grand Trunk Pacific Ry. at the following points: mile 5.40 on the Clark Subdivision, mile 3.83 on Riverhurst Subdivision, near Regina, Sask.; mile 24.39 on the Brazeau Subdivision, and mile 79.06 on the Three Hills Subdivision, near Alix, Alta.; mile 20.98 on the Brazeau Subdivision, and mile 76.97 on the Three Hills Subdivision, near Alix, Alta.; the Drumheller branch with the Three Hills Subdivision at mile 197.13; in n.w. ¼ Sec. 13, Tp. 53, Range 24, west 4th Meridian, Vegreville Subdivision.

A press report states that it was expected to complete a track connection between the Canadian Northern Ry. and the Grand Trunk Pacific Ry. near Barlow, Alta., Dec. 15, and that all the G.T.P.R. freight and passenger trains will be run into the Canadian National Rys. yards, while the C.N.R.'s local freight shed will be closed, and all local freight

house to be built on the wharf completed recently at Prince Rupert, B.C., for which a contract has been let to J. H. Simmons. Winnipeg, is to be of timber construction, so called "semi-fireproof," but will have full fire protection and a complete sprinkler system. It will be 146 ft. wide by 820 ft. long, the wharf being 173 x 861 ft. The warehouse will be capable of containing 350,000 cases of salmon, or 22,000 tons of merchandise. Its estimated cost is about \$230,000, including sprinkler system, but exclusive of equipment.

Self Propelled Cars on Canadian National Railway.

The storage battery car, fully described and illustrated in previous issues of Canadian Railway and Marine World, is still operating between Bathurst and Campbellton, 62.96 miles, on the Bathurst Subdivision, Campbellton Division, Maritime District, having been fitted for winter service at the C.N.R. Moncton shops, as mentioned in our December issue. This car, which was at first furnished by the Railway Storage Battery Car Co., New York, for trial purposes, has now been bought by the C.N.R. The gasoline motor car operated between Brockville and Westport, 44.4 miles, on the Brockville Subdivision, Ottawa Division, Ontario District, which was described in Canadian Railway and Marine World for Nov. and Dec. 1921, which was furnished by Ledoux, Jennings, Ltd., Montreal, for trial purposes, has been bought by the C.N.R. In the latter part of December it was shopped for a general overhaul, on the completion of which it will be returned to service on the same run. It has consistently made an operating profit and its patrons have expressed satisfaction with the service given. To replace this car while being overhauled, the gasoline motor car operated during the summer between Cross Creek and Stanley, 5.74 miles on the Nashwaak and Stanley Subdivisions, Edmundston Division, Maritime District, and which was described in our Dec. 1921 issue, was placed on the run between Brockville and Westport, but owing to its limited capacity steam train service has also been restored temporarily.

The C.N.R. management is considering the purchase of a gasoline motor car of improved design, to be placed on the Brockville-Westport run with the Ledoux, Jennings car when the latter is returned to service.

Exchange and Surcharge on International Freight and Passenger Business.—In accordance with the Board of Railway Commissioners' order of Jan. 14, 1921, the rate of exchange in connection with shipments of freight between points in Canada and the United States, from Dec. 1 to 14, 1921, was 5%, and from Dec. 15 to 31 it was 8½%. The surcharge on this traffic from Dec. 1 to 14 was 6%, and from Dec. 15 to 31 it was 5%. The rate of surcharge on international passenger business from Dec. 1 to 31 was based on 9% exchange.

Freight Rates Equalization.—The Board of Railway Commissioners will sit at Halifax, N.S., Jan. 17; St. John, N.B., Jan. 19; and Ottawa, Feb. 15, in connection with the general investigation re equalization of eastern and western freight rates. Final argument will be heard at the Ottawa sitting.

East Burrill Viaduct, Canadian National Railways.

Lawrence Subdivision, Que., has been completed and traffic is being operated over it. The viaduct is at mile 89.7 west of Quebec, near St. Boniface, and crosses the Lavergne gully, through which the East Burrill Creek flows. It is a single track viaduct, with steel towers, on concrete pedestals and abutments. The track is on a 2 degree curve throughout the length of the bridge, the super elevation of 1½ in. being taken up by tilting the spans. The dimensions of the structure, which is illustrated on this page, are:—Length 645 ft.; greatest height, 80 ft.; centers of grades, 9 ft.; spans, 2 end spans of 60 ft. each, 4 intermediate spans of 60 ft. each, 1 intermediate span of 85 ft., and 4 tower spans of 40 ft. each; these spans are supported on 5 braced steel towers and 1 rocker bent tower. The substructure consists of 22 concrete pedestals averaging 10 ft. high; batwing abutment at east end 26 ft. high, and temporary timber abutment at west end resting on rock fill, to be replaced by permanent concrete abutment when the fill settles. The contract for the substructure was let to the late Angus Sinclair, Toronto, who sublet to Campbell & Latimore, Toronto, and the steel superstructure

will be handled at the G.T.P.Ry. freight shed.

Sasatchewan Lines Opened.—The Board of Railway Commissioners has authorized the opening for traffic of the extension of the Thunderhill Branch from Peaceville, mile 72.6, to Lintlaw, mile 100.3; and the extension of the Turtleford Branch from Turtleford, mile 57, to St. Walburg, mile 77.3. The last named line starts from North Battleford, Sask., and was projected to reach Edmonton, Alta. The extension now opened takes the line to St. Walburg, about 80 miles from St. Paul de Metis, to which point a line is in operation from Edmonton, 127 miles.

Alberta Line Opened.—The Board of Railway Commissioners has authorized the opening for traffic of the extension of the Onoway Subdivision, from Robinsons, mile 33.8 to Whytecourt, mile 72.3.

Cowichan Extension Proposed.—The Premier of British Columbia is reported to have stated that he had received information that a 10 mile extension of the Canadian National Rys. into the Cowichan District of Vancouver Island was proposed. (Dec. 1921, p. 644.)

Prince Rupert Warehouse.—The ware-

Mainly About Railway People Throughout Canada.

E. W. Beatty, K.C., President, C.P.R., has been elected President of the Boys' Farming and Training School, Shawbridge, Que.

G. T. Blackstock, K.C., who died at Toronto, Dec. 27, was employed as counsel for the C.P.R. in a number of cases, including the arbitration between the Dominion Government and the company respecting the class of construction of part of the British Columbia section, in the eighties.

Bradford Earl Chace, whose appointment as City Ticket Agent, C.P.R., Nelson, B.C., was announced in our last issue, was born at New York, N.Y., Feb. 29, 1884, and entered C.P.R. service June 1, 1904, since when he has been, to Sept. 14, 1904, mail clerk, Operating Department, Vancouver, B.C.; Sept. 14, 1904 to March 24, 1906, clerk, Passenger Department, Vancouver, B.C.; Oct. 23, 1906 to Jan. 1, 1907, clerk, Passenger Department, Vancouver, B.C.; Jan. 1, 1907 to July 1, 1911, ticket clerk, Vancouver, B.C.; July 1, 1911 to March 1, 1913, cashier and ticket clerk, Vancouver, B.C.; March 1, 1913 to Sept. 9, 1916, wharf ticket agent, Vancouver, B.C.; Sept. 9, 1916 to Dec. 11, 1918, City Ticket Agent, Portland, Ore.; Dec. 11, 1918 to Nov. 23, 1921, chief rate clerk, Passenger Department, Vancouver, B.C.

W. C. Bowles, who has been appointed Assistant Freight Traffic Manager, Eastern Lines, C.P.R., Montreal, was born there, June 3, 1875, and entered C.P.R. service in 1891, since when he has been, to Sept. 1, 1897, in various positions in District Freight Agent's office, Montreal, and General Agent's office, Chicago, Ill.; Sept. 1, 1897 to Apr. 1, 1903 rate clerk, Traffic Manager's office, Winnipeg; Apr. 1, 1903 to Mar. 1905, Assistant General Freight Agent, Calgary, Alta.; Mar. 1905 to Oct. 1907, Assistant General Freight Agent, Vancouver, B.C.; Oct. 1907 to Mar. 1908, General Freight Agent, Nelson, B.C.; Mar. 1908 to June 5, 1909, General Freight Agent, Winnipeg; June 5, 1909 to June 1911, General Freight Agent, Pacific Division, Vancouver, B.C.; June 1911 to Dec. 8, 1921, General Freight Agent, Western Lines, Winnipeg.

Aston Burrows, Proprietor, Canadian Railway and Marine World, has been elected chairman of the Canadian National Newspapers and Periodical Association's postal and parliamentary committee.

F. F. Busted, formerly Assistant Engineer, C. P. R., Vancouver, B.C., who died there recently, left an estate of \$40,800. He left a life interest in the whole to his widow, and on her death the property is to be equally divided between a son and a daughter.

Henry Coffin, a retired foreman of the Prince Edward Island Ry. shops at Charlottetown, died recently, aged 84, at the home of his son, L. H. Coffin, Manager, Canadian Bank of Commerce, Montagu, P.E.I.

George Montague Cordingley, whose appointment as Chief Dispatcher, C.P.R., Saskatoon, Sask., was announced in our last issue was born at Montreal, Feb. 13, 1886 and entered C.P.R. service Apr. 6, 1900, since when he has been to Oct. 2, 1902, call boy and stenographer, dispatcher's office, Winnipeg; Oct. 2, to Oct. 28, 1902, operator, Larivière, Jan.; Oct. 28, 1902

to Aug. 27, 1907, operator, Winnipeg Terminals; Aug. 27, 1907 to May 1, 1909, relieving dispatcher, Winnipeg; May 1, 1909 to Nov. 14, 1921, dispatcher and acting Chief Dispatcher, Saskatoon, Sask.

R. Creelman, Assistant Passenger Traffic Manager, Canadian National Ry., Winnipeg, attended the Transcontinental Passenger Traffic Officials Association's annual meetings in Chicago, Ill., Dec. 7.

Colonel J. S. Dennis, C.M.G., Chief Commissioner of Colonization and Development, C.P.R., Montreal, and Mrs. Dennis, sailed for England on Dec. 13. A London, Eng., press dispatch of Dec. 23 said that Col. Dennis had arrived there to negotiate with the British authorities in regard to emigration to Canada, and had issued a statement to the British press in that connection.

J. M. R. Fairbairn, Chief Engineer, C.P.R., Montreal, and President, Engineering Institute of Canada, addressed the Institute's Ottawa branch at luncheon on Dec. 8.

Thos. C. Irving, who was General Manager of Bradstreet's, for Western Canada, until he retired in 1919, and who died at Toronto, Dec. 6, aged 72, was well known among railway men throughout Canada. He was an intimate friend of the late Sir William Whyte of the C.P.R., with whom he made many trips over the company's Western Lines.

Charles Ewart Jenkins, whose appointment as London Booking Agent, C.P.R., London, Eng., was announced in a recent issue, was born there Aug. 22, 1881, and entered railway service in Jan. 1895, since when he has been, to Sept. 1902, junior clerk, Goods Department, London & South Western Ry., London, Eng.; Oct. 1902 to March 1903, freight clerk, Natal Government Ry., Durban, South Africa; March 1903 to Dec. 1906, tourist and booking clerk, Thos. Cook & Sons, tourist agents, Durban, South Africa; Feb. to Dec. 1907, counter clerk, C.P.R., London, Eng.; Jan. 1908 to Aug. 1909, passenger clerk, C.P.R., Manchester, Eng.; Sept. 1909 to Jan. 1910, counter clerk, C.P.R., London, Eng.; Feb. 1910 to March 1911, passenger clerk, C.P.R., Ipswich, Eng.; Apr. to Dec. 1911, Travelling Passenger Agent, C.P.R., London, Eng.; Dec. 1911 to Dec. 1915, chief clerk to General Passenger Agent, C.P.R., London, Eng.; Jan. 1916 to July 1919, various seasonal duties for General Passenger Agent, and European General Manager, C.P.R., London, Eng.; July 1919 to Sept. 1921, chief booking clerk, C.P.R., London, Eng.

C. E. Jenney, District Passenger Agent, Canadian National-Grand Trunk Pacific Ry. and Grand Trunk Pacific Coast Steamship Co., Vancouver, B.C., was presented with a gold watch by his associates, Dec. 2, on leaving Vancouver for New York, where he has been appointed General Agent, Passenger Department, Canadian National-Grand Trunk Ry.

W. B. Lanigan, Freight Traffic Manager, C.P.R., Montreal, visited Winnipeg in Dec. 1922 on business.

R. C. W. Lett, General Agent, Industrial and Resources Department, Canadian National Ry., Edmonton, Alta., returned there Dec. 9, after attending the International Live Stock Show at Chicago, Ill.

J. A. McLeod, Assistant Chief of In-

vestigation Department, C.P.R., Winnipeg, died at Rochester, Minn., Nov. 27.

W. G. McPherson, Division Master Mechanic, Regina Division, Saskatchewan District, C.P.R., Regina, was entertained at dinner there recently, and presented with a travelling bag and two easy chairs by the local staff, on his removal to Moose Jaw, Sask., where he has been appointed Division Master Mechanic, Moose Jaw Division, Saskatchewan District.

Lord Mount Stephen, first President of the C.P.R., whose death was mentioned in our last issue, has, according to London, Eng., press dispatches, left the residue of his estate to the King Edward Hospital Fund. The amount is not stated, but it is said that with the exception of a few small legacies it represents the total of the estate. His previous gifts to the hospital fund approximated \$2,500,000.

Lieut.-Col. R. L. Nelles, formerly Freight Agent, G.T.R., Toronto, died at Toronto, Dec. 27. He was born Nov. 4, 1842, and entered G.T.R. service in Oct. 1862, since when he was, to 1867, clerk, Caladenia, Ont.; 1867 to 1870, agent, Canfield, Ont.; 1870 to 1881, agent, Caladenia, Ont.; 1881 to 1896, agent, Brantford, Ont.; 1896 to July 1, 1905, agent, Parkdale, Ont.; July 1, 1905 to Nov. 1, 1909, when he retired on superannuation, freight agent, Toronto. He was Lieutenant-Colonel of the Haldimand Rifles.

Senator Frederic Nicholls, Chairman of the Board, Canadian General Electric Co., who was the first President of the Canadian Northern Ry. Co. and a director of it until its lines were transferred to the Dominion Government in Sept. 1918, and was Vice President, Toronto Ry. Co., when he died at Toronto, on Oct. 25, 1921 left an estate valued at \$461,592.72, of which \$344,551.90 was life insurance. His will directs the creation of a trust fund of \$300,000, the income from which is to be divided equally among his two daughters and four sons, until his youngest living grandchild becomes 21 years old, when the fund is to be divided among his children. Any amount which the estate realizes over \$300,000 is to be divided among his six children, as soon as it can be done conveniently.

A. B. Ogilvie, Road Foreman of Locomotives, G.T.R., Ottawa, Ont., died there, Dec. 8, aged 46. He was formerly in Canada Atlantic Ry. service and remained with the G.T.R. when it took over the C. A. R. in 1905. He was a son of Jas. Ogilvie, Assistant Chief Operating Officer, Board of Railway Commissioners, a brother of C. E. Ogilvie, General Foreman, Ottawa & New York Ry., and a nephew of W. D. Robb, Vice President, Transportation, Construction and Maintenance, G.T.R.

Geo. A. Oxnard, who died at Guelph, Ont., Nov. 21, 1921, aged 87, and who was born at Portland, Me., Jan. 31, 1833, entered G.T.R. service in 1853 at Island Pond, Vt., and was transferred to various positions as follows:—1855, Detroit, Mich.; 1858, Guelph, Ont.; 1859, London, Ont. In 1860 he returned to Guelph, and was city ticket agent until retiring in 1901.

C. W. Parker, Signal Engineer, C.P.R., spoke at the electrical co-operative luncheon in Montreal, Nov. 30, on signalling.

F. H. Hippen, K.C., formerly General Counsel, Canadian Northern Ry., who was one of the G.T.R.'s counsel in the recent arbitration as to the value of its stock and who has also been one of the Toronto Ry.'s counsel in its arbitration with the City of Toronto, has broken down from overwork and has had to leave Toronto for treatment.

J. M. Rapelle, who has been appointed Vice President in charge of operating and maintenance, Northern Pacific Ry., St. Paul, Minn., was born at Chippewa, Ont., Jan. 22, 1857, entered railway service in Aug. 1879, and for some time was brakeman on the G.T.R., and later entered Atheson, Topeka & Santa Fe Ry. service. From May 1882 to Nov. 1887, he was a conductor on the C.P.R.; Nov. 1887 to 1898, conductor, Northern Pacific Ry.; 1898 to Apr. 1905, Trainmaster, conductor and again Trainmaster, same road; Apr. 1905 to July 1908, Superintendent, Yellowstone Division, same road; July 1908 to May 1910, Superintendent, Rocky Mountain Division, same road; May 1910 to 1912, Superintendent, Idaho Division, same road; 1912 to May 1914, General Superintendent, Mandan, N.D., to Paradise, Mont., same road; May 1914 he was appointed Assistant General Manager, and shortly after, General Manager, same road, which position he held at the date of his present appointment.

H. T. Rawlings, formerly Lake Forwarding Agent, Canadian National Ry., Cleveland, Ohio, and for some time past Vice President and director, A. F. Baier Coal Co., Cleveland, has resigned the latter position to become Vice President and director, Schroeder-Kelly Coal Co., Cleveland.

H. D. Reid, President, Reid Newfoundland Co., returned to St. John's, Nfld., Dec. 12, after spending some three months in England.

Senator J. D. Reid, ex-Minister of Railways and Canals, and Mr. Reid, left Ottawa, Dec. 8, to spend the winter in England and the south of France.

James William Reid, whose appointment as Inspector of Railway Safety Appliances, Board of Railway Commissioners, Calgary, Alta., was announced in our last issue, was born at Harvey, N.B., Nov. 12, 1872, and entered transportation service in 1910, and shortly after entered C.P.R. service, receiving training in several departments, in conjunction with a course in railway engineering at McGill University, graduating in 1914, after which he remained in C.P.R. service in various capacities. During the war he served overseas with the Royal Air Force.

W. C. Riddell, formerly Advertising Agent, Grand Trunk Pacific Ry., Winnipeg, was presented with a case of pipes Dec. 14, by his associates at Winnipeg, on leaving for Toronto, where he has been transferred to the Canadian National Ry. staff. He had been Grand Trunk Pacific Ry. Advertising Agent at Winnipeg since Aug. 1918, having been transferred from the G.T.R., Montreal.

H. R. Safford, who has been appointed Vice President, Chicago, Burlington & Quincy Rd., Chicago, Ill., was from Oct. 1911 to Sept. 1918, Chief Engineer, G.T.R., Montreal. From Sept. 1918 to March 1, 1920, he has Engineering Assistant, Central Western Region, United States Railroad Administration, Chicago, and since then Assistant to President, Chicago, Burlington & Quincy Rd., Chicago.

Thomas Steele, who died at Ottawa,

Dec. 11, aged 68, was one of the early employees of the Canada Atlantic Railway, now part of the G.T.R.

P. A. Stewart, who died at Vancouver, B.C., Nov. 27, aged 63, was engaged on the C.P.R. in its early construction days under H. J. Cambie and other engineers. He was born in Ireland, came to Canada in the early '80s and served in the Riel Rebellion and in the South African war.

Mrs. M. F. Tompkins, wife of the General Freight Agent, Canadian National Ry., Montreal, N.B., died there at the end of November.

Railway Earnings.

Canadian Government Railways.

Following are total operating revenues, total operating expenses, and net operating deficits, for the Intercolonial, Prince Edward Island, National Transcontinental, and local lines in the Maritime Provinces and Quebec which have been acquired by the Dominion Government and added to the Canadian Government Ry., as far as they are available to date.

	Revenue	Expenses	Net deficits
Jan. 1921	\$3,527,304	\$4,347,728	\$820,423
Feb.	3,526,658	4,367,491	840,833
Mar.	3,595,144	4,538,904	943,761
Apr.	3,381,973	4,915,995	1,534,022
May	2,914,973	3,728,949	813,976
June	2,853,986	3,811,205	957,219
July	2,988,552	3,547,379	558,827
Aug.	3,366,391	3,436,475	70,084
Sept.	3,155,260	3,774,283	618,023
Oct.	3,312,673	3,553,685	241,012

\$3,460,863 \$3,902,094 \$551,231 \$7,152,584
Decr. \$1,493,325 3,153,678 1,660,353

*Net revenue.

Canadian National Railways.

Following are approximate monthly gross earnings for the Canadian Northern Ry. System and Canadian Government Ry., the latter including the Intercolonial Ry., Prince Edward Island National Transcontinental Ry., and various local lines which have been acquired by the Dominion Government in the Maritime Provinces and in Quebec, enroute.

	1921	1920
January	\$8,781,839	\$7,267,562
February	8,150,511	6,511,609
March	9,497,740	7,761,282
April	8,164,955	7,937,478
May	7,844,171	8,306,850
June	7,885,548	7,776,339
July	8,837,354	9,063,674
August	8,881,530	9,582,999
September	10,548,389	9,896,681
October	11,691,881	12,351,167
November	10,742,835	12,426,824

\$100,986,506 \$98,885,159

Canadian Northern Railway System.

Following are approximate monthly gross earnings for the Canadian Northern Railway System:

	1921	1920
January	\$5,094,100	\$4,290,700
February	4,940,000	3,862,300
March	6,119,700	4,487,700
April	4,978,500	4,732,823
May	4,742,200	4,863,500
June	4,606,800	4,437,600
July	5,506,900	5,168,500
August	5,708,600	5,899,700
September	7,065,700	6,437,600
October	7,988,000	7,620,000
November	6,978,900	7,602,000

\$63,620,930 \$59,102,823

Following are total operating revenues, total operating expenses, and net operating deficits, for 1921 and 1920, as far as they are available, to date.

	1921	1920	1921	1920

Incr. 1,754,196

Decr. \$13,760,784 \$15,514,980

Approximate earnings for November, \$18,507,000, against \$22,521,000 for Nov. 1920.

The discrepancies between the above figures and those issued by the Dominion Bureau of Statistics are owing to the fact that the Bureau is, at its request, furnished with figures by the C.P.R., including the Esquimalt & Nanaimo Ry., and the Montreal & Atlantic Ry. earnings, as well as the C.P.R. ones. The figures supplied the Bureau are exclusive of certain local lines, which are included in figures supplied Canadian Railway and Marine World.

Grand Trunk Railway.

Following are total operating revenue and total operating expenses for lines in Canada for 1921, as compared with 1920, with increases or decreases for 1921 and 1920, with increases or decreases in totals, as compared with those for 1920, as far as they are available to date:—

	Gross	Expenses	1921	1920
Jan.	\$6,187,359	\$5,856,390	\$699,301	\$624,130*
Feb.	5,485,132	5,489,093	25,933	699,577
Mar.	6,271,921	5,584,721	687,200	398,839

Avoidable Waste in Locomotive Operation as Affected by Design.

A paper with the above title, read by Jas. Partington, Estimating Engineer, American Locomotive Co., before the American Society of Mechanical Engineers, Railroad Division, was published in *Canadian Railway and Marine World* for Dec. 1921. The reading of the paper was followed by considerable discussion, in which it was made abundantly clear that there is still great opportunity for improving the efficiency and economy of the steam locomotive.

F. H. C. Coppus contended that the efficiency of steam locomotives can be so developed that electrification of railways will be long deferred; by the use of mechanically induced front end draft; by condensing the steam exhausted from the cylinders and carrying the condensate back to the tender; by forcing the water from the tender into the boiler by a pump, passing it through a waste gas and waste steam heater, and by using forced draft under the grates, in the ash pan. He pointed out that mechanical drafting of a locomotive would allow of the reduction of the back pressure to 4 lb., which would mean an increased h.p. of 24%, or a fuel saving of 20%. The hot water from the tender pumped through a waste steam heater would enter the waste gas heater at 220 deg. F., and the waste gas heater would raise the temperature to 300 deg., which would introduce a further fuel saving of 20%. In his opinion, forced draft in the ash pan, in conjunction with mechanical front end draft, would give rise to an even draft on the fire, which would greatly cut down the fuel loss, stop the inrush of cold air every time the fire door is opened, and greatly increase efficiency of combustion. He calculated that a further 20% saving in fuel would result from this cause, and deducting the fuel required for the steam used in operating pump, blowers, etc., he arrived at the conclusion that the saving would be about 45%, and stated that he looked forward with confidence to the time when steam locomotives will be operating at half the present cost.

In connection with maximum steam requirements of the cylinders, W. F. Kiesel, Jr., Mechanical Engineer, Pennsylvania System, pointed out that the American Locomotive Co.'s formula for superheated locomotives is $H.P. = .0229 P A$, where P is boiler pressure and A is cylinder area. He said that this formula is satisfactory in comparing locomotives which have the same cutoff in full gear, but that in comparing a locomotive with a 90% cutoff, with one with a maximum cutoff of 50%, such as the Pennsylvania 11s decapods, the formula falls down badly. A test of this decapod locomotive, details of which were given in *Canadian Railway and Marine World* for Dec. 1921, p. 654, showed that in full gear at low speed, the steam per indicated h.p. hour was 3% less than the steam rate for a locomotive with 40% cutoff, while under the average conditions of service the saving was at least 15%. The table referred to gives the steam rate in pounds per h.p. hour for the Pennsylvania decapod as 20.8, but with a saving of 15%, this rate would be 17.68, which compares favorably with test results. The best test result indicated a steam rate of 14.9 lb. per h.p. hour. He also pointed out that the American Locomotive Co.'s formula, as given above, has its value as

a basis of comparison further affected by relative freedom of draft, and by the influence of large combustion chambers.

L. J. L. Nicholson made plain the possibilities of the thermic syphon as an efficiency and economy factor. This device is an inverted triangular water leg, the plane of which is vertical, and with a direct connection between the throat and barrel of the boiler and the space above the crown sheet. Two, or three, syphons in a firebox support the brick arch, and by their use a larger firebox heating surface is available, and a desirable circulation is set up in the boiler by water being drawn from the throat and barrel, through the syphons and into the space over the crown sheet. If two syphons were applied to locomotive 50,000 specifications of which were also given in *Canadian Railway and Marine World* for Dec. 1921, the effect would be to add 62 sq. ft. to the firebox heating surface, equivalent to the addition of 164 boiler h.p. to the capacity of the locomotive, which figure would be further increased by the desirable circulation set up. The boiler h.p. of locomotive 50,000 was 92% of the cylinder h.p.; the addition of syphons would increase the boiler h.p. to 100% of the cylinder h.p.; allowing for the weight of the syphons, the weight of the locomotive could be reduced to 113 lb. per boiler h.p. as compared with 119.6 lb. without the syphons.

It was further shown that, in the case of the Mountain type locomotives built for the Chicago, Rock Island & Pacific Ry., by the American Locomotive Co., which are equipped with three syphons each, if they were not equipped with syphons, the boiler h.p. would be reduced from 2,855 to 2,550. At present, these locomotives weigh 129.3 lb. per boiler h.p.; without syphons, their weight would be 144.7 lb. per boiler h.p. Calculations demonstrate that if these mountain type locomotives had been equipped with 100% boilers without syphons, the first cost due to increased weight would have been \$7,410 greater and the locomotive would have been 39,000 lb. heavier.

The application of the new flow engine and the Diesel engine to locomotive practice was also discussed.

Grain in Elevators.

Returns for the week ended Dec. 16, 1921, to the Dominion Bureau of Statistics, Internal Trade Branch, show that the quantity of grain in store at the various elevators throughout the Dominion increased by 7,002,636, as follows:—wheat 3,797,663 bush., oats 2,517,064 bush., barley 431,359 bush., flax 36,788 bush., and rye 219,762 bush. Receipts of wheat at country elevators were 8,992,623 bush., and shipments 9,124,307 bush. The interior elevators showed increases in wheat, oats and flax, of 243,972, 95,406 and 93 bush. respectively, and barley showed a decrease of 4,333 bush. In the public and private elevators at Port Williams and Port Arthur, increases were shown in all grains,—wheat 234,587 bush., oats 749,145 bush., barley 61,552 bush., flax 56,003 bush., and rye 39,790 bush. The receipts of all grains were 8,916,688 bush., and the shipments by ship were 6,789,355 bush., and by rail 986,256 bush. In the private terminal elevators at Win-

nipeg increases were shown in wheat and oats of 191,355 and 109 bush. respectively, and there was a decrease in rye of 516 bush.

In the eastern public elevators increases were shown in wheat of 289,385 bush., barley 167,695 bush., rye 7,054 bush., and decreases in oats of 407,228 bush. and flax 71,035 bush. The receipts of wheat were 1,283,153 bush. by ships and 881,470 bush. by rail, while the shipments were 493,220 bush. by ships and 1,382,020 by rail.

There were 3,861,482 bush. of U.S. grain in store at eastern public elevators, compared with 1,763,367 for the same period in 1920, the bulk of the former being made up of wheat 865,397 bush., and corn 2,067,230 bush.

The movement of grain by water from Sept. 1 to the close of navigation in 1921 shows 57,942,423 bush. to lower lake ports, 1,134,205 bush. to Montreal, a total of 59,076,628 bush.; and 74,848,806 bush. to Buffalo, 4,856,252 bush. to other U.S. lake ports, a total of 79,705,058 bush., a grand total of 138,781,686 bush., compared with 138,136,511 bush. to lower lake ports, 1,366,482 bush. to Montreal, a total of 39,502,993 bush.; 53,281,890 bush. to Buffalo, 9,088,170 bush. to other U.S. lake ports, a total of 62,370,060 bush., and a grand total of 101,873,053 bush. for the same period 1920.

Intermediate or Ultimate Carrier Not Responsible for Loss.

M. de Petro, of Naples, Italy, shipped a quantity of goods to Parrin Freres, Montreal, by an ocean steamship leaving Naples for New York, where they were delivered to the New York Central Rd. for transportation to Montreal. On the point of the consignment reaching the consignee it was found that a quantity of gloves were missing. An action was brought in the Quebec Superior Court against the New York Central Rd. to recover the cost of the goods, and the court decided against the company. An appeal was taken and judgment was given Dec. 14, Justices Tellier and Bernier, after reviewing the facts and the law, holding that the railway company having received the case of goods in apparently good order in New York, and delivered it to the Customs authorities in Montreal, also in apparently good order, had discharged all its obligations. A railway company is not responsible for pilferages unless it is proved that they took place while the goods were in the railway's possession. The intermediate carrier has not the right to open cases of goods in transit in order to verify the contents if the case is in apparent good order. There is no special provision in the Quebec Code establishing the responsibility of the second or last carrier, and all that a second carrier can do in a case like this is to give a receipt for goods as being in good order, without committing itself to responsibility for the contents. The appeal was granted, and the action dismissed with costs, Mr. Justice Greenshield dissenting.

The Edmonton, Dunvegan & British Columbia Ry. began operating a way freight service between Edmonton and Westlock, 52 miles, on Dec. 5. The train leaves Edmonton Mondays, Wednesdays and Fridays, and leaves Westlock on the return trip Tuesdays, Thursdays and Saturdays.

Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,
Marine, Shipbuilding, and Railway, Harbor and
Coastal and Commercial Interests.
Official Organ of various Canadian Transportation
Associations.

Published on the first of each month at
70 Bond Street, Toronto, Canada.

ACTION BURROWS, Proprietor and Editor.

Grand Trunk Shareholders Granted Right to Appeal to British Privy Council.

Counsel for G.T.R. shareholders ap-
plied to the British Privy Council's Judi-
cial Committee in London, Eng., Dec. 21,
for leave to appeal to the Privy Council
against the decision of Sir Walter Cas-
sells, President of the Exchequer Court,
and Sir Thos. White, representing the
Dominion Government, in the arbitration
to determine the value of certain G.T.R.
preference and common stocks taken over
by the Dominion Government, which de-
clared those stocks to be of no value, a
decision from which Hon. W. H. Taft, the
other arbitrator, representing the G.T.R.,
dissented. The decision was a narrow
Lord Chancellor Birkenhead and Lords
Haldane and Cave.

Sir John Simon, for the G.T.R. share-
holders, directed his argument mainly to
the rejection by Sir Walter Cassells and
Sir Thomas White of evidence as to the
physical value of the G.T.R. as legally
inadvisable. This, he submitted, had
brought the matter within the scope of the
Privy Council's authority. The Lord Chan-
cellor remarked that Sir John Simon's task
was to satisfy their lordships that there
was a question of law at stake of a sub-
stantial character and fairly disputable,
and added that subject to anything which
W. N. Tilley, K.C., counsel for the Do-
minion Government, might say, the peti-
tioners seemed to have a point of sub-
stance.

Sir John Simon contended that the Cana-
dian legislation appointing the board
of arbitration directly specified that an
appeal should lie to the Privy Council.
It was impossible, however, for the Cana-
dian statute to place upon their lord-
ships a direct obligation to hear the ap-
peal. Nevertheless he was not asking
leave for such appeal as a special favor,
but that it should be granted in accord-
ance with special Canadian legislation.

W. N. Tilley, K.C., in opposing the ap-
plication, submitted that the matter was
not a question of law, but the Lord Chan-
cellor reminded him that the members of
the board of arbitration had distinctly
declared it to be an important question
of law. Mr. Tilley said that the arbitra-
tion chairman did not see how it could
bear on the question which they had to
decide concerning the value of the G.T.R.
stock, having regard to the earning
power, present and future, of the line.

Lord Haldane said it struck him as a
very considerable question of legal prin-
ciple.

The Lord Chancellor remarked to Mr.
Tilley that the latter was in difficulty, be-
cause though the chairman of the com-
mittee was in his favor, he also said that
the matter was of legal importance.

Lord Haldane said the term "stock they
held" was just a short way of saying
assets they owned.

The Lord Chancellor wanted to know
what interpretation on the value of the
railway would be submitted supposing,
for instance, it was swept away by devastation
and had to be replaced, and added:
"I most carefully abstain from express-
ing an opinion on these matters, but is
not any opposition view plainly a disputa-
ble one."

Lord Haldane remarked that the Do-
minion Parliament might have said that
this was purely a domestic matter, but
taking a wide-minded view their lord-
ships said if there is a difference of opin-

ion they wished the matter to go before
the King in council. "You have had great
experience, Mr. Tilley," he said. "You
must see how clearly the Dominion Par-
liament has presented this matter before
ourselves. Nobody knows better than
you the disadvantage of arguing a case
merely on an application for leave to
appeal."

In making an order granting the share-
holders leave to appeal, the Lord Chan-
cellor said it was particularly desirable
that it should be understood that their
lordships did not express the slightest
opinion on the points brought up in the
application. Their only conclusion was
that there were matters reasonably dis-
putable which, within the plain terms of
the statute, might properly be considered
by the King in council. He expressed
the hope that the case would be ready for
presentation at the next term.

Grant Hall's Western Trip.

Grant Hall, Vice President, C.P.R.,
left Montreal at the end of November on
one of his periodical trips of inspection
over the company's western lines, and
arrived in Winnipeg, Dec. 1, accompanied
by D. C. Coleman, Vice President, West-
ern Lines, who met him at Port Arthur.
He left Winnipeg Dec. 4, arrived in Van-
couver Dec. 8, went to Victoria, Dec. 12,
returned to Vancouver Dec. 13, and went
east via the Kettle Valley Ry., Calgary,
Edmonton and Winnipeg to Montreal.

Mr. Hall is reported to have stated at
Winnipeg that he was looking into the
matter of the construction work to be
undertaken during 1922, but until the ap-
propriations were decided he could not
say what would be done. He is reported
to have said at Vancouver that one of the
most important projects in view for the
year is the erection of the additional pier
on the waterfront.

E. H. Fitzhugh vs. Central Vermont Ry. et al.

A Concord, N.H., press dispatch of
Dec. 8 stated that it had been announced
in court that a settlement had been reached
in the action brought by E. H. Fitz-
hugh, former Vice President, Central Ver-
mont Ry., and now of New London, Conn.,
against the Central Vermont Ry. Co., the
Grand Trunk Ry. Co., Sir Alfred Smith-
ers, Chairman of the G.T.R. directorate;
E. J. Chamberlin, formerly President, G.
T.R., and E. H. Smith, President, Cen-
tral Vermont Ry., to recover \$200,000
damages or alleged conspiracy to pre-
vent his obtaining further employment
as a railway man. The terms of the set-
tlement were not announced, but it is
stated that a paper was filed in the court
to the effect that no further suits can be
brought on the same charges. We are
officially advised that after the trial had
gone on for some days, the case was
settled between the parties, counsel on
both sides agreeing that the terms should
not be made public.

The Toronto Star, in publishing a press
telegram in reference to this matter
head it "An Earl's Lawsuit." It will be
news to Mr. Fitzhugh to see that he has
been raised to the British peerage.

Railway Development, Projected Lines, Surveys, Construction Betterments, Etc.

Alberta & Great Waterways Ry.—The Northern Construction Co.'s staff returned to Edmonton, Alta., at the end of Nov. 1921, having completed work on the line for the season. E. R. Jackson, Divisional Engineer, is reported to have stated that the line is now in good shape and that there should be no difficulty in carrying the heavy traffic expected during 1922. About 95% of the line was completely ballasted; the remaining 5% consisting of dry knolls which were not in such urgent need of ballasting as were the low lying sections. The spur track from the end of rail to the waterfront at the Clearwater River was completed, and clearing and other buildings were being erected. A road had been built from the rail terminus to McMurray, and a telephone line strung. (Dec. 1921, pg. 646.)

Canada & Gulf Terminal Ry.—We are officially advised that during 1921 the company built an extension of its line from Matane to Hamermill, Que., 2.4 miles.

Canadian Light Railways Construction Co. has been incorporated under the Ontario Companies Acts, with authorized capital of \$1,500,000 and office at Toronto to carry on business as public contractor, and more particularly to build and equip a light railway or railways in the unorganized Ontario districts, and to acquire any or all of the Canadian Light Ry. Construction Co.'s assets and liabilities. The provisional directors are A. W. Hunter, J. C. Thomson, W. T. Johns, solicitors; W. W. McKeown, student at law; and G. R. Sprout, accountant, all of Toronto. (Dec. 1921, pg. 646.)

Central Canada Ry.—Under the terms of an operating agreement with the Edmonton, Dunvegan & British Columbia Ry. and the Central Canada Ry., the C.P.R. undertook to build a 20 mile extension of the Central Canada Ry. from Peace River Crossing towards the Waterhole country. A contract for this work was let to W. A. Dutton, Winnipeg, and we are officially advised that the grading was completed during 1921, and that track work has to be completed before the opening of the extension for traffic, which it is expected will be in the summer.

Dominion Atlantic Ry.—We are officially advised that during 1921 the company completed a 2.5 mile extension from mile 39.77 on the Yarmouth Subdivision, near Weymouth, N.S., to the Sissiboo Pulp & Power Co.'s pulp mill.

Equimath & Nanaimo Ry.—We are officially advised that track was laid during 1921 on 7 miles of the branch lines to Great Central Lake, Vancouver Island. The total length of the branch is 10.5 miles, and the grading on it was completed in 1920. (Dec. 1920, pg. 646.)

Grand Trunk Ry.—A press report states that the piers of the new bridge across the new Welland Ship Canal at lock 25 will be built during the winter.

The company is reported to have re-laid 92 miles of its main line on the London Division, east of London, Ont., with 100 lb. rails during 1921, thus completing the relaying of the line with heavy rails between Toronto and London. The report also states that arrangements have been made for replacing the present 85 lb. rails between Hamilton and Niagara,

and between Hyde Park and Sarnia, together about 90 miles, with 100 lb. rails.

Kettle Valley Ry.—We are officially advised that track has been laid on the line extending southerly from Penticon to Dog Lake, 2.4 miles, on which the grading was completed in 1920; and that approximately five miles of grading have been completed on the 16.7 mile section of the line from the southern end of Dog Lake to the irrigated lands. The contract for the latter grading was let in October to A. E. Griffin & Co., Vancouver, B.C. (Nov. 1921, pg. 583.)

Pacific Great Eastern Ry.—The British Columbia Legislature on Dec. 1 voted \$773,884 to defray charges on capital expenditure on the P.G.E.R. to March 31, 1923.

The Premier of British Columbia in the course of a recent debate on this railway stated that the estimated damage to the line due to recent floods was \$200,000. It is the Government's intention to continue and complete the construction of the line from Quensel to Prince George, that connection may be made with the Grand Trunk Pacific Ry.

As a result of a delegation of business men waiting on him, the Premier advised the B.C. Legislature Dec. 1, that he had decided to ask D. B. Hanna, President, Canadian National Rys., and E. W. Beatty, President, C.P.R., to recommend persons competent to enquire into the whole situation as regards the P.G.E.R. and to advise the Government.

West Vancouver City Council on Nov. 29 approved of a draft agreement for taking over the section of the line from North Vancouver to Whytecliffe, 13 miles, as a municipal enterprise, subject to a vote of the ratepayers, and to legislative confirmation. (Dec., pg. 646.)

Transportation Men in the Dominion General Elections.

Hon. E. Bristol, K.C., one of the directors of Canada Steamship Lines, Ltd., who was minister without portfolio in the Meighen Government, was re-elected in Center Toronto.

Hon. C. C. Ballantyne, who was Minister of Marine and Fisheries and of the Naval Service in the Meighen Government, and who was again a candidate in St. Lawrence-George Division, Montreal, was defeated.

F. A. Campbell, who was a New Brunswick Power Co.'s conductor, on its St. John Ry., until the beginning of the strike some time since, and is President of the Union Bus Co., which has been running motor busses in opposition to the electric cars, was endorsed by the Canadian Labor Party as one of its candidates in St. John-Albert, but was defeated. He was a defeated Labor candidate for city commissioner at the last St. John elections.

J. M. Campbell, President, Kingston Navigation Co., who was the Liberal candidate in Kingston, Ont., was defeated.

Thos. Cantley, of New Glasgow, N.S., formerly President, Nova Scotia Steel & Coal Co., and subsequently Chairman of the Board, who resigned from the Canadian National Rys. directorate on being

chosen as the Government candidate for Pictou, N.S., was defeated.

M. P. Finn, C.P.R. conductor, who was the Dominion Labor Party candidate for Lethbridge, Alta., was defeated.

Brigadier General Chilion I. Hervey, D.S.O., (C.E., of Lancaster, Ont., and Montreal, who was the Government candidate for Glenora and Stormont, Ont., was defeated.

Jas. Murdoch, Vice President, Brotherhood of Railroad Trainmen, who was the Liberal candidate for South Toronto, was defeated, but was selected by the new Prime Minister as Minister of Labor and was sworn in Dec. 29. A seat will have to be found for him.

George Brecken Nicholson, of Chapeau, Ont., who represented Algoma East in the last Dominion Parliament, and was again the Government candidate, but was defeated, was born at Westmorland, P. E.I., March 17, 1868. He began in railway construction work in 1884, continuing until April 1901. He established the present business of Austin & Nicholson, lumbermen, at Chapeau, in partnership with Jcs. Austin, in 1901.

W. G. Ross, formerly General Manager, Montreal Tramways Co., who resigned as President of the Montreal Harbor Commission to become the Government candidate for St. Antoine, Montreal, was defeated.

Hon. J. A. Stewart, K.C., who was Minister of Railways and Canals in the Meighen Government, was again a candidate in Lanark, Ont., and was re-elected.

Edward E. Sheppard, a Timiskaming & Northern Ontario Ry. conductor, at North Bay, Ont., who, as stated in Canadian Railway and Marine World for Nov. 1921, was Minister of the Government candidate for Timiskaming, Ont., resigned, stating that entirely unforeseen conditions which had developed since the convention at Englehart, at which he was nominated, had compelled him to do so. It is taken for granted that his resignation was caused by the Ontario Government's decision to require provincial civil servants to take no active part in political affairs, although the members of the Government campaigned for the farmers' party.

The Bad Order Car Situation.

The Railway Association of Canada has issued a statement showing that the total number of cars on Canadian lines during the 15-day period ending Dec. 1, 1921, was 207,781. The American Railway Association has laid down the principle that not more than 7% of the freight equipment of a railway should be in bad order at any time, if it is to be efficiently maintained, and on this basis, 14,544 cars could be expected to be in bad order. Actually, there were 16,683 in bad order, an excess of 2,139 on the 7%. Of surplus cars in good order there were 23,536, so that altogether there were 40,219 cars idle, or 25,675 without counting those that could be expected to be in bad order on the A.R.A. basis. For the 15-day period ending Dec. 15, 1921, the total number of cars on Canadian lines was 208,746. The cars on Canadian lines on the A.R.A. allowance for bad order cars on the A.R.A. basis would be 14,612; the actual bad order cars numbered 16,388, an excess over the A.R.A. allowance of 1,776. Surplus cars in good order numbered 32,615, making the total number of idle cars 49,003, or 34,391 on the 7% bad order basis.

experimental and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government and added to the Canadian National Rys.

The column headed "Canadian Northern," includes the lines operated as the Canadian Northern Ry. System, prior to its acquisition by the Dominion Government.

The column headed "Canadian Pacific," includes also the Montreal and Atlantic, and Esquimalt & Nanaimo Rys.

The column headed "Grand Trunk" includes its Canadian lines only.

The Railways' Operating Statistics for September.

A further improvement in Canadian railways' operating position is evident in the Sept. 1921 figures, compared with those of Sept. 1920 and preceding months of 1921. As compared with Sept. 1920, total operating revenues decreased \$2,399,421, or 3.5%, but were \$3,038,077 greater than those of Aug. 1921. Compared with Sept. 1920, Canadian Government Rys. gross operating revenues decreased 11%, C.P.R. 3.5%, and Grand Trunk 10%. Canadian Northern gross operating revenue increased 5% and G.T. Pacific 32%. All railways except the G.T.R. had greater operating revenues in Sept. 1921 than in Aug. 1921.

The railways as a whole had a substantial reduction in operating expenses, the decrease as compared with Sept. 1920 being \$7,206,892, or 16%. Canadian Government Rys. expenses decreased 12%, Canadian Northern, 32%, Canadian Pacific, 8%, Grand Trunk, 6%, and Grand Trunk Pacific, almost 30%. For the railways as a whole, maintenance of way and maintenance of equipment expenditures for Sept. 1921 were such as to indicate that maintenance was kept up well during the month. Taking into consideration the decrease in wages effective July 16, 1921, and the lower material prices prevailing, it is evident that more work was done on the physical properties in Sept. 1921 than in Sept. 1920. Both the Canadian Pacific and Grand Trunk spent more in maintenance of way in Sept. 1921 than in Sept. 1920, while for maintenance of equipment all the lines show expenditures which lead one to believe that locomotives and cars were being maintained in first class condition. Transportation expenses show reductions which are worthy of note, the decreases on all railways being much greater in proportion than the decreases in traffic handled, while on the Grand Trunk Pacific, notwithstanding a freight traffic density representing an increase of more than 100% over Sept. 1920, transportation expenses show a small decrease. The greater part of this decrease in transportation expense is accounted for, of course, by the decrease in the payroll, which, in addition to reflecting the 12% wage decrease, takes into consideration \$2,211,835 paid in Sept. 1920 as back pay.

The Sept. 1921 operating ratio of the railways as a whole, 85.56, was the best obtained to that time during 1921, that to August being 86.41. The Canadian Government Rys. showed a large improvement over Sept. 1920, although the ratio was not so favorable as in August, when it was 102.08. The Canadian Northern performance, however, represented such an improvement over preceding months that the net earned by this road was sufficient to wipe out the deficit incurred by the other lines included in the Canadian National Rys., and give the whole system net earnings for the month of over \$500,000. The deficit incurred by the Grand Trunk Pacific, however, was very small, the operating ratio, 100.99, being by far the best yet obtained. The Canadian Pacific figures were reviewed at

length in Canadian Railway and Marine World for Dec. 1921, pg. 629.

As compared with Aug. 1921, freight traffic showed a satisfactory increase, being 38% greater, and although this increase was largely seasonal and due to crop movements, the ton mileage of revenue freight was only 6.5% smaller than in Sept. 1920. Passenger traffic showed a decrease of 21% from Aug. 1921, this being largely seasonal also, but as compared with Sept. 1920 the decrease was 16%, indicating that passenger traffic did not hold up as well during the month as did freight traffic. Freight traffic on the Canadian Northern increased over 9%, and on the Grand Trunk Pacific over 100%. Although, compared with Sept. 1920, revenue freight ton mileage fell off only 6.5%, freight train mileage decreased 7.4%, indicating that operating efficiency was well maintained, as is also shown by the fact that the average number of tons of revenue freight per train mile was 48.16 in Sept. 1921 and 47.48 in Sept. 1920. The longer average revenue freight haul, 288.6 miles in Sept. 1921, compared with 260.8 miles in Sept. 1920, was also an aid in keeping freight train mileage relatively low in proportion to revenue freight handled. While passenger traffic fell off 16% from Sept. 1920, passenger train mileage was, but 8.6% less, which indicates that passenger train mileage could not be curtailed to correspond with reduced business as could freight train mileage. The statistics for passenger car mileage further indicate this condition. The statistics for loaded and empty freight cars indicate that the traffic in Sept. 1921 was not nearly so well balanced as in Sept. 1920, the loaded freight car miles being much less in Sept. 1921 than in Sept. 1920, while the empty freight car miles were much greater in number, the ratio of loaded to total freight car miles being 64.9 and 72.8 in Sept. 1921 and 1920 respectively. The revenue tonnage per train being greater in Sept. 1921 than in 1920, and almost four more empty cars per train being hauled than in Sept. 1920, it is evident that the gross tonnage of freight trains in Sept. 1921 was much greater than in Sept. 1920.

As before noted, the great decrease in the payroll is due in large part to back time payments being made in Sept. 1920, although in addition to the effect of the 12% wage cut now in effect, it is probable that the programmes of strict economy in effect during the whole of 1921 have been a large influence in reducing labor costs. The abnormally large ratios of payroll to revenue, and payroll to operating expenses, as shown for Sept. 1920, are due largely to the back time payments for that month, while the corresponding ratios for Sept. 1921 indicate a return to the pre-war relationship.

The increase in rates allowed by the Board of Railway Commissioners in 1920 took effect Sept. 13. The reductions made since then left the freight rates in effect in Sept. 1921 higher on the average than in Sept. 1920, although the passenger rates show the effect of having been re-

stored to the level at which they were prior to Sept. 13, 1920. As between the two months, the figures showing the operating revenues and operating expenses per mile of road operated show the comparison more clearly, perhaps, than any others. Despite a decrease in traffic, the rates were such in Sept. 1921 as to give a higher gross revenue per mile of road than in Sept. 1920, while the operating expenses, reflecting both the decreased traffic and the decreased labor and material costs, combined with the increased revenues to give the more favorable operating ratio noted above.

Reduction in Grain Export Rates to Vancouver.

While the Board of Railway Commissioners' recent general order 350, directing a general reduction in freight rates throughout Canada, to take effect Dec. 1, as dealt with fully in Canadian Railway and Marine World for December, on pg. 634, was not made applicable to international, or import and export rates, the export rates on grain from points in the Prairie Provinces to Vancouver have been voluntarily reduced by the Canadian transcontinental railways, the reduction taking effect Dec. 1. These rates were reduced by the same amount as were the domestic rates, i.e., they have been left 20% higher than those in effect prior to Sept. 13, 1920.

The following examples show the extent of the reductions made:—Between Edmonton and Calgary, and Vancouver, the rate prior to Dec. 1 was 34c. per 100 lbs., new rate 31c.; from Vegreville to Vancouver, former rate 36½c., new rate 33½c.; from North Battleford to Vancouver, former rate 40½c., new rate 37c.; Warman to Vancouver, former rate 43c., new rate 39½c.; Kindersley to Vancouver, former rate 39c., new rate 36c.; Elrose to Vancouver, former rate 43c., new rate 39½c.

Locomotive Terminal at Moncton, N.B.

In the article in Canadian Railway and Marine World for Dec. 1921 the captions under the plans on pgs. 623 and 624 were unfortunately transposed, the plan on pg. 623, being designated as Fig. 1, General Layout, Locomotive Terminal, instead of Fig. 2, Layout C.N.R. Terminal, and vice versa, the mistake being obvious from the accompanying reading matter.

In regard to the equipment we are officially advised that the machines heretofore in use in the old locomotive house will be used for machine shop equipment and that the boilers are being transferred from the old boiler house. The heating and lighting equipment is all new, as is that in the stores building, with the exception of a few Bowser pumps, obtained from different parts of the line. The coaling plant, sand house equipment and water tank are all new.

Movable Coupler for Transfer Car, Prince Edward Island Ry.

As standard gauge is 4 ft. 8½ in., and the Prince Edward Island Ry. gauge is 3½ ft., the distance between the center line of the narrow gauge track and that of a standard gauge track made by adding a third rail between Charlottetown and Summerside and between Emerald Jet. and Port Borden is 7¼ in. When standard gauge freight cars were first taken from Cape Tormentine, N.B., by the car ferry steamship to Port Borden, P.E.I., some means were necessary for switching them in the yard there, some of the tracks in which are equipped with third rail for handling standard gauge equipment, it being obvious that the center line of the couplers on the P.E.I. Ry. cars would be 7¼ in. out of line with the center line of the standard gauge equipment couplers. In addition, the height from rail to center line of coupler is 6

tail pin instead of one. In operation, one coupler and tail pin only are used. If the car is being hauled by a standard gauge locomotive, with this end forward, the coupler is used in the opening at the upper left, as shown in the illustration, and when the car is being used with a narrow gauge locomotive, and more standard gauge cars behind it, the coupler is changed over to the lower right opening. By this arrangement a narrow gauge locomotive can handle a number of narrow gauge cars, followed by this car and as many more standard gauge cars as it can haul. Conversely, a standard gauge locomotive can handle some standard gauge cars, this car, with the standard gauge coupler end forward, and a number of narrow gauge cars.

It would naturally occur to a railway man that the car would not track very

Arrangement of Openings for Coupler Shank in End Plate, Transfer Car, Prince Edward Island Ry.

in, less on the narrow gauge equipment than on the standard gauge. The difficulty was overcome, and the switching of standard gauge cars with narrow gauge locomotives was made possible, by equipping a standard gauge flat car with a movable coupler at the end, to be used next to the locomotive in switching operations. The end sill of the flat car on which the movable coupler was installed was reinforced, and a large plate was bolted on. The accompanying illustration shows the end elevation. Openings, parallel to the center line of the car, as shown, are provided to receive a short shank coupler, while vertical holes, extending from the top of the casting down to the coupler shank openings, provide for the insertion of a tail pin. The construction resembles that used on the front end of locomotives, and on snow ploughs, with the exception that there are two openings for the coupler shank and

well when being handled behind narrow gauge equipment, on account of the center line of the coupler being so much out of line with the center line of the car. We are informed, however, that since the device has been in use in the yard at Port Borden and at other points where third rail is provided, it has proved to be a satisfactory arrangement and has exhibited no tendency to cause derailment.

Northwestern Elevator Co.—A press report states that this company has started building an extension to its plant at Port William, Ont., that the addition will consist of 60 concrete tanks, each 22 ft. in diameter by 95 ft. high, increasing the capacity of the structure to 900,000 bush., that cleaning machinery with capacity of 8,000 bush. an hour will be installed, and that the total cost of the extension will be approximately \$700,000.

Billing Repair Card for Cars.

The American Railway Association, Mechanical Division, has issued the following circular:—The Arbitration Committee has had a number of questions recently, relative to billing repair cards returned with exceptions, where the repairing line has supplied additional information on the repair card. There are old arbitration decisions which prohibit the practice of supplying additional information on billing repair card and restrict the charge of the repairing road to the least expensive material or second hand material where the billing repair card did not originally show the kind of material applied. When these decisions were rendered, the billing repair card was also the original record of repairs, being prepared at car copy being attached to car, one copy used for file and the original used for billing.

Since the practice of attaching billing repair cards to cars has been discontinued (except in the case of certain private owned cars) and a form of original record of repairs has been adopted, as covered in Interchange Rule 7, the arbitration decisions referred to are abrogated.

In cases where, through oversight of clerks, the billing repair card is incomplete, correct reference may be supplied, provided the original record of repairs is clear as to repairs made and material used. The original record will be subject to review by the car owner in case of dispute.

Billing repair cards should show actual conditions and check with the original record of repairs in so far as they should check.

Clerks preparing billing repair cards should not assume any information required by the Rules of Interchange which is not clearly shown on the original record of repairs.

The G.T.R.'s Bridgeburg-Black Rock Dummy Service.

The Town of Bridgeburg, Ont., applied to the Board of Railway Commissioners some little time ago for an order directing the G.T.R. and the International Bridge Co. to reduce the tariff on what is called the "dummy service" across the bridge between Bridgeburg and Black Rock, N.Y. The bridge is 0.86 mile long. By the Board's order 29,512, passed April 1, 1920, the minimum charge for the transportation of passengers over the bridge was fixed at 75c. a ride, and following the order the G.T.R. published a tariff of 75c. for 10-trip tickets between Bridgeburg and Black Rock. Shortly afterward the charge was increased to 90c., the railway claiming that the Interstate Commerce Commission's order in ex parte 74 allowed an increase of 20% in commutation fares within the U.S. and that under the Board of Railway Commissioners' general order 303 a similar increase could be made in international rates. The 90c. rate was disallowed by the Board, however, and the 75c. rate restored. The Town of Bridgeburg's application for a further decrease was dismissed by order 31,773, Nov. 12, 1921.

In opposing the application, the railway showed that in 1918 the dummy service caused a loss of \$4,847.71, and in 1919 of \$2,692.95. The operation is by car, some 55 ft. long, with an engine and boiler in one end of it, each crew

consisting of a driver, fireman and conductor, and 40 single trips a day are made. It was contended by counsel for the Town of Bridgeburg that this equipment might be replaced by a gasoline car, which would have the effect of greatly reducing the cost of operation, resulting in lower fares. Concerning this, Commissioner Boyce said in his judgment: "Such a reform (the replacing of the steam car by a gasoline car) would involve changes in operating rules and other serious considerations involving the necessary and vital provision for public safety, and at present the Board has not gone to the extent of making provision for such a service." Chief Commissioner Carvell said: "I feel the service is costing more than it should, and that the railway should obtain and present to this Board the latest available statistics as to the operation of gasoline cars for short distances, such as are being operated between Brockville and Westport, Ont. We should also have information as to the cost of electrifying this particular piece of track, and the cost of operating the cars electrically. In my opinion, a very great saving could be made in the cost of operation by either

branch line, and short main line, passenger service is desirable from both the public and railway viewpoints, Chief Commissioner Carvell's recommendations as far as they refer to self propelled cars, are well worth noting.

A C.P.R. Locomotive Conversion.

The compound locomotive is going out of use on Canadian and U.S. railways, being replaced by the modern power unit equipped with superheater and piston valves and other refinements of locomotive practice. The accompanying illustrations show a 10-wheel 4-6-0 compound locomotive, built in 1904, and using saturated steam, which was converted into a simple locomotive, equipped with superheater, at the C.P.R. Angus shops, Montreal, recently. Fig. 1 shows the original locomotive after stripping and de-wheeling, but before the removal of the original cylinder castings, the low pressure cylinder and slide-valve steam chest being evident. New piston valve cylinder castings were applied, necessitating slight modifications in the front ends of the frames; new front and back tube sheets, to take the superheater flues, were

Steam Railway Track Laid in 1921.

Official reports to Canadian Railway and Marine World show that ten Canadian railways laid 242.80 miles of new track during 1921, compared with 309.68 miles laid by five railways in 1920. Following are the particulars:—

Canada & Gulf Terminal Railway—	Miles	Miles
Matane to Hammerville, Que.	2.40	
Canada Central Railway—		
Pesce River to Berwin, Alta.	23.60	
Canadian National Railways—		
Ameranth, Man., north	17.70	
Thunderhill extension, Sask.	13.90	
Melfort, Sask., northeast	23.70	
Lack Lake extension, Sask.	15.02	
Jackfish Lake extension, Sask.	15.06	
Peebles-Lampman, Sask., material yard ..	0.50	
Eston, Sask., material yard	0.17	
Acadia valley, Alta., material yard ..	0.64	
Onoway Branch, Alta.	11.90	
Vancouver Island line, B.C.	3.10	
		101.69
Canadian Pacific Railway—		
Carbon to Kirkpatrick, Alta.	16.73	
Altawan, Alta. West.	18.00	
		34.73
Near Weymouth, N. S., to Sissiboo Pulp Mill	2.50	

Locomotive Conversion at C.P.R. Angus Shops, Montreal.

Fig. 1. Original compound locomotive, after stripping and de-wheeling.

Fig. 2. The resulting efficient simple superheated locomotive.

of these methods as compared with present conditions."

There is no doubt that the operation of this service by steam car is too costly. As pointed out in Canadian Railway and Marine World for Dec. 1921, pg. 643, there is room for great economy in the operation of branch lines and in the provision of passenger service over short stretches of main line. Steam operation in these cases is a losing proposition. In our opinion, Commissioner Boyce unduly magnified the difficulties which would be met in the way of necessary revision of operating rules. There is no reason why the definition of a train, as contained in the Standard Code, cannot be as well applied to a gasoline car, a storage battery car, or an electric motor car, as to a locomotive. With the dependability of such equipment demonstrated, a 2-man crew should be sufficient to ensure compliance with rules concerning main line protection. There does not seem to be any reason for anticipating the necessity of radically revising operating rules to provide for such operation, and in view of the fact that economy in

put in, and a V-H superheater was installed. The Stephenson valve gear was retained, but modified in design. A new dry-pipe was used, and the firebox was equipped with arch tubes and brick arch. Fig. 2 shows the remodelled locomotive on completion of the job. There can be no doubt that the rebuilt locomotive, by its greater power and superior economy, will soon make good the cost of the work of modernizing.

Steel Rail Orders.

The Grand Trunk Ry. has, we are officially advised, ordered from Algoma Steel Corporation 13,829 gross tons of 100 lb. open hearth steel rails, A.R.A. type A section, in addition to the 15,243 tons ordered from Dominion Iron & Steel Co., as mentioned in our Dec. 1921 issue.

The Timiskaming & Northern Ontario Ry. has, we are officially advised, ordered 6,000 tons of 80 lb. A.S.C.E. open hearth steel rails from Algoma Steel Corporation, which are expected to be sufficient for its construction work during this year.

Esquimalt and Nanaimo Ry.—	
Great Central Lake Jet. to Stump River, B. C.	3.75
Kettle Valley Railway—	
Pentiction South to Dog Lake, B.C.	2.40
Pacific Great Eastern Railway—	
Australian Creek to Cottonwood, B. C.	35.00
Port George to Red Rock Creek, B. C.	18.00
	53.00
Quebec Central Railway—	
Scott to Diamond Jet. Que.	19.33
	242.80

In addition to new track laid, the Alberta and Great Waterways Ry. reports the laying of 10 miles of track from mile 272 to 282, to replace 12 miles of old track abandoned owing to difficulties encountered in the maintenance of the roadbed down the Clearwater River Valley; the Canadian National Rys. reports the laying of 6.5 miles of second track completing a second track from Murison Jet., mile 302.5, to Drumheller, mile 314.7 both from Saskatoon. The work of constructing this track was begun in 1919, and continued in 1920 when about 6 miles of track laying had been done.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian National Rys.—H. B. AKIN, heretofore storekeeper, Joliette, Que., has been appointed acting District Storekeeper, Ontario Lines, vice E. D. Toye, assigned to special duties. Office, Leaside, Ont.

H. R. BULLEN, heretofore Travelling Passenger Agent, Los Angeles, Cal., has been appointed Assistant General Agent, Passenger Department, Canadian National-Grand Trunk Pacific Rys. and Grand Trunk Pacific Coast Steamship Co. Office, Los Angeles.

G. E. BUNTING, Australasian Manager, Canadian Government Merchant Marine, has also been appointed General Traffic Agent, C.N.R., with supervision in New Zealand and Australia of its traffic interests, freight and passenger, and not General Traffic Manager, as stated in our last issue.

A. B. CHOWN, heretofore General Agent, Passenger Department, Canadian National-Grand Trunk Rys., New York, N.Y., has been appointed Assistant General Western Passenger Agent, Canadian National Rys., and Assistant General Passenger Agent, Western Lines, Grand Trunk Ry. Office, 112 West Adams Street, Chicago, Ill.

P. W. CLARKIN, heretofore chief clerk, Division Freight Agent's office, Charlottetown, P.E.I., has been appointed acting Division Freight Agent, Island Line, during the absence on sick leave of A. McDonald, Office, Charlottetown.

A. H. DAVIS, heretofore ticket agent, Brandon station, Man., has been appointed ticket agent, Edmonton station, Alta.

C. W. HIGGINS, heretofore Advertising Agent, Western Lines, has also been appointed Advertising Agent, Grand Trunk Pacific Ry. vice W. C. Riddell, transferred to C.N.R. service at Toronto. **C. E. JENNY**, heretofore District Passenger Agent, Canadian National-Grand Trunk Pacific Rys., Vancouver, B.C., has been appointed General Agent, Passenger Department, Canadian National-Grand Trunk Rys., New York, N.Y., vice A. B. Chown, promoted. Office, 1270 Broadway.

R. KING, Superintendent, Calgary Division, Western District, Calgary, Alta., has had his jurisdiction extended to include both the C.N.R. and Grand Trunk Pacific Ry. terminals at Calgary. Heretofore, he has had charge of the C.N.R. terminals there, the G.T.P.R. terminals being under J. Irwin, Superintendent, Biggar Division, C.N.R., Edmonton, Alta.

E. R. McPHERSON, heretofore storekeeper, Halifax, N.S., has been appointed storekeeper, Moncton, N.B., vice W. B. Logan, promoted to acting District Storekeeper, Maritime District, as announced in Canadian Railway and Marine World for Nov. 1921.

F. MILTON has been appointed acting storekeeper, Halifax, N.S., vice E. R. McPhereson, transferred to Moncton, N.B.

L. L. PRICE has been appointed stores inspector, Moncton, N.B.

E. RICHIARD has been appointed storekeeper, Joliette, Que., vice H. B. Akin, appointed acting District Storekeeper, Ontario Lines.

W. C. RIDDELL, formerly Advertising Agent, Grand Trunk Pacific Ry., Win-

nipeg, has been appointed Advertising Agent, Quebec and Ontario lines, C.N.R., between Quebec City, Armstrong and Port Arthur, Ont. Office, Toronto.

F. L. SEATON, heretofore Travelling Auditor, Winnipeg, was stated in our Nov. 1921 issue as having been appointed acting Assistant Auditor of Traffic, Canadian Government Rys., at St. John, N.B. His office is at Moncton, not St. John.

R. J. SLOAN has been appointed ticket agent, Brandon station, Man., vice A. H. Davis, transferred to Edmonton, Alta.

A. E. SNELL has been appointed stores inspector, Leaside, Ont., vice H. Sampson, transferred.

Canadian Pacific Ry.—**JOS. BAKER**, heretofore Night Foreman, Moose Jaw, Sask., has been appointed Locomotive Foreman, Field, B.C., vice M. W. Boucher, transferred.

W. C. BOWLES, heretofore General Freight Agent, Western Lines, Winnipeg, has been appointed Assistant Freight Traffic Manager, Eastern Lines, vice H. E. Macdonell, appointed Special Traffic Representative. Office, Montreal. See also under R. E. Larmour.

J. F. BURNS, heretofore Chief of Investigation Department, Montreal, is reported to have been appointed Assistant Chief, with office at Winnipeg.

A. H. CADIEUX, heretofore Inspector, Investigation Department, is reported to have been appointed Assistant to R. G. Chamberlain, Chief of Investigation Department, with office at Windsor St. Station, Montreal.

J. CHISHOLM, heretofore Car Foreman, Macleod, Alta., has been appointed Car Foreman, Aylth, Alta.

W. H. DEACON, heretofore Travelling Passenger Agent, with headquarters at Vancouver, B.C., is reported to have been appointed General Agent, Passenger Department, at Portland, Oregon.

C. E. JEFFERSON, heretofore acting General Freight Agent, Eastern Lines, Montreal, has been appointed General Freight Agent, Western Lines, vice W. C. Bowles, promoted. Office, Winnipeg.

C. JOHNSON has been appointed Roadmaster, Sutherland Subdivision, Saskatchewan Division, Saskatchewan District, succeeding J. McInnes.

J. JOHNSON, heretofore Assistant Foreman, Ottawa, Ont., has been appointed Locomotive Foreman, White River, Ont., vice H. Marchand, now employed as a hostler there.

M. KENNEDY has been appointed Night Foreman, Hochelaga, Que., vice J. Shore, transferred.

R. E. LARMOUR, who has been acting as Assistant Freight Traffic Manager, Eastern Lines, since June 1921, while H. E. Macdonnell, who has now been appointed Special Traffic Representative, was on leave of absence owing to illness, has resumed his duties as General Freight Agent, Eastern Lines, Office, Montreal.

J. L. McCLOSKEY is acting as Agent at Juneau, Alaska, as mentioned in our last issue. We are officially advised that no appointment of General Agent, to succeed H. F. Richardson, deceased, will be made at present.

H. E. MACDONNELL, heretofore Assistant Freight Traffic Manager, Eastern Lines, Montreal, who has been on

leave of absence, owing to ill health, since June 1921, has been appointed Special Traffic Representative, to perform such duties as may be assigned to him. Office, Montreal.

T. McNEIL, heretofore Agent, Liverpool, Eng., has been appointed Liverpool General Agent, and not General Agent, as stated in our last issue. Office, Royal Liver Building, Liverpool, Eng.

W. G. McPHERSON, heretofore Division Master Mechanic, Regina Division, Saskatchewan District, Regina, Sask., has been appointed Division Master Mechanic, Moose Jaw Division, Saskatchewan District, vice J. Gibson. Office, Moose Jaw, Sask.

T. MARTIN, heretofore Division Engineer, Revelstoke Division, British Columbia District, Revelstoke, B.C., has been appointed Division Engineer, Nelson Division, British Columbia District, vice J. F. Soans, transferred to Revelstoke, B.C. Office, Nelson, B.C.

E. PITTARD has been appointed Car Foreman, Macleod, Alta., vice J. Chisholm, transferred to Aylth, Alta.

J. SHORE, heretofore Night Foreman, Hochelaga, Que., has been appointed Assistant Foreman, Ottawa, Ont., vice P. Johnson, transferred.

J. F. SOANS, heretofore Division Engineer, Nelson Division, British Columbia District, Nelson, B.C., has been appointed Division Engineer, Revelstoke Division, British Columbia District, vice T. Martin, transferred to Nelson. Office, Revelstoke, B.C.

J. TELFORD, heretofore Roadmaster, Belleville Subdivision, Ontario District, Belleville, Ont., has been appointed Roadmaster, St. John and Fredericton Subdivisions, New Brunswick District. Office, McAdam Jct., N.B.

Esquimalt & Nanaimo Ry.—**J. D. FRASER**, heretofore acting Superintendent, has been appointed Superintendent, Office, Victoria, B.C.

Grand Trunk Ry.—**A. B. CHOWN**, heretofore General Agent, Passenger Department, Canadian National-Grand Trunk Rys., New York, N.Y., has been appointed Assistant General Passenger Agent, Western Lines, G.T.R., and Assistant General Western Passenger Agent, Canadian National Rys. Office, 112 West Adams St., Chicago, Ill.

J. A. CLANCEY, formerly Trainmaster, Battle Creek, Mich., has been appointed Superintendent of Transportation, Western Lines, vice O. F. Clark, appointed Car Accountant. Office, Chicago, Ill.

O. F. CLARK, heretofore Superintendent of Transportation, Western Lines, Chicago, Ill., has been appointed Car Accountant, Western Lines, vice G. B. Betts, transferred. Office, Chicago, Ill.

See also Canadian National Rys.

Grand Trunk Pacific Ry.—See Canadian National Rys.

Lacombe & Northwestern Ry.—**H. G. DIMSDALE**, heretofore Resident Engineer on Alberta & Great Waterways extension to Waterways, Alta., has been appointed Resident Engineer in charge of work on Lacombe & Northwestern Ry., vice P. L. Dehney, assigned to other duties on the A. & G.W.R., both reporting to John Callaghan, General Manager, A. & G.W.R. and L. & N.W.R.

Michigan Central Rd.—**F. W. COWLEY**, heretofore passenger conductor,

whose appointment as Assistant Trainmaster was announced in our last issue, has his office at St. Thomas, Ont., and not London, Ont., as stated.

J. F. DEIMLING, heretofore Assistant Chief Engineer, has been appointed Chief Engineer, vice G. H. Webb, deceased. Office, Detroit, Mich.

G. H. HARRIS, heretofore Engineer of Track and Maintenance of Way, has been appointed Assistant Chief Engineer, vice J. F. Deimling, promoted and his former position has been abolished. Office, Detroit, Mich.

Telegraph, Telephone and Cable Matters.

The Commercial Cable Co.'s cable s.s. John W. Mackay was launched at Newcastle-upon-Tyne, Eng., Nov. 30. She is the first oil driven ship which the company has had, and is 360 ft. long and 4,100 gross tons. The keel of a sister ship has been laid down at the same yard.

Although the Pacific Cable Board has not yet received official intimation that the Australian Government has sanctioned the proposed duplication of the Pacific cable, a London, Eng., press dispatch says it is anticipated that Australia's assent will be obtained immediately, thereby securing the unanimity of all the governments concerned. The proposed duplication will probably cost over £1,000,000, but the Pacific Cable Board has in hand a reserve and general renewal fund exceeding that amount, there will be no need to call on any of the partner governments for financial assistance.

The Commercial Cable Co.'s new cable steamer John W. Mackay was launched at Walker-on-Tyne, Eng., Nov. 30. She was specially designed for her work, and will be propelled by twin screws, driven by reciprocating steam engines. Her dimensions are,—length 360 ft., breadth 48 ft., depth 35 ft. Her overhanging bow carries 3 cable sheaves, and a stern sheaf is fitted aft. The cable will be carried in 4 cable tanks placed forward of the machinery, which will have a coiling capacity of over 50,000 cu. ft. The machinery required for working the cables, including picking up and paying out gears, electric turning over gear, dynamometers and patent sounding machine, will be of the latest design. The captain's accommodation is being arranged on the boat deck, where will also be the chart and navigating rooms. On the shelter deck will be the staterooms for the ship's navigating officers, and the officers engaged in the cable work. The officers' dining and smoking rooms will be on the upper deck, where also the engineers, petty officers, cable men and seamen will be berthed. The propelling machinery will consist of twin screw triple expansion engines, supplied with steam by three boilers under forced draft, and fitted to burn fuel oil. The auxiliary machinery, consisting of steam windlass, capstan, steam winches, steam boat hoist, steam steering gear, etc., will be of the latest design, and the ship will be well heated, ventilated and electrically lighted, and equipped for wireless telegraphy and submarine signalling.

Canadian National Telegraphs.

Canadian National Telegraphs has announced a reduction in the rate for cable messages to Bermuda and Turks Island from 24 to 36c. a word. The rate for de-

ferred cable messages has been reduced from 21 to 18c. a word.

Thomas M. Kane, chief operator, Canadian National Telegraphs, Kingston, Ont., died suddenly from apoplexy at his desk recently. He entered Great North Western Telegraph Co.'s service about 37 years ago, and remained when Canadian National Telegraphs assumed control.

Canadian National Telegraphs utilized 700,000 ft. of wire to put in special loops for election purposes, during the recent Dominion elections. The extra business caused by the election, necessitated the installation by the company of 325 of its loops throughout the Dominion. This also required the services of one operator for each loop, and in addition 275 special messengers. A direct wire service was arranged between Toronto and all cities in the Dominion on the company's circuit for the interchange of election returns, and more than 100,000 miles of wire were used in collecting and forwarding of returns, and approximately 1,500 employees were engaged in this service alone.

Canadian Pacific Railway Telegraphs.

E. W. Camp, son of W. J. Camp, Assistant Manager. C.P.R. telegraphs, was married to Miss A. M. Drysdale at Westmount, Que., Dec. 3.

An instance of fast telegraphy is mentioned in a press report, the C.P.R. Telegraphs having cable a message from Kingston, Ont., at 10:10 a.m., to Liverpool, Eng., to which a reply was received 3½ hrs. later. Another case mentioned was the cabling of a speech made in Vancouver, to London, Eng., at 11 a.m., which appeared in the London Times afternoon edition. While the first mentioned case is a good example of quick work, the latter, while no doubt good work, had nothing exceptional about it, while the difference of time is taken into account 11 a.m. in Vancouver being approximately 3 a.m. in London.

The recent Dominion elections resulted in the Canadian Pacific Telegraphs performing an extraordinarily heavy service in handling returns, the company having approximately 1,000 wire connections for the full returns. Telegraph and other communicating companies are heavily taxed on election days, as, in addition to the ordinary traffic, which is usually heavy, they are factors in gathering and forwarding the returns to a central point for completion. From such central point they are sent out over a network of wires covering the whole Dominion. In order to provide sufficient operators for the extra service, the day staff at all important centers also reported for duty during the evening up to midnight, and, in addition, many day operators in the railway service and day newspaper offices, were engaged. In order that the customers could keep track of the returns as they came in, a pamphlet was prepared, giving the names of the nominees, and providing spaces for the results in each constituency, the pamphlet being enclosed in a neat cover. The management received many letters of commendation on the excellent manner in which the returns were delivered.

The Michigan Central Rd. was planning to scrap 160 freight cars at St. Thomas, Ont., but on the mayor's suggestion gave the wood to the poor of the city, the city council providing for its delivery from the M.C. Rd. shops to the recipients' homes.

Among the Express Companies.

The Canadian Purchasing Agents Association, when meeting at Montreal recently, protested against the express companies' demand that prepayment on express charges on shipments from the U.S. be made in U.S. funds.

The National Dairy Council of Canada's application to the Board of Railway Commissioners, for cancellation of the 20% increase in express rates on cream, allowed by the Board's general order 327, Feb. 2, 1921, and to re-establish the special commodity rates on cream in existence prior to that order was dismissed by the Board on Nov. 24, 1921, by order 31,820.

Canadian National Express Co.

The company has started on the Canadian National Rys. extension west of Turtleford, Sask., and has opened offices at Turtleford, Cleveles, Spruce Lake and St. Walburg. An agent has been appointed at St. Walburg, the other stations being star points.

Offices have been opened at Melrose, Port Elgin, Cape Tormentine, Baie Verte, N.E.B., Pomquet, Imperoyal, Harbour, Musquodouit, Stewart and McInnis Harbour, N.S., Ellerslie, P.E.I., Routhieville, Que., Delmas, Sask., and Beynon, Alta. The name of the office at Lovett, Alta., has been changed to Stereo and made a star point.

Fred. Norman, who was appointed Superintendent, Canadian National Express Co., Winnipeg, recently, was born at Pictou, Ont., Feb. 24, 1874, and entered express service, May 1, 1892, since when he has been, to June 1893, messenger, Canadian Ex. Co., Ottawa and Rouses Point, Montreal and Port Covington, and other points; June 1893 to June 1896, relief messenger and relief clerk, same company, Montreal and Portland, Quebec and Ottawa, Toronto and Kingston and other points; June 1896 to Feb. 1905, messenger, same company, Montreal and Toronto; Feb. 1905 to Oct. 1908, route agent, same company, Montreal Division; Oct. 1908 to July 1913, agent, same company, Winnipeg; July 15, 1913 to Sept. 1, 1921, Superintendent, Northwest Division, same company, Winnipeg.

Train Nomenclature.

Usually a railway train on which there is no sleeper, or diner, no smoker, no waiter, no ventilation, no porter, and no news butcher is termed an "accommodation train."—Judge.

Canadian Officials of U.S. Companies.

A Washington, D.C., press dispatch of Dec. 13, said that some C.P.R. officers, including Lord Shaughnessy, had asked permission from the Interstate Commerce Commission, under the Interstate Commerce Act, to hold their places as officers of several U.S. corporations subsidiary to the main system.

Canadian National Rys. executive officers arranged for a business meeting of such officers as could be conveniently brought to Toronto for the purpose, to be held there in December, but the date having been found unsuitable, for some of the officers, it was decided to hold the meeting until a later date.

The C.P.R.'s general offices in Montreal were closed from Dec. 30 at 1 p.m. to Jan. 3 at 8:30 a.m.

Electric Railway Department

Trackless Trolley Omnibusses for Toronto Transportation Commission.

As stated in Canadian Railway and Marine World for December, the Toronto Transportation Commission has ordered four trackless trolley busses for use in the northern outskirts of the city. The type of bus ordered is shown in the accompanying illustration. With the exception of there being but one trolley pole instead of two, it is quite similar in construction to the trolley busses tested in Detroit recently, an illustration of one of which was given in our December issue. The busses ordered by the Commission have the following dimensions: Length overall, at bottom of body at

chassis frame20 ft. 7 in.
Height from top of floor to underside of ceiling6 ft. 2 in.
Width over posts outside7 ft. 4 in.
Height from top of floor to chassis frame2 in.
Height from first step to top of body floor1 ft. 2 in.

The chassis is to be of standard Packard type E D design, with such changes as are necessary to accommodate electrical instead of gasoline equipment. Complete with motors, control apparatus and resistor, the chassis will weigh 7,190 lb., there being an almost equal distribution of weight on the front and rear axles. The wheels, equipped with single solid tires in front and double solid tires at the rear, will be 34 in. diam., and wheel housings will be placed over the rear wheels, at a height allowing sufficient clearance from the wheels at the maximum deflection of the springs. The housings will be of pressed metal.

The chassis frame will constitute the underframe of the body of the bus. To the chassis frame proper will be added sufficient cantilever extension to receive the bus body, the side sills of which will be directly connected to each end of the chassis frame extensions. The body is to be of metal frame construction, the lower members to consist of structural steel angles, the intermediate, or belt rail, and upper members to consist of pressed steel sections. The lower sills, and rear end of car will be of plymetal, securely riveted to body frame members at all edges. The roof will be of waterproof veneer, shaped or moulded to curvature of roof, covered with canvas, laid in priming coat and then to have two coats of roof paint. The roof will be of sufficient strength to carry a man without danger of damage, and access to it will be obtained by steps at one side of the emergency door.

There will be one double outward folding door on the right, in front, glazed in the upper section with 3/16 in. crystal glass, and in the lower section with wire plate glass, so that the driver can see that the step is clear. This door will be operated by a hand lever at the left of the driver, the lever controlling pneumatically operated mechanism. An emergency door will be provided at the left side, near the rear, to be controlled by an electric lock, with spring contacts, placed in position behind a glass covering, in such a way that the breaking of the glass will automatically cause the lock to operate.

The interior, below the window sills, will be finished in plymetal, which will be painted to conform with the birch stained mahogany window sill mould, and

the card rack mouldings will be of birch, stained mahogany. The ceiling will be white enamelled. The flooring will be 3/16 in. yellow pine boards tongued and grooved, and the aisle flooring will be maple, corrugated so as to provide for the drainage of surface moisture. The back frames of the seats will be of wood, mortised and tenoned, and arranged to receive ventilated mattress type springs. Imitation leather upholstery will be used. The rear of the seat backs, where exposed to sight, will be covered with veneer painted to conform to the upholstery. The seat cushions will be of the mattress type, ventilated, and covered with the best quality imitation leather. The pedestals and seat end brackets will be of lyntite, and the transverse seat brackets are to be provided with lyntite grab handles. There will be seating capacity for 29 passengers, there being

Two lighting circuits will be installed, each lighting five standard 23 watt lamps. One circuit will light the two headlights, the sign light, the light for the step, and one of the interior lights. The other circuit will light the five remaining interior lights. The interior lights are to be arranged three on each side, the enclosed type of fixtures and shades to be used. The wiring for the lighting circuits is to be installed in conduit. Nichols lantern duplex tail lights will be installed at the rear. Heating will be by six Cutler-Hammer, 500 watt, 296 volt, single unit truss plank heaters, two units in series, the heater wiring also being installed in conduit. Ventilation will be by three lintern exhaust ventilators, located along the center line of the roof. A signal system will be installed, to consist of a low voltage buzzer with the necessary dry cells for operation. The dry cells

Trackless Trolley Omnibus, Toronto Transportation Commission.

a transverse seat across the rear of the bus, and one transverse seat, two longitudinal seats, and four transverse seats at each side of a central aisle. The driver's seat will be of the bucket type, the seat and back to be spring upholstered, stuffed with the best grade of curled hair, and covered with imitation leather.

The busses will be equipped with a vertical stanchion at the rear end, extending from floor to ceiling, while a similar stanchion will be located just inside the door at the front, to assist passengers in entering and leaving. A mirror, 6 x 22 in., will be located in the interior of the bus at the front, in such a position, and inclined at such an angle, that the driver may have a clear vision of the rear of the bus and also a vision of the road at the rear. Railings of steel tubing will be installed adjacent to the driver's seat, to separate the passengers from the driver. An illuminated route sign will be located in the upper right hand corner, lighted with one 23 watt lamp, and racks will be installed above the windows, to hold 11 in. advertising cards, the moulding framing of these to be stained to resemble mahogany, as above noted.

will be under the driver's seat, and push buttons, connected with the buzzer, will be located on each window post.

The vision shield is to be in one part, with a ratchet hinge at the top for holding the shield in different positions. At the right of the vision shield will be a stationary sash with crystal glass, this sash and the vision shield extending the entire width of the front end of the bus body. The lower portion of the front end will consist of a plymetal dash, upon which the necessary control instruments will be mounted. A rain shield of stained glass is to be provided the full width of the vision shield and will be held in place by aluminum end brackets.

The bus will be driven by two motors, mechanically connected in tandem through a universal joint. They will be mounted beneath the bus body with shafts longitudinally, and connected through a universal joint to the automobile type of differential drive in the rear axle. The control apparatus will be mounted under the hood. The motors, with nominal rating in accordance with American Institute of Electrical Engineers standards, will be 25 h.p., 37 amp.,

at 600 volts. The speed corresponding to this rating will be 1,235 r.p.m. The motors are to be of the standard safety car type, with sleeve bearings and a special shaft extended at both ends, so finished that the universal joints may be readily attached to the taper fit of either end. The motors will be interchangeable. No thrust is to be transmitted to the motors from the driving mechanism. The motors will be duplicates of those in the safety cars at present operating in Toronto.

The control will be of the automatic series parallel type, having four notches in the series position, and three in the parallel. The first notch in the series position will be independent of the accelerating device, so that very slow running will be had for emergency use in slow traffic. All other notches will be under the control of a time element current limiting apparatus will provide a minimum time element for complete operation of the sequence switch when no current is flowing through the main motors. With current in the main motors, the speed of operation will be approximately inversely proportioned to this current. Three operating positions of the master controller will be provided for "starting," "full series," and "full parallel." The last two notches will be running ones. Operation of the control apparatus will be by a foot pedal for normal running. Reversal of running direction will be by a switch type reverser, controlled by a lever which will be interlocked with the main operating pedal.

The control apparatus will include one set of six magnetically operated switches with control resistor and sequence relay, one foot operated master control, one motor field reverser, one double pole, magnetically operated line switch with overload relay, one automatic time element sequence switch, one motor start switch and one set of grid resistance. All of the control apparatus will be mounted beneath the usual engine hood, the resistors, control resistance, reverser and master controller being mounted on one side of the panel. It will be ventilated through louvers, and arranged for direct ventilation to the atmosphere during summer and for ventilation into the bus body during winter. All other control apparatus will be mounted on the opposite side of the insulating and heat-resisting switchboard panel, protected from the atmosphere, dirt and moisture.

The power supply for the control circuits will be obtained from the main supply circuit, and will be reduced to the proper operating voltage by a control resistor. By the use of this control resistor, all but two of the control circuits will be at low potential, tending to provide more reliable operation of the control apparatus on account of the less liability of insulation breakdown. Overload protection will be obtained by a two pole, single magnet, coil-operated line switch, mounted under an overload trip. This switch will also be used to close or open the main circuits each time the master controller is moved to "on" or "off" positions. This switch will be mounted adjacent to the contactor on the control carrier, and an operator will be brought through the dash for closing or tripping the switch, which arrangement will be very convenient to the operator.

The proper sequence of switches will

be obtained by a single drum master controller, which will be mounted under the hood and operated by a foot lever. A two-pole snap-switch, complete with fuses, will be supplied for opening the control circuits for inspecting or repairing, and will be mounted on the dash board.

A motor operated drum switch will be used to obtain a time element current limit acceleration of the control equipment. This switch will constitute a secondary master switch for limiting acceleration of the vehicle, and will be in turn controlled by the master controller. The speed of the drum of this sequence switch will be limited by the current in the main motor circuits. However, the drum will continue to move, although at slow speed until the full parallel position is reached, if the main motors do not accelerate. The sequence switch, therefore, will provide for acceleration on heavy grades or with heavy loads.

A three pole double throw switch, similar in construction to the reverser, will be furnished to cut out either of the two main motors. For collection of current, one no. 13 U.S. trolley base

curb, the wires being suspended 18 ft. above the street level by the usual span construction, involving tubular steel poles on both sides of the street.

These busses have been ordered from the Packard Ontario Motor Co., which will assemble the chassis in Toronto. The bodies are being built by Canadian Brill Co., and the electrical equipment is being supplied by Canadian Westinghouse Co. Delivery is expected to be made in January.

Proposed Purchase of Toronto Suburban Railway.

Toronto City Council at a special meeting, Dec. 8, approved an agreement made between the Hydro Electric Power Commission of Ontario and the city for acquiring the Toronto Suburban Ry. Co.'s property and assets under the provisions of the Hydro Radial Railway Act of 1914, and subsequent amendments. The proposition is that all the T.S.Ry. Co.'s lines shall be taken over, the city taking over outstanding bonds for \$2,628,000, paying in cash \$202,000 for the line within the city limits (the franchise for which has expired, and preparations are in progress for a valuation by arbitration under the franchise), and the provision of \$150,000 for betterments within the city. The sections of the line in the city would then become part of the city's system, and the lines outside would be handed over to the Hydro Electric Power Commission of Ontario for operation, the city to be responsible for any deficits on operation. The council authorized the submission to the ratepayers on Jan. 2, of the necessary bylaws to give effect to the agreement.

The Ontario Government has objected to this proposed purchase on very similar grounds to those taken in regard to the Niagara, St. Catharines & Toronto Ry., which are given very fully elsewhere in this issue. The Prime Minister, in writing the Hydro Electric Power Commission of Ontario's Secretary, also said in part:—"The Toronto Suburban Ry. has a total length of 68 miles, and serves a considerable number of municipalities. Under the existing legislation it is very doubtful, to say the least, whether a railway can be acquired and operated on behalf of one municipality when the railway extends through a number of other municipalities. It would seem that special legislation would be necessary to cover this point, as was recognized last session in the adoption of the Toronto & York Radial Ry. Act. In view of all the above facts it does not appear that any purpose will be served by approving of any agreement, which is not only in some of its terms at variance with the existing law, but which may be still further at variance with the law a few months hence."

No Joint Commission for Toronto.—On the suggestion of Mayor Church, the Toronto Board of Control recommended the submission to the electors on Jan. 2 of the following question:—"Are you in favor of the appointment of a public utilities commission of five members to operate and control all the light, power and transportation of the City of Toronto?" This recommendation was discussed at a special meeting of the city council Dec. 8, 1921, and was rejected by 13 to 6.

complete, with 16 ft. pole, swivel harp and 4 in. wheels will be supplied. This single pole will be equipped with two shoes, and an equalizing spring will serve to maintain contact with both the positive and negative wires despite irregularities and differences in elevation as between the two wires. As stated in our December issue, the trackless trolley bus first tried out in Detroit was equipped with a double pole current collection apparatus the double pole also being the standard in English practice.

The approximate speeds will be, for the first notch, 5 m.p.h., second notch, 12 m.p.h., and third notch, 24 m.p.h.

The route for these busses will be along Merton St. from Yonge St. to Mount Pleasant Road, and along that to Eglington Ave., a total distance of 1½ miles so that the trolley bus service will be practically an extension of the street car service in that portion of the city. There will be two sets of wires for the supply of current, a positive and negative wire on both sides of the street, each about midway between the center and the

Proposed Purchase of Niagara, St. Catharines & Toronto Railway.

At a meeting of representatives of 17 Niagara Peninsular municipalities, at St. Catharines, Ont., Dec. 1, F. A. Gaby, Chief Engineer, Hydro Electric Power (Commission of Ontario, reported that an option on the N. St. C. & T. Ry., which is now operated as part of the Canadian National Ry. System, had been obtained from the then Minister of Railways, Hon. J. D. Reid, for \$3,544,374.10, to be paid for by the Commission's 4½% 50-year bonds for \$2,466,374.10, and the assumption by the Commission of \$1,068,000 outstanding bonds due in 1929. The property to be acquired consists of lines connecting Niagara-on-the-Lake, Port Dalhousie, St. Catharines, Merrittton, Thorold, Niagara Falls, Welland, Humberstone and Port Colborne, also local lines in St. Catharines, Merrittton, Thorold and Niagara Falls. He estimated that \$774,456 would be required to put the railway in first class condition, and that an extension from Ontario and St. Pauls Streets, St. Catharines, to the junction of the main and local lines at Merrittton, and an extension in Thorold to the industrial district at Thorold South, could be built for approximately \$344,999.90. For these two expenditures, aggregating \$1,119,455.90, 6% bonds would be issued, and the total expenditure involved in the purchase of the lines and in betterments and extensions would therefore be \$4,663,830, to cover which it would be necessary for the municipalities to guarantee bonds proportionate to their respective municipal assessments as follows:—Cities—St. Catharines, \$1,578,202; Niagara Falls, \$579,826; Welland, \$390,769. Towns—Niagara, \$107,509; Port Colborne, \$110,392; Merrittton, \$122,287; Thorold, \$286,152. Villages—Humberstone, \$102,896; Port Dalhousie, \$82,963. Townships—Grantham, \$384,227; Thorold, \$272,232; Louth, \$32,665; Stamford, \$292,684; Pelham, \$79,239; Crowland, \$251,551; Humberstone, \$99,670; Niagara, \$129,576.

The meeting unanimously endorsed Mr. Gaby's report, and recommended to the councils of the interested municipalities that bylaws be submitted at the coming municipal elections, to provide for the taking over of the railway on behalf of the municipalities.

The Hydro Electric Power Commission of Ontario's Secretary wrote the Ontario Prime Minister on Dec. 2, requesting the passing of an order in council approving of the terms of the proposed agreement with the interested municipalities for the purchase of the N. St. C. & T. Ry., in accordance with the requirements of the Hydro Electric Railway Act. Mr. Drury replied as follows: "The proposed agreement contemplates the issue of bonds by the Commission. As you are no doubt aware, the Government now has under consideration new legislation relating to hydro electric radial railways and has already stated that it will not recommend the guaranteeing of any bonds of the Commission issued for the construction or acquisition of radial railways. The Government is of opinion that the acquisition of the N. St. C. & T. Ry. should not be proceeded with under existing legislation. It would not appear that any interest will be prejudiced if the matter is not dealt with at present, because the railway in question is already an electric radial railway owned by and operated for the public. There are other

objections to the proposed agreement, amongst them being that it provides that the debentures of the municipalities issued as collateral security for the bonds proposed to be issued by the Commission may be hypothecated, and that the Commission may acquire and operate other means of transportation than radial railways. As these matters are not in accordance with existing legislation, they should not be embodied in the agreement. The proposed acquisition of the railway in question has evidently been in contemplation for a considerable period, because the resolutions of the municipalities which you send me were passed at various dates between April 17, 1914, and March 21, 1920, whereas the request for the sanction of the Lieutenant-Governor in Council was not received until Dec. 3, 1921. I understand, moreover, that only part of the municipalities concerned proposed to vote upon the agreement at the next municipal election, and that others of them would not vote upon it until some later date. Under all the circumstances, it does not appear that any purpose will be served by approving of agreements which are not only in some of their terms at variance with the existing law, but which may be still further at variance with the law as it will be enacted by the Legislature a few months hence."

Attorney General Raney issued a statement Dec. 20, saying that the letter from the Commission's Secretary asking for the passing of an order in council stated that the agreements were "uniform and practically as submitted to the Government in June 1920. Mr. Raney said:—"This statement is not correct, because the agreement of 1920 contained no provision for the hypothecation by the Commission of the debentures of a municipality, and no provision authorizing the Commission to operate 'other means of transportation of passengers and freight.' These very important provisions and those authorized by statute. Moreover, the application came to the Government too late. It was practically impossible for the municipalities to take the necessary steps to submit the bylaws and agreements to the electors in accordance with the law at the coming municipal elections even if the Government had approved of the form of the agreement as soon as submitted and without taking any time for consideration."

On Dec. 21 Mr. Drury issued a statement in which he said:—"The Government refused to ratify by order in council the bylaws submitted to it because in several important respects they overstepped the Hydro Electric Railway Act. Further, the first letters asking for ratification were received by the Government on Saturday, Dec. 3. The first day on which they could have been dealt with was Monday, Dec. 5, so that even if the Government had been willing to have given an unconditional ratification, which it was not, the bylaws could not have been passed by the municipal councils and received four weeks public notice, as provided by law before Jan. 2, the date of the municipal elections. Further, in accordance with the Government's promise, it is the intention to submit legislation at the coming session which will empower groups of municipalities to build, acquire and operate electric lines where they so desire under conditions

which will better safeguard the municipalities and be more likely to ensure the success and soundness of the undertaking. This being the case, any action taken by the municipalities at the present time, even if such action had not been rendered impossible by the delay of the Commission in submitting the matter to the Government, would in my opinion be premature and would defeat its own purpose."

The Ontario statutes contain the following provisions. Hydro Electric Act, 1914, sec. 4:—"A corporation, or two or more corporations, may, if authorized by the Lieutenant-Governor in council so to do, enter into an agreement with the Hydro Electric Power Commission of Ontario for the construction, equipment and operation of an electric railway to be operated by electrical power or energy supplied by the Commission."

In 1920 this was made to apply to the purchase of existing railways as follows: "The agreement may include in its terms the acquiring by purchase or lease of any steam railway, electric railway or street railway, or any part or parts thereof, or the obtaining of running rights over the same."

In 1916 the following stipulation as to bylaws submitted to the electors in connection with such agreements was inserted:—"The agreement shall not be submitted to the electors, nor shall any bylaw for that purpose be proceeded with by the council of the corporation until the terms of the agreement have been submitted and have received the sanction of the Lieutenant-Governor in council."

Representatives of most of the 17 municipalities in the Niagara Peninsula met at St. Catharines Dec. 22 and passed the following resolutions:—"That the meeting of municipal representatives interested in the acquiring of the N. St. C. & T. Ry., following the decision of the Premier and Cabinet of Ontario in refusing to sanction the electors of our municipalities voting at the forthcoming municipal elections and immediately thereafter, upon the bylaw and agreement to acquire such railway under the Hydro Electric Railway Act, resolves as follows: That having regard to the wish of municipal councils and their representatives expressed at various intervals during the past two years, and re-affirmed at meetings of Aug. 26 and Dec. 1, 1921, to submit to the electors the acquisition of such railway, and of which desire ample notice has been published from time to time in the press of Ontario, and has been given to the Hydro Electric Power Commission and through it to the Government, we view with extreme indignation and regret the attitude of the Premier and Government and its announced decision. That notwithstanding such decision this meeting re-affirms the desire of the municipal representatives of this district to have the bylaw and agreement submitted to immediate vote. That this meeting views with serious alarm the recent action of the Government in connection with the municipal enterprises of the hydro power and radial undertaking, and desires that it be firmly understood that the policy of the undertaking should not be directed by the Government nor the total enterprise taken over by it, and that the same should remain a strictly municipal undertaking and enterprise, and that in the future, as in the

past, the Hydro must be kept entirely free from political influence. That action be taken at once by the executives of the Hydro Municipal Power and Rural Association to protect the interests of the municipalities. That this meeting reaffirms its utmost faith in Sir Adam Beck and the engineers and officials of the Hydro Power Commission, and in their policy and actions on behalf of the municipalities. That this meeting endorses the submission of the bylaw and agreement for acquisition of the railway in accordance with arrangements already made in that behalf, and that no action be taken to deprive the electors of the opportunity to exercise their franchise on the question at the forthcoming election and in accordance with the undoubted wish of the vast majority of the people of this district."

One-Man Car Operation in Fort William and Port Arthur.

Details in connection with the proposed operation of one-man cars on the electric railways in Fort William and Port Arthur, Ont., are being worked out by the Fort William and the Port Arthur Public Utilities Commission, acting either separately or jointly.

The Fort William committee has been authorized by the Board of Railway Commissioners to operate the cars over steam railway crossings in Fort William, and the Port Arthur Commission is applying to the Board for permission to operate such cars over the Canadian National Ry. diamond on the Fort William Road, and for a direction as to the payment of a watchman at the crossing.

The Port Arthur commission estimates that it will cost about \$400 each to convert the present cars for one-man operation, and has authorized negotiations with T. H. McAuley, formerly of Calgary, Alta., and later of St. John, N.B., for the use of his patent on them.

At a recent joint meeting M. C. Campbell, Port Arthur, and Alderman Chapple, Fort William, were appointed to act, with the managers of the two lines, to secure data on the one-man car system, and report at a future joint meeting.

The Levis County Railway's Position.

The Levis County Ry. Co. suffered a severe setback in Feb. 1921, when fire destroyed its car barns and rolling stock to the value of about \$300,000. For some time past the company had been giving a partial service on its lines, which is reported to have been discontinued about the end of Nov. 1921. A press report of Dec. 17, 1921, stated that an arrangement had been made whereby the Quebec Light & Power Co. had taken over the Levis County Ry.'s property for operation. W. J. Lynch, General Manager, Q. Ry., L. & P. Co., is reported to have said that no agreement had been entered into for the company to operate the Levis County Ry. lines. If the Levis company, operating on a 10c. fare, with tickets, could not earn operating expenses and interest on investment under its present efficient management, it could not expect to meet with any more satisfactory results if operated under similar conditions by the Q. Ry., L. & P. Co.

Electric Railway Projects, Construction, Betterments, Etc.

Fort William Municipal Ry.—Fort William, Ont., City Council decided, Dec. 15, a press report states, to invite tenders for cutting and clearing the right of way for a belt line to Chippewa Park, so that construction may be gone on with early in the spring. The ratepayers passed a bylaw in Sept. 1921, providing \$30,000 for the construction of this line. Nov. 1921, pp. 602.)

Hamilton St. Ry.—As stated in Canadian Railway and Marine World for Dec. 1921, H. W. Middlemist, Consulting Engineer, Ontario Railway and Municipal Board, made an inspection of the company's tracks on certain streets, which Hamilton City Council had asked the Board to order to be repaired. Mr. Middlemist subsequently reported to the Board that he had made his inspection on Nov. 16, in company with the City Engineer and G. G. Waller, General Superintendent of Railways, Dominion Power & Transmission Co. After giving a detailed description of the state of the tracks, one section of which is owned by the Hamilton & Dundas St. Ry. Co., another of the Dominion Power & Transmission Co.'s subsidiaries, Mr. Middlemist said: "I do not consider that any of the track I saw could be called dangerous, but where the 73 lb. Dick-Kerr grooved rails are laid I think they should be replaced by new rails on a concrete base whenever the city authorities desire to pave the streets. On Barton St. and Ardmore Ave. the 70 lb. T rails are the good, and are quite suitable for the present macadam streets, which are in a very poor condition." The matter is still under the Board's consideration.

Kitchener & Waterloo St. Ry.—We are officially advised that the Kitchener City Commissioners contemplate building in the spring about a mile of double track line from Albert St., Kitchener, Ont., to the city limits. (Nov., pp. 601.)

Montreal Tramways Co.—We are officially advised that the company during 1921 made four extensions of line, totaling 21.19 miles, as follows:—Sherbrooke St. extension, 0.14 mile; Bordeaux extension, 1.22 miles; Park Ave. extension, 0.72 mile; Cremazie Rd. and Bogg Ave., 0.11 mile.

New Brunswick Power Co. We are officially advised, re-laid 1.5 miles of track in St. John, N.B., during 1921. All new material was used in about a mile of the work, and part new material for the balance. The company is planning to do considerable track relaying for 1922, but its extent will depend very much in the cost of materials and what paving work the St. John City Council will elect to do during the year.

Nipissing Central Ry.—We are officially advised that there is under survey a proposed extension from Lindsay to North Timiskaming, Ont., 15 miles. S. B. Clement, North Bay, Ont., is Chief Engineer.

Ontario Hydro Electric Ry., Essex Division.—Windsor, Ont., City Council has under consideration a proposition to widen Sandwich St., in connection with which it is desired to have the electric railway tracks removed from the north side to the middle of the street.

A press report says that the building of a second track on Ouellette Ave. and Wyandotte Ave., Windsor, Ont., about 8,000 ft. in all, has been completed, and

that cars are being operated on it.

Regina Municipal Ry.—A section of the line on Fourth Ave., Regina, Sask., extending from Scott St. to McDonald St., has not been operated, as the Board of Railway Commissioners had ordered the installation of a half interlocker plant at the crossing over the C.P.R. at the joint expense of the city and the C.P.R. Residents of Eastview and Eastern annex asked recently that this piece of line be put in operation, and after consideration by a special committee the council has been requested to take the necessary steps. The cost of the interlocker plant to the city is estimated at about \$4,000. (Nov. 1921, pp. 601.)

Saskatoon Municipal Ry.—We are officially advised that there was built and put in operation during 1921 about 2,600 ft. of second track on the lines in Saskatoon, Sask.

Toronto Suburban Ry.—We are officially advised that during 1921 the company built a mile of line in the center of the street in Weston, Ont., to replace a similar length of track at the side of the street.

One-man Car Operation on British Columbia Electric Railway.

In connection with the proposed operation of one-man cars on the British Columbia Electric Ry. lines in Vancouver, Victoria and New Westminster, and other municipalities, the B.C. Legislature has added the following section to the British Columbia Railway Act recently:—"284A. No electric street railway or tramway company shall operate on any route any type of street car operated by one man only, commonly known as a 'one-man car,' without first having applied to and obtained the consent of the Minister. Where application is made to the Minister under this section in respect of the operation of one-man cars upon any route which traverses any portion of a municipality, the Minister, before deciding the matter of the application, shall notify the council of the municipality, and shall hear all representations which the council may desire to make with regard to the proposed operation of one-man cars, and shall thereafter decide the matter of the application, having special regard to the safety of the public."

A delegation representing Victoria, Vancouver and New Westminster waited on the Premier at Victoria, Dec. 15, to discuss the one-man car question. It is reported that the Premier is also Minister of Railways, informed the delegation that a fair trial should be given to one-man cars, and that if, later on, the public service and safety required it, the question could be re-opened. An order would be made granting permission to run the cars subject to the statutory regulations made by the Railways Department.

The first one-man car was put in operation on the company's Vancouver lines Dec. 8. It is stated that it is an old car rebuilt, fitted with a new type of fender, and equipped with air brake and an equipment for opening and closing doors.

Victoria City Council has passed a resolution in favor of taking a vote on the operating of one-man cars, at the municipal elections.

Proposals Regarding Purchase of Ottawa Electric Railway.

Considerable attention is being given in Ottawa to the three questions which the city council has decided to submit to the electors on Jan. 2. They are:—1. Are you in favor of the city giving the Ottawa Electric Ry. the required notice to take over the street railway at a price to be fixed by arbitration, as provided by the agreement between the city and the company? 2. Are you in favor of the present franchise of the Ottawa Electric Ry. being extended for a further period of 30 years? 3. Are you in favor of the city entering into an arrangement with the Ottawa Electric Ry. for service at cost?"

The advantages of municipal ownership of the Ottawa Electric Ry. were discussed at a meeting of the Wellington Ward Municipal Association, there, Dec. 15. Ex-Mayor H. Fisher is reported to have said the greatest objection to granting to the company a new franchise is that it is impossible to draw up a contract which would compel the company to give service unless it would pay it to do so. Service, not the fare, is the first consideration. The present shareholders would sell their interests to outside financiers at any time if they could obtain their price.

Controller Ellis is reported to have said the city could take over the railway on the expiration of the franchise in 1923 for less than \$4,000,000, and could continue to operate it on a 5c. fare. He alleged that the company had made from 15 to 19% on invested capital during the past 10 years, and that while the net revenue last year was \$500,000, it only paid the city \$16,000.

In connection with these two statements, the Ottawa Electric Ry. Co. has issued the following figures, showing the receipts and expenditure, and the disposition of the same for the calendar year 1920:—

Total revenue	\$1,786,065.85
Direct operating expenses	\$1,257,689.91
Depreciation reserve	120,000.00
Ordinary taxes	45,325.75
War taxes	45,500.00
Mileage payments to city	16,661.94
Insurance reserve	10,000.00
	1,477,575.60
Net profit	\$308,490.25
Interest on loans	\$26,239.80
Profit and loss account	670.45
Dividends	281,580.00
	\$308,490.25

T. U. Fairlie, of the Hydro Electric Power Commission of Ontario's staff, valued the company's property necessary for the operation of the railway on behalf of the city at \$4,580,435, a figure with which the company says is incomplete. On this figure the profits mentioned above work out at less than 6½%.

A public meeting was held in Hope-well Ave. Public School, Dec. 16, at which the principal speaker was Mr. F. D. Burpee, the company's Manager, who discussed the service at cost plan which, he said, is favored by the company as a plain common sense plan based on the principle that the company's revenue, which is derived entirely from fares, shall be always sufficient to pay all costs of operation. It is estimated that about \$2,000,000 will have to be expended during the next five years to provide for necessary requirements, without taking into consideration any extensions. He also said:—"I am authorized by the company to say that, in the event of the electric railway plebiscites at the next municipal

election showing that a majority of the electors desire another contract with the company for a period not exceeding 30 years, the company will be willing to accept an agreement calling for a 5c. fare. As economic conditions sometime during the life of the contract might make a 5c. fare unable to provide for the cost of operating the railway, the maintenance and upkeep of its plant in efficient conditions, proper provision for depreciation of wasting assets, and a fair and reasonable interest on the actual value of its property, the company would expect that a clause be included in the agreement giving the same consideration to this point as is contained in section 6, entitled Tolls, of the act passed by the Ontario Legislature in 1920, under which the City of Ottawa would acquire and operate the electric railway. This section is as follows:—"Tolls: The Commission shall so regulate and fix all tolls, tariffs of tolls, and fares for the carriage of passengers and freight that they will produce in each year a sum sufficient to provide for the cost of operating the railway and other works, for their maintenance and upkeep in an efficient condition, for making such renewals and replacements as are properly chargeable to revenue, and for the payment in due course of the principal and interest of all outstanding debentures, encumbrances and other fixed and floating liabilities." As a company does not have to provide a sinking fund to retire the bonds at the end of 30 years, it is in a better position than a municipality to maintain the 5c. fare. The annual charge against the revenue for principal or sinking fund would be about \$75,000."

Electric Railway Employees' Wages, Working Conditions, Etc.

British Columbia Electric Ry.—Two reports have been submitted by members of the board of conciliation which sat recently at Vancouver to consider wages and working conditions about which differences existed between the company and its employees. The majority report was signed by G. W. C. Dittmars, chairman, and A. G. McCandless, representing the company, and the minority report by R. P. Pettypiece, representing the men. The majority report states that the points at issue were the company's notice of a 15% reduction of wages; the wages and working conditions governing the operation of one-man cars; the company's desire to abolish extra payment to conductors and motormen for Sunday and holiday work, and the working conditions contained in the agreement of Nov. 5, 1919. The majority report states that the company was justified in asking for a 15% cut in wages, but they did not agree that the present is an opportune time to make so drastic a reduction, and recommended that a 10% reduction be made in all wages from Dec. 1, 1922; Sunday work to be paid for at time and a half; extra men to be guaranteed a minimum monthly earning of \$87.50; overtime at the rate of 10c. an hour instead of 25c., it to be paid for runs not completed within 10 hours of the commencement of the first shift. Some alterations are recommended in working conditions, and also the following:—"In the event of the com-

pany operating one-man cars on any part of its system, we recommend that the men so operating them be paid at schedule rates plus 10%." We make this recommendation for the reason that it has been shown to us that on these cars the men's duties will be more exacting and their responsibilities greater, and as it will likely call for some of the best men the company has, we feel that they should be recompensed accordingly."

R. P. Pettypiece in his minority report expresses the opinion that the utmost reduction that should be allowed is 5%. He estimates that this with the altered working conditions recommended would be equal to a total reduction of 12%.

The wages paid conductors and motormen since Oct. 1920 have been, on city lines, 65c., reached in a year and a half; and on interurban lines 67c.

It was announced on Dec. 13 that the company had decided to accept the majority report. Dec. 15 the men had not signed acceptance.

Hull Electric Co.—As stated in Canadian Railway and Marine World for Nov. 1921, G. Gordon Gale, Vice President and General Manager, advised the company's employees Nov. 1 that a 10% reduction in wages would be made from Dec. 1, which the men were asked to accept. They declined and applied for the appointment of a board of conciliation, naming F. Bancroft, of the Toronto Star staff, as their representative. The company subsequently named Geo. Kelley as its representative and the Minister of Labor appointed W. F. O'Connor, K.C., of Ottawa, as chairman.

International Traction Co.—We are officially advised that on Oct. 1, 1920, the wages of conductors and motormen were advanced from a sliding scale of from 40c. to 45c. an hour from 45c. to 50c. an hour, to be in force for a year. Thirty days prior to the expiration of the agreement the company notified the men of its desire to make a reduction in wages by returning to the scale in force prior to Oct. 1, 1920, the new agreement to contain a proviso that either party, on giving 30 days notice might again open up the question. The men objected to the inclusion of this proviso, and made application to the Labor Department for the appointment of a board of conciliation. The company nominated J. L. O'Flynn as its representative; the men nominated E. O. McMullen to represent them, and Rev. Father Jas. Brennan was chosen as mediator. Before the board met to discuss the matter, the company agreed to eliminate the 30 day clause from the agreement, and all the board was called upon to do was to meet and confirm the agreement. In the report to the Department the members said they were very happy to be able to state that the best of feeling existed throughout between the men and the company. The wage rate per hour fixed in the agreement, which is to run for a year, and to be automatically renewed from year to year unless either party gives 30 days notice prior to any Sept. 30, is as follows: First six months, 40c.; second six months, 41c.; third six months, 42c.; fourth six months, 43c.; thereafter, 45c. Interlocker signal men are to be paid \$90 a month, and \$5 a month to present employees, extra, on account of their long service. Nine hours is to constitute a day's work.

J. L. Col. G. C. Royce, General Manager, Toronto Suburban Ry., has been elected a director of La Pas Oil Corporation.

Proposed Purchase of Toronto Eastern Railway

Toronto City Council, at a special meeting, Dec. 8, authorized the submission of the following question to a vote of the ratepayers on Jan. 2:—"Are you in favor of carrying out the agreement with the Hydro Electric Power Commission of Ontario for the construction of the radial railway to Bowmanville without the guarantee by the Ontario Government of the bonds of the Commission?"

The bylaws for the purchase of the Toronto Eastern Ry., on which only a little construction has been done, from the Canadian National Ry., and for its completion under the provisions of the Hydro Electric Railways Act, were adopted by the municipalities interested at the municipal elections at the end of 1919, and beginning of 1920. The total amount involved for the purchase of the line and its completion mentioned in the bylaws was \$8,360,794, of which Toronto's share would be \$4,328,665.

Scarboro Township decided Dec. 9 to resubmit the bylaw to the ratepayers. The amount involved in this municipality as mentioned in the bylaw carried in 1920 was \$892,686. Whitby Town Council decided Dec. 12 to leave the question of having a revote on the bylaw to the consideration of the council to be elected Jan. 2. The amount of debentures to be assumed under the Whitby bylaw was \$277,955.

On Dec. 19 the Ontario Attorney General received the following letter from Scarboro Township Municipal Clerk: "Re Toronto Radial Act, 1921. I am writing you on behalf of the municipal corporation of Scarboro Township in respect to the matter set out below. Under the act above mentioned, the Hydro Electric Power Commission of Ontario, the City of Toronto and the Toronto & York Radial Ry. were, amongst other things, authorized to enter into an agreement dealing with the Toronto & York Radial Ry.'s Scarboro Division, but subject to the approval of the Lieutenant-Governor in council. Scarboro Township was not at any time consulted in respect to the drafting of the act, nor the proposed agreement, neither has it at any time been consulted in reference to the agreement, though, of course, any such agreement must of necessity affect very materially the interests of the township. The township does not take the position that it is antagonistic to the agreement in so far as it affects the township, but it does take the position that where its interests are concerned it should be at least consulted, and on behalf of the township I have written to Sir Adam Beck, the Mayor of Toronto, and York Radial Ry. Co., pointing out the facts, and I enclose herewith copies of the respective letters. On behalf of the township, I respectfully request that in case the agreement be submitted for approval of the Lieutenant-Governor in council, the statement above made be given consideration, as important interests of the township may be materially affected."

The Attorney General thereupon wrote the Hydro Electric Power Commission of Ontario's Secretary as follows:—"In the Prime Minister's absence, I enclose copy of a letter received this morning from the solicitor for Scarboro Township in this matter. The Government has had under consideration your letter of Dec. 6 asking for approval of this agreement,

and, subject to an amendment, considered necessary to keep the agreement within the law, had determined to give the necessary approval, the assumption being that the agreement was acceptable to the township as well as to the Commission. In view of the solicitor's letter, I think it is better to defer action in order that an agreement may be submitted which will be mutually satisfactory in its terms."

Motor Omnibus Traffic Notes.

Three of the Union Bus Co.'s drivers were fined \$10 each in the St. John, N.B., police court, recently, for driving on the New Brunswick Power Co.'s electric railway. The Bus Co. gave notice of appeal.

A new motor bus service between Hamilton, Grimsby and Beamsville, Ont., was put into operation Dec. 1. A bus leaves Hamilton post office and Beamsville town hall at 6 a.m. every week day, and makes the trip in an hour and a half. The service thereafter is every two hours in each direction, the last buses leaving at 10 p.m. The Sunday service is the same except that the 6 a.m. and 10 p.m. buses are not run in either direction. Connections are made at Beamsville with a bus service to St. Catharines.

Hon. F. C. Biggs, Minister of Public Works and Highways for Ontario, is reported to have stated that the Ontario Government has under consideration a proposal to regulate all bus services operated in the province. The objective of such legislation would be the improvement of the various services for the public benefit, the regulating of the services in such a way as to allow profitable operation, the compelling of good service, and the saving of wear and tear on provincial highways by eliminating unnecessary duplication of services.

The Union Bus Co., which was formed in St. John, N.B., largely by New Brunswick Power Co.'s employees who were let out of its service when it declined to recognize the union and has since been operating a bus service in opposition to the electric railway, went out of business at midnight, Dec. 8. F. A. Campbell, President, is reported to have stated that the company had ceased operations for the winter only, during which the cars would be stored, and that operations would be resumed in the spring. Ira Ferris, President of the Electrical and Steel Car Worker's Union, is reported to have stated that the bus company had closed up shop as the service was not paying; the employees were causing to patronize the buses and the fines against the company for breaches of the bylaws were becoming so heavy that it was impossible for it to continue operations. The company had paid \$15,000 on account of \$19,000, the price of the buses, and only owed \$125 outside the balance due thereon. Of the amount paid for the buses only \$500 had been received from sources outside the union funds. Between 30 and 40 men have been thrown out of employment by the failure. The buses are reported to have been taken possession of by the holder of a lien note.

The British Columbia Legislature has refused the City of Vancouver's application for permission to operate motor buses on the ground that it is to the city's best interests to have only one transportation system. Some members stated that two transportation systems would be a calamity, and other members

said that competition in city transportation would lead to the chaotic conditions that have existed in Seattle. W. J. Bowser, leader of the opposition, charged the government party with playing the British Columbia Electric Ry.'s game by proposing to give it a perpetual monopoly, but Attorney General Farris replied that the private bills committee lost interest in the city's petition when the rumor became current that the city did not really wish to enter into competition, but merely to hold its power over the B.C.E.R. Co. as a club. Another member asked the house to consider the effect on the credit of the province if the city were allowed to step in over the company's head. The city's petition was prompted by the demand of the West Broadway residents for a street car line, which the company has refused. The company has offered a motor bus service in connection with its street railway system, provided the city will pave the street, an expenditure the city is not likely to incur at present.

Joint Welding and Bonding, Toronto Transportation Commission.

In the article in Canadian Railway and Marine World for Dec. 1921, pg. 656, describing the track construction and rehabilitation work being done by the Toronto Transportation Commission, it was stated as follows: "In making the track joints, the joint plates are set up tight with all four bolts, and then welded by the Lincoln carbon arc process top and bottom. Two of the bolts are then taken out. O-B bonds are used in making the joints."

From the above it might be inferred that the bonds are used in all joints. Where the Lincoln carbon arc process is used in making the joints on tangent track, the bonds are not used, but in intersection work and on tangent track, where the joints are not welded, O-B bonds are used with metal terminals, welded with metallic electrode. On a number of joints on tangent track, a combination of the carbon arc process and the metallic arc process of welding was used, the lower seams being welded with the carbon arc and the upper with the metallic arc. Such joints were not bonded.

Newfoundland Hydro Electric Development.—H. D. Reid, President, Reid Newfoundland Co., who returned to Newfoundland from England, early in December, accompanied by hydro electric engineers from Sir W. G. Armstrong, Whitworth & Co., stated in an interview that he had been in England chiefly to rectify English capitalists' interest in the development of hydro electric power in Newfoundland. It has been estimated that the total water powers available are about 235,000 h.p. He believes that there is every possibility of the plans being carried out, but much depends on the view that the Newfoundland Government may take of the whole scheme. The English hydro electric engineers made preliminary investigations in the spring, and are now making the final arrangements. A company is being formed in Newfoundland, to be financed in England, and the engineering work will be carried out by Sir W. G. Armstrong, Whitworth & Co., Newcastle-upon-Tyne, Eng. The project, it is stated, will represent a capitalization of about \$15,000,000.

Electric Railway Notes.

Toronto Ry. Co. is being sued by the city for \$52,232.76, for carting away snow from the track allowances, which it is claimed the company should have taken away last winter.

The Hydro Electric Power Commission of Ontario has arranged with the Toronto Ry. Co. to use the company's auxiliary steam plant to supply extra power for the Commission's customers.

British Columbia Electric Ry. employees held their ninth annual dinner at Vancouver, Dec. 2. Among the speakers were George Kidd, General Manager, and W. G. Murrin, Assistant General Manager.

Brantford & Hamilton Electric Ry. and Hamilton Radial Electric Ry. bylaws regulating travel on their cars, have been recommended by the Board of Railway Commissioners for the Dominion Government's approval.

The Port Arthur, Ont., City Council and Port Arthur Utilities Commission are reported to have agreed that all public places shall be placed on the assessment roll and be made liable to taxes the same as privately operated enterprises.

The London & Port Stanley Ry. is reported to have definitely entered the terminal transportation business in London, Ont., a start having been made with the delivery of coal to the gas works. It is estimated that a revenue of \$10,000 a year will be earned by this one service.

The London & Lake Erie Ry. & Transportation Co., the affairs of which are being wound up, has sold to the City of London, Ont., a strip of land 2,150 ft. long and running to 182 ft. wide. The purchase of this piece of property will enable the city to begin work on an extension of Richmond St.

The London, Ont., Street Ry. Co.'s franchise expires in 1925, and it is reported that arrangements have been made for the early appointment of a Commissioner to study the whole question. The suggestion is to appoint four aldermen, and four citizens unconnected with the city council, with the mayor as chairman.

The New Brunswick Power Co. has advised the Board of Railway Commissioners that the proposed overhead crossing at Douglas Ave., St. John, N.B., in which the C.P.R. is interested, is not, in its opinion, required, and has refused to make any contribution towards its cost.

Edmonton, Alta., City Commissioners are reported to have, after a conference with the heads of departments, arranged a scale of salaries for 1922. The Superintendent of the Edmonton Radial Ry.'s salary for 1921 is stated to have been \$2,700, but the new figure is not mentioned.

A Levis, Que., press dispatch says:—The Levis County Ry.'s service is still closed and autobuses offer the only service to citizens from point to point. The company for the last year has lacked encouragement on the part of the municipalities interested and has been unable to resume its regular service."

Winnipeg City Council's public safety committee is reported to have decided Dec. 9 to ask the Winnipeg Electric Ry. to pay taxes and pavement charges claimed to be due. The amount stated was \$917,291, made up of \$804,982.39 taxes and pavement charges, and \$112,308.61

penalties on unpaid taxes for several years past.

Ernest C. Partridge, formerly a London & Port Stanley Ry. conductor, was found guilty at the Middlesex County Sessions, Dec. 12, of stealing and manipulating fares. It was shown that he was engaged, through a private detective agency, to act as a conductor, and as he is reported to have admitted supplying tickets to Dr. Honsinger, a St. Thomas dentist, for whose apprehension a warrant is out, in return for which he received some money, several bottles of whiskey and some dental work.

A verdict for \$55,000 damages, awarded at the Hamilton, Ont., assizes against the Hamilton St. Ry. Co. in respect of the death of Thomas Irwin, in Jan. 1920, from injuries received through the fall on him of one of the company's iron standards on street. The verdict included \$30,000 to the widow and \$12,500 to each of two sons. An appeal against the award came before Mr. Justice Riddell, in the Second Divisional Court at Toronto, Dec. 12, when he suggested the damages be reduced to \$10,000 for the widow and \$5,000 for each of the sons. The case was adjourned to enable counsel to reach a settlement.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Railway and allied companies.—

	Sep. 1921	Sep. 1920	Sep. 1919	Sep. 30, 1920	Sep. 30, 1919

The Manitoba Power Co. has been granted supplementary letters patent under the Dominion Companies Act, cancelling the clause in its letters patent reading:—"The capital stock of the company shall be \$5,000,000, divided into 50,000 shares of \$100 each," and substituting therefor the following:—"The capital stock of the company shall consist of 100,000 common shares without nominal or par value, which shall be issued and allotted for the sum of \$10 each, provided that the said company shall carry on its business with a capital stock of \$1,000,000."

Montreal Tramways Co. has declared a further deferred dividend of 2½% for the quarter ended June 30, 1919. It is stated that this will leave only one quarterly dividend of 2½% in arrear. The company has paid off 15% of dividend arrears since Jan. 20, 1920, and it is expected that the remaining dividend in arrear will be paid off early in the year. Regular current dividends are also being paid.

An offering of \$1,750,000 of the company's first and refunding mortgage 5% gold bonds was made in New York Nov. 27. It was stated that this was the first electric railway bond issue to be offered there for several years and it was reported to have been oversubscribed within 48 hours. The issue price was 83½%, equivalent to a 6¼% basis.

Mainly About Electric Railway People.

Maurice C. Gilman, who has been appointed Sales Manager, Electric Utility, Winnipeg Electric Ry. Co., is in charge of sales of electric current, co-operating with the Superintendent of the Contract Department, both reporting to the Vice President. His duties include fixing of rates, creating new business for the electric utility, inducing of industries to settle in Winnipeg and dealing with consumers who have industrial loads to place. He is an electrical engineer and before going to Winnipeg was employed with Montreal Light, Heat & Power Co., as Special Agent and Research Engineer, and prior to that was for about 8 years Power Sales Engineer, Assistant to Chief Engineer, and Sales Manager, consecutively, Toronto Electric Light Co. He was at one time with the Public Service Corporation, Newark, N.J., and subsequently with the Brooklyn Edison Co., Brooklyn, N.Y. He is a member of the Canadian Electrical Association and was for several years chairman of the commercial section, and is also a member of the commercial section of the National Electric Light Association, New York.

Philip Pocock, Vice Chairman, London Railway Commission, was re-elected a member of the London, Ont., Public Utilities Commission at the annual election on Dec. 5, 1921.

E. A. Robert, President, Montreal Tramways Co., visited New York recently, presumably in connection with matters connected with the company's financing.

London & Lake Erie Railway & Transportation Co. Liquidation.—A special general meeting of shareholders, held at London, Ont., recently, passed resolutions approving of the sale of a portion of the right of way in London to the city for \$5,000; of the sale of the terminal site and a portion of its right of way in London, with buildings thereon, to M. White, for \$6,500; of the sale to the Province of Ontario of certain portions of its right of way, subject to a reservation, for \$4,500; and the sale of certain rolling stock and equipment to the Canadian National Ry. for \$18,000; also other resolutions authorizing the directors to dispose of the remainder of the property and assets. We are advised that the sale to the Canadian National Ry. for the Niagara, St. Catharines & Toronto Ry., consisted of 6 passenger cars, and 1 work car, with their equipment and accessories, and was completed over a year ago. The resolution passed by the shareholders was a mere formality, to comply with statutory provisions.

Moscow Street Car Conditions.—Only 142 electric street railway trains of two cars each are in condition to operate in Moscow, consequently only 22% of the population can be accommodated. The Russian Government has extended to the general public recently the privilege, hitherto granted only to government employees and workers, of riding in the cars, but they can only use the cars between 10 a.m. and 4 p.m., and pay 1,000 roubles for a "stretch," which is about half a mile. A recent report stated that the fares collected amounted to about 1,500,000,000 roubles a month, and that there was a monthly deficit of about 2,000,000,000 roubles.

The Place of the Motor Bus in Urban Transportation.

By A. W. McLimont, Vice President and General Manager, Winnipeg Electric Railway.

The place of the motor bus in urban transportation, although relatively a new subject in the electric railway industry, finds us at a phase of the transportation problem which has been rapidly assuming important proportions and I believe that as leaders in the electric railway business we may now profitably give this matter our serious consideration.

The ideas which I would like to impress upon those who are interested in urban transportation are prefaced upon these principles: First, it is the paramount business of traction companies, clothed with monopolistic privileges, such as exclusive franchise rights, to provide for communities served, with transportation. Second, the transportation furnished must be adequate and economical. These principles I regard as fundamental. If the motor bus is to have any place in urban transportation, its use must be in alignment with these two principles.

We have been using motor busses in Winnipeg since 1918 and will likely employ them more and more in the future. We use them as feeders to our street railway system. The busses are considered as street cars, under our franchise, and transfers are issued and accepted from cars to busses and vice versa. But I do not believe that motor busses can ever at least for many years, successfully supplant street cars in Winnipeg, though to a small extent they may do this in fact already have done so. Perhaps the best way to explain what I think the place of the motor bus is will be to explain how we came to use them in Winnipeg.

Our first busses were installed in 1918, shortly after I came to Winnipeg, on the Westminster Avenue-Lipton St. route, to replace jitney service which was abolished by an agreement with the city at that time. This route is a mile long, and serves a residential district which is not reached by our street car lines. In the absence of street car service, jitneys had come to furnish transportation to this district, in other words, to do the work which our franchise had delegated to us. Now, in failing to provide service the company had unconsciously forgotten its duty as a transportation system. True enough, it would not be profitable, in fact war conditions made it impossible, to consider laying tracks and making an extension into this territory. But that was not sufficient reason for failing to provide service.

Careful investigation would have revealed, as it finally did, that even though extensions of our tracks were, for the time out of question it still was economically possible to furnish service by streetcar busses. Instead of expending \$65,000 on the payments for laying tracks and building overhead, and another \$40,000 for four cars, we bought four 16-passenger busses at a cost of approximately \$10,000. Not only was the initial capital outlay cut down from \$105,000 to \$10,000, but we were able to furnish service on very short notice after the acceptance of the agreement abolishing the jitneys. It is unnecessary, I take it, to explain why we were anxious to be relieved of jitney competition on for, of course, the jitneys did not confine their service

to the Westminster Ave.-Lipton St. route, but rather found their principal justification for existing.

A second route operated by us is known as the Stockyards route. At the time we decided to operate this bus route we were confronted with this situation: The city had decided to pave a street upon which we had an old, dead-end, single track extending in the direction of the stockyards. This section of track was little over half a mile long and was located on the side of the street. The city bylaws required this track to be moved to the middle of the street, when the paving was done, and, of course, the track being old, meant that it would practically have to be reconstructed. As I have already indicated, the track did not extend to the stockyards. To provide car service to the stockyards would have required building an extension of nearly half a mile, including special work for a stream railway crossing. All told this work would have meant a capital outlay of around \$75,000. Two new cars would have increased this to \$95,000. The traffic to be handled could all be conveniently carried by two 20-passenger busses. After a conference with the municipal authorities we decided to tear up the old track, thereby releasing a good deal of rail for use elsewhere, and bought two new busses at a cost of \$10,000. These busses operate on the new pavement, and the present service extends to the stockyards, while formerly it was necessary to walk half a mile from the end of the car line in order to get there.

We have still another route upon which busses are operated. Here the primary consideration was to avoid building an

extension which would require either cross-overs or subways for two railway crossings—one of which was a 3-track and the other a 2-track crossing.

In all the cases which I have cited it will be noticed that the bus has been used to give service where formerly none was provided by street cars and under conditions which made it economically impossible to provide street car service. In the one instance bus service also replaced the street car. I have no doubt that most city transportation systems can advantageously make use of motor busses along the lines which have been described. How extensively this may be done is a question which can only be answered in light of local conditions.

We are favored with very cheap power at Winnipeg, hydraulically generated on the Winnipeg river, and this allows us to operate our street cars very cheaply. Our motive power costs less than 3c. a car mile, while gasoline for busses costs about 6c. a mile. Cheap electricity, together with the very heavy traffic which we have on the main arteries of travel, especially during peaks, make it impossible for motor busses to compete successfully with the street cars on the main lines. Then too, the extreme climatic conditions which we have in most Canadian cities would further favor the street car in preference to the motor bus, for people have little patience waiting for cars when weather conditions are severe.

I have had a few costs compiled showing how, in light of our experience at Winnipeg, motor busses have a very real place in urban transportation when used as feeders, but cannot take the place of street cars on the main routes.

Classification	Main Route (North limits Deer Jodice)		Feeder Route Westminster-Lipton	
	Street car	Motor bus	Street car	Motor bus
General data				
Length of route, miles one way	7.09	7.09	1.03	1.03
Total car or bus miles per year	2,737,600	8,211,600	128,196	128,196
Per route mile data				
Number of cars or busses operated on peak	12	36	3	3
Total number of cars or busses required	13	39	4	4
Investment in rolling stock	\$156,000	\$195,000	\$10,000	\$10,000
Investment in track and overhead	65,000		65,000	
Total investment	\$221,000	\$195,000	\$105,000	\$10,000
Car or bus miles per year	386,000	1,158,000	124,000	124,000
Operating costs per car or bus mile				
Motormen, conductors, drivers	13.5c.	6.8c.	7.5c.	7.5c.
Motive power	2.5c.	6.0c.	6.0c.	6.0c.
Other operation expenses	3.3c.	1.8c.	3.3c.	1.8c.
Maintenance of roadway	2.0c.		2.0c.	
Maintenance of rolling stock	3.5c.	7.2c.	3.5c.	7.2c.
General and undistributed expenses	3.0c.	1.0c.	3.0c.	3.0c.
Depreciation	2.6c.	1.0c.	1.4c.	1.0c.
Taxes	1.7c.	3.4c.	2.0c.	2.0c.
Interest on investment	4.6c.	1.3c.	6.8c.	0.7c.
Total costs per car or bus mile	96.7c.	28.5c.	32.8c.	29.2c.
Total operating costs per year				
Per route mile	\$141.650	\$330.000	\$10.670	\$36.200
Per entire route	\$1,001,500	\$2,310,000	\$42,050	\$37,400

On main route costs are for 20-passenger street cars, but on feeder route they are for one-man cars. On main route costs are for two-man busses, but on feeder route they are for 16-passenger busses. One minute headway is maintained during peaks on main route. Area.

Chatham, Wallaceburg & Lake Erie Railway's Future.

The Chatham, Wallaceburg & Lake Erie Ry. is an electric line extending from Wallaceburg via Chatham to Erie Beach, Ont., 33 miles. It was acquired

some years ago by Sir William Mackenzie and associates, but has not been a profitable undertaking, and the question as to what would become of it has been discussed on several occasions. In March the Chatham City Council promoted a bill before the Ontario Legislature to provide for a survey of the line being

made with a view to its being taken over by the Hydro Electric Power Commission of Ontario. This bill was withdrawn on the passing of an order in council authorizing the Commission to have its engineers report on the railway's condition, etc.

Attention was again directed to the future of the line recently owing to a trip made by a party of C.P.R. officials, who are reported to have made a detailed inspection. A local report is that the C.P.R. officials are considering how far the Chatham, Wallaceburg section of the line could be utilized as a part of a projected extension of the C.P.R. from Catham to Sarnia, Ont. (May 1921, pg. 268.)

Electric Railway Passenger Fares.

Hamilton St. Ry.—After discussion in committee and in council for a lengthened period, Hamilton, Ont., City Council on Dec. 8, by a vote of 14 to 5, decided to permit the company to charge a straight 5c. fare for ordinary passengers. Heretofore the fares have been 5c. cash, or 6 tickets for 25c., limited tickets for 25c., good from 6.30 to 8 a.m., 11.50 a.m. to 1.30 p.m., and 5 to 6.30 p.m.; children between 5 and 12 years, 3c. cash or 10 tickets for 25c.; children under five years free. The bylaw provides for a straight 5c. fare at the council's pleasure, children's fares to remain as before. The new fare went into effect Dec. 15, the company continuing to accept tickets sold previously. The arrangement is only temporary, pending negotiations for a revision of the franchise agreement. The ratepayers will on Jan. 2 vote on the question:—"Are you in favor of the council granting to the Hamilton St. Ry. Co. permission to charge a fare of 5c. where tickets are now used, the fares for children to remain unchanged?" Should this question be answered in the negative the bylaw will be repealed.

Toronto Transportation Commission.—The question of scholars' tickets has been under discussion for some time between the Commission and the Public and Separate School Boards. After lengthened negotiations an arrangement was reached and put into effect Dec. 9. We are officially advised that pupils who reside in the city who come within the provisions of the Adolescent Act, viz., 16 years and under, are to be carried between 8 a.m. and 4.30 p.m. on school days at the same rate as children, viz., 7 tickets for 25c. Tickets are being sold in the public and separate schools at stated times by a representative of the Commission to scholars who are designated by the principals or teachers as entitled to the privilege. In the case of the private schools, the tickets are bought by the school authorities and sold by them to pupils entitled to the privilege. A similar arrangement also exists at the Technical School and the High School of Commerce. The principle of the whole arrangement is, we are advised, that the conductors on the cars do not sell special scholars' tickets, but that they are sold elsewhere, where there is some proper person to specify whether the pupils to whom they are sold are entitled to buy and use them.

Winnipeg Electric Ry.—The Manitoba Public Utilities Commissioner has been consulted recently by the Reeve of Assiniboia Municipality in regard to a reduction in zone fares between Deer Lodge and Winnipeg City limits. He suggested

changing the present three zones, with a 5c. fare in each, to two zones with a 5c. fare in each.

Another matter affecting fares likely to come before the Commissioner is the use of workmen's tickets in East and West Kildonan Municipalities. At present workmen's tickets may be bought by those travelling from Winnipeg to Morse Place or the John Black Memorial Church, but they cannot be used from those points into the city. It is desired to make them available in both directions.

Electric Railway Track Laid in 1921.

According to returns received by Canadian Railway and Marine World, 7,757 miles of new track were built by four Canadian electric railways in 1921, compared with 9,712 miles in 1920, the figures for 1921 being given below.

Bramford Municipal Ry.—		Miles.	Miles.
St. Pauls Ave. extension	1.19	
South Market St. extension41	
Montreal Tramways Co.—			1,960
Sherbrooke St. extension132	
Greenwood Ave., connecting Toronto Ry. and Ontario Ry.72	
Park Ave. extension	1.22	
Cremazie Road-Bagg Ave.11	
Quebec Ry., Light & Power Co.—			2,190
Bourgeois Ward extension		0.880
Toronto Transportation Commission—			
Coxwell Ave., Queen St. to Danforth Ave.		1,010
Greenwood Ave., connecting Toronto Ry. and Ontario Ry.		0.041
Danforth Ave., connecting Toronto Ry. and Ontario Ry.		0.023
Teraulay St., College St. to Bloor St.		0.625
Albert & James Sts., loop		0.115
Bloor St., Runnymede Road to Bathurst St.		0.416
Bathurst St., Dupont St. to St. Clair Ave.		2,787
Total		7,757

The figures given above are for new route mileage added. For example, the Toronto Transportation Commission built an extension on Coxwell Ave. from Queen St. to Danforth Ave., 1.04 miles. This is double track, so that 2.08 miles of single track were laid, but only 1.04 miles are reckoned as added to the system. The actual new track laid by the Commission in these locations was as follows, the figures representing single track:—

Straight track—		Feet.
Coxwell Ave.	7,900
Greenwood Ave.	410
Danforth Ave.	210
Teraulay St., College St. to Bloor St.	6,560
Albert and James Sts., loop	610
Bloor St., Runnymede Rd. to Jane St.	4,396
St. Clair, at Caledonia, passing track	150
Bathurst St., Dupont St. to St. Clair.	5,364
New routes in intersections	9,344
		35,324

Car houses—		
Bloor St. West	150
St. Clair Ave., special work	4,743
Danforth Ave., straight track	5,885
Danforth Ave., special work	7,150
Danforth Ave., straight track	10,713
Russell, special work	1,059
		30,650

Sidings, etc.—		
Coxwell Ave., material yard	600
Russell car house, dump track	650
Hillcrest material yard	2,025
Merton St., material yard	1,150
		4,425

Total 70,109 ft., or 13,335 miles.

In addition to the work mentioned above, the Commission has rebuilt a con-

siderable mileage, full particulars of which were given in Canadian Railway and Marine World for Nov. 1921, pg. 599.

The New Brunswick Power Co. relaid 1.5 miles of double track line at St. John N.B. The Toronto Suburban Ry. rebuilt 1 mile in Weston transferring the track from the side to the center of the street; the Hydro Electric Ry. Essex Division built about 0.8 of a mile of second track on two of its lines in Windsor, Ont., and Winnipeg Electric Ry. built 0.125 of a mile of track across Maryland Bridge.

Answers to Questions on Electric Railway Topics

The following answers have been sent, by Canadian electric railway officials, to questions addressed to the American Electric Railway Association's question box:—

Workmen's Compensation Insurance.—Is your compensation insurance carried by an outside company, or do you carry it yourself? What are the relative advantages of these plans?

British Columbia Electric Ry., Vancouver, B.C.—All compensation to employees is covered by a provincial statute styled "Workmen's Compensation Act," administered by a board of commissioners appointed by the Government. The company is assessed for the compensation paid out by the board. The company carries its own insurance to cover compensation to others than employees. The company has found it less expensive to carry its own risk in either case.

Underground Pipe Drainage.—Is it your practice to employ the drainage method in connection with all underground pipe, cable and other metal structures?

John Whitsett, Manager, Winnipeg Electric Ry., Winnipeg.—We employ no drainage whatever on underground pipes, but we provide for draining all underground cables, under supervision of the Public Utilities Commission, and keep records of this cable drainage all in accordance with the Manitoba Electrolysis Act, which prescribes all regulations.

Payment of Wages.—In paying an employee weekly wages, which of the following methods have been found best, and why? (a) To pay employee his money at the window loose, i.e., not in an envelope; (b) To pay employee his money put up in an envelope; (c) To pay employee by cheque.

F. D. Burpee, Manager, Ottawa Electric Ry.—About six months ago we adopted the cheque system, and it has been found very satisfactory, not only to the company, but also to the employees. We avoid the risks of conveying large amounts of currency from the bank to the pay office. The cheques are distributed in very much less time to the employees. The employee can cash the cheque at any bank in the city, or most of the stores. The endorsed cheque returned from the bank is the best evidence we could have that the employee has received his pay.

Types of Account Books.—As a permanent record should the three principal books of a company, viz., the journal, ledger and cash books, be bound volumes, or would loose leaf books of some kind be considered equally permanent and safe for reference in future years?

F. D. Burpee, Manager, Ottawa Electric Ry.—We use bound journal and cash book, and loose leaf ledger.

Marine Department

Dominion Government Dredger No. 16.

The Marine and Fisheries Department has had built by Canadian Vickers Ltd., Montreal, a twin screw hopper and barge loading dredger, which will be known as Canadian Government Dredger No. 16, for service on the St. Lawrence River, particularly along the north shore, below Quebec, where the river bed consists of red sand, stones, gravel and clay. The dredger was partly built and was launched during the war, but, owing to pressure of other work, operations had to be suspended and it was laid up, pending an opportunity to complete the contract.

The dredger is one of the largest of its kind in the world, the principal dimensions being,—length overall 292 ft.,

The hull is built of steel, and the dredger throughout is built and equipped under Lloyd's special survey to Class 100A1, and also to Government inspection.

The propelling machinery consists of 2 sets of triple expansion, surface condensing engines, with cylinders h.p. 17 in., i.p. 27 in., and l.p. 43 in. diameter, and 27 in. stroke. Arrangements are made so that either of the main engines can drive the dredging gear. There are two boilers 15½ ft. diameter by 11½ ft. long of the single ended marine type, supplying steam at a pressure of 180 lb. per sq. in., and built to Lloyd's and Canadian Steamboat Inspection. A complete

The main frame amidships is a piece of extra strong structural steel work, supporting the dredging gear, bucket ladder and navigating platform, and on it are also the mud shoots and doors for directing the flow of soil overboard to either side, or to the ship's own hopper to either side fore and aft. The mud shoot doors are operated by special steam driven winch for the large main doors, and by small hand winch or rope tackle for the smaller doors.

The bucket ladder, with its string of buckets, is suspended from the main frame at the top end, and free to hinge about the same. The lower end is raised and lowered to the necessary dredging

Canadian Government Twin Screw Hopper and Barge Loading Dredger No. 16.

breadth moulded 48 ft., and depth moulded 20½ ft. It is of the self propelling, center bucket ladder, self loading, or barge loading, type. It will be capable of dredging and discharging into barges on either side, at the rate of 1,500 tons of soft material an hour, or a proportionately less amount of gravel, stiff clay and other hard material. It will also be capable of digging a channel to a maximum depth of 57 ft. below the water surface, and also of cutting its own flotation through shoals and discharging into its own hopper or on barges.

Two complete sets of 43 buckets each are provided, one set for soft material, each of 54 cu. ft. capacity, and the other set for stiff clay and hard material, each of 30 cu. ft. capacity. The speed of the buckets will be 18 a minute for the larger, and 12 a minute for the smaller.

outfit of engine and boiler room auxiliaries has been installed, and a commodious workshop, with power driven lathe, drills and other useful appliances, is fitted up in the engine room.

The dredging machinery, one of the leading features of this type of ship, is of special design and make, and consists of a train of spur wheels and pinions, forming reduction gear, with friction wheels for driving top tumbler on bucket ladder. The transmission gear consists of a clutch gear coupled to crank shaft of each main engine, arranged for two speeds of 12 small or 18 large buckets a minute, from thence by shafting and bevel wheel gearing to main gear already described. All gear wheels are of cast steel, with double helical teeth and shafting of fluid pressed steel, the whole being of extra massive construction.

depth, by a steam driven hoisting gear, with winding drum and wire rope led to top of forward frame on forecastle deck. The steam gear is in the forward hold, with control levers on upper deck.

The hopper well is of 1,500 tons capacity, and is stiffened by internal cross divisions and longitudinal girders. The hopper doors are of hardwood 5 in. thick, lined on the inside with ¾ in. steel plate, and operated by two powerful steam driven winches with chain leads, all of special design and make.

The mooring arrangements are very complete, consisting of bow and stern winches, steam driven and of ample power, together with bow and stern fairleads, all of special design and rugged construction, and capable of moving the ship when at dredging station, either forward and aft, or to port and starboard

direction, as required. In addition, the forward bow winch will also serve as a windlass to operate the two bow anchors used for ordinary navigation purposes. Four powerful warping capstans complete the mooring equipment.

A combined steam and hand steering gear is installed in engine casing, of the chain barrel type, with control rods to wheel house on navigating bridge.

Accommodation is provided for a crew of about 40, the officers and engineers

Floating Drydock for North Vancouver.

We are officially advised that the Dominion Government, on Dec. 2, entered into an agreement with the Burrard Drydock Co. Ltd., for the payment of a subsidy at the rate of $4\frac{1}{2}\%$ on \$2,500,000 for 35 years, in aid of the construction of a sectional floating self-docking drydock, with a lifting capacity of 15,000

dock, and to enter into an agreement with the Dominion Government under the Drydocks Subsidies Act, C. Wallace, Wallace Shipbuilding & Drydock Co., North Vancouver; J. J. Coughlan, J. Coughlan & Sons, Vancouver, and R. S. Lennie, are among the directors.

An agreement was entered into between the Dominion Government and J. Coughlan & Sons Ltd., Vancouver, Oct. 27, 1920, for the construction of a stationary drydock of the second class at Burrard, on similar terms, but the contractors did not see sufficient work ahead of them to warrant the expenditure, but considered that there would doubtless be ample work by effecting a combination with the Wallace Shipbuilding & Drydock Co., for the purpose of building a drydock, with the present result.

In addition to the construction of the drydock, there will be a considerable amount of dredging, and a reinforced concrete pier 700 ft. long by 50 ft. wide will also be built.

A. D. Swan, M.Inst.C.E., M.I.Mech.E., has been retained by the company as engineer for the work, and is preparing contract plans and specifications. It is expected that construction will be started at an early date.

The s.s. *Lady Evelyn*, until recently owned and operated by the Gulf of St. Lawrence Shipping & Trading Co., has been sold by the Anderson Co. of Canada to the Howe Sound Navigation Co. for operation between Squamish and Vancouver, B.C., in connection with the Pacific Great Eastern Ry. The *Lady Evelyn* was built at Birkenhead, Eng., in 1901, when she was named *Deerhound*. She was owned by the West Cornwall Steamship Co. and operated in the passenger, mail and freight trade between Penzance, Cornwall and the Scilly Isles. She was bought by the Dominion Post Office Department in 1907, for use as a mail tender at Rimouski, Que., and was sold by the Department to the Gulf of St. Lawrence Shipping & Trading Co. about two years ago. She is a steel twin screw steamship, and has the following dimensions,—length 189 ft., breadth 26.1 ft., depth of hold 9.5 ft., draft $8\frac{1}{2}$ ft.; tonnage 483 gross, 39 register. She is fitted with triple expansion engines, with cylinders 16, 24 and 38 in. diam. by 24 in. stroke, and supplied with steam by two return tubular boilers at 160 lb. The hull is divided by 5 watertight bulkheads and she has 2 decks, the promenade one being 139 ft. long. She is fitted with electric light throughout, and has steam steering gear and capstans fore and aft.

Great Lakes Levels.—The U.S. Lake Survey reports the stages of the Great Lakes, in feet above mean sea level, for Nov. 1921, as follows:—Superior, 602.20; Michigan and Huron, 570.14; St. Clair, 574.55; Erie, 571.80; Ontario, 244.65. Compared with the average November levels for the past 10 years, Superior was 0.39 ft. below; Michigan and Huron, 0.67 ft. below; Erie, 0.12 ft. below; Ontario, 0.80 ft. below.

Government Construction Material for Sale.—The Purchasing Commission of Canada, Ottawa, has prepared lists of Government construction equipment for sale at Rimouski and Quebec, Que., and Bowmanville and Toronto, Ont., consisting of surplus contractors' construction equipment, including gasoline and steam tugs and launches, scows, suction dredges, derricks and miscellaneous supplies.

Cross section, Canadian Government Dredger No. 16.

being berthed in state rooms on bridge deck, with commodious mess rooms. The seamen, firemen, etc., are berthed on the lower deck amidships, with mess room separate.

The accommodation, and the ship generally, is heated throughout with steam, and lighted by electricity, and the sanitary and ventilation arrangements are complete and efficient.

The dredger was designed by Wm. Simons & Co., Renfrew, Scotland.

The Pacific Export Lumber Co. is stated to have chartered the British Canadian Steamship Co.'s s.s. *Margaret Coughlan*, at the rate of \$15, for carrying lumber from British Columbia and Puget Sound ports to the Orient.

tons, at North Vancouver, B.C. It is provided that the work is to be commenced within 6 months and completed within 2 years from the signing of the agreement. The drydock is to be of the following general dimensions,—length over keel blocks, 500 ft.; length over walls, 435 ft.; width over all, 132 ft.; width between side walls, 100 ft.; draft of drydock afloat and fully loaded 15 ft. The work will be done under the general supervision of the Dominion Public Works Department's District Engineer at New Westminster.

The Burrard Drydock Co. Ltd. was incorporated under the Dominion Companies Act, in Oct. 1920, with \$1,000,000 authorized capital, and office at North Vancouver, B.C., to build a floating dry-

The Grounding of the s.s. Glenlivet and Raising of Barge Thomas Quayle.

Canadian Railway and Marine World for Dec. 1921 stated that the Great Lakes Transportation Co.'s s.s. Glenlivet collided with the U.S. barge, Thomas Quayle, in tow of the s.s. George King, near Toledo, Nov. 1, the barge being sunk and the Glenlivet forced aground against the crib lights by the force of the collision. We have since been advised that the details given were not correct. The facts are that the barge Thomas Quayle, coal laden, in tow of the s.s. George King, while coming out from Toledo, in the face of a stiff breeze, sheared over against the lighthouse crib, which is five miles from the mouth of the harbor. Her port bow hit hard on the pier and then swung around with the current and she sank in 22 ft. of water, completely blocking the west channel. The s.s. Glenlivet, inbound to Toledo, tried to pass the barge and went aground. Tugs were secured and the Glenlivet was released and entered Toledo by the outbound channel. We are informed that the s.s. Glenlivet did not touch the barge and that there were no lights on the wreck. Immediately after the Glenlivet was released a gas buoy was placed near the wreck.

The contract for raising the barge Thomas Quayle was awarded by the Engineer in charge for the U.S. Government to John E. Russell, harbor contractor, etc., Toronto. The wrecked barge lay about 5 miles out of Toledo harbor in Lake Erie, in a very exposed position in 22 ft. of water. It was found necessary to transfer the cargo to another barge. Coverings were then put over all the hatches and openings, leaving in effect in the forward hatch for pump suction. The hole in the port bow was 6 x 12 ft., and in addition there was considerable bottom damage which had to be repaired. Three attempts were made with the pumps before the barge was raised. In the third attempt the gang left Toledo harbor at 10 a.m. for the wreck and had the barge back in Toledo harbor at 6 p.m. the same day, using 5 pumps and two 6 in. siphons. Steam was furnished for the whole wrecking outfit by the contractor's own steam tug J. L. Russell, and the work was completed within 28 days from the time the outfit left Toronto, and in the whole of that time the contractor had only 8 working days.

Mainly About Marine People.

Sir Montagu Allan, Montreal, formerly of Allan Line Steamship Co., is stated to be the largest individual shareholder, with 2,625 shares, in the Merchant's Bank of Canada, of which he is President, and which on account of losses it has incurred, is proposed to be absorbed by the Bank of Montreal. Other shareholders associated with marine interests are Bryce Allan, Beverly, Mass., also formerly of Allan Line Steamship Co., with 1,050 shares; estate of Thos. Long, formerly a director of Northern Navigation Co., and Collingwood Shipbuilding Co., 1,000 shares; estate of Sir Frederic Orr-Lewis, formerly President, Canadian Vickers Ltd., 1,756 shares; and Lady Orr-Lewis, 1,900 shares.

C. E. Dalton, heretofore Steamship Inspector, Boilers and Machinery, St. John, N.B., has been appointed Steamship In-

spector (General), there.

Capt. Jos. Dix, who died at Kingston, Ont., Dec. 13, aged 80, sailed his own ships on the Great Lakes and St. Lawrence River for over 50 years.

Capt. J. Hyslop, of the Cairn Line s.s. Cairnross, who fell down a ladder into the hold of his ship, at Portland, Me., Dec. 13, and was almost instantly killed, was well known in Montreal.

N. Lachance has been appointed examiner of masters and mates for the port of Quebec.

W. G. Ross, ex-President, Montreal Harbor Commission, has resigned from the Black Lake Asbestos & Chrome Co.'s directorate, and A. E. Francis of McLean, Kennedy & Co., shipping agents, Montreal, has been elected to succeed him.

C. D. Secord, Special Representative, and D. C. MacKenzie, Auditor, Canada Steamship Lines, Toronto, are directors of Canadian Oil Field, Ltd., which has been incorporated under the Ontario Companies Act, and is offering stock for sale.

The International Petroleum Co.'s s.s. G. Harrison Smith, which is built in the U.S., and registered in Canada, as mentioned in our last issue, is a combination ore and oil carrier, and is the first of four similar ships to be built for the company. She is designed to carry a full cargo of either ore or oil in separate compartments, the ore being carried in a narrow elevated hold 360 ft. long by 30 ft. wide. The hull is divided, by weight bulkheads, into three compartments, each of which has three hatches extending the full width of the ore hold. The space for oil, which is alongside and below the ore space, is divided by a longitudinal bulkhead, extending from the keel to ore hold. The fore and aft compartments are for fuel oil and the center compartment for cargo oil. The wing spaces, acting as expansion trunks on account of their depth, afford the greatest possible flexibility for carrying liquid cargoes of varying density, and adjusting the trim under all conditions.

United States Merchant Marine Losses. The U.S. Coast Guard Service report for the year ended June 30, 1921, shows that 222 U.S. merchant ships, aggregating 122,397 tons, were lost during the year through foundering, strandings, collisions and other causes, and that in addition 555 other U.S. merchant ships were involved in casualties, resulting in damage to the extent of \$300 or more. There were 777 casualties, in which 206 persons lost their lives, 7 of whom were passengers. The value of property lost was \$34,923,031, of which \$28,662,733 represented the value of the ships. Of the ships lost, 49 foundered, 63 stranded, and 19 were lost in collisions. There were 75 ships lost on the Pacific coast, 16 on the Great Lakes, 35 on rivers, and 61 at sea or in foreign waters.

German Ships Sold in Great Britain.—A London, Eng., press dispatch says that with the recent sale of 16 large German steamships to British buyers, the German fleet has disposed of all the 465 former German ships allocated to him by the Government for sale, except one ship. Four prize steamships, including Field Marshal, 6,100 tons, have also been sold. At the prices obtained, these latest sales are considered very satisfactory in view of the state of the market.

Grain Shipments Through Port McNicoll.

Following are particulars of grain shipped through Port McNicoll, Ont., by the C.P.R. from Sept. 1 to Nov. 30, 1921, and 1920, respectively:—

	1921	1920
Bushels shipped	25,807,651	7,855,001
Bushels shipped per day	284,699	80,834
Tons shipped	13,631	4,773
Tons shipped per day	150	53

Panama Canal Tolls.—The U.S. President has signed an order, exempting from payment of tolls, ships which make the transit of the canal from Cristobal to Balboa and return, for the sole purpose of having repairs made at the Balboa drydock and shops. Charges will, however, be made for pilotage, lockage and towage, when used. Under the law governing tolls it was necessary to collect tolls on ships which made the transit solely for repairs, and in some instances where a ship had made the transit from the Pacific to the Atlantic, and met with an accident at the Atlantic end, necessitating its return through the canal to Balboa, it was necessary to collect tolls again for the extra transit, which acted as a burden on shipping and a handicap to the drydocking and repair facilities provided at the canal.

Wreck Commissioners' and Nautical Assessors' Status and Jurisdiction. We are officially advised that this matter, comment on which was made in Canadian Railway and Marine World for Dec. 1921, following the judgment of Mr. Justice Morris of the British Columbia Supreme Court, in the appeal of the master of the s.s. Canadian Exporter, against the suspension of his certificate, is engaging the Justice Department's attention at Ottawa. In this connection it may be mentioned that the Dominion Marine Association has taken the ground that the master of a ship concerned in an investigation should be given a full opportunity to defend himself, as contemplated by the statute.

Navigation Coal Co. Ltd. has been incorporated under the Dominion Companies Act, with capital stock of 500 shares without nominal or par value, provided it shall carry on business with a capital of \$2,500, with office at Montreal, to act as importer and exporter of general merchandise, to transport passengers, mail and general freight, towing, wrecking and salvaging, and general carrier by land and water and in connection therewith to own and operate ships, elevators, coals, bins, etc. The incorporators are: F. B. Common, F. G. Bouché, H. W. Jackson, G. R. Drennan, A. G. Yeoman and W. P. Creagh, Montreal.

The Suez Canal Co. has announced that from Jan. 1 the maximum draft for ships passing through the canal will be increased by 1 ft. to 31 ft.

Docking at Queenstown.—A London, Eng., press dispatch of Dec. 12, announced the immediate cancellation of the British Admiralty's order of Sept. 10, 1920, providing that no ship carrying passengers eastward should enter the port of Queenstown, Ireland.

Storage & Truckportation Ltd. has been incorporated under the Ontario Companies Act, with \$20,000 authorized capital, and office at Ottawa, to carry on business as warehousing, transporting and forwarding agent in all its branches. The provisional directors are: J. M. Taylor, F. H. Day and M. H. G. Taylor.

General Shipbuilding Matters Throughout Canada.

B.C. Marine Engineers & Shipbuilders Ltd., Vancouver, B.C., has overhauled and repaired the Hudson Bay Co. motorship *Lady Kindersley*, which sustained some damage on her recent trip to the Arctic. The cost of repairs is reported to have approximated \$15,000.

Canadian Vickers Ltd., Montreal.—We were advised Dec. 12, 1921, that no date had been fixed for the laying of the keel of the icebreaking steamship for the St. Lawrence River, the contract for which was placed by the Marine Department at the end of Nov. 1921. The building of this ship will employ on an average between 500 and 600 men, and it is expected that she will be ready for delivery during November this year. A description of this ship was given in *Canadian Railway and Marine World* for Dec. 1921, p. 670.

Collingwood Shipbuilding Co., Collingwood, Ont., was assessed by the City of Toronto for \$255,000, in connection with its use of the Dominion Shipbuilding & Repair Co.'s plant in Toronto, for finishing, on a cost plus basis, the two steel cargo steamships for Canadian Government Merchant Marine, which were only partly built when the latter company became bankrupt. The City Court of Revision has cancelled the assessment.

Davie Shipbuilding & Repairing Co., Lauzon, Que.—The Canada Steamship Lines barges *Hamilton* and *Thunder Bay*, which have been practically rebuilt at the Davie yards, as mentioned in our last issue, were formerly tow barges, but have had engines and boilers installed. The *Hamilton* has been reduced in length by 48 ft., and in depth by 5½ ft., her dimensions now being—length 250 ft., breadth 40 ft., depth to top of trunk 20½ ft. The *Thunder Bay* has been reduced in length 60 ft., her dimensions now being—length 242 ft., breadth 40 ft., depth 25 ft. The work on both ships has been completed and they have been handed over to their owners for service between Montreal and the Great Lakes.

Northern Boatbuilding Co., Edmonton, Alta., is building an auxiliary powered schooner for Denis Innikot, an Eskimo hunter at Shingle Point, near the mouth of the Mackenzie River. It will be 40 ft. long, schooner rigged, with two masts and fore and main sails. It will be equipped with a 12 h.p. engine for auxiliary power, and all up to date appliances. This is the fourth boat of a similar type which the company has built for Eskimos in the Arctic regions who seem to have mastered the intricacies of a gasoline engine, and show considerable ability in the use of the compass, weather glass, etc. The new methods show a considerable advance on the kayaks, generally built of walrus hide. When completed, the boat will be forwarded to McMurtry and towed from there by one of the Northern Trading Co.'s ships to the Arctic.

Port Arthur Shipbuilding Co., Port Arthur, Ont., has recently repaired the *Algonia Central Steamship Co.'s s.s. W. C. Franz*, which collided with a wreck in Lake St. Clair and suffered considerable damage to her hull.

Port Arthur Shipbuilding Co., Port Arthur, Ont., is stated in a Port Arthur press dispatch of Dec. 22 to have received an order from Mathews Steamship Co., Toronto, for a steel bulk freight steam-

ship for Great Lakes service, to be 550 ft. long over all, 58 ft. beam, and 31 ft. deep; with 3 Scotch boilers, each 13½ ft. diam. and 11 ft. 2 in. long, and each boiler to contain 3 interchangeable furnaces, to work under 185 lb. steam pressure, the engine to be triple expansion, 25½ x 41 x 56 in. by 42 in. stroke. It is also stated that she will be built under J. H. Smith's supervision to the American Bureau of Shipping's classification A100.

The Port Arthur Shipbuilding Co. will install new boilers during the winter in the Mathews Steamship Co.'s s.s. *Huron*, ton.

Quebec Shipbuilding & Repairing Co. Ltd. has been incorporated under the Quebec Companies Act, with \$500,000 authorized capital, and office at Quebec, Que., to carry on a general shipbuilding, repairing, chartering and navigating business; to own and operate ships, drydocks, shipyards, etc. The incorporators are: G. Leclerc, O. Lemay, P. Lesage, A. Miville and F. Choquette, Quebec, Que.

Reid Newfoundland Co., St. John's, Nfld., has thoroughly overhauled and repaired, the *Belle Island Shipping Co.'s s.s. Mary*.

Victoria (B.C.) Shipowners Ltd., Victoria, B.C.—We were officially advised Dec. 14 that no decision had been arrived at by the Marine Department in regard to the tenders which were invited for the completion of the second barquentine *Sir Henry Drayton*, which this company was building at the Cholberg Shipyards, under special contract with the Dominion Government, at the time of its failure, and which has, with the remaining two unfinished, and one finished, been taken over by the Government.

Wallace Shipbuilding and Drydock Co. North Vancouver, B.C. After completing the *Princess Louise*, when she achieved an average speed of 17 knots an hour, the s.s. *Princess Louise* was delivered to the C.P.R. for its British Columbia Coast Service, Dec. 2. The contract with the builders did not include the upholstering and fitting which is being done at Victoria. On her trial a number of guests met in the dining saloon and in accepting the steamship from the builders, Capt. J. W. Troup, Manager, C.P.R., British Columbia Coast Service, spoke of the difficulties he had experienced in attempting to place the order for the building of the ship in Great Britain, on account of strikes and labor conditions in general. The builders of the ship quoted the lowest price of those tendering for actual construction within a given time.

This company is reported to have been given a contract for overhauling the Dominion Government s.s. *Newington*. It is also reported that the company will overhaul the U.S. lighthouse tender *Cedar*, which is stationed at Ketchikan, Alaska.

St. John Drydock & Shipbuilding Co. sold recently to *Aemilius Jarvis & Co.*, Toronto, \$392,825.68 first mortgage 5½% serial gold bonds at 95.13, maturing from Jan. 5, 1922, to Jan. 5, 1956, the principal and interest being payable by the Dominion Government by semi-annual subsidy, which is assigned to a trust company. They were offered to the public to yield 5.75%.

Prairie Grain Shipments Through Vancouver.

After years of controversy, with on the one hand ingrained conviction that Canadian grain would never leave from the Pacific coast, and on the other a sanguine assurance that ultimately this would come to pass, Vancouver is coming into its own as a port of outlet for part of the crop of the prairie provinces. Though the first shipment was made a few years ago, development since that time, and the volume of grain in prospect for export from the Pacific, leave no doubt as to the future status of Vancouver as a grain shipping port.

The movement of the first big shipment of Canadian wheat to Europe by way of the Pacific was watched with considerable interest, and attention from many quarters was directed to its reception at the English port. There was general apprehension that it would suffer passing through the tropical region of the Panama zone, but, when it was unloaded in England, grain experts stated that grain had never been received there in better condition. Pacific coast exporters breathed easily, and saw a future opened up for the Pacific coast in sharing with the east the business of carrying the grain product of the west to Europe. Other shipments followed immediately upon the first, and by the end of 1920 16,000 tons of grain, mostly wheat, had left Vancouver for Europe via the Panama Canal.

In 1921 shipments from the Pacific coast to Europe began just as soon as the movement of the threshed crops from the prairies got under way and the export business has been busy since that time. Grain dealers on the coast estimate that during the current season, approximately ten times as much grain will pass through Vancouver for Europe as last last season. This will amount, according to estimate, to at least 160,000 tons. There will be about 40 cargoes.

Another departure in the export of grain in 1921 was the shipment of sacked wheat from Vancouver to Japan. Hitherto Japan has been contented with the softer U.S. grains, but that the Canadian product is now held in high favor is evidenced in the extensive demand, November consignments to the Orient from Vancouver totalling 7,000 tons. In the same month a shipment of 2,000 tons left England, whilst shipments commenced in 1920 to San Francisco mills are continuing.

The success of initial export shipments of Canadian grain from Vancouver to many parts of the world leaves no shadow of doubt as to the great future of the port, lying so convenient to the western granaries, as an outlet for a portion of their annual crop, and the success of shipment through the Panama Canal to Europe is fraught with significance to the Dominion grain export movement. Every year a certain amount of congestion occurs with the enormous product of the prairie provinces flooding the terminal elevators and export shipping points at the same time. The heavy increases in annual production which will probably continue in greater proportion in the future, will tax the eastern ports of outlet to a yet greater extent, and the success of Vancouver shipments will considerably relieve the situation as well as substantially augment the importance of the British Columbia port.—From *Agricultural and Industrial Progress in Canada*.

Canadian Government Merchant Marine Ltd., Shipbuilding, Operation, Etc.

Officers of Steamships.—The following appointments of masters and chief engineers have been made in addition to those given in previous issues:—Canadian Aviator, chief engineer, W. R. Jones; Canadian Coaster, Capt. S. B. Corkum; vice Capt. B. S. Potts; Canadian Explorer, chief engineer, E. Sutherland; Canadian Fisher, chief engineer, L. O. Lamoreux; Canadian Hunter, chief engineer, W. Fotheringham.

The barkentine *Simon F. Tormie*, one of the wooden ships built at Victoria, B.C., under special aid from the Dominion Government, and which was handed over to Canadian Government Merchant Marine for operation on the failure of Victoria (B.C.) Shipowners Ltd., was found drifting and out of control in the Strait of Juan de Fuca, at the end of November. She was picked up by the

bunkers. From Sydney she went to Rockland, Me., to make standardization runs over the Rockland measured mile, it being the only one in the vicinity suitable for the trials of a large ship loaded to over 29 ft. On the full speed trials she developed an average speed of 12.3 knots. She also had to run fully loaded at full speed for 6 hours at sea without a stop, in the course of which the machinery was required to be run cool and satisfactory without the application of water. After the completion of this run off Halifax, she discharged her cargo of coal there, and was then changed to burn oil instead. She was partly loaded at Halifax, with a general cargo of Canadian manufactured goods for New Zealand and Australia, and proceeded to New York, where she took on additional cargo, consisting of petroleum, and sailed from that

Marine Public Works Contracts.

The Public Works Department has given contracts as follows:—Repairs to wharf at Port Hood, N.S., Oct. 31, 1921, to T. D. Morrison, D'Escoisse, N.S., at schedule of prices; reconstruction of eastern breakwater at Collingwood, Ont., Nov. 16, 1921, to W. Birmingham, Kingston, Ont., at schedule of prices; repairs to wharf at Providence, Ont., Nov. 16, 1921, to McNamara Bros. and Thornton, Sault Ste. Marie, Ont., at schedule of prices; extension to shore end of western wharf, Grosse Isle quarantine station, Que., Nov. 17, 1921, to Jos. Gosselin Ltd., Quebec, Que., at schedule of prices; construction of third section Steveston jetty at mouth of Fraser River, B.C., Nov. 24, 1921, to J. S. Connell Ltd., Vancouver, B.C., at schedule of prices; extension to western wharf at Notre Dame des Sept Douleurs, Que., Nov. 26, 1921, to N. Le Tourneau & J. A. Fortier, Montmagny, Que., at schedule of prices; repairs to town wharf, Parry Sound, Ont., Nov. 30,

Canadian Government Merchant Marine Steel Cargo Steamship Canadian Cruiser, approximately 10,500 d.w. tons.

Pacific Salvage Co.'s s.s. *Algerine*, and towed into Victoria.

The s.s. *Canadian Farmer*, which grounded at the entrance to Nanaimo Harbor, towards the end of November, was released a few hours later, without damage.

The s.s. *Canadian Rover*, bound for Ocean Falls, B.C., was reported aground at Duncan Bay, about 10 miles north of Cape Mudge, Dec. 6, with the U.S. coast-guard cutter *Snohomish* standing by.

Halifax Shipyards Ltd., Halifax, N.S., as stated in Canadian Railway and Marine World for Dec. 1921, delivered the s.s. *Canadian Cruiser*, Marine Department contract 38, builder's yard no. 3, approximately 10,500 d.w. tons, to the Marine Department Oct. 22, 1921, subject to satisfactory loaded speed trials being run. The ship was ordered to be built to burn coal, and arrangements were subsequently made for the installation of oil burning apparatus, but the speed trials were to be run using coal. After delivery to the Department, she loaded about 1,600 tons of fuel oil at Halifax, and then proceeded to Sydney, where she loaded 8,221 tons of coal and 347 tons of

port, on Dec. 7, for New Zealand, and thence to Australia.

Halifax Shipyards advised us Dec. 16 that it expected to complete the steel cargo s.s. *Canadian Constructor*, Marine Department contract 39, builder's yard no. 4, approximately 10,500 d.w. tons, for Canadian Government Merchant Marine, by the end of the month.

The Navigation Coal Co. Ltd., which has been incorporated under the Dominion Companies Act, with 500 shares of no nominal or par value, provided that it shall carry on business with a paid up capital of \$2,500, and office at 137 McGill St., Montreal, has been formed to handle the Canadian business of A. C. Elliott & Co., shipping agents, and the Cory Mann-George Corporation, wholesale coal dealers, New York, who ship coal from Atlantic ports to New Brunswick, Nova Scotia and St. Lawrence ports, selling coal in cargo lots to large industrial concerns. W. E. Henry, Managing Director, Montreal, represented a number of U.S. coal mining concerns in France during the war.

1921, to R. G. Weddell, Trenton, Ont., and R. G. Saunders, Toronto, at schedule of prices; reconstruction of wharf at Cowichan Bay, B.C., Nov. 30, 1921, to Fraser River Pile Driving Co., New Westminster, B.C., at schedule of prices; dredging slips at foot of Queen and Princess Sts., Kingston, Ont., at \$1 a cu. yd., and dredging channel to Government wharf and basin and removal of old piles and crib pier, Collings Bay, Ont., Dec. 15, 1921, at 50c a cu. yd., to Fontenac Dredging Co., Kingston, Ont.

The loss of the C.P.R. s.s. *Princess Sophia* was before a U.S. court at Seattle, Wash., again recently on the C.P.R.'s appeal as to the limitation of its liability for damages. The ship was lost on the Vanderbilt Reef in the Lynn Canal, in Oct. 1918, and claims for approximately \$5,000,000 have been made by passengers and others, for loss of property, life, etc. The latest judgment, against which an appeal has been refused, limits the liability as to passengers, baggage and cargo, to the value of the ship, the passengers' fares and the cargo tariffs charged.

The United States Merchant Marine and Ocean Freight Trade.

A conference was held at Washington, D.C., Dec. 1, between the Shipping Board's committee on interstate conferences and representatives of the leading U.S. railways, to discuss the position of the U.S. Merchant Marine and the railways with regard to freight traffic handled by the railways to the seaboard for ocean shipment, with a view to prevailing upon the railways to abrogate their contracts with foreign steamship companies, and to hand over such traffic to U.S. ships. It is said that about 28 railway companies have contracts, or understandings, with other than U.S. steamship companies, for the interchange of passengers and freight, some of which have been in force for nearly 30 years. Most of these contracts are stated to be of an ordinary type, while several of them call upon the railway companies to aid in the reduction of local taxes, to supply fuel below cost, free wharfage and other privileges.

The Chairman, F. I. Thompson, Alabama, stated that any exclusive or preferential contract or agreement between a U.S. railway company and a foreign shipping company was a menace to U.S. ships, resulting in a diversion of U.S. traffic to other ships operating in competition. He pointed out that the Merchant Marine Act of 1920, Sec. 28, clearly defines the intention of Congress, viz., that U.S. railways be preferential feeders of tonnage for U.S. ships. The committee's object is to secure such corrective and co-operative measures as will ensure that the rail carriers shall be free for the extension of U.S. commerce in ships operated under U.S. registry. Six of the railways requested favorable cancelling of such contracts or agreements, two announced that their contracts had expired and had not been renewed, and one desired to discuss the matter further on account of its peculiar situation, and desired the U.S. Shipping Board to guarantee it an equally advantageous arrangement in return for cancellation.

D. O. Wood, General Foreign Freight Agent, Canadian National-Grand Trunk Ry., Montreal, who represented the G.T.R., is reported to have stated that rather than that the agreement between the G.T.R. and the White Star-Dominion Line should be cancelled, he believed the steamship line would transfer its terminal from Portland, Me., to a Canadian port.

A. Fries, Vice President in charge of traffic, Baltimore & Ohio R.R., stated that his company has three agreements with foreign lines. One agreement, with the North German Lloyd, expired at the commencement of the war, and has not been renewed. Present agreements are with the Donaldson Line, Furness, Withy & Co., and the Scandinavian-American Line, and he stated that the first two companies are agreeable to the cancellation of the contracts. With regard to his company's contract with the Scandinavian-American Line, he could not speak, as he had been unable to get in touch with the principals. He claimed that his company in no way discriminated against any steamship company using the port of Baltimore and his company's docking facilities. He agreed to recommend the cancellation of such contracts, and in the event of steamship companies refusing to submit, he would call upon the Board for its sup-

port in enforcing their abrogation.

W. P. Kenney, Vice President and Director of Traffic, Great Northern Ry., stated that it had a contract with the Nippon Yusen Kaisha, entered into originally by Jas. J. Hill. This Japanese line acts as the agent of the road in the Orient, and thus gives the Great Northern practically all of its inbound tonnage. When the Chairman told Mr. Kenney that the Great Northern was in direct competition with the U.S. Government in its efforts to build up a merchant marine, the latter pointed out that up to a short time ago there had been no other service available than the one provided by the Japanese line. He also said that the U.S. Shipping Board could not enter into such a contract, and would be as likely to turn its business over to the Canadian Pacific as to the Great Northern. The Chairman stated that the U.S. Shipping Board boats could take care of

the bulk of the traffic would go through the Panama Canal, and inland from the east coast of the U.S. He said that the C.M. & St. P.R. did not want to lose the business arising out of its relation with the Japanese line, until it had something with which to replace it. If the arrangement were discontinued, the C.M. & St. P. would lose the inbound traffic, and would stand a great chance of losing the export traffic, 80% of which originates east of Chicago, as he doubted whether the railways and the U.S. Shipping Board could control it if foreign steamship companies wanted to handle it through Canada. He would give no assurance as to the working agreement being dropped, and asked for time to discuss the matter.

F. I. Thompson, the Chairman, issued a statement subsequently indicating his belief that the Great Northern would abrogate its contract with the Japanese line.

The line adopted by the Board is well within its competency, and the reorganization of the Board's operations is proceeding on the basis of, as far as possible, confining the shipment of ocean traffic, originating in the U.S., to U.S. ships.

The Board's Bureau of Traffic will handle all traffic matters and will determine the trade routes which should be developed, scrutinize all conferences and agreements in foreign and domestic trades and investigate all complaints of discrimination in rates or unfair prices, following closely the activities of the Interstate Commerce Commission, due to the effect of rail rates on shipping.

The Bureau of Operations will study the relative cost of operation of U.S. and foreign ships, particularly with regard to labor costs, industrial relations with regard to marine and dock labor, and will study port, pier and terminal facilities.

The Bureau of Construction will study the relative cost of shipbuilding at home and abroad, particularly the cost of building ships of the most efficient types, pass upon transfers of U.S. ships to foreign ownership or registry, and the designs of ships to be built under the provisions of the construction loan fund provided by the Jones Act, but which has not yet come into existence.

This matter, along with others of an international character, such as the question of the free passage of U.S. ships through the Panama Canal, were kept in abeyance during the Disarmament Conference at Washington, but are now being resumed with a view to their solution from a U.S. viewpoint.

An amendment to the Railroad Refunding Bill was proposed in the U.S. Senate recently, by Senator J. E. Ransdell of Louisiana, providing that no portion of the fund arising from the sale of bonds, notes and securities, under the terms of the bill, shall be used to settle with transportation systems which have preferential agreements with foreign steamship lines so long as such contracts continue in effect.

Max Eisenberg was fined \$20 and costs at Moose Jaw, Sask., recently, for selling a Canadian National Ry.'s harvester's ticket.

Dominion Marine Association.

President, A. A. Wright, Tideswater Shipbuilders, and Vice President and Managing Director, David Shipbuilding & Repairing Co., Montreal.

First Vice President, T. R. Enderby, Operating Manager, Canada Steamship Lines, Montreal.

Second Vice President, Hon. L. C. Webster, President, Webster Steamship Co., Montreal.

Executive Committee, The President, First Vice President, Second Vice President, and Directors: Burke, Canada Steamship Lines, Montreal; Yvon Dupre, Sincennes-McNaughton Line, Montreal; W. B. Ellsworth, Imperial Oil Ltd., Toronto; L. H. Henderson, Montreal; G. J. Madden, Georgia-Hull Coal Co. of Canada, Montreal; A. E. Mathews, Mathews Steamship Co., Toronto; W. J. McCormack, Canadian National Steamship Co., Sault Ste. Marie, Ont.; Col. G. P. Murphy, C.M.G., Ottawa Transportation Co., Ottawa, Ont.; E. W. Oliver, Niagara, St. Catharines and Toronto Navigation Co., Toronto; W. H. Smith, Ontario Car Ferry Co., Montreal; J. F. Sowards, Kingston, Ont.; J. E. Moore, Point Anne Quarries Ltd., Toronto; John Walker, Keystone Transports, Montreal.

Counsel, Francis King, M.A., Kingston, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

all the Great Northern business, but Mr. Kenney said that the Japanese line gives the Great Northern business in return; business which the U.S. Shipping Board could not get until it had worked up a large trade in the Orient. Asked whether he did not know of the agitation against contracts with foreign shipping lines at the time that the contract with the Japanese line was renewed, Mr. Kenney said he had, but he pointed out that if the contract had not been renewed, it would likely have been made with the C.P.R. He promised to take up the matter with the G.N.R.'s President and report to the Shipping Board.

R. M. Calkins, Vice President, Traffic, Chicago, Milwaukee & St. Paul Ry., stated that it had commercial relations, growing out of a contract which had lapsed, but which was tacitly continued in operation, with the Osaka Shosen Kaisha, another Japanese line. He said that the Japanese people naturally want to patronize their own ships, and that if the traffic carried in Japanese ships is barred by the western U.S. rail carriers,

Canadian Pacific Railway Ocean Steamship Services.

W. Webber, General Agent, Atlantic ports, Canadian Pacific Steamships, with his staff, left Montreal, Nov. 28, for St. John, N.B., for the winter season.

The Montreal-Southampton-Antwerp service will be maintained by the steamships *Melita* and *Minnedosa*, in addition to one sailing at the beginning of the season by the s.s. *Scandinavian*.

The s.s. *Empress of Britain* will make two winter trips to the West Indies, sailing from New York Jan. 21 and Feb. 21. She is to arrive at Quebec from Liverpool, May 19, and sail for Liverpool, May 26.

The Montreal-Glasgow service will be given by the steamships *Metagama*, *Coriscan* and *Tunisian*. The *Metagama*, at present on the Liverpool route, will open the Montreal-Glasgow service, arriving in Montreal, Apr. 29.

The s.s. *Empress of Scotland* is scheduled to arrive at Quebec, from Liverpool, Eng. Apr. 29, and to sail on her first trip to Havre and Southampton, May 4, and the *Empress of France* is to arrive at Quebec, May 10, and sail on her new route, May 16, continuing on the Quebec-Havre-Southampton route throughout the year.

The s.s. *Montcalm* is scheduled to sail from Liverpool, Eng. Jan. 18 on her maiden voyage to St. John, N.B. She has a speed of 17 knots an hour and is equipped with a geared turbine. Her dimensions are,—length 566 ft.; breadth 70 ft.; depth 51½ ft.; and she has accommodation for 520 cabin and 1,550 third class passengers.

For 1922, the C.P.R. is planning a number of changes in its ocean services, which are operated by Canadian Pacific Steamships, Ltd. All of its new steamships will be completed and ready for operation during the year, after having been delayed in construction, owing to strikes and other labor difficulties in Great Britain, in some cases for over a year.

The s.s. *Monteagle*, when she arrived at Vancouver at the end of November, brought from Japan 61 carloads of miniature Japanese Christmas oranges. This is considered a large shipment and was the first for this season. About 50 of the carloads were for Alberta, Saskatchewan and Manitoba, the balance being for British Columbia. Another shipment of oranges, consisting of 50,000 bundles, arrived at Vancouver a few days later, by the s.s. *Empress of Asia*.

Eleven members of the C.P.R. s.s. *Monteagle's* crew were presented with medals, at Vancouver, B.C., recently, by the Lieutenant-Governor, on behalf of the Liverpool Shipwreck and Humane Society, for saving lives at sea under dangerous conditions, from the French steamship *Hsintin*, in the China Seas, in April 1921. The rescue was accomplished under circumstances which called for exceptional presence of mind, and skilful and courageous seamanship.

The steamships *Empress of France*, formerly the *Allan Line* s.s. *Alsation*, and the *Empress of Scotland* formerly the *Hamburg-American Line* s.s. *Kaiserin Auguste Victoria*, will be operated between Quebec, Havre, France, and Southampton, Eng. Pending the reopening of St. Lawrence navigation, they have been chartered to Frank Clark for

winter tourist trips from New York to the Mediterranean, and are scheduled to sail from New York on Feb. 11 and Feb. 4 respectively.

The German s.s. *Titpitz*, which was bought by the C.P.R. recently from the Reparations Commission, and renamed *Empress of China*, has, it is reported, been further renamed *Empress of Australia*. It is expected that she will be placed in service during the summer, between Vancouver, Victoria and Oriental ports. She is at present at Hamburg, Germany, where she was built, being converted to an oil burner, the oil burning equipment being similar to that already installed in the company's s.s. *Empress of Britain*.

Capt. Jas. Gillies has been appointed master of the s.s. *Empress of France*, vice Capt. E. Cook, deceased. He has had a long service with the *Allan Line*, and remained with the C.P.R. when it acquired that line. Capt. Cook was taken ill on his last trip to Quebec, and recovered sufficiently to take his ship on the return trip to Liverpool, but died the day after landing. During the war he was an *Alsation*, since renamed *Empress of France*, while she was doing convoy work. He spent 37 years at sea, 29 of which were in Canadian service, with the *Allan Line* and the C. P.R.

The service which was given last year, between Montreal and Genoa, in conjunction with the *Navigazione Generale Italiana*, with the C.P.R. s.s. *Montreal*, formerly the German *Koenig Friedrich August*, and the *Navigazione Generale Italiana's* s.s. *Caserta*, has been suspended owing to insufficient patronage. It may be resumed in the summer, but much will depend on general trade conditions in Europe, at that time. Although nothing definite has been decided, it is reported that the s.s. *Montreal* may be transferred to the Antwerp route, and that the *Caserta* may be transferred to the Italian company's New York service.

The s.s. *Montclare* was launched at Clydebank, Scotland, Dec. 17, being christened by Lady Brown, wife of Sir George McLaren Brown, European General Manager, C.P.R., London, Eng. The *Montclare* is a geared turbine steel steamship with two funnels, and has the following dimensions,—length 566 ft., breadth 70 ft., depth 51 ft., and is approximately 16,000 gross tons, with a speed of 17 knots an hour. She has accommodation for 620 cabin and 1,550 third class passengers. She is a sister ship of the company's s.s. *Montrose*, a description of which was given in Canadian Railway and Marine World for Feb. 1921.

The Montreal-Liverpool service will be maintained by the new steamships *Montcalm*, *Montrose* and *Montclare*. The *Montcalm* will make her maiden trip to Canada during January, when she will arrive at St. John, N.B., and sail thence, for Liverpool, Feb. 1, remaining on that route until the reopening of St. Lawrence navigation. She is scheduled to arrive at Montreal, Apr. 30. The *Montrose* will sail from Liverpool on her maiden trip to Montreal, May 5, and the *Montclare* will be due in Montreal on her maiden trip from Liverpool, July 2. In addition to these new steamships on the Montreal-Liverpool route, there will be

two sailings by the steamships *Minnedosa* and *Scandinavian*, the former to arrive at Montreal May 7, and the latter June 3.

Press dispatches from London, Eng., have been appearing in the daily press lately, bearing the heading "Liverpool Regrets C.P.O.S. Desertion," and stating that "the announcement that C.P.R. steamships are to be diverted from docking at Liverpool to Southampton henceforth, has been received at Liverpool with regret, although it has been recognized for some time that this was inevitable."

This of course is incorrect, as no arrangements have been made for such a change. As indicated elsewhere on this page, the C.P.R. steamships, *Empress of France* and *Empress of Scotland* are to be operated between Quebec, Havre and Southampton, and apart from these and the usual Southampton calls made by the C.P.R. steamships running to European continental ports, there is no change. The s.s. *Empress of France*, formerly the *Allan Line* s.s. *Alsation*, usually made Liverpool her English port, while the *Empress of Scotland*, formerly the German s.s. *Kaiserin Auguste Victoria*, has never called there, and is not yet being operated by the company. Apart from there being no desertion of Liverpool by C.P.R. ships, there will be more likely an addition to the number of its ships using that port.

The s.s. *Empress of Canada's* final trials were to take place Dec. 28, and it was expected that she would sail on her maiden voyage, between Jan. 15 and Feb. 1, from Liverpool, direct for Hong Kong. She has been built especially for the passenger and mail service between Vancouver, Japan, China and Manila, and will be the largest ship for this purpose on the Pacific Ocean. Her dimensions are,—length over all 653 ft., breadth 77½ ft., depth to bridge deck 53½ ft. She was designed with a straight stem and cruiser stern, with 3 funnels and 2 pole masts. She has passenger accommodation for about 500 first class, 100 second class, 240 third class, and 930 Asiatic steerage passengers, as well as for a crew of about 550. She is equipped with geared turbines, driving twin screws. She was launched at Glasgow, Scotland, Aug. 17, 1920, and it was intended that she should have been ready for sea in Feb. or March 1921, when a round-the-world cruise was arranged for her maiden trip. Labor troubles and strikes, however, delayed all shipbuilding through Great Britain, and it was at one time feared that she would have to be sent to one of the continental shipyards to be finished. This was obviated by the settlement of the strikes a few weeks ago. A full description of her was given in Canadian Railway and Marine World for Sept. 1920, and an illustration was given in Nov. 1920.

Alberta Coal for Pacific Coast. — An Edmonton, Alta., press report says that the Alberta Government is negotiating in regard to new markets for Alberta coal, and that the Vancouver Harbor Commissioners are considering the construction of an extensive dock on which to store the coal for bunkering steamships and other purposes, and that a similar scheme is proposed for Prince Rupert.

Winter Moorings of Canadian Steamships.

Following is a list of Canadian steamships and the ports at which they are berthed for the winter, of which Canadian Railway and Marine World has been officially advised:—

Algoma Central Steamship Co. Sault Ste. Marie, Ont.—Agawa, W. C. Franz, at Midland, Ont.; Home Smith, J. Frater Taylor, at Port McNicoll, Ont.

Canada Atlantic Transit Co. Montreal.—Arthur Orr, Kearsage, at Chicago, Ill.

Canada Steamship Lines. Montreal.—Glenmount, Winona, at Collingwood, Ont.; Pandora, at Charlotte, N.Y.; Collingwood, Martian, W. D. Matthews, at Goderich, Ont.; Atikokan, at Halifax, N.S.; White Star, at Hamilton, Ont.; Arabian, Belleville, David G. Thomson, Edmonton, H. F. Bronson, India, John C. Mann, Kenora, Mapleboro, Mapleleg, Maple-gorge, Maplegreen, Mapleheath, Maplehill, Melville S. Bacon, Montreal, R. G. A. Weaver, Ramona, Thunder Bay, Vinmount, at Kingston, Ont.; A. E. McKinstry, Glenellah, Narragansett, at Levis, Que.; Beaverton, Canadian, E. B. Osler, Emperor, J. H. G. Hagarty, Maplehurst, Midland King, Midland Prince, Sarnia, Valcartier, W. Grant, Morden, Westmount, at Midland, Ont.; George T. Davis, Hamilton, at Montreal; Advance, Brighton, Cataract, City of Hamilton, City of Ottawa, Cobourg, Hilda, J. R. Edwards, Jeremiah Godfrey, Joyland, Maplebrook, Maplegrange, Mapleton, Minne E. Orton, Nadine, Oatland, Simla, at Port Dalhousie, Ont.; Maplebranch, at Sarnia, Ont.; Cape Diamond, Cape St. Francis, Longueuil, Rapids King, Saguenay, Tadoussac, Turbina, at Sorel, Que.; Cape Elmarty, Cape Trinity, Montreal, Quebec, Rapids Prince, Rapids Queen, Three Rivers, at Three Rivers, Que.; Cayuga, Chippawa, Corona, Kingston,

Macassa, Modjeska, Toronto, at Toronto.
Canadian Pacific Car & Passenger Transfer Co. Prescott, Ont.—Charles Lyon, at Prescott, Ont.

Canadian Pacific Ry. Great Lakes Steamship Service.—Alberta, Assiniboia, Athabasca, Kewatin, Manitoba, at Port McNicoll, Ont.

Canadian Towing & Wrecking Co. Port Arthur, Ont.—A. F. Bowman, Coteau (barge), Empire (barge), James Whalen, at Port Arthur, Ont.

Chicago, Duluth & Georgian Bay Transit Co. Chicago, Ill.—North American, South American, at Saugatuck, Mich.

Clarke Steamship Co. Quebec, Que.—Labrador, North Shore, Tremblay, at Quebec, Que.

Crystal Stream Steamship Co. St. John, N.B.—D. J. Purdy, Majestic, at Indiantown, St. John, N.B.

Donnelly Salvage & Wrecking Co. Kingston, Ont.—Cornwall, Frontenac, William Johnston, at Kingston, Ont.

Georgian Bay Tourist Co. Midland, Ont.—Midland City, at Midland, Ont.; George Hall Coal Co. of Canada, Montreal, Bignogan, Ignifer, John F. Morrow, John Rugee, Leigh, Royan, at Canadian Vickers' dock, Montreal; A. D. Compton, Florence, Frank B. Ewen, Fred Mercier, Jas. W. Follette, Katie H., Rockferry, Senator Derbyshire, Wellington No. 1, at Montreal; J. B. Ketchum II, Margaret A. Hackett, Zapotec, at Ogdensburg, N.Y.

Glen Transportation Co. Midland, Ont., operated under management of A. E. Matthews, Toronto.—Cicoa, Glenafon, at Midland, Ont.; Glencadam, at Collingwood, Ont.; Glenclava, at sea.

Honey Harbour Navigation Co. Midland, Ont.—City of Dover, Tenno, Waterbus, at Midland, Ont.

Hudson's Bay Co. Winnipeg.—Fort McMurray, at McMurray, Alta.; Liard, at Fort Simpson, N.W.T.; Mackenzie River, at Fort Smith, N.W.T.; Inenew, Fort York, at Moose Factory, Ont.; Fort Churchill, at York Factory, Ont.

Imperial Oil Ltd. Toronto.—Talaralie, at Ioco, B.C.; Barge 41, Glen Allan, Imperial, Imperial, Iocelle, Iocoma, Royal-alite, Sarnolite, at Sarnia, Ont.; Mina Brea, at Baltimore, Md.

International Transit Co. Sault Ste. Marie, Ont.—Algoma, at Sault Ste. Marie, Ont.

Keystone Transports Ltd. Montreal.—Keybell, Keynor, Keyport, Keyvive, Key-west, at Kingston, Ont.

Kingston Navigation Co. Kingston, Ont.—Brookville, St. Lawrence, at Kingston, Ont.

Lake Erie Navigation Co. Walkerville, Ont.—Marquette and Bessemer No. 1, at Conneaut Harbor, Ohio.

Magnetawan River & Lake Steamboat Line. Burks Falls, Ont.—Armour, Glenada, at Burks Falls, Ont.

Marquette & Bessemer Dock & Navigation Co. Walkerville, Ont.—Marquette and Bessemer No. 2, at Conneaut Harbor, Ohio.

Mathews Steamship Co. Toronto.—Easton, at Collingwood, Ont.; Clinton, Malton, at Cornwall, Ont.; Bayton, Yorkton, at Goderich, Ont.; Huronton, at Port Arthur, Ont.; Laketon, Riverton, at Port Colborne, Ont.

Montreal & Cornwall Navigation Co. Cornwall, Ont.—Britannic, at Cornwall, Ont.

Muskoka Lakes Navigation & Hotel Co. Gravenhurst, Ont.—Ahmic, Chero-kee, Islander, Medora, Nipissing, Oriole, Saramo, at Gravenhurst, Ont.

Ships Registered in Canada During September and October, 1921.

In compiling the following lists of ships registered, steamboats and motorboats, operated by engines of less than 10 h.p., are eliminated, as also are sailing ships of less than 100 tons register.

STEAM.

No.	Name	Port of Registry	Where and when built	Length	Breadth	Depth	Gross Tons	Reg. Tons	Engines, n.h.p., etc.	Owner or Managing Owner

Nevada Shipping Co., Halifax, N.S.—Nevada, at Kingston, Ont.

Newcastle Steamboat Co., Newcastle, N.B.—Max Aiken, at Chatham, N.B.

Northern Navigation Co., Sarnia, Ont.—Hamonic, Huronic, Noronic, Thousand Islander, at Sarnia, Ont.

North Bay & French River Navigation Co., North Bay, Ont.—Northern Belle, at North Bay, Ont.

Ontario Car Ferry Co., Montreal.—Ontario No. 1, at Cobourg, Ont.

Ontario Transportation & Pulp Co., Thorold, Ont.—Linden, Mary H. Boyce, at Thorold, Ont.

Ottawa Transportation Co., Ottawa, Ont.—Dolphin, Florence, Geo. A. Harris, Hall, Ottawan, Scotsman, Sir Hector, at Hull, Que.

Pembroke Transportation Co., Pembroke, Ont.—Oiseau, at Pembroke.

Playfair Interests.—The six steamships which have been bought from the French Government by James Playfair, Midland, Ont., and his associates, as mentioned in Canadian Railway and Marine World for Dec. 1921, have not all arrived on this side yet. At the time of writing, the name of the owning company has not been decided, but it is probable that they will be operated next season, under the management of A. E. Mathews, Toronto, as are those of the Glen Transportation Co. The Glenarm, Glendowan and Glanfern will be berthed for the winter, at Midland, Ont., the Gleneye and Glengarnock, at St. John's, Nfld., and the Glendochart at Londonderry, Ireland. The Glendochart will be brought out next spring.

Prescott & Ogdensburg Ferry Co., Prescott, Ont.—Ferdinand, Miss Vandenberg, at Prescott, Ont.

Quebec Salvage & Wrecking Co., Levis, Que.—Lord Strathcona, at Quebec, Que.

Rockport Navigation Co., Kingston, Ont.—Mississquoi, Waubie, at Kingston, Ont.

Sincennes-McNaughton Line, Montreal.—All tugs and barges at Sorel, Que.

J. F. Sowards, Kingston, Ont.—Jed, Jeska, M. A. Lydon, Shanly, Winner Wing, at Kingston, Ont.

Sparrow Lake Steamer Line, Sparrow Lake, Ont.—Glympse, at Port Stanton, Ont.

Timagami Fur Co., Timagami, Ont.—Kingo, at Timagami, Ont.
Toronto, Hamilton & Buffalo Navigation Co., Hamilton, Ont.—Maitland No. 1, at Ashtabula Harbor, Ohio.

Turret Steamship Co., Halifax, N.S.—Turret Cape, at Kingston, Ont.

Webster Steamship Co., Montreal.—Colin W., Eric W., Howard W., Richard W., Montreal; Stuart W., at Quebec, Que.

Windor & Pelee Island Steamship Co., Pelee Island, Ont.—Pelee, at Kingsville, Ont.

Wolfe Island Township, Ont.—Wolfe Islander, at Kingston, Ont.

Atlantic and Pacific Oceans.

The White Star-Dominion Line has reduced its passenger rates for winter cruises to the West Indies on its s.s. Meranti by approximately 15%.

A steamship sailed from a Welsh port early in December, for Vancouver, carrying the first consignment of 25,000 tons of Welsh tin plates for use in the British Columbia packing industry.

The St. Lawrence navigation season for 1921 was closed Dec. 8, with the sailing

from Montreal of the Montezuma Transportation Co.'s s.s. G. R. Crowe, which arrived there Dec. 6, being the latest date on which any ocean going steamship has arrived at Montreal in any year.

London, Eng. press dispatch Dec. 2:—The Times foreshadows a sharp cut in freight rates from the United Kingdom to British Columbia, which should provide special opportunity for the development of British export trade toward Canada. The flat rate will shortly become 25 shillings a ton, which will be equivalent to a charge of a penny for 30 miles. The Times adds that it should not be assumed that the cheap rate will be continued indefinitely, as shipping managers maintain that the new rate will be unprofitable and is therefore presumed that the cut will be solely due to the slump in shipping, in order to keep ships employed.

The s.s. Virginian, owned formerly by the Allan Line Steamship Co., and later, by the C.P.R., sold recently to Swedish interests, and renamed Drottningholm, is being overhauled at Gothenburg, Sweden, and fitted with De Laval steam turbines. She was the first ocean going steamship to be equipped with steam turbines, and was followed by her sister ship Victorian. In neither case was the equipment considered a great success, as the turbines were too slow to give economical results. With the new equipment, it is expected that she will do an extra 2½ knots, with 10% less power than formerly, with the propellers increased in diameter by about 3 ft., and decreased in speed by one-third. The coal required under the new conditions will be about 145 tons a day instead of 200 as formerly.

The White Star-Dominion Line reports that its passenger traffic across the Atlantic during the St. Lawrence navigation season of 1921, was well up to the average of pre-war years, and that generally, satisfactory business was done. The total number of passengers carried by the company's steamships was 22,660 viz: 13,414 westbound, and 9,246 eastbound, in 19 sailings. The last sailing took place from Montreal, when the s.s. Canada left port, Nov. 19, the winter service being given from Portland, Me., the ships making calls at Halifax, N.S., with the steamships Canada and Vedic. For the 1922 season, the steamships Canada, Megantic and Regina will be used, the last named making her maiden voyage to Montreal early in May. It is reported that the company may place its new steamship Doric in the St. Lawrence service later in the year.

Martime Provinces and Newfoundland-land.

The Newfoundland schooner June, 485 tons, is reported to have been burned at Port Mahone, Minorca, in the Mediterranean Sea.

Preparations are reported to have been made for the repair of the Nelson wharf, St. John, N.B., during the winter, at an approximate cost of \$15,100.

The s.s. Mary Smith, owned by A. Smith, Dartmouth, N.S., was seized by the Customs Department at Halifax, N.S., Nov. 26, on a charge of smuggling liquor into Canada.

The schooner Donald J. Cook, owned in Lunenburg, N.S., was abandoned at sea, Dec. 19, while on fire, the crew being rescued by the s.s. San Eduardo, bound for Puerto Mexico.

The schooner Rosalie Bellevue, 230 tons gross, built in 1909, was sold at St. John's, Nfld., by auction, Dec. 9, for \$1,200, to P. F. Cowan. It is stated that two years ago she was valued at \$50,000.

The Newfoundland schooner Ruby W. was discovered in mid-ocean, Dec. 8, by the Danish s.s. Gudrun Maersk, by which the crew were rescued and the wreck set on fire and destroyed. The Ruby W. was of 287 tons register, and sailed from Pernambuco Nov. 5 for St. John's.

The Nova Scotia schooner Vicola is reported to have foundered at sea with her crew of 9 men, while en route from North Sydney to St. John's, Nfld., with coal from the Nova Scotia Steel & Coal Co. She sailed from North Sydney, Nov. 23, and was never reported.

The Hudson's Bay Co.'s s.s. Nascopee arrived at St. John's, Nfld., at the end of November, after having completed her second trip to Arctic regions, in one season, a record not previously achieved. On the second trip she carried over 700 reindeer from Norway to Baffin Land.

The U.S. schooner King Daniel was seized by the Dominion Customs officials near Musquash, N.B., recently. She sailed from St. John, N.B., Nov. 18, with a cargo of liquor in bond for Nassau, Bahamas, and it is alleged broke the law in unloading it at a port other than it had been consigned to.

The s.s. Bassan, which was wrecked at St. Pierre, Miquelon, last summer, and which was afterwards sold by its owner, the U.S. Shipping Board, was sold by auction Dec. 9 by the Sheriff at Amherst, N.S., to A. Pugsley, River Hebert, N.S., for \$5,200, as a result of actions brought by her crew for wages, and by others for

Ships Added to and Deducted From the Canadian Register During September and October, 1921.

supplies. She was at Parrsboro, N.S., where repair work was being undertaken, but this was suspended some time ago, as there were no funds available for continuing it.

The Newfoundland s.s. Fern went ashore on the western head, St. Shott's, Nfld., towards the end of November and became a total loss. She sailed from Sydney with coal for the Reid Newfoundland Co., and went ashore during a dense fog. She was built at Sidell, La., in 1918, had a wooden hull and was screw driven by engine of 75 h.p. Her dimensions were,—length 248 ft.; breadth 43.1 ft.; depth 18.1 ft.; tonnage 1,579 gross, 972 net. She was owned formerly by Newfoundland Shipbuilding Co., Harbor Grace, one of the companies formed during the war by C. Hannevig. About two years ago, when bound from Savannah, Ga., to Rotterdam, Holland, she was damaged by ice off Newfoundland and later went ashore in Bonavista Bay. She was refloated and towed to St. John's, where her cargo was discharged and she was sold by auction to Sir Michael Cashin for the Fern Steamship Co., and she has been under charter to the Reid Newfoundland Co. for coaling purposes for some time.

The Halifax & Canso Steamship Co., of which G. S. Campbell & Co., Halifax, N.S., are managers, has bought the s.s. Fogota, in England, and is transferring her to the Canadian register, under the name Chedabucto. She was owned by J. Crosby & Co., St. John's, Nfld., and has been operated in the Newfoundland coastal trade for some years. She is taking the place of the company's s.s. Scotia, which was destroyed by fire Aug. 26, 1921. She was built at Dundee, Scotland, in 1910, and has a steel hull of the following dimensions,—length 145.2 ft., breadth 24.5 ft., depth 13.7 and 10.6 ft.; tonnage 411 gross, 238 net, 420/438 deadweight. She is classed 100A at Lloyds and has one deck and a shelter deck and two holds. She is equipped with electric light throughout, and has accommodation for 40 first class passengers, and approximately 2,800 barrels. Her propelling machinery consists of compound engines, with cylinders 18 and 40 in. diam. by 27 in. stroke, supplied with steam by a single end-on boiler at 130 lb. a sq. in. working pressure.

Province of Quebec.

During the 1921 St. Lawrence navigation season, 981 ocean ships docked at Quebec, compared with 564 in 1920. This was an increase of almost 100% in tonnage over 1920.

The British s.s. Gyp, from London, Eng., to Chicoutimi, Que., light, grounded at St. Etienne Bay, in the Saguenay River, at the end of November. She was released by the Quebec Salvage & Wrecking Co.'s s.s. Lord Strathcona, and taken to Quebec for examination.

The U.S. s.s. Parks Foster was libelled at Montreal recently, on a claim of \$25,000, by Manchester Lines' s.s. Manchester, for damage caused when the two ships collided at the end of November. The Parks Foster was released on a bond and the matter will be dealt with by the local Admiralty Court.

A shipment of 200,000 eels was made from Quebec to New York recently. They were transported via Lake Champlain and the Hudson River in three specially

built barges, so arranged that water could flow in and out at all times, so that the fish might be kept alive. The value of the shipment is given as \$100,000. Hitherto, the annual exportation of eels from Canada was valued at \$85,000.

The s.s. North Land, which, it is reported, is being dismantled at Sorel, has been more or less than a white elephant for the past two years. She was owned formerly by the Northern Steamship Co., Buffalo, N.Y., and with her sister ship North West, was built exclusively for the passenger trade between Chicago, Duluth and Buffalo, and operated in connection with the Northern Pacific Ry. In 1919 she was cut in two at Quebec, and sent through the canals to Buffalo, to the Davie Shipbuilding & Repairing Co., to which company it was stated she had been sold. The fore section arrived at Sorel Dec. 6, 1919, and the after section at Coteau Landing Dec. 12. Some trouble seems to have arisen, as no steps were taken to join the two sections together again. Enquiries during 1920 elicited the information that she had been transferred to Northern Steamship Co. interests, as represented by the Paragon Shipping Corporation, New York. The stern section was subsequently taken to Montreal pending the owner's decision as to whether the two sections would be joined, or the ship sold in her existing condition. Since then apparently nothing in the way of joining the two sections has been done, and it is now stated that she is being dismantled at Sorel, and that four of the 10 boilers have been sold to the George Hall Coal Co., for use in some of its steam barges, and that two others may be used in the steam trawler St. Julien.

Ontario and the Great Lakes.

The Georgian Bay Tourist Co.'s s.s. Midland City will have more staterooms added during the winter at Midland, Ont.

The lighthouse on Shanganash Island near Port Arthur was destroyed by fire Nov. 30. The damage is estimated at \$2,000.

The Marine Department will, it is reported, erect an up to date life saving station at Main Duques Island, Lake Ontario, in the spring.

The Port William City Council has arranged with the Dominion Towing &

Wrecking Co. for the use of its steam tug Strathogie for fire fighting purposes. The rate charged will be \$200 for the first hour, and \$100 for each additional hour.

Navigation from the head of the Great Lakes closed officially at midnight Dec. 12, when the extended insurance period expired. On that day, 14 steamships cleared from Fort William, carrying 4,227,000 bush. of grain, consigned chiefly to Erie and Buffalo, N.Y.

Work on sections 1 and 2, Welland Ship Canal, was reported to have been closed down for the winter Dec. 16. The destruction of the concrete plant at Port Weller, by fire, Dec. 3, is stated to have caused an earlier closing of the work than was originally planned. Work is continuing for the present on sections 3, 4 and 5.

A Fort William press dispatch states that 20 steamships left that port, Nov. 30, carrying 5,316,000 bush. of grain, valued at over \$7,000,000. Increased insurance rates went into effect at midnight Nov. 30 for any ships leaving port after that time. Eleven of these ships were bound for Buffalo, N.Y., with 3,171,000 bush. of grain, the balance being bound for Canadian ports.

A gas and bell buoy has been established to mark the wreck of the barge Richard Burns, sunk in the St. Clair Flats canal, about three miles below the lower light. The wrecked tug Pauline Heckler, sunk off the Corsica shoals lightship, near the line of the Point Edward range lights, has been marked by a red and black striped gas buoy showing a flashing white light for 5 sec. every 10 sec.

The s.s. Louis Philippe, owned by Canada Steamship Lines, has been acquired for ferry service between Sarnia and Port Huron, Mich. She arrived at Sarnia Dec. 3, but, according to present advices, will not be placed in service until the spring. She was built at Lauzon, Que., in 1914, and is screw driven by engine of 58 h.p. Her dimensions are,—length 162 ft., breadth 37 ft., depth 11 ft., tonnage 600 gross, 251 net.

The s.s. City of New York, owned in Cobourg, Ont., founded near Stony Point, Lake Ontario, Nov. 27, while bound from Oswego, N.Y., to Trenton, with coal, 8 persons losing their lives. Five of these had escaped from the sinking ship

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during November, 1921:

Articles	Canadian	U.S. Canal	Total
Lumber	8,472	10,651	14,123
Flour	1,069,300	818,840	1,887,540
Passengers	1,648,259	51,824,399	53,332,559
Grain, other than wheat	2,845,164	11,195,447	13,540,811
Copper	4,021	6,351	10,372
Iron ore	385,002	385,002	770,004

Registered Tonnage	597,488	2,014,636	2,612,124
Freight—Eastbound	217,997	2,301,385	2,519,382
Freight—Westbound	58,017	693,072	746,089
Total Freight	271,014	2,994,457	3,265,471

in a small boat, their subsequent deaths being due to exposure. The City of New York was screw driven, by engine of 19 h.p. Her dimensions were,—length 136 ft.; breadth, 27.6 ft.; depth, 11.6 ft.; tonnage, 292 gross, 199 net.

A. A. Schantz, President, Detroit & Cleveland Navigation Co., is reported to have stated in an address to the Detroit Board of Commerce, Dec. 5, that the business of the larger Great Lakes steamship line operating out of U.S. ports is decreasing at such a rate that in five years few ships will be running. This condition, he said, was due to the LaFollette seaman's law passed by the U.S. Congress some time ago. He claimed that this act should not be repealed, but that it should be modified. He stated that under its provisions in five years time no excursion or commercial ships will leave Detroit unless the law is amended. Its requirements are so drastic in the matter of the size of crews and other particulars that companies are unable to live up to them.

The steam tug Arbutus, while en route from Ashland, Wis., to Port Arthur, at the end of November, sprang a leak and sank. She was built at Wallaceburg Ont., in 1887, and was screw driven by engine of 4 h.p. Her dimensions were,—length 63 ft., breadth 14.8 ft., depth 7 ft.; tonnage, 49 gross, 34 net. She was at one time owned by S. Wright, Port Arthur, and some time ago he alleged that she was stolen. Shortly after she was captured, in U.S. waters by a U.S. revenue boat, for being engaged in the liquor running business, and was confiscated and sold.

Manitoba, Saskatchewan, Alberta and Northwest Territories.

The Alberta & Arctic Transportation Co. has registered its s.s. Distributor III, which was built at Fort Smith during 1920. She is paddle wheel driven by engine of 15 h.p. and her dimensions are,—length 151 ft., breadth 35.3 ft., depth 6.1 ft.; tonnage, 876 gross, 517 net.

British Columbia and Pacific Coast.

The Dominion Government has reduced the charges for the use of the Esquimalt

drydock, to enable British Columbia yards to meet competition of U.S. companies with private drydocks.

Between Jan. 1 and Aug. 31, 1921, 3,500 tons of wheat from British Columbia ports passed through the Panama Canal for European ports. Among other recent shipments from Vancouver was also 100 tons of mutton, stated to have been the first shipment of chilled meat from Canada to Europe through the Panama Canal.

Steamships connected with twelve different lines are operating between British Columbia ports and North and South American Atlantic ports, and United Kingdom and European ports, via the Panama Canal. It is stated that approximately two-thirds of the grain at Calgary, Alta., elevators in the early part of December was for shipment through Vancouver. During 1921 about 50,000 tons of prairie grains were shipped from Vancouver, compared with 16,000 tons during the previous year.

The Vancouver Board of Trade, following a protest made by C. H. Nicholson, Manager, Grand Trunk Pacific Coast Steamship Co., is drawing the Marine Department's attention to what is claimed to be a handicap to Canadian steamships, owing to the change in rules governing the inspection of passenger steamships calling at U.S. ports. It is stated that hitherto there has been a reciprocal arrangement between the two countries, whereby certificates of inspection, granted in either country, were accepted by each, but that this arrangement has been voided by a U.S. law not enforced previously. It is claimed that under this law the G.T.P.C. Co.'s s.s. Prince Rupert's passenger capacity was reduced last June when application was made for a new U.S. certificate.

Tenders for the construction of a steel ferry steamboat for operation on Burrard Inlet are under consideration by North Vancouver City Council. It is stated that the lowest tender received is from the Coaster Construction Co., Montrose, Scotland, being approximately \$250,000. Other tenders are reported, from J. Coughlan & Sons, for a steamboat \$300,000, and for a ship with Diesel-electric drive \$225,000, from Wallace Shipbuilding & Drydock Co., for a steamboat

\$285,000, for a ship with Diesel-electric drive \$388,000, and for direct Diesel drive \$409,000. It is said that the lowest tender objected to the specifications, which were prepared by the Wallace Shipbuilding & Drydock Co., and that such objections were based on a desire to build a ship that would be able to make the Atlantic voyage, while local firms would build for use exclusively on, sheltered waters.

Canadian Notices to Mariners.

The Marine Department has issued the following:—

77. Nov. 19.—207, British Columbia, Strait of Georgia, Fraser River entrance, changes in position and character of range lights.

78. Nov. 25.—208, New Brunswick, Bay of Fundy, St. John harbor, fog bell established. 209, New Brunswick, Bay of Fundy, St. John harbor, light and fog bell established by St. John Drydock & Shipbuilding Co. 210, New Brunswick, Bay of Fundy, Petitcodiac River, Hopeville Cape, correct position of lighthouse.

79. Nov. 29.—211, Nova Scotia, Bay of Fundy, Minas Basin, Avon River, wreck, buoy placed. 212, Newfoundland, south coast, Rencontre West, New Harbour Island, light established.

80. Dec. 1.—213, Ontario, Lake Erie, Port Stanley, intensity of breakwater light increased. 214, Ontario, Lake Huron, Georgian Bay, western islands to Waubashene, new edition of chart. 215, United States, Lake St. Clair, wreck, gas and bell buoy established. 216, United States, St. Clair River, Port Huron southbound channel, change in position of buoys. 217, United States, lower end of Lake Huron, wreck, buoy placed.

The s.s. Le Quesnoy, which was built by Dominion Shipbuilding & Repair Co., Toronto, in 1919, and owned by Nova Scotia Transportation Co., Toronto, is reported to have been sold to German buyers for \$600,000. She is a steel single deck steamship, screw driven by engine of 147 h.p., and of the following dimensions,—length 251 ft.; breadth 43.7 ft.; depth 26 ft.; tonnage, 2,742 gross, 1,670 net. She was operated for some time between European ports, but has been laid up at Hartlepool, Eng., since Aug. 1920.

February, 1922

Double Gauge Track on Prince Edward Island Railway.

As the question of completing the changing of the Prince Edward Island Ry. gauge from 3½ ft. to the standard 4 ft. 8½ in. was much discussed during the recent general elections, it will be of interest to review what has already been done in this connection, the methods adopted, and the results. The P.E.I.R.

12.89 miles, a total of 60.27 miles. The laying of the third rail was begun in Aug. 1918, and carried on until the early part of December, when it was abandoned for the winter. Construction resumed in May 1919 and completed in August of that year.

The original narrow gauge track con-

the surface of the three rails would be in the same plane. This has proved fairly satisfactory, except that, owing to the short life of the shims, the cost of replacement is becoming rather heavy. Some difficulty is also being experienced in keeping the shimmed rail to gauge on sharp curves, as the shims have a tend-

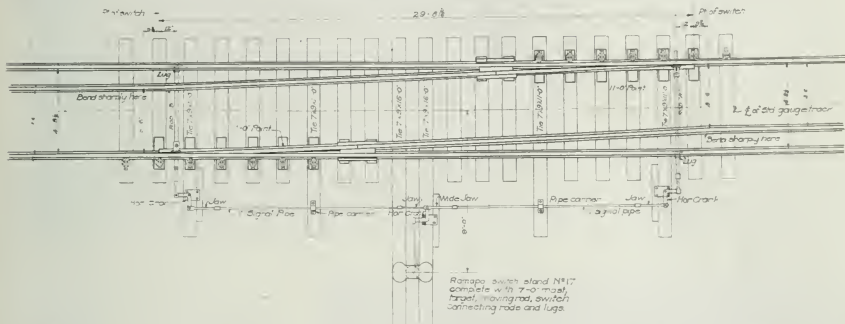

Fig. 1. Double Gauge Tracks, Prince Edward Island Ry. Standard and narrow gauge combination turnouts, 80 lb., showing switches necessary for Y tracks.

has a total mileage of 276.77, made up as follows:—main line, Charlottetown via Summerside to Tignish, 115.17; and the following branches, Charlottetown to Mur-

sisted of about 38 miles of 56 lb. rail, and 22 miles of 50 lb. rail, but for the installation of the third rail this was replaced in part by having the two outer

ency to slide on the ties, but this is overcome to some extent by the insertion of wooden braces between the shimmed rail and the outer Russian rail.

Fig. 2. Double Gauge Tracks, Prince Edward Island Ry. Standard and narrow-gauge combination turnouts, 80 lb. Method of interlocking movable point frog and switch point.

ray Harbor, 47.70; Lake Verde to Vernon, 4.43; Royalty Jet. to Souris, 56.08; Harmony Jet. to Elmira, 9.85; Mount Stewart Jet. to Georgetown, 24.29; Emerald Jet. to Borden, 12.89. A third rail has been laid on the main line from Charlottetown to Summerside, 47.38 miles, and on the Emerald Jet.-Borden branch.

or standard gauge rails of 67½ lb. rail, which had been rolled for the Russian Government in 1917. The inside rail of 56 or 50 lb. weight, was allowed to remain for narrow gauge equipment. As the Russian rail is 5 in. high and the 56 lb. rail only 4 in., it was necessary to place shims under the light rail, so that

There were no particular problems experienced in the laying of the third rail, but the labor involved was rather heavy, as the two outer rails had to be laid so that the center line of the standard gauge track, which would carry the heaviest rolling stock, would correspond with the center line of the roadbed or ties, and this

meant that the remaining narrow gauge rail had to be moved over on the tie 7 1/2 in., being half the difference between the width of the standard and narrow gauge. In general the third or standard gauge rail is laid on the north or right hand side of the track, but to follow this out while connecting up at junctions would have meant that the third rail at one end of the Y would be on the opposite side of the track, when meeting up with

For yard sidings a no. 13 rigid frog was used. This frog is double pointed, and, owing to the very small angle, the tracks and wheels must be rigidly to gauge to avoid derailments, on account of the liability of wheels striking frog points. The accompanying plans, figs. 2 and 3, show the arrangements of both the rigid and movable frog turnouts.

Nearly all the bridge spans had to be renewed to take care of the heavier roll-

that there are two rails on the north side of the track, close together, provides sufficient shade from the sun to hold the frost at the north end of the ties for a longer period than at the south end, with the inevitable result that during this time it is quite a problem to hold the track to anything like proper elevation, and there have been several derailments on this account.

The third rail was to provide through

Fig. 3. Double Gauge Tracks, Prince Edward Island Ry. Standard and narrow gauge combination turnouts.

the main line tracks. This was overcome simply, by the provision of two switchpoints, one on each side of the rail, operated by a single switch stand, by means of which the third rail was transferred from one side of the track to the other. The accompanying plan, fig. 1, of switch for Y tracks will explain this more clearly.

All main line turnouts are no. 8, and

ing stock, but as none of them are over 40 ft. long, no heavy work was involved.

It was expected that considerable difficulty would be experienced in winter operation in keeping the narrow and outer rail clear of ice and snow, but the drop nose ploughs previously in use for narrow gauge operation have done this work quite satisfactorily. Their drop noses were fitted with a removable plate,

standard accommodation between Charlottetown and Summerside, the chief distributing points on the Island, and main-land points, via the car ferry between Port Borden, P.E.I., and Cape Tormentine, N.B., and covers about one-fifth of the P.E.I.R., which is now the Canadian National Rys. Island Division, but it is hoped that financial conditions will in the not distant future permit the extension of the standard gauge to outlying points, and thus eliminate the present multiple rail track as far as possible.

Canadian Railway and Marine World is indebted to Alex. Scott, Division Engineer, Island Division, Canadian National Rys., for the foregoing information.

The next portion of the work to be undertaken will undoubtedly be the part of the main line between Summerside and Tignish, 115.17 miles, which would do away with the transfer of freight from standard gauge cars to narrow gauge ones at Summerside, for points from there to Tignish.

Additional illustrations will be found on page 61.

Station Caretaker Agents' Duties.

The Board of Railway Commissioners passed general order 355 Jan. 5, as follows:—Re general order 119, Jan. 31, 1914, and the appointment of caretaker agents at non-agency stations. Whereas railway companies are required from time to time to appoint caretaker agents at stations at which regular station agents are not maintained, the Board therefore declares that the duties of a caretaker agent shall be to see that the station is kept clean, and, when necessary, heated and lighted for passenger's accommodation, and to be present on the arrival and departure of trains; such duties to be the same as those of a regular station agent, excepting the billing of freight and handling the telegraph system.

The Canadian National Rys. Employees' Social Club held a New Year party in the Winnipeg union station rotunda, commencing just after midnight and continuing until 4 a.m. on Jan. 2.

Double Gauge Tracks and Switches in Charlottetown Terminal Yard, P.E.I. Ry.

consist of two no. 8 frogs and one no. 13 frog, with movable points. These frog points are operated by a Ramapo switch stand, having two moving rods, and double throw instead of the ordinary single throw. This stand is partly interlocked with the switch points by plunger and lock rods, making it impossible to leave the frog points set for a siding if the switch points are set for the main line.

slotted for the inner or narrow gauge rail. This plate is changed over to the left or right hand of the plough to suit the position of the inner rail, that is in working west the plate is on the right hand side of the plough, and in working east it is changed over to the left hand side. Considerable trouble has, however, been experienced in the spring, while the frost is leaving the ground. The fact

Birthdays of Transportation Men in February.

E. M. Snell, General Agent, Erie Rd., Toronto, born at Wingham, Ont., Feb. 16, 1872.

The Canadian Light Railway Co's Position.

A storm is brewing at Kirkland Lake and Swastika. The headquarters of the Canadian Light Railway Construction Co. is the storm-center, and unless a change takes place exceedingly soon, there promises to be a veritable cloudburst. C. E. Pinelle has apparently been promoting the scheme to build a light railway through the Kirkland Lake district. This gentleman stated some weeks ago that the expectations were that the line would be in partial operation before the arrival of heavy winter snow. However, already the "beautiful" is even now almost belly-deep, but so far as I can find out the necessary ties and steel rails have not even been bargained for, let alone purchased.

Dame rumor is working overtime these nights in this second largest of Canadian gold mining fields. Men have been employed by the Canadian Light Railway Co., but there is no record of a good many of them having been paid for their labor. Indeed, pay day is far overdue and it is a fact that starvation has actually threatened certain of the company's employees. This fact became so apparent that a private citizen at Kirkland Lake was moved to purchase a supply of provisions in order to prevent extremely serious hardship to say the least.

Perhaps the greatest wonder of all may be attached to the fact that the names of a number of prominent men are identified with this unfortunate situation. It is one of the greatest mysteries that there is no record of such men as F. L. Culver, of the Beaver Consolidated Mines, D. A. Dunlop, Vice President of the Hollinger Consolidated Gold Mines, W. H. Alderson of the Gutta Percha & Rubber Manufacturing Co., Hugh Blain, President of the Eby-Blain, Ltd., and W. H. Vaughan, formerly identified with the C.P.R., having raised any objection to their names being capitalized in connection with lending an air of stability to the light railway project.

I was early last summer that F. L. Culver, President of the Canadian Light Railway Co., announced to the writer that arrangements had been made to enter into a scheme to build approximately 100 miles of light railway, running to the west of Swastika to West Shining tree, and east of Swastika to Larder Lake by way of Kirkland Lake. Col. R. P. Rogers, it was announced, would have charge of construction work, and a good part of the line would be in operation before winter. The scheme looked good,

J. M. Spurling, Assistant to Vice President, Traffic, G.T.R., Montreal, born at Toronto, Feb. 16, 1882.

G. Spencer, Chief Operating Officer, Board of Railway Commissioners, Ottawa, born in London, Eng., Feb. 21, 1865.

A. P. Villain, City Ticket Agent, C.P.R., San Francisco, Cal., born there, Feb. 6, 1891.

F. L. Wanklyn, General Executive Assistant, C.P.R., Montreal, born at Buenos Aires, Feb. 25, 1860.

J. R. Watson, Assistant Superintendent, Sleeping Dining and Parlor Cars and News Service, Eastern Lines, C.P.R., Montreal, born at Morpeth, Eng., Feb. 8, 1873.

A. Williams, Superintendent, Farnham Division, Quebec District, C.P.R., Farnham, born at Mono Road, Ont., Feb. 22, 1872.

especially in view of the proven ability of some of the men on the directorate. Time wore on, however, without an actual start being made. Hope commenced to sink, and with this sinking grew the silence of the directors. Last of the fall came the announcement that a new company known as the Canadian Light Railway Construction Co., had been incorporated and would take over the original concern as a means of overcoming certain "irregularities" in connection with the early activities of the company. Since that time, the name of C. E. Pinelle has seemed to become conspicuous in all mention of the scheme, while the names of F. L. Culver, Col. R. P. Rogers, D. A. Dunlop, and so on, have seemed to sink into obscurity—that is, in so far as the Canadian Light Railway scheme is concerned. Yet, just here is one of the matters which is coming in for criticism.

In the Hotel Goldfields, Timmins, Ont., right in the shadow of the Hollinger mine, there hangs a prospectus, of a sort, of the Canadian Light Railway concern, beside which is a map of the new townsite of Mt. Snowdon and beneath it, two of the list of original directors, namely: F. L. Culver, D. A. Dunlop, Hugh Blain, W. H. Vaughan, and W. H. Alderson. Whether or not this is intended to capitalize the names of these gentlemen is perhaps not for me to judge; but, the fact remains that all those looking over the literature would perhaps draw only one conclusion. The question is this: Are these men still behind or identified with what is taking place in connection with this Northern Light Railway Construction Co.? If not, are they going to remain silent and stand by the result, favorable or otherwise, of the scheme? If they are, or, if they are not, a part and parcel of the present company, they should keep in mind that the public has never been informed about their withdrawal, and all of which leads me to ask the same gentlemen a few questions.

Is it known that F. W. Duncan, Kirkland Lake, was moved to purchase provisions to save unpaid employees of the Canadian Light Railway Construction Co. from hunger? Is it known that Mr. Lillio, a Swastika lawyer, has been engaged to endeavor to collect bills from the company? Is it known that the Board of Trade has considered the situation so serious as to occupy its attention and a decision to appeal to the authorities? Is it known that the townsite of Mt. Snowdon, a mere piece of wilderness, com-

prised of claims which are not yet even patented, is being advertised on the strength of the possibility of a railway being built? Is it known that temporary water works and light have been promised on the townsite of Mt. Snowdon by the first of 1922, while about the only evidence of this may be a hole in the ice on Victoria Lake and a convenient pit, together with a battery or pocket light? Is it known that F. W. Duncan has gone to Toronto for the purpose of plugging certain facts before the Attorney General? If these facts and many others of vital interest are not known, then it behooves the original directors of the projected light railway to come forward and acknowledge their ignorance. Continued silence cannot help but involve their names with gossip which is at once based upon facts, and which becomes exaggerated to such an extent as to give rise to rumors that there may be the deuce to pay before many moons.

The truth is that even among the pioneers of the north, where every man and every project is given the benefit of ordinary doubt, the tactics of C. E. Pinelle, the adopted father of the light railway scheme, is coming in for a great deal of criticism. Without any attempt to sit upon the judgment seat, it is my opinion that the hopes of far away claim holders are in danger of becoming so many bubbles if they are based upon the construction of a railway promoted along the lines followed by Pinelle. I have lived in certain parts of the great north where the unwritten laws dictated that no man should exploit the energy of others without compensation. Yet, here at Kirkland Lake there is a situation which not only involves alleged failure to pay wages, but where men have been found penned up in a shack on the very outpost of civilization, unable to find other work, unable to collect wages and with emptiness alone filling the bread box.—From Toronto Saturday Night Jan. 7.

Grain Shipments Through Port McNicoll.

Following are particulars of grain shipped through Port McNicoll, Ont., by the C.P.R., from Sept. 1 to Dec. 31, 1921, and 1920, respectively:—

	1921	1920
Total bushels shipped	23,026,390	10,258,975
Bushels shipped per day ...	233,630	84,311
Total cars shipped	15,068	6,667
Cars shipped per day	124	54½

Dispute over J. J. Hill's Millions.—A Minnesota court has before it certain matters in connection with the settlement of the estate of the late Mrs. Mary T. Hill, widow of the late Jas. J. Hill, formerly Chairman of the Board, Great Northern Ry. It is stated that the issue involves more than a family disagreement, and that it is really a fight between Great Northern Ry. and Northern Pacific Ry. interests for the control of the Chicago, Burlington & Quincy Ry. One of the developments of the fight is reported to have taken place Jan. 6, when Louis W. Hill, Chairman, Great Northern Ry. Co., was replaced as President of the United Securities Co. by his brother James N. Hill, L. W. Hill and C. R. Brown, Jr., subsequently resigned from the Northwestern Trust Co.'s directorate.

United Shippers Limited, which was incorporated under the Dominion Companies Act, Dec. 6, 1921, has been granted supplementary letters patent authorizing it to act as a common carrier of freight.

Freight Rates and the C.P.R.'s Crownsnest Pass Agreement.

A recent Ottawa press dispatch said: "When the Crownsnest Pass railway legislation was enacted, a condition of it was low rates on western grain on the C.P.R. In 1918 this was amended, and the rate fixing power given to the Board of Railway Commissioners, but this provision was limited to three years. It expires in 1922. Unless the new Parliament renews the Board's authority, there will be a reversion to the old rate, which was about half of the present one."

When the C.P.R. projected a branch line from Lethbridge, Alta., to Nelson, B.C., via the Crownsnest Pass, it obtained a Dominion Government subsidy of \$11,000 per mile, under the authority of an act passed by Parliament in 1897, which provided that the company should enter into an agreement with the Government in connection with freight rates as follows: "A reduction shall be made in the general rates and tolls of the company as now charged, or as contained in its present freight tariff, whichever rates are now the lowest, for carloads or otherwise, upon the classes of merchandise hereinafter mentioned, westbound, from and including Fort William, and all points east of Fort William on the company's railway, to all points west of Fort William on the company's main line, or on any line of railway throughout Canada, owned, or leased by, or operated on account of the company, whether the shipment is by rail line or by lake and rail, such reduction to be to the extent of the following percentages. (Here followed the reductions to be made in rates in specific commodities.) There shall be a reduction in the company's present rates and tolls on grain and flour from all points on its main line, branches, or connections, west of Fort William, to Fort William and Port Arthur, at points east, of 3c. per 100 lb. "The reduced rates on the westbound commodities were to be put in effect on or before Jan. 1, 1898; the reductions on eastbound grain were to be 1½c. per 100 lb. on or before Sept. 1, 1898, and the additional 1½c. per 100 lb. on or before Sept. 1, 1899. The railway was built from Lethbridge west to Kootenay Landing, at the south end of Kootenay Lake, 283.1 miles, and from Nelson to Procter, on the west shore of Kootenay Lake, 20.4 miles, and steamship connection on Kootenay Lake was between Kootenay Landing and Procter. Rates conforming with the agreement, and even lower than required by it in some cases, were put in effect in due course.

On the Canadian railways' application for a 15% increase in rates, which was granted with modifications by the Board of Railway Commissioners, Mar. 15, 1918, I. Pitblado, K.C., who appeared on behalf of Manitoba, submitted that the C.P.R., in its application, was attempting to override the agreement, and as a special act passed by the Dominion Parliament overrides the general act and limits the Board of Railway Commissioners' general jurisdiction, his contention was apparently justified. The Board granted the railways the increase sought, subject to the terms of the agreement, the restrictions imposed by which preventing the Board from allowing the full increase on some commodities. On grain, for example, a flat increase of 2c. per 100 lb. was about all that could be grant-

ed without putting in a higher rate than the agreement would allow.

The next general rate increase was the so-called 25% increase granted the railways by order in council 1863, Aug. 12, 1918. The two increases resulted in rates being increased about 30% on the whole. In the application for the so-called 25% increase, the terms of the Crownsnest agreement were apparently disregarded.

The Railway Act of 1919 was assented to July 7, 1919. The railways had pointed out that, on account of changed conditions, the rates which they could charge as limited by the Crownsnest agreement were not remunerative, and suggested the advisability of amending the then existing Railway Act so as to give the Board of Railway Commissioners power, in determining reasonable rates for the carriers, to override agreements previously entered into, any prior act of Parliament, whether general in nature, or applying to only one railway, or only a portion of one railway. As a result the following was inserted in the Railway Act as subsec. 5 of sec. 325: "Notwithstanding the provisions of sec. 3, the powers given to the Board, under this Act, to fix, determine, and enforce just and reasonable rates, and to change or alter rates as changing conditions or cost of transportation may from time to time require, shall not be limited or in any manner affected by the provisions of any act of the Parliament of Canada, whether general in application, or special and relating only to any specific railway or railways and the Board shall not excuse any charge of unjust discrimination, or of undue or unreasonable preference, on the ground that such discrimination or preference is justified, or required, by any agreement made or entered into by the company. Provided that this subsection shall remain in force only during the period of three years from and after the date of the passing of this act."

It is evident then, that the Board of Railway Commissioners' power to disregard the Crownsnest agreement, in its determination of what constitutes reasonable rates, will terminate on July 7, 1922, and that unless action is taken in the meantime, the rates will be thereafter limited by the agreement, according to the law. The Canadian Northern Ry. was also bound by a similar agreement made in 1901, with the Manitoba Government; but the Dominion Parliament was asked for an authorizing and confirming statute, which was passed, and which stated in part "Nothing in this act . . . shall divest or limit . . . the rights or powers of the Governor in council . . . of the Railway Committee of the Privy Council, or of any commission or other authority . . ." Therefore, so far as the Canadian Northern's Manitoba agreement respecting rates is concerned, orders of the Board of Railway Commissioners have precedence. But as concerns the C.P.R. agreement, the Board's orders have precedence only under the Railway Act, sec. 325, subsec. 5, quoted above, and this precedence will terminate July 7, 1922.

It is evident that the Railway Act will have to be amended so as to continue the Board of Railway Commissioners'

powers to determine the reasonableness of rates, regardless of the Crownsnest and other agreements. It will be observed that the Crownsnest agreement provided for certain rates on various commodities westbound, and on grain eastbound. As a result of the agreement, the company made lower rates on commodities westbound from Fort William and Winnipeg, with the result that British Columbia coast cities at once pointed out the discrimination, and by a Board of Railway Commissioners' judgment (7 C.R.C. 125) the coast cities were granted proportionate eastbound rates. In a discussion preceding the 15% rate advance of Mar. 15, 1918, Sir Henry Drayton, then Chief Commissioner, stated, "I am of the opinion that discrimination should be avoided, and that the effect of the Crownsnest agreement must be extended to the system of the company as today operated." It would appear, then, that if the agreement be enforced, it would determine rates for the whole system. Otherwise, it would be a breeder of discrimination, and would directly infringe on the provisions of the act requiring uniformity in rates. Further, if certain rates be enforced on one railway, it practically means that the same rates will be in force on all railways serving the same territory. Other companies would be injured to the same extent as the company making the agreement, and through no fault of their own.

One of the basic requirements of the Railway Act is that railways be granted rates which are reasonable and remunerative. If the agreement were enforced, the rates would be unreasonable, and the purpose of the act would be defeated. Suppose a shipper signs a contract with a provincial railway to pay a certain rate for transportation, and the railway subsequently comes under the Board of Railway Commissioners' jurisdiction and the Board should decide the rate to be unreasonable. The Board would be looked to to override the agreement, and prescribe a reasonable rate. The same reasoning holds. The Board of Railway Commissioners' rate regulating authority should give it power to override the Crownsnest agreement and prescribe reasonable rates, not only until July 7, 1922, but for all time. We are at a loss to understand what kind of reasoning prompted the insertion of the three year limitation in the Railway Act of 1919. Sec. 5, subsec. 5, the only possible reason being that a complete restoration of the economic conditions formerly prevailing was fully expected. It is evident that this complete restoration is highly improbable, and in view of conditions it appears desirable that the subsection be amended by striking out the reference to time limitation. It is unthinkable that the regulating authority, the Board of Railway Commissioners, be bound by contracts made years ago, or which may be made and ratified by Parliament from time to time, which would breed discrimination, and thus induce an increase to defeat the provisions of the act, and place a barrier in the way of just and efficient regulation of railways.

R. P. Ormsby, Secretary, Canadian National Ry., Toronto, has been re-elected Mayor of Leaside, Ont., by acclamation.

Stop Over Charges on Grain for Storage, Milling etc. in Transit.

Chief Commissioner Carvell gave the following judgment, Dec. 17, 1921, which was concurred in by Deputy Chief Commissioner Nantel and Commissioner Rutherford:—Re complaint of Winnipeg Board of Trade, Western Canada Flour Mills and others, against the proposed increase in the stop-off charge on grain for storage, milling, etc., in transit; application of Dominion Millers' Association for an order directing that the G.T.R. discontinue excessive stop-over charge of 2c. per 100 lb. on grain products shipped milling-in-transit for domestic consumption; and application of Dominion Millers' Association and Montreal Board of Trade for an order directing the railways to grant the right to Ontario and Quebec mills to mill in transit grain grown in Ontario and Quebec. As these three cases all have been heard by the Board at various times and are standing for judgment and are so closely inter-related, I propose to treat them in one judgment. An examination of the history of the milling-in-transit privilege would rather show that it was inaugurated primarily for the purpose of encouraging the milling of grain in western Canada, the object being the establishment of industries and the production of by-products in the west which are so necessary for the raising of live stock; and for many years the rate charged by the C.P.R. for the privilege was 1c. per 100 lb. west of Fort William and 2c. per 100 lb. east thereof, on grain for domestic consumption. In Feb. 1917, application was made by the Dominion Millers' Association and others, asking that the rate in eastern Canada on grain mill for domestic use be reduced to 1c. per 100 lb., the same as that charged in western Canada, my understanding being that the rate for export was 1c. per 100 lb. both in the east and in the west. After very lengthy hearings and argument, the Board gave judgment on Oct. 3, 1917, directing the C.P.R. to reduce the rate in the east to 1c. per 100 lb., as there was discrimination under the then existing conditions, holding that, as the G.T.R. had no railway in the west (the Grand Trunk Pacific being in law a separate entity), the charge of 2c. by that company was not discriminatory, and no order was made with respect to that railway. On June 14, 1918, the Dominion Millers' Association applied to this Board for an order directing the G.T.R. to discontinue the stop-over charge of 2c. per 100 lb. on grain products for milling in transit for domestic use. In Sept. 1918, the Canadian Pacific, Grand Trunk, Canadian Northern, and Grand Trunk Pacific Railways filed tariffs becoming effective Nov. 1, 1918, increasing the stop-off charge from 1 to 2c. per 100 lb. Protests were immediately made by Quaker Oats Co., Dominion Millers' Association, and Winnipeg Board of Trade Shippers' Bureau against this application, asking that it be suspended pending a hearing, which was done by order 27,761, Oct. 28, 1918. The matter came on for hearing first in Toronto in Oct. 1918, and later on at Ottawa, and practically all important points west as far as Vancouver, the principal stand against any increase in rate being made at Winnipeg in March, 1919. While this case was pending, on Sept. 20, 1919, C. B. Watts, on behalf of the Dominion Millers' Association, applied to this Board, asking that the rail-

way companies be ordered to grant the same milling-in-transit privilege to grain growers in Ontario and Quebec as that granted to western grain, and the three cases have been heard practically concurrently down to the present time.

I entirely concur in the principles enunciated by this Board in its judgment of Oct. 3, 1917, that, as the G.T.R. did not operate in western Canada, the charge of 2c. made by it in the east was not discriminatory, and I also agree with the Board that, because one railway may charge a different rate from a competitor, it is no evidence of discrimination. As before stated, the milling-in-transit privilege was inaugurated for the purpose of encouraging the milling industry in western Canada, and, without a doubt, it has served its purpose, because large mills are in operation in most cities from Kenora to Calgary, a great business is being carried on, and the by-products, in the shape of shorts and bran, are available for the feed of stock, which is becoming more and more important to western Canada. As the principal mills are on the C.P.R. lines and the rate, by the judgment above referred to, was made the same both east and west, so long as the rate is the same, no matter what it may be, no injury can befall the western mills which would not be equally applicable to the east, and no lesser amount of by-products would be available in western than in eastern Canada. Mr. Watts, in his application for the milling-in-transit privilege being granted to Ontario and Quebec grain, stated that the G.T.R. grants to mills in Michigan the right to mill grain produced in Michigan and other parts of the United States at a rate of $\frac{1}{2}$ c. per 100 lb. and, as far as I can read the case, this statement has not been contradicted. It was alleged by the Dominion Millers' Association, and the tariff citations given in proof support the allegation, that all grain coming from Detroit ex rail and ex lake is granted the milling-in-transit privilege in Ontario by both the Canadian Pacific and Grand Trunk Railways, and this applies to U.S. grown as well as Canadian grown grain, the stop-over charge on grain from Detroit to Montreal being $\frac{1}{2}$ c. per 100 lb., while the stop-off on grain from Goderich and Port McNicoll is 1c.

I am at a loss to understand why the milling-in-transit privilege should be granted to western Canadian grain and U.S. grain for grinding at the mills in Ontario and Quebec, while the same right is denied to the grain from the two provinces, and, in my opinion, the same treatment that is handed out to grain produced in one part of Canada, not to say anything about U.S. grain, must be granted to grain produced in all other parts of Canada, and, therefore, I find that all grain produced in Canada should be allowed the same stop-over privileges for milling purposes, no matter in what part of Canada the milling operation takes place. This, of course, has nothing whatever to do with the out of line haul. In such cases, reasonable rates off the through line should be granted the transportation companies. As I view the question, the stop-over privilege for milling, elevator, cleansing, or hospital purposes, is a service incidental to transportation, customary and usual in connection with the business of the railway companies in Canada, and has nothing what-

ever to do with the ordinary transportation charges, and it should make no difference whether the main line haul were 100, or 1,000, or 3,000 miles. This service should be paid for entirely independent of the line haul, and, therefore, the charge for this service, unless conditions are very dissimilar, should be the same on every railway in Canada. For this reason, I think that the charge for milling-in-transit or other such services on the G.T.R. should be the same as that made by the Canadian Pacific, Canadian Northern, and Grand Trunk Pacific Railways, or any other railway in Canada under the Board's jurisdiction.

This naturally brings us to the question of what is a reasonable rate for the services to be performed by the railway, always considering that it receives the legal rate for transporting the grain from the starting point to destination, and that the stop-over privilege simply means that, if the same amount in weight is returned to the railway company for transportation to destination within six months, the completion of the contract of carriage will be made by the railway at the legal through rate, which rate it may happen to be. It would probably be impossible to find exactly the same set of circumstances at any two given points, or perhaps, to put it more mildly, the cost of this service at many points in Canada would be greater or less than at many other points, and all the Board can do is to arrive at a fair average value for the services performed.

This case was exhaustively heard at Winnipeg in March, 1919, and argued and some additional evidence given before this Board at Ottawa in May, 1920. At the sittings in Winnipeg, evidence was furnished by both the Canadian National Rys. and the C.P.R. as to the cost of a switching movement such as would be required with the stop-over privilege in the Winnipeg yard, and, from this evidence, it seemed pretty hard to arrive at any exact data as to how much shunting is ordinarily required for stopping off a car of grain for grinding purposes and forwarding the product thereof at a later date. According to the evidence, in some cases the railway company was called upon to perform two movements, i.e., the spotting of a car of grain on one side of the mill and lifting it from the other side, the car having been switched around by the milling company itself. No doubt, in many cases, a car would be placed on one side of the mill and another one lifted from the other side, involving practically one movement, and, in many other cases, the loaded car would be spotted, and the empty removed, after it had been unloaded, and, when the flour was ready for shipment, an empty car would be spotted and the full car lifted, thus making four movements. It seemed to me to be almost impossible to arrive at any absolute conclusion as to what would be the actual cost of the switching movements. As I read the evidence, it has never been the railway companies' contention that the switching movement was intended to produce profit. In fact, as far back as 1916, Mr. Beatty contended that the 1c. rate did not pay the actual cost of operation to the company, but that it was granted to the west for the purpose of encouraging the milling industry. Then, again, the figures furnished by the two railway companies two

years ago, while fairly indicative of the cost today, would probably not be as accurate a year from today, because operating costs of all railways have to some extent been reduced during the past six months, and there is no reason to believe there will not be further reductions within the next six months or a year.

I have, therefore, come to the conclusion that, as the C.P.R. has always granted the stop-over privilege, and performed the necessary switching, for 1c. per 100 lb., there is no reason why a change should be made under present conditions, and, as I have already found that the rate should be the same all over Canada, this would involve a reduction of the G. T.R. rates from 2c. to 1c. per 100 lb. I, therefore, think an order should issue that all railway companies in Canada under the Board's jurisdiction should be allowed to charge 1c. per 100 lb., for the stop-over privilege for milling purposes, no matter in what part of Canada the operation may be carried on, and the privilege should be granted to all grains produced in Canada, when milled at any point in Canada, at the same rate per 100 lb., and the several railway companies under the Board's jurisdiction should be directed to file tariffs accordingly.

Assistant Chief Commissioner McLean gave the following judgment Dec. 30, 1

agree that the proposal to increase the milling-in-transit rate from 1c. to 2c. should be dismissed. In regard to the application to have the G.T.R. discontinue the stop-over charge of 2c. per 100 lb. on grain products shipped milling-in-transit for domestic consumption, my position is already expressed in Dominion Millers' Association vs. Canadian Freight Association, 22 Can. Ry. Cas. 125, at p. 134.

The further application involved is one asking that the Board direct the railways to grant the right to Ontario and Quebec mills to mill-in-transit grain grown in Ontario and Quebec. Ontario grain for milling and reshipment is subject to two separate contracts; one for the carriage of grain on a special basis of local rates to the mill; the other for the carriage of the product from the mill under the ordinary tariff. In the presentation of this application, it was admitted by the applicant that there was no effective competition between the flour milled from Ontario wheat and the flour milled from northwest wheat. Montreal was referred to by the applicant as being the main market for Ontario wheat, and it was admitted that there was no effective competition there; and that the use of the two types of flour were different and not competitive. The application as launched, turning, as I under-

stand it, on unjust discrimination, I am not satisfied that a prima facie case of discrimination was established. Reference was made in correspondence from the applicant, subsequent to the hearing, to milling-in-transit at Canadian points on U.S. grain while milling-in-transit was not granted to Ontario wheat. There is in force a C.P.R. tariff on grain from Detroit, ex lake and ex rail, with milling-in-transit arrangements and charges in Canada, and shipped to Canadian destinations. The basic charge is 14c. The tariff does not limit this to U.S. grain. Whether or not the existence of this arrangement, applicable to grain from Detroit, ex lake and ex rail, while there is not a milling-in-transit arrangement on Ontario grain, is unjustly discriminatory or unduly preferential is a matter into which, in my opinion, it is not necessary to go in advance of a prima facie case of discrimination being made out.

The Board issued the following general order 354, Jan. 4:—The Board orders that all railway companies subject to its jurisdiction file tariffs, effective not later than Feb. 1, 1922, showing a charge of 1c. per 100 lb. for the stop-over privilege on all grain for storage, milling, malting, or other treatment; such privilege to be granted for all grain produced in Canada, subject to a reasonable charge for out of line hauls.

Canadian Pacific Railway Earnings and Expenses, November, 1921.

C.P.R. gross earnings for Nov. 1921 were \$18,787,679, a decrease from Nov. 1920 of \$5,011,466; working expenses, \$15,115,877, were \$4,610,255 less than in Nov. 1920, and net earnings, \$3,671,801 were \$401,208 less. As compared with the preceding month, Oct. 1921, gross earnings in Nov. 1921 fell off \$3,301,945, operating expense decreased but \$262,261, and net earnings decreased \$3,039,685.

While the Nov. 1921 gross earnings were less than the Nov. 1920 gross earnings by \$5,011,466, the Oct. 1921 gross earnings were less than the Oct. 1920 gross earnings by only \$2,711,008. In view of the fact that the rate relationship as between Oct. 1920 and Oct. 1921 was practically the same as the relationship between Nov. 1920 and 1921, it is evident from the above figures that the traffic did not keep up as well relatively in Nov. 1921 as in Oct. 1921. The decrease in gross as between Nov. 1921 and Oct. 1921 was to be looked for, in view of the fact that October is always a month of exceptionally heavy traffic, largely on account of the grain movement. The decrease in gross in Nov. 1921 as compared with Nov. 1920, while large, also reflects the decreases in rates which had gone into effect, viz., the 20% reduction in passenger rates, the 5% reduction in freight rates, and the large number of individual rate reductions made by Canadian railways voluntarily.

Looking back over the years, it is worthy of note that although the Nov. 1921 gross earnings were so much smaller than those of Nov. 1920, they were, however, the largest gross earnings for November of any year except 1920. In net earnings, however, Nov. 1921 was exceeded by Nov. 1920, and by the same month of every year from 1917 back to 1910, inclusive, with the single exception of 1914. The fact of there being such a large decrease in gross revenue

in Nov. 1921, as compared with Nov. 1920, in so far as this is based on lower rates, indicates that deflation is taking place on the railways so far as transportation costs to the public are concerned, but the fact remains that net earnings have not yet regained their pre-war volume, which indicates that deflation has not yet taken place to the same extent on the railways so far as operating costs are concerned.

A condition worthy of the attention of shippers and of that of the people as a whole, is to be found in a comparison of the C.P.R. operating figures for Nov. 1921 with those for Oct. 1921. As stated, gross earnings were \$3,301,945 smaller in November than in October; net earnings were \$3,039,685 smaller, but operating expenses were only \$262,261 smaller. In other words, the C.P.R. had to spend \$15,378,138 in operating expenses to do \$22,089,624 worth of business in October, while in November the company had to spend \$15,115,877 to do \$18,787,679 worth of business. Stated another way, additional business worth \$3,301,945 was done at an additional expenditure of only \$262,261. While it is not improbable that certain features of maintenance and operation called for increased expenditure in November, yet the mere fact of the company being able to derive so much larger gross earnings in October at such a comparatively small additional expenditure, clearly demonstrates that the railway business is one of the most, if not the most, outstanding example of a "business of increasing and decreasing returns." The business is one wherein what would ordinarily be referred to as overhead costs, in a manufacturing business or trading enterprise, are such a large percentage of the total cost of doing business that when once enough business is secured to make the venture pay its way, any additional business can be handled at smaller cost, and will finally result in greatly increased profits, which,

under a scheme of wise regulation, will finally result in lowered prices to the public for the products turned out by the business. In this case the products are freight, passenger and other forms of transportation. It would require a book to present a thorough examination of the effect of fluctuating traffic on the multitudinous items of expense of railway operation, individually, but the idea may be expressed by stating that a case could easily arise where nine trains daily would leave a road struggling to escape bankruptcy, while 10 trains a day would make it a steady dividend payer.

This condition conveys a lesson in no unmistakable terms, and shows plainly that Canada's greatest need today is greater population, to the end that greater passenger travel and a greater freight tonnage may be created for the railways, which are here and in a position to handle it. The proposition is simplicity itself. With present rates and traffic the C.P.R. is earning a sum approximately a fair return to the investors in the enterprise; with a sufficiently increased business it can continue to earn a fair return and also set aside funds for use in the provision of new lines and facilities, while at the same time it can afford to give lower rates to the public.

That the C.P.R. is aware of this fact, and that it is taking active measures to convert possibilities in this connection into realities, thus further demonstrating the fact that it is one of the greatest agencies in the building up of this country, and that the interests of Canada and of the C.P.R. are inseparably linked together, is to be found in the fact that the company will have in operation, this year, a fleet of ships of a type which can be expected to be commercially profitable, of practically 500,000 tons. By the addition of more passenger steamers on both the Atlantic and Pacific Oceans, the company is making provision for handling

immigration which it will undoubtedly encourage, and which should be encouraged. In this connection, the importance of the Dominion Government placing in effect a vigorous immigration policy, providing for the absorption of large numbers of people, of a desirable class, into the agricultural and industrial life of the country, cannot be over emphasized. It is axiomatic that cheap and efficient transportation is a necessity in this country, and it can also be taken as axiomatic that with an increase in population and production, transportation costs to the public will steadily decrease, so long as competition is kept on a proper basis and

is not made extreme by too many participants, so long as ill advised construction, unjustified economically, is not indulged in, and so long as regulation does not become narrow, restrictive, and the creator of a false economy which would inevitably result in inefficiency in transportation and result, ultimately, in large national loss.

The C.P.R. earnings for Nov. 1921, as reviewed above, could have been much better, as concerns gross and net. They reflect conditions of traffic below normal, of expenses which were still high in relation to rates, and of net earnings which should be higher to provide for a

fair return on the value of the property, and for the creation of funds which may be drawn on in the future for new facilities, without the necessity of adding largely to fixed charges. But it is evident that the railway is not deterred from looking forward to better conditions, the earnings of any one month, or by the reduced earnings of the last or three years; not only is it looking forward to better conditions, but it is actively engaged in the creation of better conditions, of a new and greater prosperity, not only for itself, but for every individual and every business institution in this country.

Orders By Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a complete record of the Board's proceedings. No other paper has done this. Important traffic regulations and orders are given in full on another page of this issue.

General order 353. Jan. 3.—Amending general order 271 by inserting in the Board of Railway Commissioners, instead of Ontario Grocers' Guild, and by adding United Grain Growers, Ltd., and Fruit Commissioner's Office, Agricultural Department, to list of entities to be considered in proposed freight and express classifications.

General order 354. Jan. 4.—Directing all railways to file tariffs, effective not later than Feb. 1, showing charge of 1c. per 100 lb. for stop-over privilege on all grain for storage, milling, malting, or other treatment; such privilege to be granted for all grain produced in Canada, subject to reasonable charge for out of line hauls.

31,888. Dec. 10.—Authorizing Canadian Northern Ry. to replace timber on the line of the Fraser's farm at mile 52.6 Lachute Subdivision, Lachute, Que., and to build additional farm crossing at grade to the west of the present under-crossing.

31,889. Dec. 10.—Authorizing G.T.R. when signals are clear to operate locomotives and trains without stop at Toronto, in connection with Commission's tracks on Queen St., Toronto.

31,890. Dec. 9.—Authorizing C.P.R. to build spur for West Toronto from Main Street, Toronto. 31,891, 31,892. Dec. 9.—Declaring that the present Canadian National Ry. crossings near Kylemore and at 24th Avenue, Regina, Sask., are protected by Board's satisfaction.

31,893. Dec. 9.—Approving agreement between Bell Telephone Co. and Enterprise Telephone System, Lennox and Addington, Ont.

31,894. Dec. 2.—Extending to July 1, 1922, time within which C.P.R. may build interchange track with Canadian National Ry. at Montfort Jct., Que.

31,895. Dec. 6.—Dismissing Canadian Fisheries Association's application for order reducing switching charge of 15¢ at Prince Rupert, B.C.

31,896, 31,897. Dec. 10.—Ordering C.P.R. to rebuild overhead highway bridges in Lot 14, Con. 1, Downsview, Ont., and in Lot 18, Con. 1, near Smithfield, Ont., so that they will carry a load of 12 tons.

31,898. Dec. 9.—Ordering Canadian National Ry. to build this class station at Winter, Sask., by Sept. 1, 1922.

31,899. Dec. 12.—Authorizing Dominion Atlantic Ry. to build spur for L. E. Shaw & Co., Avonport, N.S.

31,900. Dec. 12.—Authorizing Canadian National Ry. to open for traffic portion of line from Linton to Kelowna, B.C., mile 109.5 to 114.1.

31,901. Dec. 12.—Authorizing G.T.R. to build spur for Fairbank Lumber & Coal Co., Toronto.

31,902. Dec. 9.—Ordering Canadian National Ry. to remove station agent at Yonker, Sask., caretaker agent to be appointed.

31,903. Dec. 13.—Authorizing G.T.R. to install improved type of automatic bell with warning signal in lieu of watchman at crossing of Stave Bank Road, near Port Credit, Ont.

31,904. Dec. 13.—Approving Canadian National Ry. proposed freight and passenger shelter at Barrows Jct., Man.

31,905. Dec. 13.—Authorizing G.T.R. to build spur for Drummond, McCall & Co., Montreal.

31,906. Dec. 12.—Authorizing Canadian Northern Ontario Ry. to connect its tracks with G.T.R. at Rockland, Ont.

31,907. Dec. 13.—Approving agreement between Bell Telephone Co. and Laurette Telephone Co., Hull County, Que.

31,908. Dec. 13.—Ordering Canadian National Ry. to set aside present waiting room at Rama, Ont., as an office, present freight shed to be converted into a waiting room, whole building to be

put into good shape, and addition made of another small building erected, for accommodation of freight shipments; work to be done by May 30, 1922, present caretaker agent to be continued in charge until then.

31,909. Dec. 12.—Ordering Canadian National Ry. to stop trains on flag at crossing of C.P.R. near Nightingale, Alta., and to erect portable crossing and station agent by Sept. 1.

31,910. Dec. 13.—Dismissing application of Indian Affairs Department for order directing C.P.R. to erect gates at highway crossing at three points in Ontario, B.C.

31,912. Dec. 13.—Authorizing Canadian National Ry. to open for traffic connection of Edmonton & Slave Lake and Grand Trunk Pacific Ry. at Union Jct., Alta.

31,913. Dec. 13.—Ordering Canadian National Ry. to make sidewalk on each side of trestle bridge out of station at St. Louis, Sask.

31,914. Dec. 13.—Authorizing Windsor, Essex & Lake Shore Rapid Ry. to open for traffic portion of line from Main Street to near Mill Sts., to connection with its line on Lansdowne, near Mill St., 907 ft.

31,915. Dec. 14.—Authorizing C.P.R. to build spur for F. C. Bell Winnipeg.

31,916. Dec. 14.—Authorizing G.T.R. to install wigwag signal at crossing of Argyle St., Peterborough, Ont.

31,917. Dec. 13.—Declaring that for the present crossing of G.T.R. at Beaufort, Que., is protected by Board's satisfaction.

31,917. Dec. 13.—Approving agreement between Bell Telephone Co. and Condon-Jarratt Telephone Co., Simcoe County, Ont.

31,918. Dec. 9.—Recommending to Governor in council for sanction, agreement between Prince Edward Island Telephone Co. and Eastern Telephone Co., by which all property, etc., of the former is sold and transferred to the latter.

31,919. Dec. 16.—Dismissing application of City of Brandon, Man., for order requiring removal of station at Knox, Man., to intersection of C.P.R. and Grand Trunk Pacific Ry. ¾ mile west of present location, and establishing a joint station there.

31,920. Dec. 16.—Authorizing Hydro Electric Power Commission of Ontario to remove lines and Guelph Radial Ry. interconnection, Guelph, Ont., built under order 27,128, Jan. 17, 1918, and to build new interchange track.

31,921. Dec. 16.—Declaring that, for the present, Canadian National Ry. crossings 1.3 miles west from Quill Lake, Sask., is protected to Board's satisfaction.

31,922. Dec. 16.—Authorizing Canadian Northern Ry. to connect its Vegreville Subdivision with Grand Trunk Pacific Branch Lines Co.'s Bashaw Subdivision, mile 23.6, near Camrose, Alta.

31,923. Dec. 16.—Declaring that, for the present, crossing of C.P.R. near Marilla station, Ont., is protected to Board's satisfaction.

31,924. Dec. 16.—Ordering Grand Trunk Pacific Ry. with co-operation of C.P.R., to make crossing on north side of track in Sec. 6, Tp. 13, Range 1, west of meridian, Sask., mile 3,200.

31,925. Dec. 19.—Recommending to Governor in council for sanction Grand River Ry. bylaw 4, amended, and Northern Ry. bylaw 35, covering General Train and Interlocking Rules.

31,926. Dec. 19.—Dismissing application of Fort Churchill Municipality, Man., for order directing Canadian National Ry. to make street crossing, or sidewalk, over its tracks at Fairfield Ave.

31,927. Dec. 20.—Suspending, pending hearing, Dominion Atlantic Ry. Supplement 7 to Tariff C.R.C. 575, issued to become effective Jan. 5, 1922, re terminal charges at Halifax on export and import traffic.

31,928. Dec. 19.—Authorizing Canadian National Ry. to open for traffic connection of its Strathcona-Camrose Branch, 2 miles 2.3 miles from Grand Trunk Pacific Branch Lines Co.'s Bashaw

Subdivision at mile 23.67, Alta.

31,929. Dec. 19.—Authorizing Canadian National Ry. to open for traffic, connection between Canadian Northern and Western Ry. Brazeau Subdivision, at mile 24.39 with Grand Trunk Pacific Branch Lines Co.'s Three Hills Subdivision, at mile 24.39, Alta.

31,930. Dec. 19.—Authorizing G.T.R., when clear signals are displayed, to operate over crossing of Montreal and Western Ry. at Burlington, Ont., without first stopping, speed not to exceed 6 miles an hour.

31,931. Dec. 19.—Extending to July 1, 1922, time within which C.P.R. may build spur for Standard Lime Co., St. Elizabeth Parish, Que., authorized by order 30,079, Sept. 2, 1920.

31,932. Dec. 16.—Approving London & Port Stanley Ry. crossing at Bessie St., Port Stanley, Ont.

31,933. Dec. 20.—Authorizing G.T.R. to operate over crossing of Montreal and Western Ry. Co.'s tracks at Guy St., Notre Dame St. and St. Henri Place, Montreal.

31,934. Dec. 20.—Approving plan showing location and details of G.T.R. proposed station at St. Polycarpe Jct., Que.

31,935. Dec. 20.—Authorizing C.P.R. to build two sidings, and three spurs, for Elbow Lake Lumber Company, in Lot 11, Con. 1, Cleland Tp., Ont.

31,936. Dec. 21.—Authorizing G.T.R., when signals are clear, to operate over crossing of Preston & Berlin Ry., half a mile south of Kitchener, Ont., without first stopping, speed not to exceed 6 miles an hour.

31,937. Dec. 21.—Approving location and details plans of G.T.R. proposed new station at Sutton, Ont.

31,938. Dec. 20.—Authorizing G.T.R., when signals are clear, to operate over crossing of Montreal and Western Ry. Co.'s tracks at Notre Dame St., Montreal, without first stopping, speed not to exceed 6 miles an hour.

31,939. Dec. 21.—Authorizing Canadian National Ry. to divert and cross certain highways on its Vegreville Subdivision, near Camrose, Alta.

31,940. Dec. 21.—Approving agreement between Bell Telephone Co. and Violet Hill Telephone Co., Dufferin County, Ont.

31,941. Dec. 21.—Ordering Canadian National Ry. to build this class station for the present, G.T.R. crossing at mile 5.58 Stoney Creek Subdivision, Beach Road Highway, on Burlington Branch, is protected to Board's satisfaction.

31,942. Dec. 21.—Authorizing C.P.R. to build spur, and sub-spurs, for International Construction Co., and spur for Smith, Aielle & Delord, near Mile 23.6, Alta.

31,943. Dec. 21.—Declaring that, for the present, G.T.R. crossing at mile 5.58 Stoney Creek Subdivision, Beach Road Highway, on Burlington Branch, is protected to Board's satisfaction.

31,944. Dec. 22.—Authorizing C.P.R. to build spur, and sub-spurs, for International Construction Co., and spur for Smith, Aielle & Delord, near Mile 23.6, Alta.

31,946. Dec. 23.—Authorizing G.T.R. to build two spurs for Anglo-Canadian Leather Co., in Lot 13, Con. 1, Chaffoy Tp., Ont.

31,947. Dec. 23.—Authorizing C.P.R. to install, by June 1, 1922, gates at crossing of Selkirk Ave., Winnipeg, to be operated by day and night watchmen, and to be interlocked with derails on street railway track.

31,948. Dec. 21.—Authorizing Canadian National Ry. to build this class station for the present, G.T.R. crossing at mile 5.58 Stoney Creek Subdivision, Beach Road Highway, on Burlington Branch, is protected to Board's satisfaction.

31,949. Jan. 3, 1922.—Authorizing C.P.R. to build spur for Imperial Oil Ltd., Joliette, Que.

31,950. Jan. 3.—Authorizing Edmonton, Dunvegan & Northern Ry. to build spur for Capital City Box Co., near Smith, Alta.

31,951. Jan. 3.—Ordering that flag protection be provided for all sidings on G.T.R. sidings over Main St., Seaford, Ont.

31,952. Jan. 3.—Declaring that G.T.R. crossing of highway at Glen Robertson, Ont., is protected to Board's satisfaction.

31,953. Jan. 3.—Authorizing Canadian National Rys. to operate trains over spur to Luscar in Sec. 8, Tp. 47, Range 28, west 6th meridian, Alta.

31,954. Jan. 3.—Authorizing Canadian National Rys. to operate for traction of 14 miles from mile 21.85 Battle River Subdivision, to connection with Grand Trunk Pacific Ry. at mile 74.90 Viking Subdivision.

31,955. Jan. 3.—Ordering G.T.R. to build farm crossing for J. W. Peer, Lorne Park, Ont.

31,956. Jan. 3.—Rescinding order 23,926, July 27, 1917, authorizing G.T.R. to connect with Canadian National Rys. in Lot 10, Con. 1, Brighton Tp., Ont.

31,957. Jan. 3.—Authorizing G.T.R. to close station at Washago, Ont.

31,958, 31,959. Jan. 5.—Amending orders 26,740 and 26,742, Nov. 15, 1917, directing Canadian Northern Ry. to install gates at Darling and Chambly Sts., Montreal, by providing that 25% instead of 20% by paid out of Railway Grade Crossing Fund.

31,960. Jan. 4.—Extending to Jan. 31, time within which Grand Trunk Pacific Ry. may complete station between Dominion and Quebec Sts., Peterborough, Ont.

31,961. Jan. 3.—Authorizing Canadian National Rys. to open for traffic portion of its railroad from Scapa, mile 28.54, to Beachy, mile 35, Sask.

31,962. Jan. 4.—Declaring that for the present G.T.R. first crossing of highway at St. Lawrence pawa station, Man., is protected to Board's satisfaction.

31,963. Jan. 4.—Authorizing Canadian National Rys. to build spur for Alberta Government in s.e. and n.e. ¼ Secs. 6, 7, T4, Range 23, west 6th meridian, Alta.

31,964. Jan. 5.—Authorizing G.T.R. to build siding and crane track for Ontario Public Highways Department, at Stony Creek, Ont.

31,965. Jan. 4.—Approving plan dated Nov. 29, 1921, in lieu of plan dated Sept. 29, 1921, showing installation of half interlocking plant at C.P.R. and Peterborough Radial Ry. crossing at Peterborough, Ont.

31,966. Jan. 5.—Authorizing Hull Electric Co. and C.P.R., when signals are clear, to operate trains and cars over crossing at Chatham (Cheslea Road), Hull, Que., without first stopping, speed over crossing not to exceed 15 miles an hour.

31,967. Jan. 4.—Authorizing Toronto, Hamilton & Buffalo Rys. and the G.T.R. to build, jointly, nine branch lines across Kenilworth Ave., Hamilton, Ont., for National Steel Car Corporation.

31,968. Jan. 4.—Extending to May 31, time within which G.T.R. may complete siding for Ontario Mfg. Co., Knapel Tp., Ont., authorized by order 30,344, Nov. 13, 1920.

31,969. Jan. 5.—Authorizing G.T.R., when signals are clear, to operate trains over Ottawa River crossing at Ottawa, Ont., without first stopping.

31,970. Jan. 5.—Authorizing C.P.R. to build spur for Drummond Mine Co., near Kirkpatrick, Alta.

31,971. Jan. 4.—Approving agreement between Bell Telephone Co. and Schomberg Telephone Co., Simcoe and York Counties, Ont.

31,972. Jan. 4.—Dismissing application of Frank Hill Cable Co., Calgary, Alta., and J. M. Dillon, Cayley, Alta., for leave to commence action against C.P.R. for recovery of freight charges for excess capacity on certain live stock shipments to Chicago, Ill., and other points in the U.S. in 1920.

31,973. Jan. 5.—Declaring that for the present C.P.R. crossing at mile 30.4 Peterborough Substation, at Kendry, Ont., is protected to Board's satisfaction.

31,974. Jan. 5.—Approving Vancouver, Victoria & Eastern Ry. & Navigation Co. plan, showing change of location of signals governing movements on British Columbia Electric Ry. to opposite side of street at crossing of Georgia St., Vancouver, to provide for change in rule of road from left to right.

31,975. Jan. 7.—Authorizing Canadian National Rys. to cross and divert surveyed road in S. Sec. 5, Tp. 49, Range 9, west 6th meridian, near Horbury, Alta.

31,977. Jan. 5.—Extending to Feb. 1, time within which Bell telephone crossing at St. Lawrence, Ont., may be completed, if not completed by that date.

31,978. Jan. 4.—Authorizing G.T.R. to install, in lieu of watchman, improved type of double illuminated electric bell, with wigwag signals, between both main tracks, at crossing Main St., Princeton, Ont.

31,979. Jan. 6.—Dismissing G.T.R. application for amending order 25,651, Nov. 10, 1916, by authorizing it to add wigwag signal to electric alarm bell installed at crossing of Prince St., Lenoirville, Ont., in substitution for watchman maintained there.

31,980. Jan. 5.—Ordering C.P.R., within 90 days, to install two double electric automatic illu-

minated bells, with wigwag signals, of most improved type, at crossing of highway south of Ilerville Jct. station, Que., mile 18.8 Ardrossan Subdivision.

31,981. Jan. 5.—Amending order 26,741, Nov. 15, 1917, directing Canadian Northern Ry. to install gates at crossing of Davidson St., Montreal, by providing that 25% instead of 20% of cost be paid out of Railway Grade Crossing Fund.

31,982. Jan. 4.—Ordering Canadian National Rys. to maintain permanent station agent at Ardill, Sask., until further order.

31,983. Jan. 5.—Approving Hydro Electric Power Commission of Ontario's plan showing details of abutments for bridge carrying Michigan Central River over cut at Northampton, Ont.

31,984. Jan. 5.—Ordering Canadian National Rys. until further order, to appoint caretaker agent at Pease, Sask., and to maintain telephone service installed between Crooke, River and Pease.

31,985. Jan. 5.—Rescinding order 27,216, providing for installation of electric bell at Regent St. crossing, Hawkesbury, Ont., by G.T.R., and ordering that all G.T.R. movements over crossing be protected by the trainmen.

31,986. Jan. 4.—Rescinding order 27,215, requiring watchman to be maintained at Main St. crossing, Hawkesbury, Ont., by G.T.R., and ordering that all train movements over crossing be protected by the trainmen.

31,987. Jan. 5.—Approving plan and specifications for installation of electric bell at Regent St. crossing, Hawkesbury, Ont., by G.T.R., and ordering that all train movements over crossing be protected by the trainmen.

31,988. Jan. 7.—Approving Vancouver, Victoria & Eastern Ry. & Navigation Co. (G.N.R.) plan showing change of location of derails and signals, governing movements on British Columbia Electric Ry. over cut at Northampton, Ont., west of Powell St., Vancouver, to provide for change in rule of road from left to right.

31,989. Jan. 5.—Authorizing G.T.R. to build spur for Dunsack Co., Kitchener, Ont.

31,990. Jan. 9.—Rescinding order 17,358, Aug. 27, 1912, in so far as it exempts C.P.R. from erecting fence on south side of its Thompson Subdivision, at miles 81.4 to 81.6; 81.9 to 83.4; 83.3 to 83.7; and 84.1 to 84.2.

31,991. Jan. 9.—Declaring that for the present, G.T.R. Wheatley's crossing, 4 miles east of Dunville, Ont., is protected to Board's satisfaction.

31,992. Jan. 7.—Ordering Canadian National Rys. to appoint station agent at Lake Lenore, Sask., by Jan. 31.

31,993. Jan. 9.—Authorizing Toronto Tp., Ont., to take highway crossing over G.T.R. in s.e. ¼ of Lot 4, Con. 2, south of Dundas St., Ont.

31,994. Jan. 9.—Dismissing application of Hunting Merrit Lumber Co., Vancouver, B.C., requesting cancellation of franchise to operate Main Marpole on British Columbia Electric Ry., to local Milwaukee points on Chicago, Milwaukee & St. Paul Rys.; and application of Granite Island Quarries Ltd., Vancouver, B.C., A. Cotton, Elburne Saw Mills, B.C., and others regarding publication of joint terminal rates over Canadian National Rys. and other railways to Canadian points from points on British Columbia Electric Ry., Vancouver & Lulu Island Branch.

31,995. Jan. 9.—Authorizing Saskatchewan Highways Department to make highway crossing over Canadian National Rys. Bier River Branch in s. ¼ Sec. 27, Tp. 53, Range 7, west 3rd meridian.

31,996. Jan. 10.—Authorizing G.T.R. to build spur for Barrie Fuel & Supply Co., Barrie, Ont.

31,997. Jan. 10.—Ordering Canadian National Rys. to complete fencing between miles 75 and 77, north side, in Nipigon Tp., Ont., by June 15.

31,998. Jan. 10.—Authorizing C.P.R. to build spur for Imperial Oil Ltd., West Selkirk, Man.

31,999. Jan. 9.—Authorizing Canadian National Rys. to build spur for Stettler Meat Co., Stettler, Alta.

32,000. Jan. 9.—Ordering C.P.R. to thoroughly clean out watercourse built by it on Barome Road, present at Keewatin, and to provide conditions will permit in the spring; to be completed by May 1.

32,001. Jan. 9.—Ordering C.P.R. to thoroughly clean out watercourse built by it on Barome Road, present at Keewatin, and to provide conditions will permit in the spring; to be completed by May 1.

G.T.R. Stockholders and Levies on Dividends.—Holders of G.T.R. 5% and 4% debenture stocks and 4% guaranteed stocks, were notified recently that the dividends provided Jan. 5 would be subject to a levy of ¼% on the debenture stocks and 1% on the guaranteed stocks, to meet the costs of the recent arbitration proceedings. This is the second deduction made for the same purpose, and a London cable of Jan. 5 states that considerable complaint has been made by the stockholders at the deductions and at the probability of another deduction being made to meet the costs of the appeal to the Privy Council.

Prosecution of Train Baggage-man for Alleged Drunkenness.

The Quebec Court of Appeal, in a majority judgment delivered at Montreal recently by Mr. Justice Tellier, Mr. Justice Rivard concurring, and Mr. Justice Guerin dissenting, in the matter of a reserved case from the Court of Sessions on the point as to whether the employment of a baggage man is one having to do with the movement of trains. The facts of the case are that Frank Lang was a C.P.R. baggage man, and that it was alleged that on March 8, 1920, he was found to be under the influence of intoxicating liquor while in his car at Windsor St. station, Montreal. Proceedings were taken under the Railway Act, 1919, sec. 423, which fixes the penalty for such an offence at a fine of not more than \$400, or imprisonment for not more than five years. At the trial it was urged that no offence had been proved, as there was no evidence that Lang's employment had anything to do with the movement of trains. Upon the prosecution's motion Judge Decaire reserved for the Court of Appeal the question, "Was the occupation of the accused as baggage man an employment having to do with the movement of C.P.R. trains?" The Court of Appeal, after hearing an argument May 18, decided to send the case back to the Court of Sessions for supplementary details, including the definition of the duties of a baggage man, from which it appeared that while the train was in motion the baggage man became an ordinary trainman subject to the conductor's orders as to signalling, opening switches, etc.

In the majority judgment, Mr. Justice Tellier pointed out that the Court of Sessions apparently took it as decided in the affirmative that Lang was under the influence of liquor when taken from the train, and stated that the sole question for the court to decide was whether his employment had to do with the movement of trains. The answer must be in the affirmative. It was during his hours of service that he was taken out of the car, into which he insisted on going after being advised not to do so on account of his condition. His duties as baggage man consisted in doing duty as a trainman when required to do so by the conductor, all these services being required by the one employment. The question would be answered in the affirmative; the verdict of not guilty recorded by the Court of Sessions would be quashed, and the accused would be retried, and his case disposed of in conformity with the answer given in reply to the question asked in the reserved case.

Railway Rolling Stock Orders and Deliveries.

The Lehigh Valley Rd. is having 1,000 box cars repaired by National Steel Car Co., Hamilton, Ont.

The G.T.R. has ordered 10 switching locomotives and 5 transfer locomotives to be built at its Montreal shops.

Electrification of Michigan Central Rd.—A recent press report stated that the M.C.R. management was considering plans for the electrification of its Canadian lines. We are officially advised that this is not the case.

The Agitation for Lower Freight Rates.

Despite the freight rate reduction which took effect Dec. 1, 1921, and preceding reductions, agitation for further rate reductions is still pronounced throughout the country. In the Saskatchewan Legislature on Jan. 16, Hon. C. A. Dunning moved that:—"Whereas the burdens of existing freight rates, especially on the products of agriculture, is so great as to be more than the traffic can bear; and whereas in many parts of the province the result of this condition is that grain is standing in the fields unthreshed because, at the present prices, threshing costs and freight charges would absorb the whole of the price realized; therefore, be it resolved that, in the opinion of this Assembly, the Saskatchewan Government should continue its application for the reduction of freight rates now before the Board of Railway Commissioners; and further, that, in the opinion of this Assembly, the Dominion Parliament should under no circumstances re-enact the Railway Act of Canada, sec. 325, sub-sec. 5, which expires in July, 1922, and which, if allowed to lapse, will again bring into force the Crowsnest Pass agreement." In the debate Mr. Dunning said that every western member of the House of Commons should be urged to again bring into force the Crowsnest Pass agreement. He pointed out that this agreement has been suspended for the past three years, and that unless Parliament passes new legislation concerning it, it will go into effect again in July 1922. He claimed that if the agreement was reverted to it would mean a reduction of 80% of the rate in force on Jan. 1, 1921 on grain from Winnipeg to Fort William, 77% from Brandon, 76% from Qu'Appelle, 66% from Medicine Hat, and 62% from Calgary. He added: "It may be said that the railways must operate. I agree, but Saskatchewan farms must be operated also. They cannot operate successfully under present freight rates and present prices for farm products. The railways must operate because farms here are not much use without transportation. The interests of the railways and the interests of the farmers in regard to these basic products are identical."

The United Farmers of Alberta at a convention in Regina, on Jan. 20, passed a resolution requesting the Board of Railway Commissioners to put into effect an immediate reduction in freight rates on agricultural products, lumber and coal.

The Lieutenant Governor's speech at the opening of the Manitoba Legislature's current session said:—"My Government is of the opinion that railway rates on farm products, compared with the prices the farmer can now secure for these commodities, are so high that the burden can scarcely be longer borne by the industry, and they will continue to abate their efforts of the past years for both a general reduction in freight charges, and such an adjustment of their distribution, as will remove what is believed to be an unjust discrimination against the western provinces."

The United Farmers of Manitoba, at a convention in Winnipeg in January, passed a resolution demanding that freight rates be brought back to the 1917 level immediately. J. R. Murray, Assistant General Manager, United Grain Grow-

ers, claimed that western farmers paid \$11,000,000 more than they should have in freight charges last year. W. H. Lilwall said that farmers' profits had "vanished" as a result of exorbitant freight rates" but afterward qualified his statement by stating that freight rates constituted only one factor in the elimination of farmers' profits.

The Canadian Council of Agriculture, in a meeting at Winnipeg on Dec. 22, 1921, passed a resolution calling on the new Dominion Government to make use of its "undoubted authority to override, and, if necessary, reorganize the personnel of the Railway Commission, in order that relief from the crushing burden of freight rates may be secured."

The Board of Railway Commissioners has been holding hearings in Halifax, N.S., and St. John, N.B., on the application of Maritime Province interests for lower rates, and chiefly for the restoration of the differentials prevailing before rates were increased. In the hearing at Halifax on Jan. 17, the Nova Scotia Government, Halifax Board of Trade, Canadian Manufacturers' Association, Maritime Branch, Amherst Board of Trade, and several industrial representatives appeared in support of the application. At the hearing in St. John, N.B., on Jan. 19, other Maritime interests' representatives were heard. These hearings were confined to the statement of cases and the presentation of evidence, argument being set for Feb. 15, at Ottawa. The differentials to which the Maritime Province interests chiefly object were discussed fully in Canadian Railway and Marine World for May, 1921, p. 259.

Proposed Coal Rate Reductions on D.T. & I. Rd. Disallowed.

The Detroit, Toledo & Ironton Rd., by schedules filed to become effective Sept. 3, 1921, proposed to reduce the interstate rates on coal, in carloads, from mines on its line in Ohio, to Toledo, Ohio, Detroit, Mich., and other points served by it. Upon protest by the Northern West Virginia Coal Operators' Association and others, the schedules were suspended by the Interstate Commerce Commission until Jan. 1, 1922, and later until Jan. 31, 1922. At a hearing by the Commission in Dec. 1921, the matter was again dealt with, the fact being developed that the total coal traffic originating on the D.T. & I. lines is relatively small compared to the total produced in the Ohio district, and it was also shown that the D.T. & I. management was aware of the fact that differentials had been fixed between the various competitive groups of mines of which the mines served by the D.T. & I. are a part. Commissioner Esch pointed out that a proper rate relationship between competitive groups, particularly on such a commodity as coal, is in many respects of greater importance to the shipping public than the measure of the rate itself. He also made clear the fact that the Commission assumes the power to suspend proposed reductions in rates in any case where such suspension would operate to prevent an apparent discrimination. Undue prejudice and preference may be brought about as readily by reducing one of two related rates as by

increasing the other rate. Following the hearing, the Commission issued a judgment cancelling the schedules containing the reduced rates, on the ground that they would result in undue preference to mines on the D.T. & I. line and in undue prejudice to other mines competing in the same market and served by other railways.

The D.T. & I. Rd. has come into prominence because Henry Ford, the automobile manufacturer, acquired it, because a notable improvement became evident in its earnings in the spring of 1921, and because it was claimed that new and more efficient operating methods were responsible for this improvement. Much publicity has been given the matter in daily newspapers. However, as pointed out in Canadian Railway and Marine World for Oct. 1921, p. 532, the change in the financial results secured by the road was brought about by the addition of a large volume of high class traffic, and by the fact that the road is now more of a manufacturing plant facility than a common carrier.

While in June, 1921, the D.T. & I. operating ratio had been reduced to 52.7, it has been steadily increasing since then, being 59.7 in July 71 in August, 70.3 in September, and 78.8 in Oct. 1921, while net operating income was \$261,259 in June and \$15,191 in October. Gross operating revenues did not change materially, except to decrease by about 15% in October, as compared with September, the increase in operating ratio being due to rate decreases and increased expenses. While these results will not bring gratification to the newspaper writers who have been holding up the D.T. & I. as the model of railway operating efficiency, it is not likely that they were caused by growing inefficiency. The operating results on the D.T. & I. are not to be compared with those of any other rail carrier, for the reason that the D.T. & I. is paying extraordinary wages and has made many rate reductions, on the one hand, but is favored with a large volume of high rate traffic from the Ford plants, on the other. The eternal struggle to make railway operation efficient has been going on since the birth of the railway industry. Contrary to what daily newspapers would have the public believe, the D.T. & I.'s new management has not ended that struggle by attaining the maximum efficiency in railway operation. The struggle to make railroading efficient in all its branches and departments will continue, and the truth of the matter is that the new D.T. & I. management has merely joined the management of all railways, large and small, in the struggle.

Railway Lands Patented.—Letters patent were issued during December, 1921, for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia as follows:—

	Acre.
Alberta & Great Waterways Ry.	650
Canadian Northern Ry.	644.85
Canadian Northern Western Ry.	1.98
Canadian Pacific Ry.	44.83
Central Canada Ry.	107.92
Edmonton, Dunvegan & British Columbia Ry.	108.56
Total	906.64

The Railway and Steamship Employes' Club, incorporated in 1920, gives notice in the Quebec official Gazette that its office is at 329 St. Lawrence Boulevard, Montreal. J. Walls is Secretary-Treasurer.

Pacific Great Eastern Railway Construction Costs.

The British Columbia Premier stated in the Legislative Assembly recently that the total amount provided by the Government in connection with the construction of this railway, including interest to Sept. 30, was \$38,652,703.03. The audited accounts of the company as at June 30, were presented, showing as follows:

Liabilities.		
Capital stock	\$	40,000.00
Guaranteed 4th mortgage stock		
1st and 2nd mortgage less \$5,925,195 pledged to the Government as security		14,234,805.00
Interest accrued		293,592.88
Provincial loans, accrued interest		18,579,437.90
Interest on guaranteed debenture stock paid by province		4,911,125.44
Accounts payable		486,015.34
Total	\$38,644,976.54	
Assets.		
Investment in road and equipment	\$36,320,332.18	
Miscellaneous physical property	756,657.61	
Current assets	576,501.90	
Unexpired insurance	2,243.36	
Discount on funded debt adjusted to June 30	909,242.30	
Total	\$38,544,976.54	

Automatic Train Control in the United States.

Considerable progress has been made in Europe and the U.S. in connection with automatic train control. In the latter country, a block signal and train control board was created in 1907 and was employed by the Interstate Commerce Commission till 1912 in studying train control, and since that date the I.C.C. Bureau of Safety has continued the studies. The U.S. Railroad Administration had an automatic train control committee, which continued a study of the matter, and handed over its records to the I.C.C., and since the termination of Federal control a joint committee of the American Railway Association has been working with the I.C.C. Bureau of Safety in the study of various train control devices operating under varying conditions.

The Interstate Commerce Commission, on Jan. 10, issued an order calling upon 49 railways to show cause by March 15 why the Commission should not issue an order requiring them to install by July 1, 1924, on certain specified sections of their lines, automatic train control devices to meet the requirements set forth. This order is based on the Transportation Act of 1920, sec. 26, which empowered the Commission to call upon carriers to install automatic train control apparatus which would meet certain safety requirements, any order of the Commission under that section to be made effective within two years from its issue.

The Commission's order of Jan. 10 points out that great attention has been paid to the results of operation of automatic train control devices on the Chesapeake & Ohio, the Chicago, Rock Island & Pacific and the Chicago & Eastern Illinois Railroads, and that the different automatic train stop and train control devices in use on those lines have proved highly efficient. The order also contains a summary of the savings which automatic train control devices would make possible, on the basis of past accident records, by eliminating accidents. It is stated that 14 years of investigation and study of the matter, during which time the Commission has been in close touch

with all developments, has clearly demonstrated the practicability and necessity of automatic train control. The Commission makes it clear that a road does not necessarily have to be block signalled before the automatic train stop can be used in operating it, by recognizing the possibility of using such a device without the necessity of using automatic block signals in conjunction with it. After specifying what portions of the roads named in the order are affected, the order concludes with a list of the specifications and requirements a satisfactory automatic train control system would have to meet.

Among the railways mentioned in the order on which devices are to be installed are the Michigan Central, between Chicago and Detroit only; and the Pere Marquette, between Grand Rapids and Detroit only.

Aerial Transportation Notes.

Plans for an air service between London, Eng., and Cork, Ireland, are reported as being made. The service will, it is said, be arranged in connection with trans-Atlantic steamships, and it is claimed that a day could be saved on the trip from London to New York by the use of such a service.

Major Cotton, who made an abortive attempt to establish a mail service between Newfoundland and Nova Scotia on Dec. 10, 1921, is reported to have arrived at Botwood, Nfld., Jan. 16, to arrange for another attempt. The proposed route is from Botwood to Halifax, with a possible stop at Sydney.

The special ensign to be flown over the Canada Air Board's properties is described as follows:—Light blue, in the dexter canton the Union and, in the center of the fly of the flag, on a red shield edged with white, an albatross, white, with wings extended over three maple leaves conjoined on one stem, proper.

The Canada Air Board is about to appoint an Air Wireless Inspector for the Operations Branch at High River, Alta., at an initial salary of \$2,340, and an air photographer for the operations branch at an initial salary of \$1,800 a year. Applications will be received by the Civil Service Commission at Ottawa to Feb. 9.

The Canada Air Board has added the following to the Air Regulations 1920:—"No person shall enter or attempt to enter any aircraft in flight; or leave or attempt to leave any aircraft in flight, except for the purposes of making parachute descent; or give, upon any aircraft in flight, any gymnastic or other like exhibition."

The first lighthouse for airplanes will, it is reported, be built by French engineers on Mont Afrique, near Dijon, in southeastern France. Dijon is the converging point of a number of international air routes, including the Paris-Algiers, the Paris-Mediterranean, the Paris-Switzerland and the Paris-Italian lines. The light will be visible, in ordinary weather, for over 90 miles, and up to an altitude of 12,000 ft.

Canadian Railway Club.—J. Marshall, Special Representative, American Railway Association, read a paper, on prevention of freight loss and damage, before the club in Montreal Jan. 10. The club's annual dinner was held at Montreal, Jan. 28.

Storm Interference with Maritime Provinces and Newfoundland Transportation.

A severe gale, accompanied by heavy snowfall, in the Maritime Provinces and Newfoundland, on Dec. 30, 1921, blocked traffic on the Intercolonial Ry., in Cape Breton, and in the Foleigh Mountain portion of the main line, near Truro, N.S., also on the Sydney & Louisburg Ry., the Cape Breton Electric Co.'s line, and the Reid Newfoundland Ry. Main line traffic on the Intercolonial was partially restored within a couple of days, but further drifting, caused by the continuance of high winds, prevented anything like a general restoration of the passenger service to Sydney was not restored until Jan. 6. During the clearing of the Sydney & Louisburg Ry. lines on Jan. 5, a snow plough accident resulted in three men being rather badly scaled. The car ferry from Tormentine, N.B., to Borden, P.E.I., was not able to make the regular trips on Dec. 30, and the train service on the island was tied up for several days. The Reid Newfoundland Ry. express train from Port aux Basques to St. John's when near Rapid Pond, about 11 miles east of Humberstone on Dec. 30, was practically buried under an avalanche of snow, believed to have been loosened by the movement of the heavy trains. Three cars were derailed, but no one was injured. A wrecking crew was sent out, and the train was released, arriving in St. John's on the evening of Jan. 3.

Steam Railway Track Laid in 1921.—Canadian Railway and Marine World has not received any additions to or revision of the figures given in its January issue showing the mileage of new track laid by Canadian steam railways during 1921. These figures showed a total of 242.80 miles of new track laid, against 309.63 miles laid in 1920. During 1921 the Canadian National Rys. laid 101.69 miles and C.P.R. owned, controlled or operated lines laid 85.71 miles. The distribution of miles of new track laid by provinces is as follows:—Alberta, 70.27; Saskatchewan, 68.35; British Columbia, 62.26; Quebec, 21.73; Manitoba, 17.70; Nova Scotia, 2.50. Total, 242.80.

C.P.R. officials have given the Royal Military College, Kingston, Ont., a number of war souvenirs, etc., for the decoration of the staff mess. E. W. Beatty, President, C.P.R., who is also a member of the college governing board has given a Prussian helmet and a German regimental flag captured during the war; F. L. Wanklyn, General Executive Assistant has given an umbrella stand, table lamp and tobacco box, made from shell cases, a picture of the surrender of Cronje, a scene in the Boer war, and a picture showing an express train and a flash of lightning, and named Rivals; and A. D. MacTier, Vice President, Eastern Lines, has given a picture entitled Comrades.

Grand Bank Ry. Arbitration.—The appointment of G.T.R. shareholders against the arbitrators' award that certain stocks were valueless, had not been entered for hearing before the Imperial Privy Council up to Jan. 9. On the other hand, a committee representing banks, trust companies, insurance companies, and others interested in G.T.R. stocks, etc., has decided to appeal to the Dominion Government for consideration.

Canadian Pacific Railway Construction, Betterments, Etc.

The appropriations for construction and betterments for this year have been under consideration by the management at Montreal since early in January, when D. C. Coleman, Vice President, Western Lines, went there from Winnipeg to consult with Grant Hall, Vice President, J. M. R. Fairbairn, Chief Engineer, and other general officers. The result has not been announced, but a press report says that the estimates presented call for an expenditure of about \$25,000,000.

Chateau Frontenac, Que.—Excavation for the erection of the 20-storey tower is reported to have been started. The tower is to be built on the site of the old kitchens on Des Carriers St., which is being cleared for the new structure. The Dominion Bridge Co., which has the contract for the erection of the steel work, is assembling the material on the site, and expects to have its contract completed during the summer.

Glen Yards Car Cleaning Plant.—A contract has been let to D. G. Loomis & Son, Montreal, for the erection of a car cleaning building and a large area of open and covered platforms at Glen yards, Montreal.

Northern Colonization Ry.—The Dominion Parliament will be asked at its next session to extend the time for the completion of the partially built line from Labelle, westerly to Mont Laurier, and thence to Lake Timiskaming in Pontiac County, Que.

Interprovincial & James Bay Ry.—The Dominion Parliament will be asked at its next session to extend the time within which the company may complete its partially built line from the C.P.R. near Lumsden's Mills to the Des Quinze River, Que.

Carleton Place Station.—Construction of the new station at Carleton Place, Ont., is reported to be making satisfactory progress. The slate roofing is practically completed, concrete flooring is being put in the waiting room, and other interior work done. The new platform in front of the station is reported 75% complete, and a long island platform has been built.

Islington Station Burned.—The station at Islington, Ont., which was built in the early part of 1921, was completely destroyed by fire on Jan. 5, with the exception of the concrete foundations. The cost of the station was about \$10,000. Work on the erection of a new structure similar in design and size to that destroyed, was started, on Jan. 10, the existing concrete foundations being utilized, and it is expected to be ready for occupancy in February.

Saskatchewan & Alberta Extensions.—The Dominion Parliament will be asked at its next session to extend the time for the commencement and completion of the following branch lines:—From near Asquith, Tp. 36, Range 9 or 10, west of 3rd Meridian, on the Pheasant Hills Branch, northwesterly to near Cloan, on the Wilkie northwesterly branch, Tp. 42, Range 30, west 3rd Meridian, Sask. From near Rosetown, on the Moose Jaw Northwesterly Branch, Tp. 30, Range 15, west 3rd Meridian, northwesterly and northeasterly to near Keppel, on the Pheasant Hills Branch, Tp. 35, Ranges 12 or 13, west 3rd Meridian, Sask. From Kelfield, on the Wilkie-Anglia Branch, Tp. 34, Range 19, west

3rd Meridian, easterly to Tp. 32 or 33, Range 14, west 3rd Meridian, Sask. From Amulet, on the Weyburn-Sterling Branch, Tp. 8, Ranges 20 or 21, west 2nd Meridian, northwesterly to Dunkirk, on the Moose Jaw Southwesterly Branch, Tp. 12, Range 28, west 2nd Meridian, Sask. From the Manitou Lake Branch, Tp. 43, Range 21, West 3rd Meridian, generally northwesterly through Lloydminster to Whitford Lake, Tp. 26, Range 15, west 4th Meridian, Alta. From Kipp, on the Crownston Subdivision, Tp. 9, Range 22, west 4th Meridian, easterly and northwesterly to Retlaw, on the Suffield-Blackie Branch, Tp. 13, Range 17, west 4th Meridian, Alta.

Moose Jaw Station, Etc.—Good progress is reported to have been made with the finishing of the interior of the office building. The plastering of the walls and ceilings is practically completed, with only a portion of the ground floor remaining unfinished. The staircase has been installed, and a big section of the hardwood floor laid on the top flat. Installation of conduits, tables, switchboard, etc., in connection with the telegraph office is proceeding so that when the building is completed, which it is expected will be by April 1, the staff will move from the old offices to the new ones without delay.

Vancouver Pier.—Grant Hall, Vice President, is reported to have stated during his recent visit to Vancouver, that the company's most important project in view for the British Columbia District for 1922 is a pier on the Burrard Inlet waterfront, and that an announcement would be made at an early date as to the contract. The construction of this pier was decided upon several years ago, and early in 1920 a contract was let to the C.P.R. Construction Co. for excavation and fill work on the site. Details of this work were given in Canadian Railway and Marine World for May 1921, p. 250. We are officially advised by D. C. Coleman, Vice President, Western Lines, that work on the construction of this pier, the dredging and filling for which was done in 1920 and 1921, will be proceeded with this year. It is said that the work will probably occupy about 18 months. (Jan., pp. 23.)

Freight and Passenger Traffic Notes.

A shipment of 100 pairs of silver black foxes, with a reported value of \$100,000, was made recently from the Colpitts ranches, near Salisbury, N.B., to New York State.

There have been shipped from St. John, N.B., direct to Galveston, Tex., recently 12,000 barrels of seed potatoes, the first shipment of such an extent to that section of the United States.

The C.P.R. is reported to have hauled 2,048 cars, containing 4,285,903 bush. of grain during the present season to the elevators at West St. John, N.B., compared with 2,063 cars containing 3,473,545 bush. in the same period for the 1920-21 season.

British Columbia's halibut catch for 1921 is reported as over 20,000,000 lb., valued at \$2,274,525. The greater part of this was landed at Prince Rupert, and carried over the Grand Trunk Pacific Ry. to Winnipeg, where it was delivered to

various lines for shipment to eastern Canada and United States points.

The C.P.R., in conjunction with La Cie. Francaise du Tourisme, is organizing a personally conducted pilgrimage to points on the European continent, including famous shrines in Italy and France, with special optional tours to the Passion Play at Oberammergau, and the various battlefields of the Great War.

The Canadian National Rys. on Jan. 15 reduced its train service between St. John, N.B., and Quebec via McGivney Jct., from a daily to tri-weekly, on Mondays, Wednesdays and Fridays, leaving St. John at 3:20 p.m., and Quebec at 3:45 p.m., and arriving at Quebec at 10:45 a.m. and at St. John at 11:35 a.m. on the following day.

The Canadian National Rys. on Jan. 15 reduced its express train service on the Canadian Northern Ry. between Toronto and Winnipeg from a daily train to one three times a week westbound, Mondays, Wednesdays and Fridays, and eastbound Tuesdays, Thursdays and Saturdays. The change has been made to reduce operating expenses, and it is said the daily service will be resumed as soon as conditions warrant in the spring.

The Reid-Newfoundland Co. gave notice recently that it had been decided to continue the operation of trains on the Bonaville, Bay de Verde and Trepassay branches during the winter, unless weather conditions prevented. The closing down of four branches of the Newfoundland Ry. during the first quarter of 1922 was provided for in the legislation of 1921, passed on Sir George Bury's recommendation. The only one of these branches which will not be operated will be that from Humberstown to Millerstown Jct.

The C.P.R. Co. and its station agent at St. Hughes, Que., were, on Jan. 16, ordered, jointly and severally by the Quebec Superior Court to pay to L. H. Marcotte, St. Simon, Que., \$399, with costs, for damages resulting from discriminating against the plaintiff in the supply of cars. The plaintiff is a hay dealer, and between Sept. 1, 1919, and April 20, 1920, was engaged in shipping it from St. Hughes and Cavignac. He alleged that during that period he was only provided with 21 cars for loading, while three other shippers from the same places were supplied with 383 cars. The railway's figures showed that 26 cars had been provided for plaintiff's shipments. The company in defence contended that there was a difficulty in obtaining cars for the carrying of freight to U.S. points, and that it had treated him with fairness and justice in supplying cars. The court held that the company's agent had acted in an unjust and partial manner towards the plaintiff, who had been obliged to stop buying hay from the farmers because he could not get cars. There had been a violation of the Railway Act, secs. 312 and 316, and the plaintiff's loss had been shown to be greater than the amount claimed. Judgment was given for the \$399 claimed with costs.

Tie Durability.—Tests by the Forest Products Laboratory at Madison, Wis., show that there is practically no difference in the durability of Douglas fir ties cut in mountain territory and those cut along the Pacific coast, although it was observed that the latter receive preservative treatment a little more readily than the former.

The Interstate Commerce Commission's General Investigation of Railway Rates.

The Interstate Commerce Commission's action in ordering a substantial reduction in western grain and hay rates on U.S. railways was dealt with in Canadian Railway and Marine World for Dec. 1921, p. 636. It was also the railways' action in proposing a 10% reduction in freight rates on practically all classes of agricultural products throughout the whole of the U.S., except certain New England territory. In proposing this latter reduction, the railways made application to have the reduction applying to the western territory only set aside, but after hearings the Commission refused the application, so that as matters stand the railways will have to bear both reductions.

On Dec. 14, 1921, the Interstate Commerce Commission began what is intended to be a most thorough investigation into the whole subject of railway rates. This action was taken on the Commission's own motion, but it would seem as if the railways' application to the Commission for a clean-cut enunciation of future policy in connection with rates had a lot to do with it. Generally, the purpose of the investigation is to determine if any further reductions in freight rates can be required by the Commission, having in view the existing law, and all relevant circumstances, and incidentally the enquiry will cover the percentage of return which the railways should be allowed to earn, the present percentage standards being due for revision on March 1.

Large numbers of railway and public representatives have been attending the hearings, which started with the examination of Howard Elliott, the chairman of the Northern Pacific Ry., who handed to the commissioners a hundred pages of tariff changes involving rate reductions which had gone into effect on the Northern Pacific since the Transportation Act was passed. He emphasized that U.S. railway managements are aware of the fact that deflation has taken place in a large degree, and of the necessity of the railways joining in the deflation process, but he also forcibly drove home the fact that the railways did not reap the benefits of inflation as did the agricultural and manufacturing interests. He said: "Rates are higher today than before the war, but they were then far too low for safety, and we are comparing today with an indefensible basis, if the country is to continue private operation and ownership of railways, subject to public regulation." He made it plain that rates could be made too low for the country's good, saying: "To permit wastage through inadequate rates means a deterioration of the properties, which will tend to prevent their serving the public adequately, and to permit such wastage is not honest, efficient and economical." In summing up his argument to show that deflation must take place in other lines, before prices in them are as reasonable as rates, he said: "A sweeping reduction in rates would not, in my judgment, at this time increase business, for many other things must be settled before we obtain what we all desire, that is, a complete revival of industry in this country." As showing the public interest in efficient transportation, he said in concluding his testimony: "It is just as important to each of those gentlemen

(farmer, miner, manufacturer, etc.), in the long run, to make certain that he is going to have service as it is to the railways." Though such a thing needed no further publicity, Mr. Elliott clearly showed that the railways, despite honest, efficient and economical management, have not earned a fair return. He made it clear that the U.S. has increased and prospered along every line much more than have the carriers that performed the transportation services that were such an important element in aiding the growth of the last 50 years.

A. P. Thom, counsel for the Association of Railway Executives, told the Commission that the labor situation is one of the greatest barriers to the restoration of rates to a nearer approximation of the pre-war level. He pointed out that the railways naturally expect the shippers and the public as a whole to realize that high wages were the chief cause of present rates, and that they also expect that public support will be given the railways in a wage readjustment.

Statistical data were presented to the Commission covering operating results on the railways operating in the southern, western and eastern territories, and the operations of the railways as a whole. G. M. Shriver, Senior Vice President, Baltimore & Ohio Rd., presented figures to show that the net operating income of the railways as a whole for the year ended Sept. 30, 1921, was at the rate of but 2.75%, and even at that the amount of deferred maintenance which will have to be made up in the near future is great. He made it plain that a rate reduction at this time would be merely an experiment to see whether lower rates would result in increased traffic, increased net earnings, and he emphasized the fact that the railways are in no position to experiment, proving this latter statement by a comprehensive review of the railway revenues and expenses from the resumption of private control to date.

Numerous other representatives appeared on behalf of individual railways or groups of railways, and on Jan. 11, when testimony concerning the New England roads was being presented, it was brought out that the roads in that territory, considered as a whole, were operating at a loss during 1921.

R. H. Aishton, President, American Railway Association, gave evidence concerning the efficiency of railway operation, dealing with such things as freight loss and damage, car loading and car mileage, etc. He expressed the opinion that railway operation in the U.S. is characterized by as great a degree of efficiency and economy as it is humanly possible to bring to the work on the basis of the existing facilities.

Daniel Willard, President, Baltimore & Ohio Rd., told the Commission that railway managers are doing everything in their power to make railway rates as low as possible, and expressed the opinion that a general reduction in freight rates would be undesirable at this time. He said that freight rates did not go up until other costs had been at their peak for some time, and although it undoubtedly will be the case that rates will accompany prices in their downward course, it cannot logically be expected that rates will precede prices in deflation.

The Commission has arranged for continuations of the hearing throughout January, when other railway representatives will be heard and when representatives of shippers and the public generally will express their views.

An examination of the testimony given and the circumstances surrounding this hearing and other recent I.C.C. rate hearings makes the fact plain that the rate situation in the U.S. is largely identical with that in Canada, although undoubtedly rates have been reduced to a greater extent in Canada than in the U.S. Human nature seems the same the world over, in that every individual tries to reduce his costs by the most obvious and convenient method, and what is true of an individual is also true of the great number of individuals deriving their livelihood from any industry. Because freight rates are subject to Government supervision, and because they are higher than before the war, they seem to be a fitting instrument by means of which costs for other industries may be reduced; while costs controlled by other private individuals cannot be so conveniently attacked. It will be interesting to see whether public thought concerning railways in the U.S., or rather public carelessness and lack of thought concerning railways, more or less automatically interpreted by railway regulation, will be such as to compel a reduction in railway rates without a reduction in railway operating expenses having first been accomplished. To people in Canada who watched the course of U.S. railway regulation in the period preceding Federal control, the actions of the Interstate Commerce Commission and of the U.S. Railroad Labor Board during 1922 will be significant.

Toronto City Council Railway Directorships.—In the early days of bonusing the construction of steam railways the Toronto City Council secured the right to nominate a director of each of the following companies:—Northern Ry., Credit Valley Ry., Toronto, Grey & Bruce Ry., and Ontario & Quebec Ry. The first named has been for years part of the G.T.R. system, and the others have become merged in the C.P.R. system, but for certain purpose the four companies' corporate entity remains. The city council decided on Jan. 9 not to appoint any directors of these companies, as the several boards have now no duties to perform and that the former practice of giving passes to the city's directors has been abolished.

Railway Accidents Throughout Canada. The total number of accidents during Dec. 1921, reported to the Board of Railway Commissioners, was 131, resulting in 19 persons being killed, and 133 injured. Of those killed, 1 was a passenger, 10 employees and 8 others; and of those injured, 7 were passengers, 100 employees, and 26 others. Under "others" are included 6 persons killed and 18 injured in 16 highway crossing accidents. In 4 of these accidents crossings were protected by gates, and 1 by a bell, while in 11 cases, the crossings were unprotected. Automobiles were concerned in 7 of the accidents, wagons and buggies in 5, pedestrians in 3, and a bicycle in 1.

Canadian National Railways Construction, Betterments, Etc.

Western Lines Track Construction.—During 1921, on new branches, or the extension of existing branches, work was started on 13 different lines, on which at the end of 1920 there had been completed 589.39 miles of grading, 326.85 miles of track having been laid thereon. Grading was continued during 1921 on 10 of these lines, and 67.31 miles additional were got ready for track laying, while track was laid on a further 99.29 miles of the completed grading. Of the 656.70 miles of completed grading, track has been laid on 426.14 miles. One of the branch lines is partly in Saskatchewan and partly in Alberta. The following table shows the state of construction on each of the lines, the mileage in each province being given separately:—

Branch	Miles graded		Miles of track laid	
	to Dec. 1920	1920 1921	to Dec. 1920	1920 1921
Manitoba				
Oakland Branch	62.03	44.18	17.70
Saskatchewan				
Eston S.E.	29.53	3.19	0.17
Jackfish Lake	76.43	6.57	62.74	15.06
Luck Lake	21.66	3.36	19.75	10.52
Melfort N.E.	29.94	23.70
Peelies-Lampman	19.42	0.58
Prince Albert N.E.	2.46	15.54
Thunderhill	97.33	0.60	80.13	13.86
Turtleford, E.	2.27	20.73
Acadia Valley	17.90	0.64
Alberta				
Acadia Valley	16.99	14.33
Hanna
Medicine Hat	132.11	0.08	58.82
Onoway Branch	76.25	0.94	60.50	11.90
Vesuvius-Calgary	1.10	0.07	0.73	0.74

Western Lines Betterments.—During 1921 the C.N. Rys. carried out an extensive programme of betterments on the western lines. The work covers the laying of a second track on 6.57 miles, completing the second track construction between Munson and Wayne, Alta., to serve the Drumheller coal areas. The following track relaying was done: 22.21 miles on the National Transcontinental Ry., relaid with 80 lb. rails, and 16.01 miles on the National Transcontinental, the Grand Trunk Pacific and the Canadian Northern relaid with 85 lb. rails. Of the 80 lb. rails, 2.51 miles were laid between miles 30.7 and 33.27, and 2 miles between miles 33.27 and 49.6, the latter in patches, on the Fort William-Lake Superior line. 11.56 miles in patches between Sioux Lookout, mile 0 and mile 104.34, and 6 miles in patches and curves, between mile 2 from Reddit and mile 39. The 85 lb. rails were laid on the following sections of the National Transcontinental: Fort William to Lake Superior, 7.5 miles; between miles 69.1 and 76.6, 7.5 miles; between miles 160 and 177.3, 18.72 miles; between Sioux Lookout, mile 104.34 and mile 123.06, 18.72 miles; between Reddit, mile 89.9 and mile 115.3, 25.6 miles; between miles 119.46 and 120.7, 1.24 miles; 24.05 miles on Grand Trunk Pacific Ry. between Melville and Harte, Man., mile 84.63 to 108.78, and on the following sections of the Canadian Northern Ry.:—Between Duluth, Winnipeg and Pacific Ry. and Rainy Lake, 4.04 miles between miles 100.24 and 104.28; 44.46 miles between miles 120.97 and 164.42; 9.4 miles between Rainy Lake and Kashabowie, mile 1.2 to 142.6 (changing old battered rails); 3.30 miles between Rainy Lake and Fort Frances; mile 142.6 to 255.85 (changing old battered rails), and 16.8 miles between miles 255.85 and 272.85; 5 miles between Rainy River and Sprague; mile 288 to 293; 4 miles be-

tween mile 329 and 385 (one rail partly relaid); 2.88 miles near Gladstone, Man., between miles 25.8 and 28.77; 2.88 miles near Pleasant Point, between miles 2.2 and 5.18; 24.70 miles between Dauphin and Kamsack, mile 178.2 to 203.2; 3.7 miles between Calgary and Hanna, mile 125.6 to 129.3; and 102.4 miles between mile 159.4 and 261.8.

The ballasting of 131 miles of track on the Hanna, Alta., Subdivision, was completed in 1921 at an approximate cost of \$210,000.

Work was completed, or started, on a number of new structures at divisional and other points on the Canadian Northern and Grand Trunk Pacific Rys., the principal of which were the following:—

Construction was started upon the replacement of the Howe truss span bridge over the Assiniboine River at mile 72.6, Pleasant Point Subdivision, Man. The new steel superstructure will consist of one 225 ft. through truss span on concrete substructure, and is estimated to cost \$160,000. The construction is reported to be 15% completed, and it is expected to have it finished this year.

At Melville, Sask., on the Grand Trunk Pacific Ry., an extensive system of water supply works has been completed at a cost of about \$320,000. The works include a dam, a new reservoir and a pipe line.

At Nutana, a few miles east of Saskatoon, new terminal facilities have been laid out at an approximate cost of \$174,000, and the necessary terminal buildings erected at a cost of approximately \$236,000.

A new steel bridge has been completed over the South Saskatchewan River at Saskatoon, Sask., at a cost of approximately \$340,000. The new structure consists of six 157 ft. through truss spans, erected on the previously existing foundations and piers.

The concrete substructure for a new bridge across the Red Deer River at mile 59 on the Hanna-Medicine Hat line has been completed, and it is expected that the steel superstructure will be erected this year. It will consist of one 80 ft. and one 76 ft. deck girder spans, and four 165 ft. through truss spans. The entire structure is estimated to cost \$326,000.

The new work completed at Prince Rupert consists of a salmon wharf 860 ft. x 173 ft. 3 in., on which work has been started on the erection of a warehouse, 810 ft. x 147 ft. 3 in. Some details of these works have already been given in Canadian Railway and Marine World, and additional details regarding the warehouse are now available. The frame structure is to be built to resist a wind load of 25 lb. a square foot; and to sustain a snow load of 30 lb. a square foot on the roof; while the warehouse floor will sustain a live load of 500 lb. a square ft. The building will have capacity for handling 50,000 cases of salmon, leaving a 26 ft. passage in the center, and a 16 ft. one on each side. A feature of the structure will be a suspended office in the middle of the building, 58 ft. 4 in. x 30 ft. 10 in. On the deep water front of the wharf a track will be provided for a 5-ton 4-motor electric travelling crane. In addition to its use as a salmon warehouse, the building may be used for general oriental trade, and for this purpose it is calculated that it will have a

capacity of 12,000 tons. The total cost of the wharf and warehouse is estimated at \$750,000, and it is expected that the whole work will be completed during next summer.

Vancouver Island.—The present rail-head on the line from Victoria, B.C., northwesterly is at 74.6. We are officially advised that it has been decided to extend it for about 10 miles to where the James Logging Co. is operating. (Jan., pg. 27.)

Humber River, Newfoundland, Development Proposals.

Sir W. G. Armstrong, Whitworth & Co., issued a statement relative to their connection with the Humber River valley, Nfld., development proposals, and the plans being made for carrying them out. This British company took up the matter upon the invitation of the directors of the Newfoundland Products Corporation, and Mines and Forests Limited, and is acting as the technical adviser of these companies in the development of the natural resources of the areas controlled by them. The engineers of the Reid Newfoundland Co., which is the controlling influence of the two companies named, prepared plans for the development of the Humber River valley areas, which have recently been examined, checked and proved by the British company's engineers and experts. The plans provide for the development of 150,000 h.p. from the Junction Brook flow, to which can be added from other streams 85,000 h.p. at a total cost of not exceeding \$60 a horsepower. The first industrial plant to be started would be a pulp mill, utilizing about 80,000 h.p., and providing 400 tons of newsprint a day. The available supply of wood for the mill is estimated at 10,500,000 cords, which is sufficient to supply for 50 years without considering natural growth. The British company will take a contract to supply all the machinery and equipment for the whole power development and for the pulp and paper mill at a firm price, and will do all the construction work on a cost plus percentage basis. The estimated cost of the development, including the amount required for working capital, is approximately \$4,000,000.

To finance this undertaking it is proposed to authorize the issue of \$4,000,000 of bonds, of which \$1,000,000 will be retained for issue as and when required. The Newfoundland Government has been asked to guarantee the interest and sinking fund of the bond issue, and to safeguard the Government it is proposed to set aside a special reserve fund of \$250,000 a year for six years to be deposited with trustees. The earnings are estimated at more than double the amount required to meet the fixed charges.

The shareholders of the two companies first named put into the concern, without payment, their lands, waterpowers, etc., which will be mortgaged to secure the bonds. It is proposed that the existing Newfoundland Products Corporation be enlarged and altered to meet the requirements of the new conditions, and be renamed the Newfoundland Electric Power & Products Corporation, and that the British company be represented on the directorate.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Alberta & Great Waterways Ry.—P. L. DEBNEY, heretofore Resident Engineer, Lacombe & Northwestern Ry., has been appointed a draftsman, A. & G.W. Ry., at Edmonton, Alta.

Board of Railway Commissioners—G. A. BROWN, heretofore chief clerk, Traffic Department, who has been acting as Traffic Officer since the death of Jas. Hardwell, Chief Traffic Officer, in 1921, has been appointed Assistant Chief Traffic Officer, with office at Ottawa. By order in council of Dec. 5, 1921, his salary was fixed at \$3,000 for the first year, increasing \$120 a year for 5 years until \$3,600 is reached. This is subject to revision on the appointment of a Chief Traffic Officer. The rate is effective from April 1, 1919, as he has been performing the duties since that date.

R. RICHARDSON, heretofore Assistant Secretary, has been appointed Assistant Secretary and Registrar with office at Ottawa. By order in council of Dec. 5, 1921, his salary was fixed at \$3,240 for the 1st year, increasing to \$3,420 for the 2nd year, \$3,600 for the 3rd year, \$3,780 for the 4th year, and \$3,900 for the 5th year, the rate to be effective from April 1, 1921, as he has been performing the duties since that date.

Canadian National Rys.—G. M. HEMS-WORTH, Travelling Passenger Agent, Canadian National-Grand Trunk Pacific Rys. and Grand Trunk Pacific Coast Steamship Co., and **D. ROSS**, sailed from Vancouver, B.C., recently, for Shanghai, China, where, it is reported, they have been appointed assistants, in the Passenger and Freight Departments, respectively, to A. Brostedt, General Traffic Agent, C.N.R., who has general supervision of the traffic interests in China, Japan, Straits Settlements and the Philippines.

H. SAMPSON, heretofore Stores Inspector, Leaside, Ont., has been transferred to the District Storekeeper's office there, as a general clerk.

E. D. TOYE, heretofore District Storekeeper, Ontario Lines, Toronto, has been assigned to special duties in the Stores Department, Toronto.

H. WRIGHT, ticket clerk, Vancouver, B.C., is reported to have been appointed Travelling Passenger Agent, Canadian National-Grand Trunk Pacific Rys. and Grand Trunk Pacific Coast Steamship Co., Vancouver, vice G. M. Hemsworth, transferred to Shanghai, China.

Canadian Pacific Ry.—JOS. BAKER, heretofore Night Foreman, Moose Jaw, Sask., has been appointed Locomotive Foreman, Field, B.C., vice M. W. Boucher, appointed General Locomotive Foreman, Edmonton, Dunvegan & British Columbia Ry., McLennan, Alta.

D. COSSAR, heretofore Locomotive Foreman, Winnipeg, has been appointed Locomotive Foreman, Strathcona, Alta. **J. COTTRELL**, Assistant General Superintendent, British Columbia District, is acting General Superintendent, during the absence of F. W. Peters, who is on a trip to Japan and China.

H. C. P. CRESWELL, heretofore secretary to the Superintendent, has been appointed acting Superintendent, Depart-

ment of Colonization and Development, E. G. White, Superintendent, having been granted extended leave of absence. Office, Montreal.

W. H. DEACON, heretofore Travelling Passenger Agent, B.C. Coast Steamship Service, Vancouver, B.C., has been appointed General Agent, Passenger Department, Portland, Ore., vice E. E. Penn, deceased.

J. H. DUNLOP, heretofore ticket clerk, Vancouver, B.C., has been appointed Travelling Passenger Agent, B.C. Coast Steamship Service, there, vice W. H. Deacon, appointed General Agent, Passenger Department, Portland, Ore.

G. JOHNSTON, heretofore shop foreman, Winnipeg, has been appointed night foreman, Moose Jaw, Sask.

J. MCGOWAN, heretofore Locomotive Foreman, Strathcona, Alta., has been appointed shop foreman, Fort Worth, Ont.

J. MCKINNON, heretofore night foreman, Fort William, Ont., has been appointed shop foreman, Winnipeg, vice G. Johnston, transferred to Moose Jaw, Sask.

J. MacRAE, heretofore Locomotive Foreman, Sutherland, Sask., has been appointed Locomotive Foreman, Winnipeg, vice D. Cossar, transferred to Strathcona, Alta.

C. A. MURDOCK, heretofore Car Foreman, Three Rivers, Que., has been appointed Car Foreman, Farnham, Que., succeeding W. Sturgeon, who has been pensioned.

G. G. OMANNEY, heretofore Investigation Engineer, Colonization and Development Department, Research Branch, has been appointed Development Engineer, Colonization and Development Department, Brandon, Man., and his former title has been abolished, it being felt that this change indicates more clearly the nature of the work being carried on. Office, Montreal.

J. PRENTICE, heretofore carman, has been appointed Car Foreman, Three Rivers, Que., succeeding C. A. Murdock, transferred to a similar position at Farnham, Que.

C. A. STARKE has been appointed Night Foreman at Sherbrooke, Que.

W. H. WORTMAN, heretofore Division Master Mechanic, Edmonton, Dunvegan & British Columbia Ry., has been appointed Locomotive Foreman, C.P.R., Sutherland, Sask., vice J. MacRae, transferred to Winnipeg.

J. A. YORICK, heretofore Traffic Manager, Mattagami Pulp & Paper Co., Toronto, has been appointed Travelling Passenger Agent, Ocean Traffic, C.P.R., with territory covering the Ontario District, reporting to the General Agent, Passenger Department, Ocean Traffic, Office, Toronto.

H. K. YORK, heretofore Car Foreman, Althly, Alta., has been appointed General Car Foreman, Moose Jaw, Sask.

Edmonton, Dunvegan & British Columbia Ry.—M. W. BOUCHER, heretofore Locomotive Foreman, C.P.R., Field, B.C., has been appointed General Locomotive Foreman, D. & B.C.R., with supervision over Mechanical and Car Departments, and the direction of locomotive men and firemen in road service, reporting to the Superintendent on matters affecting operation, and to the Manager on matters affecting policy. The positions of Division Master Mechanic, heretofore held by W. H. Wortman, and Locomotive Fore-

man, heretofore held by W. P. Arnew, have been abolished. Office, McLennan, Alta.

G. MOTH, Division Master Mechanic, C.P.R., Edmonton, Alta., is also acting in an advisory capacity, E.D. & B.C.R., as District Master Mechanic.

Grand Trunk Ry.—F. BONANY, Supervisor of Track, London, Ont., is reported to have been appointed Supervisor of Track, Hamilton, Ont.

O. MASSE, heretofore Chief Dispatcher, Montreal, has been appointed Inspector of Terminals there, vice C. M. Walton, promoted.

J. M. SOMMERS, heretofore Chief Dispatcher, Districts 25 and 26, Battle Creek, Mich., has been appointed Trainmaster, with jurisdiction over the portion of District 26, Western Lines, Chicago to Griffith, inclusive, vice J. A. Clancey, whose appointment as Superintendent of Transportation, Western Lines, Chicago, Ill., was announced in our last issue. Office, Elsdon, Ill.

B. L. TYLER has been appointed acting Chief Dispatcher, Districts 25 and 26, Western Lines, Battle Creek, Mich., vice J. M. Sommers, Chief Dispatcher, promoted.

C. M. WALTON, heretofore Inspector of Terminals, Montreal, has been appointed Superintendent of Transportation, Eastern Lines, vice L. Harold, deceased. Office, Montreal.

H. WILKINSON, heretofore assistant to General Roadmaster, St. Thomas, Ont., is reported to have been appointed Supervisor of Track, London to Paris, Ont., vice F. Bonany, transferred. Office, London, Ont.

Michigan Central Rd.—T. COTTRELL, heretofore machinist, has been appointed Foreman, Air Brake Department, St. Thomas, Ont., vice A. Vicary, promoted.

J. I. STEWART, heretofore Production Foreman, St. Thomas, Ont., has been appointed Assistant Supervisor of Shops, with supervision over shops at St. Thomas, Ont., and Jackson and Niles, Mich. Office, Detroit, Mich.

A. VICARY, heretofore foreman, Air Brake Department, St. Thomas, Ont., has been appointed Production Foreman there, vice J. I. Stewart, promoted.

Montreal Board of Trade.—J. K. SMITH, heretofore Traffic Manager, Acadia Sugar Co., Montreal, has been appointed Manager, Montreal Board of Trade's Transportation Bureau, vice W. S. Tilston, deceased. Office, Montreal.

J. G. BOWLES, heretofore Secretary, has been appointed Assistant Manager and Secretary.

Self Propelled Cars on Canadian National Rys.—The storage battery car described in a previous issue of Canadian Railway and Marine World, is being continued in operation during the winter between Bathurst and Campbellton, N.B., and is giving satisfactory service. The gasoline motor car built by Ledoux, Jennings, Ltd., Montreal, and operated between Brockville and Westport, Ont., is undergoing repairs, and steam service is being given instead. The C.N.R. has ordered another gasoline motor car from the same company, for the Brockville-Westport run. The new car will have capacity for 30 passengers, and it is not improbable that side rod drive will be employed.

Traffic Orders by Board of Railway Commissioners.

Changes in Classifications.

General order 353, Jan. 3.—Re general order 271, Sept. 10, 1919, as amended by general order 348, Nov. 10, 1921, with respect to the Canadian Freight Classification and the Express Classification for Canada, and the Railway Act, 1919, secs. 322 and 360. Upon reading the submissions filed, the Board orders that general order 271, as amended by general order 348, be amended by striking out the words "The Ontario Grocers' Guild" in the ninth line of paragraph 5, and substituting therefor the words "Canadian Wholesale Grocers' Association," and by adding the words "United Grain Growers Limited" and "Fruit Commissioners' Office, Department of Agriculture."

Stop-over Charges on Grain in Transit.

General order 354, Jan. 4.—This order and the judgment on which it was based, are given in full on page 64 of this issue.

Alleged Excess Charges on Live Stock Shipments.

31,972, Jan. 4.—Re application of Frank Hill Cattle Co., of Calgary, Alta., and J. M. Dillon of Cayley, Alta., under sec. 389 of the Railway Act, 1919, for leave to commence an action against the C.P.R. Co. for the recovery of triple damages for excess charges on certain live stock shipments moving to Chicago, Ill., and other points in the United States in 1920. Upon hearing the application at Calgary, Oct. 31, 1921, in the presence of counsel for the applicants, and the Canadian Pacific and Canadian National Railways; and upon its appearing that the subject matter of the complaint does not fall within the Board's jurisdiction, it is ordered that the application be refused.

The foregoing order was based on the following judgment by Assistant Chief Commissioner McLean, concurred in by Commissioner Rutherford: Two applications are involved. That of the Frank Hill Cattle Co., sets out that in respect of various shipments of live stock made during the period from Sept. to Dec. 1920, from Calgary to Chicago, Ill., and St. Paul, Minn., the total charges collected for freight, feed and services were \$6,079.60; and it is claimed that the overcharges thereon were \$804.10, which represents an overcharge, as claimed, of approximately 13%. The case of J. M. Dillon, the shipments of live stock involved were made during Nov. 1920, from Cayley, Alta., to Chicago. It is set out that the amount collected for freight, feed and services thereon was \$5,359.24; and that the overcharge was \$663.30, which represents approximately an overcharge, as claimed, 12.3%.

The applications as launched deal with matters arising out of the adverse exchange situation. The practice of goods going forward collect, with charges payable at destination in United States funds, is not contested; but it is alleged that the Canadian carrier participating in the international haul received its share of the amount so collected in U.S. funds, and that to the extent it was paid in U.S. funds the excess over what its division of the rate in Canadian currency would represent means an excess payment to which it is not entitled. The transactions involved took place before the issuance of the Board's general order 326.

The applicant's submission was that

the contracts under which the shipments were made were Canadian contracts, entered into between the Canadian shipper and the Canadian railway, under tariffs fixed by the Canadian Board of Railway Commissioners, and that the rate was payable in Canadian currency whereas the charges were actually collected in U.S. currency. In other words, an overcharge was made. In the submission, the tariff was spoken of as having been fixed by the Board of Railway Commissioners. In another connection, applicants' solicitor spoke of the tariff having been approved by the Board, and referred in this connection to sec. 330. That section deals with standard tariffs which are required to be formally approved by the Board, and not with joint tariffs from a point in Canada to a foreign country, as dealt with in sec. 338. The Board has several companies authorized to file with the Board a joint tariff for such continuous route.

Sec. 389, under which the applications are launched, deals with certain consequences of infractions of the provisions of the Railway Act, or of the Board's orders dealing with tolls. It is not alleged that there is an infraction of any order, direction, decision or regulation of the Board in respect of tolls. The complaint, therefore, to fall within the section must be concerned with an infraction by the company, or any officer, servant or agent of the company, of any provision of the Railway Act in respect of tolls. The section goes on to recite that where there is such infraction of any provision of the Railway Act, the company shall be liable, at the suit of any person injured by reason of any such infraction, to three times the amount of the actual damage that such person may prove to have so sustained. It is further provided that action is not to be commenced for any such triple damages before the Board's leave has been obtained. What is pertinent, then, is what section of the act has been infringed?

What is involved, as I understand the situation, is an abnormal condition arising out of depreciation in Canadian currency. The Board is given very wide powers in regard to matters of railway regulation. At the same time, it must always be borne in mind that its powers being statutory, it must find the scope of these powers being within the four corners of the Railway Act. The Board is a statutory tribunal, and its powers are tied down to the scope of matters falling within the Railway Act. It is not the Board's function to supplant or supplement the provincial courts in the exercise of their ordinary jurisdiction. The matter was most pertinently set out by the late Chief Commissioner Killam in Duthie vs. G.T.R. Co., 4 Can. Ry. Cas., 304 at p. 311, when he said:—

"Occasionally one hears or reads references which suggest that misconceptions prevail in this connection. Applications or complaints are made to us which are apparently based upon a hazy notion that the Board was created for the purpose of adjudicating upon any claim against or dispute with a railway company. For two reasons we are not to begin with the assumption that such was the purpose for which the Board was established: (1) The Board is purely a creature of statute. The general prin-

ciple applicable to such a body is that its jurisdiction is only such as the statute gives by its express terms or by necessary implication therefrom. (2) Our constitution assigns to the provincial legislatures the subjects of 'property and civil rights in the province' and 'the administration of justice in the province, including the constitution, maintenance and organization of provincial courts, both of civil and criminal jurisdiction, and including the procedure in civil matters in those courts.' (See B.N.A. Act 1867, sec. 92, sub-secs. 1, 3, 14.) Corporations created by the Parliament of Canada are ordinarily subject to the provincial laws relating to property and civil rights, and prima facie, civil claims against them should be prosecuted in the provincial courts. The Parliament of Canada is empowered to provide for the establishment of any additional courts for the better administration of the laws of Canada.' (See B.N.A. Act, 1867, sec. 101), and in the exercise of its powers to legislate on certain subjects, Parliament may incidentally encroach upon the field of provincial legislation. Such encroachments, however, are not to be presumed, but must be clearly indicated and be limited to the extent reasonably necessary for giving effect to the enactments of Parliament upon subjects within its powers."

It seems to me that the comment of Bramwell, L.J., in passing upon the scope of the functions of the English Railway and Canal Commission, is also pertinent, as follows:—"I must say that I think one ought not to suppose that the legislature intended to give to the commissioners a jurisdiction in matters which could be quite as well exercised by the ordinary courts of justice. Great Western Ry. Co. vs. the Railway Commissioners and James Brown, 7 Q.B.D., 182-193.

The applicants' solicitor, although questioned at the hearing, did not refer the Board to any specific provision of the Railway Act which it was alleged covered the matter in question, and which, it was alleged, was infringed. I have given the matter careful consideration, and have been unable to find any section which by necessary inference gives the Board power to deal with the phases of contractual obligation involved, which are alleged to turn upon the question that the Canadian currency is at present depreciated as compared with the United States currency. In other words, I cannot see that the subject matter of the complaint has been brought within the scope of sec. 389, or that it falls either by explicit statement or necessary inference within the broad powers conferred upon the Board. As I read the Railway Act, it is, therefore, open to the applicant, without the intervention of the Board, to pursue his rights, if any, in a court of competent jurisdiction.

Rates from British Columbia Electric Railway Points.

31,994, Jan. 9.—Re application of Hunting-Merritt Lumber Co., Vancouver B.C., relative to the absence of a through coast rate from Marpole to the British Columbia Electric Ry. to local Milwaukee points on the Chicago, Milwaukee & St. Paul Ry.; and re application of Granite Island Quarries, Ltd., Vancouver, Albert Cotton, Eburne Saw Mills, Ltd., Dominion Timber Products, Ltd., North

Arm Lumber Co., Ltd., Dominion Creosoting & Lumber, Ltd., A. E. Ewart, Union Shingle Co., Ltd., Stoltz Manufacturing Co., Ltd., Hunting-Merritt Lumber Co. Ltd., Red Cedar Shingle Co. Ltd., and Shull Lumber & Shingle Co. regarding publication of joint terminal rates over the Canadian National and other railways to Canadian points from points on the British Columbia Electric Ry.'s Vancouver & Lulu Branch. Upon hearing the application at Vancouver, Oct. 17, 1921, in the presence of counsel for hte applicants, the Canadian Pacific the Great Northern, and the Canadian National Railways, and upon its appearing that the British Columbia Electric Ry. Co. is not now under its jurisdiction—the board orders that the application be refused.

Railway Earnings.

Canadian Government Railways.

Following are total operating revenues, total operating expenses, and net operating deficits, for the Intercolonial, Prince Edward Island, National Transcontinental, and local lines in the Maritime Provinces and Quebec which have been acquired by the Dominion Government and added to the Canadian Government Rys., as far as they are available to date.

Revenue	Expenses	Net deficits
1921	1921	1921
Jan. \$3,527,394	\$4,347,728	\$ 820,423
Feb. 3,526,658	4,367,491	840,833
Mar. 3,595,144	4,538,994	943,781
Apr. 3,363,972	3,915,995	552,923
May 2,914,973	3,728,949	813,976

The discrepancies between the above figures and those issued by the Dominion Bureau of Statistics are owing to the fact that the Bureau is, at its request, furnished with figures by the C.P.R., including the Esquimaux & Nanaimo Ry., and the Montreal & Atlantic Ry., earnings, as well as the C.P.R. ones. The figures supplied the Bureau are exclusive of certain income items which are included in figures supplied Canadian Railway and Marine World.

Approximate earnings for Dec. 1921, \$15,567,000, against \$20,418,000 for Dec. 1920.

Grand Trunk Railway.

Following are total operating revenue and total operating expenses for lines in Canada for 1921, also total net operating revenue or deficit for

1921 and 1920, with increases or decreases in totals, as compared with those for 1920, as far as they are available to date:

A Bird—And a Surprise.

Reproduced from Toronto Globe.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta & Great Waterways Ry.—The terminus of this provincially owned and operated line is at Waterways, on the Clearwater River, about 8 miles short of Fort McMurray, its final objective. Terminal yards have been laid out at this point, and shippers and others are erecting warehouses, wharves, etc., on the water front. A spur line connects these with the railway yards at the townsite. Connection is made by teams with Fort McMurray, but this is not regarded as satisfactory, and the residents are urging the completion of the line to Fort McMurray. (Jan., pg. 32.)

Canada Central Ry.—The extension of the line from Peace River to Berwin, Alta., completed under agreement with the Alberta Government by the C.P.R., which operates this line and also the Edmonton, Dunvegan & British Columbia Ry., was announced to be opened for traffic on Jan. 5. (Jan., pg. 32.)

Canadian Transit Co.—There has been deposited with the Secretary of State at Ottawa, a deed of trust and mortgage made between the American Transit Co., the Canadian Transit Co., and the Guarantee Trust Co. of Detroit, in connection with the plans for the construction of a railway and general traffic suspension bridge across the Detroit River between Windsor, Ont., and Detroit, Mich.

The company is offering for subscription \$30,000,000 of first mortgage gold bonds, bearing interest at 5% to Dec. 1, 1926, and 7% thereafter. The bonds are due for redemption Dec. 1, 1957, but may be called for payment upon 30 days notice at 102% and accrued interest. The bonds are offered at 87%. The American Transit Co. is organized under Nevada State laws, is authorized under Michigan State laws, and has obtained the Michigan Public Utilities Commission's approval for its undertaking. The Canadian Transit Co. is incorporated by the Dominion Parliament, and under that authority has entered into an agreement with the American Transit Co. for the united construction and financing of the bridge and connecting railways.

The board of engineers in charge of the project consists of C. E. Fowler, Chief Engineer and designer of the proposed structure; G. H. Pegram, and W. H. Barr, representing the United States end of the undertaking, and C. N. Monsarrat, Consulting Engineer of Bridges, Canadian National Rys. and G.T.R., Montreal; and C. R. Young, representing the Canadian Transit Co. The directors of the company are:—W. B. Gregory, President; H. H. Walker, Vice President; J. W. Austin, Treasurer; C. E. Fowler, Second Vice President and Secretary; Hon. A. A. Templeton, A. F. Healy, W. J. Pulling, C. S. King, C. E. Vandusen, J. O. Reaume, Hon. C. J. Murphy.

A press report of Jan. 13 stated that borings had been started in the river bed between 12th St. and River Rouge, on the Detroit side, and between Windsor and Ojibway on the Canadian side, to secure sites for the bridge piers. Three possible locations are stated to be under consideration. (Dec. 1921, pg. 646.)

Esquimalt & Nanaimo Ry.—The Dominion Parliament will be asked at its next session to extend the time within which the company may construct the line authorized to be built from its present line at Courtenay generally norther-

ly and northeasterly to Duncan's Bay, on the east coast of Vancouver Island, B.C.

The City Engineer of Victoria, B.C., has invited tenders for the erection of the balance of the superstructure of the railway and general traffic bridge over the harbor at Johnson St. The contract is expected to be let early in February. The Canadian Bridge Co., which has the contract to construct and erect the bascule span, is assembling its plant and material, and was expected to start construction work by the end of January. The bridge is being built by the city, the E. & N.R. Co. being a contributor to the cost. (Jan., pg. 32.)

Grand Trunk Ry.—Plans are reported to be in preparation for the construction of an extension to the company's elevator at Windmill Point, Montreal.

A press report states that it is proposed to remodel the station at East York, Toronto, and build a new freight shed and offices, and a new approach to the station this year.

The G.T.R. is reported to be preparing to put in some new sidings in connection with the building of an extension to the Goderich Elevator & Transit Co.'s plant at Goderich, Ont. (Jan., pg. 32.)

Hudson Bay Ry.—The United Farmers of Manitoba, at the annual meeting in Winnipeg recently, adopted a platform, in which they advocate that the Manitoba, Saskatchewan and Alberta Governments take up the Hudson Bay Ry. project failing action by the Dominion Government to complete the line. (Nov. 1921, pg. 583.)

Kettle Valley Ry.—The Dominion Parliament will be asked at its next session to extend the time within which the company may build its projected railway from Coalmount on the joint section operated by the K.V.R. Co. and the Vancouver, Victoria & Eastern Ry. & Navigation Co., generally southerly for 12 miles to the Granite Creek coal areas, B.C. (Jan., pg. 32.)

The Roberval-Saguenay Ry. Co. is asking the Quebec Legislature to authorize it to build a line to be operated by steam or electricity or both, from some point on its existing railway near Chicoutimi to La Malbaie, the terminus of the Quebec & Saguenay Ry., and for an extension of time to March 1928 to build authorized but unconstructed lines. (Mar. 1920, pg. 137.)

Pacific Great Eastern Ry.—Arrangements are reported to have been completed between the British Columbia Government and West Vancouver Municipality for the lease, from the former to the latter, of the section of the Pacific Great Eastern Ry. from North Vancouver to Whytecliffe for 10 years at a nominal rental. It is said the Government will contribute towards the upkeep of the line, 80% for the 1st year, 60% for the 2nd, 40% for the 3rd, and 20% for the 4th. (Jan., pg. 32.)

Timiskaming & Northern Ontario Ry.—We are officially advised that a contract has been let to Grant Smith & Co. and McDonnell Ltd., Vancouver, B.C., for the extension of the railway from the present terminus at Cochrane to near New Post, on the Abitibi River, about 70 miles. Canadian Railway and Marine World, January, pg. 22, contained a plan showing the route of the extension,

with information as to the standard of the line to be built, etc.

The contracting company is a combination of Grant Smith & Co. and of Col. the Hon. Angus McDonnell, the directors being:—Grant Smith, Spokane, Wash., President; the Hon. Angus McDonnell, Vancouver, Vice President; Jerry Sims, Secretary-Treasurer, and W. E. Hauser and E. W. Hauser, Spokane, Wash. Its head office is at Vancouver, B.C., with a branch office at Calgary, Alta. The two firms separately have handled a number of large railway and other contracts in British Columbia, Grant Smith & Co. having built on sections of the Kettle Valley Ry. extension towards Vancouver in 1914 and the Hon. Angus McDonnell being associated with other works. As a combined concern, the company built the breakwater at Victoria, B.C., at an approximate cost of \$4,000,000; the Great Northern Ry. station in Vancouver, and considerable irrigation work in Alberta, which is still going on. The T. & N.O.R. extension is the first contract the company has obtained in eastern Canada.

J. A. Campbell, of the company's staff, was in Ontario in connection with the contract in January, and returned to headquarters at Vancouver, where final arrangements will be made for carrying out the work and the appointment of the construction staff. The construction headquarters will be at Cochrane.

We are officially advised that the T. & N.O.R. commission has let the following contract for ties: Patrick McLean, North Bay, 25,000; Harris Tie & Timber Co., Ottawa, 25,000; R. S. Potter Lumber Co., Matheson, 30,000. (Jan., pg. 22.)

Vancouver, Victoria & Eastern Ry.—W. P. McKenny, Vice President, Great Northern Ry., which owns the V.V. & E. Ry., and another line running into Vancouver, B.C., was there on Jan. 12, and was reported to have said: "Vancouver will be the greatest port on the Pacific within a few years, and when that time comes we shall be ready for it. We have already arrangements under way to this end, but the time is not opportune to make any announcements. However, we are fully alive to the situation and will have our interests fully looked after."

G.T.R. Officials and Employees Meeting.

A meeting of officials and employees of G.T.R. lines centering on Belleville, Ont., was held there, Jan. 18, when Howard G. Kelley, President, and W. D. Robb, Vice President, Transportation, Construction and Maintenance, were present. Mr. Kelley spoke of the work of those who 60 years ago located and built the line, which could not be improved upon despite modern improvement in railway building, and added that it is in every respect an up to date railway. Within the last twelve years he had seen the tonnage carried by the line trebled, and this could only have been done through the entire body of employees' loyal co-operation. Practically every officer of the G.T.R. was brought up in the service, and that means that future officers are to be looked for from within the ranks of the present employees. Mr. Robb referred particularly to the welfare work, the pensions plan, and to the harmony and co-operation which had always existed between the officers and the various sections of employees.

Mainly About Railway People Throughout Canada.

Mrs. Archer Baker, widow of Archer Baker, formerly European Manager, C.P.R., London, Eng., spent some time in Canada recently partly in Montreal with her brother-in-law, W. R. Baker, C.V.O., formerly Secretary, C.P.R., and later, in Vancouver, B.C.

E. W. Beatty, K.C., President, C.P.R., was on a shooting trip in the Laurentides Mountain early in January.

William C. Bowles, whose appointment as Assistant Freight Traffic Manager, Eastern Lines, C.P.R., Montreal, was announced in our last issue, was born there, June 3, 1875, and entered C.P.R. service, Dec. 1, 1891, since when he has been, to 1896, clerk, General Freight Department, Montreal; 1896, chief clerk, General Agent, Freight Department, Chicago, Ill.; 1896 to 1897, clerk, General Freight Agent, Montreal; 1897 to 1903, chief clerk, Traffic Manager, and General Freight Agent, Winnipeg; 1903 to 1905, Assistant General Freight Agent, Calgary, Alta.; 1905 to 1907, Assistant General Freight Agent, Vancouver and Nelson, B.C.; 1907 to 1909, General Freight Agent, Winnipeg; 1909 to 1911, General Freight Agent, Vancouver, B.C.; 1911 to Dec. 31, 1921, General Freight Agent, Western Lines, Winnipeg.

F. P. Brady, Assistant to the Executive, Canadian National Rys., returned to headquarters in Toronto, Jan. 8, from his home in Winnipeg, where he was recuperating after undergoing an operation in Montreal in November.

George Alexander Brown, who has been appointed Assistant Chief Traffic Officer, Board of Railway Commissioners, Ottawa, Ont., was born at Bedford, Que., Jan. 5, 1867, and entered transportation service July 1, 1883, since when he has been, to Jan. 1, 1888, junction settlement clerk, Central Vermont Ry., Rouses Point, N.Y., and St. Albans, Vt.; Jan. 1, 1888 to Jan. 1889, chief clerk, joint freight office, Canada Atlantic Ry. and C.P.R., St. Polycarpe Jct., Que.; Jan. 1 to Apr. 9, 1889, joint agent, same roads, St. Polycarpe Jct., Que.; Apr. 9, 1890 to July 1, 1898, Claims Agent, Canada Atlantic Ry., Ottawa, Ont.; July 1, 1898 to Nov. 1, 1900, chief clerk, General Freight Department, Ottawa & New York Ry., Ottawa, Ont.; Nov. 1, 1900 to Oct. 3, 1904, Assistant General Freight Agent, same road, Ottawa, Ont.; Oct. 3, 1904 to June 20, 1921, chief clerk, Traffic Department, and from June 20, 1921, acting Traffic Officer, Board of Railway Commissioners, Ottawa.

J. P. Burns, whose appointment as Assistant Chief of Investigation Department, C.P.R., Winnipeg, was announced in our last issue, was for some years secretary to various railway officials, and at one time, Soliciting Freight Agent, Boston & Maine Rys. He entered C.P.R. service Jan. 23, 1913, as chief clerk, Investigation Department, Montreal, and later became Assistant to the Chief of the Department, at Montreal. Prior to entering C.P.R. service, he was secretary to the chief of detectives for Montreal.

A. H. Cadieux, whose appointment as Assistant to the Chief of the Investigation Department, C.P.R., Montreal, was mentioned in our last issue, was, from 1907 to June 1913, special agent, G.T.R., Montreal; July 1913 to May 1915, investigator, Investigation Department, C.P.R., Montreal; May 1915 to Dec. 1921, In-

spector, same department, C.P.R., Montreal.

James Callander, Secretary, Canadian Northern Prairie Lands Ltd., Toronto, was found dead in his motor garage at Port Credit, Ont., Jan. 3. It is surmised that he had started his car in the garage with the door closed, and there being absolutely no ventilation, his death was probably due to asphyxiation.

Chief Commissioner Carvell, of the Board of Railway Commissioners, Mrs. and Miss Carvell, spent the Christmas and New Year's holidays at Lakeville, N.B.

A. Blake Chown, whose appointment as Assistant General Western Passenger Agent, Canadian National Rys., and Assistant General Passenger Agent, Western Lines, G.T.R., Chicago, Ill., was announced in our last issue, was born at Belleville, Ont., Aug. 4, 1887, and enter-

W. C. Bowles,
Assistant Freight Traffic Manager, Eastern Lines,
C.P.R.

ed railway service, Apr. 1, 1907, since when he has been, to May, 1909, night ticket clerk, G.T.R., Belleville, Ont.; May 1909, to March 1911, day ticket clerk, G.T.R., Belleville, Ont.; March 1911 to March 1913, Soliciting Passenger Agent, G.T.R., Toronto; March 1913 to Dec. 1918, Travelling Passenger Agent, G.T.R., Pittsburgh, Pa.; Dec. 1918 to March 1919, acting General Agent, Passenger Department, G.T.R., New York; March 1919 to July 1920, General Agent, Passenger Department, G.T.R., New York; July 1920 to Dec. 1, 1921, General Agent, Passenger Department, Canadian National-Grand Trunk Rys., New York, N.Y.

John A. Clancey, whose appointment as Superintendent of Transportation, Western Lines, G.T.R., Chicago, Ill., was announced in our last issue, was born at Walkerton, Ont., June 8, 1884, and entered G.T.R. service June 2, 1901, since when he has been, to Sept. 26, 1901, office

boy, local freight office, Toronto; Sept. 26, 1901 to July 1, 1902, stenographer to Terminal Superintendent, Toronto; July 1 to Sept. 23, 1902, stenographer to District Passenger Agent, Toronto; Sept. 23, 1902 to Apr. 6, 1903, stenographer and clerk, Bridge and Building Department, Durand, Mich.; Apr. 6, 1903 to Nov. 21, 1905, chief clerk to Trainmaster, Durand, Mich.; Nov. 21, 1905 to Mar. 1, 1906, clerk to Master of Transportation, Durand, Mich.; Mar. 1, 1906 to July 1, 1910, Car Distributor, Durand, Mich.; July 1, 1910 to Jan. 2, 1911, chief clerk, Car Demurrage Bureau, Detroit, Mich.; Jan. 2, 1911 to Feb. 8, 1912, Car Distributor, Durand, Mich.; Feb. 8 to Oct. 15, 1912, Travelling Car Service Agent, Detroit, Mich.; Oct. 15, 1912 to Jan. 23, 1913, Assistant Superintendent of Terminals, Detroit, Mich.; Jan. 23, 1913 to Apr. 20, 1914, chief clerk to General Superintendent, Chicago, Ill.; Apr. 20, 1914 to Feb. 1, 1918, Division Agent, Western Lines, Chicago, Ill.; Feb. 1 to Dec. 1921, Trainmaster, Districts 27 and 28, Durand, Mich., and Trainmaster, Districts 26 and 27, Elsdon, Ill.

G. C. Dew, Asiatic Freight Agent, C. P.R., Montreal, is on a business trip to Japan and China.

Sir John Eaton, director, C.P.R., spent a few days at the local winter sports at Quebec, Que., early in January, and then went on a short shooting trip in the north.

A. C. Egan, General Auditor, Canadian National Rys., Toronto, visited friends in Winnipeg, during the Christmas holiday.

J. M. R. Fairbairn, D.Sc., Chief Engineer, C.P.R., Montreal, was the recipient of a framed expression of appreciation by the American Railway Engineering Association's Board of Direction recently, as a memento of their meeting in Montreal in July 1921, when courtesies were extended to them, by him as President, Engineering Institute of Canada.

C. E. Friend, Comptroller, Canadian National Rys., Toronto, spent a short Christmas holiday in Winnipeg.

Sir Joseph Flavelle, Chairman of the G.T.R., had a private conference with Premier King and Minister of Railways Kennedy, in Ottawa, Jan. 16. It is expected that he will retain the position for a time at least, probably until arrangements are made for full co-operation with the Canadian National Rys., but it is said that he would not accept a position on the C.N.R. board when reorganized, even if it were offered him.

U. E. Gillen, General Manager, Toronto Terminals Ry. Co., has been appointed, by the Labor Department, chairman of the board of conciliation, dealing with the wage dispute between the Dominion Coal Co., Nova Scotia Steel & Coal Co., and their employees.

Mrs. E. Graham, widow of J. G. Graham, a former Manager of the Northern Pacific Ry., at Winnipeg, died suddenly at Cleveland, Ohio, Jan. 14.

Grant Hall, Vice President, C.P.R., has been elected Honorary President of Bishop's College University Alumni Association.

D. B. Hanna, President, Canadian National Rys., addressed the Young Men's Canadian Club in Toronto Jan. 9, and the Ontario Commercial Travellers Association at London, Jan. 20.

Louis Harold, Superintendent of Transportation, Eastern Lines, G.T.R., Montreal, who died there, Jan. 4, after a very short illness, was born in Jan. 1864, and entered G.T.R. service at Trois-Rivières, Ont., in 1881, being employed first as an operator, and later as agent at various points. After some time in the Traffic Department, he was appointed Assistant Trainmaster, London, Ont., in 1912, and in the same year was appointed Special Assistant in the Transportation Department, and in 1913, Superintendent of Transportation, Eastern Lines, Montreal. The funeral, which took place at Stratford, Ont., Jan. 6, was attended by a large number of G.T.R. and other railway officials, the pall bearers being, R. H. Fish, general Superintendent, Eastern Lines, G.T.R., Montreal; W. R. Davidson, General Superintendent, Western Lines, G.T.R., Chicago, Ill.; C. R. Moore, General Superintendent of Car Service, G.T.R., Montreal; D. Lighthall, J. Scrivner and G. Childs.

A. E. B. Hill, B.A.Sc., who died at Vancouver, B.C., Jan. 5, aged 76, following a paralytic seizure, was born at Hillside, N.S., was appointed to the C.P.R. engineering staff, in 1881. He was engaged on the final location and construction of the line in British Columbia through the Rocky Mountains. In 1886 he went to Coquitlam to take charge of the water works and subsequently had charge of the construction of the New Westminster water works. In 1896 he was elected an alderman in New Westminster and was chairman of the council's railway committee.

Thomas Hodgins, formerly customs clerk, G.T.R., Toronto, died there, Jan. 7, aged 74. He was born at Abbeyville, Ireland, and was in G.T.R. service for about 50 years, retiring on superannuation about three years ago.

C. E. Jefferson, whose appointment as General Freight Agent, Western Lines, C.P.R., Winnipeg, was announced in our last issue, was presented with a silver tea service by the Freight Department staff at Montreal, recently, on his transfer from the position of Assistant General Freight Agent, Eastern Lines.

Charles Edward Jenney, whose appointment as General Agent, Passenger Department, Canadian National-Grand Trunk Rys., New York, was announced in our last issue, was born at Fergus, Ont., Dec. 31, 1873, and was educated at the Southampton and Port Elgin, Ont., public and high schools. He entered railway service June 1, 1894, since when he has been, to 1895, clerk, Assistant General Baggage Agent's office, G.T.R., Toronto; 1895 to 1896, clerk, General Baggage Agent's office, G.T.R., Toronto; 1896 to 1909, clerk, District Passenger Agent's office, G.T.R., Toronto; 1909, Soliciting Passenger Agent, G.T.R., Toronto; June 1, 1909 to Dec. 1, 1912, Travelling Passenger Agent, G.T.R., Toronto; Dec. 1, 1912 to March 1913, Travelling Passenger Agent, G.T.R., Pittsburgh, Pa.; March 1913 to March 1914, City Passenger and Ticket Agent, G.T.R., Toronto; March 1914 to Sept. 1920, General Agent, Passenger Department, Grand Trunk Pacific Ry., Vancouver, B.C.; Sept. 1920 to Dec. 31, 1921, District Passenger Agent, Canadian National Rys., Vancouver, B.C.

Hon. William Costello Kennedy, of Windsor, Ont., the newly appointed Minister of Railways and Canals, is a son of Wm. and Julia (Costello) Kennedy, was born at Ottawa, Ont., Aug. 27, 1868,

and educated at separate school, and De La Salle Institute, Toronto. He began his business career with the London & Canadian Loan & Agency Co., Toronto, in 1887, remaining in its service until 1897, when he engaged in gas and oil business at Windsor, Ont. He was President, Windsor Gas Co., 1903 to 1917, and is now a gas and oil operator. He was President, Windsor Board of Trade, 1909 to 1910; trustee, Windsor Board of Education, 1913 to 1918; councillor, Ojibway, 1913 to 1918. He was elected to the House of Commons for North Essex, Ont., Dec. 917, and again in Dec. 1921. He is a Liberal and a Roman Catholic. He married Glencora Bolton, of Detroit, Mich., May 8, 1907. He is a member of the following clubs:—Detroit; Detroit Athletic; Essex County Golf; Ontario (Toronto); Rideau (Ottawa); Country (Ottawa). His recreations are golf and motoring.

C. E. Jefferson,
General Freight Agent, Western Lines, C.P.R.

E. D. Lafleur, C.E., Chief Engineer, Public Works Department, who died suddenly at Ottawa, Jan. 14, was born Aug. 5, 1861. He entered the Department's service Sept. 27, 1881 and was in charge of the surveys for the proposed Georgian Bay Canal in 1904-05 and also made a report on the feasibility of a tunnel to connect the mainland with Prince Edward Island. He was appointed Chief Engineer of the Department Dec. 1, 1904.

W. B. Lanigan, Freight Traffic Manager, C.P.R., was reported in a Vancouver, B.C., paper recently, as contemplating resigning early this year, and settling on a fruit ranch near Victoria, B.C., in pursuance of a resolution said to have been made some time ago to resign on becoming 60 years of age. While no official information is obtainable in this connection, it appears that Mr. Lanigan bought a property in Uplands, near Victoria, same time ago, and that Mrs. Lanigan is living there. It is thought that he will probably retire there as soon as circumstances will permit, possibly on the completion of his 30th year

of service with the C.P.R. He was born at Three Rivers, Que., Oct. 12, 1861, entered the North Shore Ry. service, between Montreal and Quebec, in 1879, went with the G.T.R. in Jan. 1881, and to the C.P.R. in Aug. 1884.

W. B. Logan, whose appointment as acting District Storekeeper, Maritime District, Canadian National Rys., Moncton, N.B., was announced in a recent issue, was born at Amherst, N.S., July 30, 1869, and entered railway service July 4, 1887, since when he has been, to Apr. 13, 1901, clerk, Intercolonial Ry.; Apr. 13, 1901 to Nov. 1921, local storekeeper, Canadian Government Rys., and Canadian National Rys., all at Moncton, N.B.

J. M. Lyons, formerly General Passenger Agent, Intercolonial Ry., and subsequently Eastern Freight Agent, Reid Newfoundland Co., Moncton, N.B., was married at New York, N.Y., Jan. 7, to Miss N. M. Gillespie, formerly of Parrsboro, N.S. They subsequently sailed for Europe and on their return will live at Moncton.

J. L. McCloskey, whose appointment as Agent, C.P.R., Juneau, Alaska, was mentioned in a recent issue, was born there March 25, 1897, and educated in the local public and high schools. He entered C.P.R. service Dec. 21, 1918 and was to Nov. 1, 1921, clerk at Juneau.

Col. The Hon. Angus McDonnell, C.B., C.M.G., who is a partner in Stewart and McDonnell, railway and harbor contractor, etc., is on a visit to the firm's headquarters at Vancouver, B.C. The firm, the other partners in which are Major General J. W. Stewart, C.B., C.M.G., and Major General G. P. Dawney, C.B., C.M.G., D.S.O., is carrying out a large harbor and railway construction contract in the Gold Coast Colony, West Africa, in connection with which Col. McDonnell has been spending most of his time at the London, Eng. office recently. He is also one of the principals of Grant Smith & Co., and McDonnell, Ltd., Vancouver, which received a contract recently for the extension of the Timiskaming and Northern Ontario Ry. for about 70 miles northerly from Cochrane.

Sir Wm. Mackenzie, ex President, Canadian Northern Ry., has resigned from the Hudson's Bay Co. committee.

Oscar Masse, who has been appointed Terminal Inspector, Transportation Department, G.T.R., Montreal, was born at Coteau, Que., Nov. 7, 1884, and entered G.T.R. service Nov. 1, 1901, since when he has been, to Feb. 2, 1903, freight clerk, Coteau, Que.; Feb. 25 to Dec. 1, 1903, operator, Coteau Jct. Que.; Dec. 1, 1903 to Aug. 10, 1905, operator, Montreal; Oct. 15, 1905 to Nov. 7, 1908, dispatcher, Montreal; Nov. 7, 1908 to April 25, 1910, dispatcher, Island Pond, Vt.; April 25, 1910 to Oct. 13, 1911, dispatcher, Montreal; Oct. 13, 1911 to Jan. 16, 1922, Night Chief Dispatcher, and Chief Dispatcher, Montreal.

R. C. Morgan, Chairman of the Railway Management Committee, Reid Newfoundland Co., St. John's, spent Christmas at his home in Winnipeg.

Lord Mount Stephen's benefactions to the King Edward Hospital Fund in England were referred to by the King recently, who wrote:—"The fund has lost one of its earliest and greatest benefactors by the lamented death of Lord Mount Stephen, who, by his gifts, amounting to £500,000, many years ago, laid the foundation of its endowment, and who has

bequeathed to it the residue of his estate. His Majesty desires to record his most grateful appreciation of the noble generosity ever displayed towards the fund, and to the hospital world generally, by his old and valued friend."

Hon. Jas. Murdock, following his recent appointment as Dominion Minister of Labor, resigned as Canadian Vice President of the Brotherhood of Railway Trainmen, and has been succeeded by W. J. Babe, whose appointment is effective to July 31, but may be extended at the Brotherhood's convention at Toronto in May. Mr. Babe was born at Cataract, Ont., in 1874, and began railroading on the Michigan Central Rd. at St. Thomas, Ont., in 1895, and has since been employed as brakeman and conductor with the exception that for the past 10 years, while holding rights as a M.C.R., conductor, he has been General Chairman of the Brotherhood of Railroad Trainmen on President of the same organization for the past two years.

C. Murphy, General Manager, Western Lines, C.P.R., returned to Winnipeg, recently, from Hot Springs, Ark., where he had been staying for the benefit of his health.

John Murphy, C.E., Electrical Engineer, Railways and Canals Department, and Board of Railway Commissioners, Ottawa, read a paper before the American Association for the Advancement of Science, Engineering Section, at its recent meeting in Toronto.

Sir Augustus Nanton, of Winnipeg, one of the C.P.R. directors, and Lady Nanton, sailed from St. John, N.B., Jan. 13, by the s.s. Metagama, for Liverpool, Eng.

G. G. Ommanney, who has been appointed Development Engineer, Development Branch, Department of Colonization and Development, C.P.R., Montreal, entered C.P.R. service in 1907, making preliminary reports and surveys regarding the development of the company's lake terminal at Port McNicoll, Ont., and subsequently was in charge of construction there until 1911, when he was placed in charge of exploration and reconnaissance work in connection with harbor developments on the Pacific coast. In 1912 he was appointed Special Engineer to the President, and later was assigned to the duties of Investigation Engineer of the Research Branch of the Department of Colonization and Development, which title has now been abolished, as it is felt that the new title indicates more clearly the nature of the work being carried on by him.

F. W. Peters, General Superintendent, British Columbia District, C.P.R., sailed from Vancouver, early in January, accompanied by Mrs. Peters and his niece, Miss Dorothy Langford, on the s.s. Empress of Russia, for the Orient. The trip is mainly on account of his health, which has been indifferent for about a year, but he will combine business with pleasure, and visit the company's agencies in China and Japan.

W. C. Riddell, who has been appointed Advertising Agent, from Quebec, Que., to Port Arthur, Ont., Canadian National Rys., Toronto, was born at Port Dover, Ont., Oct. 27, 1867, and was for many years in newspaper work at various points in Ontario. He entered railway service in 1902, since when he has been, to July 1918, chief clerk to General Advertising Agent, G.T.R., Montreal; July 1918 to Sept. 1, 1920, Advertising Agent,

Grand Trunk Pacific Ry., Winnipeg; Sept. 1, 1920 to Jan. 1, 1922, Advertising Agent, Western Lines, Canadian National Rys., and Grand Trunk Pacific Ry., Winnipeg.

Brig.-Gen. H. N. Rutan, formerly City Engineer of Winnipeg, who was connected with railway construction work for many years, starting on the Intercolonial Ry. location surveys in 1868, was given his insignia as Commander of the Order of St. Michael and St. George, at Government House, Winnipeg, recently.

Major J. L. Retallack, at one time Manager, Kaslo and Slocan Ry., left Vancouver, B.C., recently, for the Gold Coast, West Africa, to take an appointment under the British Colonial Office.

Robert James Sloane, whose appointment as station ticket agent, Canadian National Rys., Brandon, Man., was announced in our last issue, was born at

ronto, Ont.; Oct. 2, 1907 to Feb. 15, 1909, stockkeeper, C.P.R., West Toronto, Ont.; Feb. 16, 1909 to Oct. 1, 1914, stockkeeper, C.P.R., London, Ont.; Oct. 1, 1914 to Nov. 30, 1916, stockkeeper, C.P.R., Ottawa, Ont.; Dec. 1, 1916 to June 1, 1918, Assistant Division Storekeeper, C.P.R., West Toronto, Ont.; June 1, 1918 to July 25, 1920, store inspector, Canadian Northern Ry., Toronto; Aug. 1, 1920 to Aug. 1, 1921, chief clerk, Stores Department, Canadian National Rys., Leaside, Toronto.

Capt. J. Springett, Agent, C.P.R., Rotterdam, Holland, and a captain of the Royal Army Service Corps during the war, has been gazetted a captain, with seniority from Nov. 24, 1920.

William Sturgeon, Car Foreman, C.P.R., Farnham, Que., was retired on superannuation Jan. 1, after 48 years continuous service, and was presented, by the staff, with a chest of silver.

Roland Edward Swain, whose appointment as Liverpool Passenger Agent, C.P.R., Liverpool, Eng., was announced in a recent issue, was born at Birkenhead, Eng., Feb. 23, 1882, and entered transportation service, Dec. 20, 1894, since when he has been, to Sept. 14, 1898, stores clerk, Engineering Department, Mersey Ry., Birkenhead; Sept. 16, 1898 to Jan. 31, 1903, passenger and freight clerk, C.P.R., Liverpool; May 4 to June 30, 1903, assistant cashier, C.P.R., Liverpool; July 1, 1903 to June 1, 1906, chief cashier, C.P.R., Liverpool; June 2, 1906 to July 31, 1909, saloon passenger clerk, C.P.R., Liverpool; Aug. 1, 1909 to Feb. 8, 1916, clerk in charge, Passenger Department, C.P.R., Liverpool; Feb. 9, 1916 to Apr. 3, 1921, chief clerk to European Passenger Manager, C.P.R., London; Apr. 4, to Sept. 30, 1921, clerk in charge, Passenger Department, C.P.R., Liverpool.

Charles Marshall Walton, who has been appointed Superintendent of Transportation, Eastern Lines, G.T.R., Montreal, was born there, Jan. 24, 1884, and entered G.T.R. service June 1, 1903 as assistant clerk, Stationery Department; Jan. 1 to May 3, 1900, clerk to Superintendent; May 3, 1900 to March 11, 1901, clerk; March 11, 1901 to Oct. 25, 1905, clerk to Superintendent of Transportation; Oct. 25, 1905 to Oct. 20, 1906, out of service; Oct. 20, 1906 to Aug. 6, 1907, timekeeper, Transportation Department; Aug. 6, 1907 to May 1, 1911, clerk, Transportation Department; May 1, to Jan. 21, 1913, car distributor; Jan. 21, 1913 to Nov. 1, 1915, chief clerk, Transportation Department, all at Montreal; Nov. 1, 1915 to Nov. 18, 1917, Assistant Trainmaster, Island Pond, Vt.; Nov. 18, 1917 to Dec. 1, 1918, chief clerk to General Superintendent of Transportation, Montreal; Dec. 1, 1918 to Feb. 1, 1920, chief clerk to General Superintendent of Car Service, Montreal; Feb. 1, 1920 to July 19, 1921, Terminal Inspector, Transportation Department, Montreal; July 19, 1921 to Jan 16, 1922, acting Superintendent of Terminals, Transportation Department, Montreal.

F. L. Wanklyn, C.E., General Executive Assistant, C.P.R., Montreal, has, with some others, retired from the Windsor Hotel directorate there, owing to the control of a majority of the stock having been acquired by D. Raymond, of the Queen's Hotel.

W. H. Winterwood, Chief Mechanical Engineer, C.P.R., gave an illustrated address to the Arconauts Young Mens Club, of Emmanuel Church, Montreal,

Hon. Wm. C. Kennedy, M.P.,
Minister of Railways and Canals.

Winnipeg, March 31, 1893, and entered railway service, March 21, 1911, since when he has been, to Jan. 1913, junior clerk, Passenger Department, Grand Trunk Pacific Ry., Winnipeg; Jan. 1913 to Apr. 1916, ticket clerk, Union Station, Canadian Northern Ry. and Grand Trunk Pacific Ry., Winnipeg; Apr. 1916 to Jan. 1917, ticket clerk, city ticket office, Canadian Northern Ry., Winnipeg; Jan. to June 1917, ticket stock clerk, General Passenger Department, Grand Trunk Pacific Ry., Winnipeg; Sept. 1917 to Dec. 1918, train auditor, Canadian Northern Ry., Calgary, Alta.; March 1919 to Sept. 1920, ticket clerk, city ticket office, Grand Trunk Pacific Ry., Winnipeg; Sept. 1920 to Oct. 1921, chief clerk to District Passenger Agent, Canadian National Rys., Winnipeg.

Ernest A. Snell, whose appointment as stores inspector, Canadian National Rys., Leaside, Toronto, was announced in our last issue, was born at Bath, Eng., June 15, 1880, and entered railway service, June 1, 1907, since when he has been, to Oct. 1, 1907, storeman, C.P.R., West To-

Jan. 13, on how Canadian railways deal with snow removal. He has been elected Vice Chairman of the executive committee of the American Society of Mechanical Engineers' Railroad Division.

John Alfred Yoric, who has been appointed Travelling Passenger Agent, Ocean Traffic, C.P.R., Toronto, was born at London, Ont., May 7, 1872, and entered transportation service in May 1888, since when he has been, to Sept. 1894, assistant ticket agent, G.T.R., Stratford, Ont.; Sept. 1894 to May 1901, assistant ticket agent, G.T.R., Hamilton, Ont.; May 1901 to assistant ticket agent, G.T.R., Buffalo, N.Y.; July 1901 to Jan. 1905, joint ticket agent, C.P.R. and Toronto, Hamilton & Buffalo Ry., Hamilton, Ont.; Jan. 1905 to June 1918, General Agent, Chicago, Burlington & Quincy Ry., Toronto; June 1918 to June 1920, in Traffic Department, Riordon Pulp & Paper Co., Hawkesbury, Ont., Timiskaming, Que.; July 1920 to Jan. 1922, Traffic Manager, Mettagamit Pulp & Paper Co., Toronto.

Henry K. York, who has been appointed General Car Foreman, C.P.R., Moose Jaw, Sask., was born at Victoria Corner, Carleton Place, N.B., Mar. 20, 1881, and entered C.P.R. service in Dec. 1903, since when he has been, to June 30, 1904, car repairing, Fort William, Ont.; June 30, 1904 to Feb. 28, 1905, air brake tester, Fort William, Ont.; Feb. 28, 1905 to May 20, 1906, car inspector, Fort William, Ont.; May 20, 1906 to May 1, 1908, Assistant Car Foreman, Fort William, Ont.; May 1, 1908 to June 30, 1910, Car Foreman, Ignace, Ont.; June 30, 1910 to Apr. 27, 1914, Car Foreman, Kenora, Ont.; Apr. 27, 1914 to Nov. 30, 1917, Car Foreman, Transcona, Man.; Nov. 30, 1917 to March 31, 1918, Car Foreman, Swift Current, Sask.; March 31, 1918 to Dec. 1921, Car Foreman, Alyth, Alta.

The Bad Order Car Situation.

The Railway Association of Canada has issued a statement showing that the total number of cars on Canadian lines for the 15 day period ended Jan. 1, 1922, was 208,025. The allowance for bad order cars on the A.R.A. basis, which assumes a total of 7% of the cars in bad order, works out to 14,562, while the actual number of cars in bad order was 18,966, an excess of 4,404 on the 7% basis. Of surplus cars in good order there were 45,393, making a total number of cars not in use of 64,299, or a total of 49,737 idle cars on the basis of 7% of the cars being in bad order.

Comparing the car performance for the period ended Jan. 1, 1922, with the 15 day period ended Dec. 15, 1921, it is seen that in the period ended Jan. 1, there were 9.12% of the cars in bad order and in the period ended Dec. 15, only 7.85%. The number of surplus cars in good order for the period ended Jan. 1, 1922, was 21.79% of the total cars on line, while for the period ended Dec. 15, 1921, the number of surplus cars in good order was but 15.62% of the total. These figures show that the bad order car situation became worse in the latter part of December than in the first part, and also make it plain that the amount of traffic offering in the latter part of the month was less than in the first part. It would naturally be expected, however, that there would be a greater number of surplus cars on hand in the latter part of the month, on account of the seasonal

falling off which sets in when the bulk of the grain crop has been handled.

While the figure of 9.12% of cars in bad order would indicate that maintenance of equipment fell behind to some extent, Canadian railways are nevertheless in a good position in this connection as compared to the majority of the U.S. railways. Freight equipment was in a worse condition on U.S. railways during all of 1921 than for many years. At the beginning of the year, the cars were still badly scattered following the period of Federal control. The extent to which car ownership was disregarded during that period is indicated by the fact that when the U.S. railways were returned to private operation only 21.9% of the cars were on home lines. At the beginning of 1921 there were 191,000 bad order cars on U.S. lines, representative of 8.5% of the total, and by July 1, 1921, the number had increased to 15.4% of the total. The peak was reached in the middle of August, when the number of bad order cars was 382,440. Some decrease has since taken place and by Oct. 15 the number was down to 354,996, or 15.2%, and at the end of Nov. 1921, the number had been further reduced till only 14% of the total freight equipment remained in bad order.

The financial plight of U.S. railways during 1921 has been described in previous issues of Canadian Railway and Marine World, and our readers will be in a position to form their own opinion concerning the connection between the above noted bad order car record and the financial results attending U.S. railway operation during the past year. It is a recognized fact that, despite all rules, the tendency in car maintenance is to maintain cars better when on the home line, and various suggestions have been put forward having to do with changes in the interchange rules so as to promote better maintenance of foreign cars, but the underlying fact remains that if railways are limited in their net earnings, equipment maintenance is bound to suffer. Although the Canadian railways had 9.12% of their cars in bad order during the period ended Jan. 1, 1922, they were in a fortunate position compared to U.S. railways, but that fact should not be taken as indicating that there is any room for the slackening of the effort to keep bad order equipment reduced to a minimum.

Exchange and Surcharges on International Traffic.—In accordance with the Board of Railways Commissioners' judgment of the order of Jan. 14, 1921, the rates of exchange in connection with the rates of freight between points in Canada and the United States from January 1 to 14, was 4 15/16%, and from Jan. 15 to 31 it was 5 9/16%. The surcharge on the said traffic was 3%. The rate of surcharge on international passenger business from Jan. 1 to 14 was based on 5% exchange, and from Jan. 15 to 31 on 6%.

Railway Cottages Taxable.—The Timiskaming & Northern Ontario Ry. owns a number of cottages at Cobalt, which are occupied by its employees. Hitherto these cottages have been held to be exempt from taxation as being owned by the Crown, but in a recent case, District Judge Hartman decided that the tenants may be assessed on the cottages occupied by them. The Cobalt Town Council will, it is reported, endeavor to collect municipal taxes from the occupants during the year.

Railway Finance, Meetings, Etc.

Algoma Central & Hudson Bay Ry.—The report of the bondholders' committee of the A.C. & H.B.R. Co. and Algoma Central Terminals Co. for the year ended June 30, 1921, states that receipts were \$2,819,892, and net earnings \$159,425. As the amount required to pay full interest on both railway and terminal bonds at 5% is \$753,635, the deficit for the year was \$594,209. The debt brought forward was \$74,488, leaving a balance of net earnings carried forward \$84,937. The company is not in a position to pay interest to either railway or terminal bondholders in respect of the year, \$119,966 has been added to depreciation reserve, making a total of \$836,600, which has been charged to revenue since June 30, 1914.

Canadian Pacific Ry.—The National City Co., New York, offered for subscription in Dec. 1921 \$25,000,000 of C.P.R. 4% coupon consolidated debenture stock at 78, yielding 5.13%. This is a perpetual and non-callable and is secured by a first charge on the entire undertaking, subject to certain priorities. Interest is payable in U.S. gold coin in New York, Jan. 1 and July 1. The issue was oversubscribed quickly.

Cape Breton Coal, Iron & Railway Co. The report for the calendar year 1920 shows a balance at debit of profit and loss of \$703,876, against \$624,058 for 1919.

Board of Railway Commissioners' Traffic Department.—G. A. Brown, heretofore chief clerk, who has been acting as Traffic Officer since the death of Jas. Hardwell in June, 1921, has been appointed Assistant Chief Traffic Officer. His rate of pay, as fixed by order in council of Dec. 5, 1921, is \$3,000 for the first year, advancing \$120 a year for five years until it reaches \$3,600, this being subject to revision on the appointment of a Chief Traffic Officer. Other members of the staff are:—Principal Traffic Clerk, C. E. McManus, annual salary \$1,920, advancing \$120 a year until \$2,400 is reached; senior traffic clerks, F. Lalonde and J. R. Usher, salary \$1,560 a year, advancing \$120 a year until \$1,800 is reached; traffic clerks, L. L. Brethour, A. B. Drum and H. W. Messenger, salaries \$1,200 a year, advancing \$60 a year until \$1,599 is reached. The rates of pay as revised by the Civil Service Commission and approved by order in council of Dec. 5, 1921, are effective from April 1, 1919, as the members of the positions have been performing the duties since that date.

Stimulating Dairying, Etc., in Alberta.—To stimulate an interest in dairying and in the production of bacon type pigs, the Alberta Department of Agriculture arranged with the C.P.R. for the operation of a demonstration train over its lines in the province from Jan. 24 to about March 1. The train carries exhibits of dairy cattle, pigs, etc., and lectures are given at various points every afternoon and evening by lecturers under the direction of S. C. Carlyle, Provincial Live Stock Commissioner.

U.S. Railway Mileage Decreased.—The Interstate Commerce Commission reports that during the year ended Oct. 31, 1921, it authorized the abandonment by 25 railway companies of 701.93 miles of railway, and the construction by 20 companies of 404.70 miles of new lines.

Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,
Marine, Shipbuilding, and Railway, Harbor and
Canal Construction, etc.

Official Organ of various Canadian Transportation
Associations.

Unfounded Attacks on Railway Managements.

It is not long since Ontario's Prime Minister stated in the Dominion general election campaign that the earnings of Canadian Government Railways have a strange way of becoming very favorable just prior to elections, and President Hanna, of the Canadian National Rys., at once made it clear that the Canadian National Rys. net earnings, which began in Aug. 1921, were genuine net earnings, and not "paper" earnings made possible by a skillful manipulation of figures. It seems that the efforts of some people to drag the C.N.R. into politics will never cease, despite the efforts of the management to keep them out, and it also seems that some people derive genuine pleasure from making discouraging statements concerning the results obtained by the high grade railway men who are operating those railways, and who are getting results which, in relation to the difficulties to be overcome, merit praise and helpful encouragement.

The latest "helpful encouragement" given Mr. Hanna was an article in the Toronto Globe of Jan. 21, by a writer styling himself "A student of railway finance," who said: "The official statement for October was encouraging, in that it showed net earnings for the first time by all four divisions of the Canadian National group. That result must, however, be understood in the light of an important qualification. In order to meet conditions of unemployment, the Government authorized the transfer of certain operating expenses from the latter part of 1921 to the year 1922. That was an open channel for shoving ahead charges which properly attached to 1921, and beyond question enabled a more favorable statement to be made for September and October than would otherwise have been possible. For example, it created net earnings which may not be entirely real, and probably were not. It lowered the operating ratio quite materially."

On the strength of this the Globe published an editorial headed "Prosperity by Bookkeeping," the tendency of which was to discredit the Canadian National Rys. management. It would naturally be thought that a newspaper which professes to be such a champion of public ownership would have ascertained the facts before doing this. However, Mr. Hanna replied promptly and said: "What actually happened was this. In view of the widespread unemployment in Canada, and the fact that railway car plants were closed, I made representations to the Government that, instead of handing out cash doles to the unemployed, it would be a good idea to give us the money to spend in effecting repairs to some 2,000 freight cars and thereby provide employment for many men. An order in council, passed Oct. 1921, for this purpose, specifically states: 'It is only fair to the National Railways that any expenditure so incurred shall not be charged against the current year's operating or financing.' As a matter of fact it was not found necessary to make any car repairs other than our regular staff could handle from the date of this order in council until the end of 1921. General in council there was no expenditure on this account during 1921, although such was permitted by the Government if it had been found necessary."

Canadian Railway and Marine World

holds no brief for public ownership of railways, but we have faith in the ability and integrity of the managements of the Canadian railways, and therefore find no pleasure in contemplating the above example of the kind of proposition railway managements are up against. The same article stated that the Canadian Northern, when taken over by the Government, was such that "every total in its annual report placed it at the foot of the list among all the large railways in the world." It also stated: "It was not only unsound in every department, but at every angle it suggested bad administration." We do not know where the "student of railway finance" got this information, but we do know that the old Canadian Northern lines in western Canada were operated just about as efficiently and economically as they could be, having in mind the adverse conditions which inevitably beset a pioneer railway. We do not venture an opinion as to whether the fact of the same person having been the former operating head of the Canadian Northern and now head of the Canadian National Rys. had anything to do with the statement last quoted, but we state as a general principle that the criticisms of executives of publicly owned railways, so prevalent in Canada in late years, is entirely unwarranted and very undesirable. Further, it is to be regretted that criticism is made anonymously. It is not probable that the series of articles in the Toronto Globe excite a great deal of interest except in cases such as the one herein discussed, but if the author of them were to give his name in connection with them, they would carry either more, or less—probably less—weight.

President Beatty's New Year's Message.—E. W. Beatty, K.C., President, C.P.R., issued the following telegraphic message Dec. 31, 1921, "On wishing the officers and employees of the company, and the members of their families, the greatest measure of health and happiness during the come year, may I express the hope that the same good will, co-operation, enthusiasm and loyalty which have marked the career and inspired the success of the Canadian Pacific during the 40 years of its existence will be continued in 1922, and that above and beyond all else, our chief aim be to promote the best interests of the Canadian people, and, by our united efforts and efficient service, accelerate the development and progress of our great Dominion."

The Freight Rates Agitation.—Howard Elliott, Chairman, Northern Pacific Ry., in testifying before the Interstate Commerce Commission recently, said: "The present uncertainties and the constant talk about reduced rates are having a very substantial effect in keeping business back and preventing the employment of labor—much more so, in my humble opinion, than the rates themselves."

Timber Preservation.—There is apparently great room for expansion in the timber preservation business. In the best year the industry in the U.S. ever had, the total material treated, including railway ties, was less than 2% of the timber being used annually in that country, which could have been economically treated.

The Fallacious Cry of High Freight Rates.

By Edwin Winfield, Assistant Editor, Canadian Railway and Marine World.

Ever since the Board of Railway Commissioners granted the railways an increase of freight rates, effective Sept. 1, 1920, and even since the reductions ordered by the Board effective Jan. 1 and Dec. 1, 1921, a great majority of the people and most of the daily newspapers have contended that the rates are killing business, and they have been blamed for under-production, under-consumption, over-production, the low price of wheat and cattle, the high cost of living, unemployment, and practically everything else except possibly the condition of crops and the state of the weather. As an example of this, reference may be made to a Toronto Mail and Empire editorial of Jan. 7, which said, in part:—"The first thing to be done is to bring about a sharp reduction in the freight rates. The producing interests of the country cannot stand the present transportation charges." This statement is typical of the many that are made concerning the freight rate situation. If there is any truth in the statement that freight rates are too high, and are acting as a restraint on the carrying on of the country's commerce, the situation is serious indeed. On the other hand, if the people of this country are harboring an economic fallacy concerning transportation costs, it would be well if it could be shown that such is the case, to the end that the fallacy might be cast aside, and that business might go forward unhindered by the bad psychological effects, which the entertainment of such fallacious ideas inevitably causes. An attempt to determine the truth or fallaciousness of the claim that freight rates are too high will be embodied in this article.

In demonstrating the truth or falsity of any proposition, it is necessary to have some basis on which to proceed. It does not seem unreasonable to take as a basis in this case the relation which freight transportation costs bore to the value of commodities in pre-war times. That freight rates were not unreasonable then and that they were not such as to prevent a satisfactory rate of progress in Canada's agricultural and industrial development is to be found in the fact that in the years preceding the war the country's development proceeded in a satisfactory way, while the people, whether engaged in agriculture or in other industry, enjoyed what may be described as a fair measure of prosperity. If it can be shown that at present the costs of freight transportation do not take from the producer or creator of wealth, individually, any more of his product, as determined on a dollars and cents comparison, than they did in 1913, it is at once evident that the demand made on the country for the payment of freight transportation costs is, proportionately as between the value of the wealth produced in 1913 and that being produced now, no greater than that which the transportation costs borne by the public are no greater today than they were in 1913, in proportion to the value of the products transported, it follows that present freight rates are just as suitable for the existence of economic prosperity in this country as they were in 1913, and that if that economic prosperity is now non-existent, it certainly is not the fault of the present scale of freight rates.

Further, if it can be shown that freight transportation costs are today lower in proportion to the value of products transported than formerly, it immediately follows that if we are not enjoying the degree of economic prosperity we would like to enjoy, it is not because of transportation costs, but on the contrary it is

a few of the rates in effect on the two largest railways of the country with the exchange value of some of the most important commodities used and transported. Let us, first, compare the fluctuations in the wholesale price of practically all commodities, grouped together, with the variation in the average charge per revenue ton mile of freight hauled by the C.P.R.

In the accompanying fig. 1, the line marked A.C. shows graphically the fluctuation in the wholesale price of these commodities. For 1913 to 1918 inclusive, the figures used represent the average of the prices in February, May, August and November. For 1919, 1920 and 1921, fluctuations are given by quarters, with the prevailing price in the middle month of each quarter taken to establish the point on the chart. This line showing price fluctuation is based on the figures dealing with wholesale prices issued by the Dominion Labor Department. The Department's index numbers were based on prices 1890-1899, but by taking the Department's index number for the year 1913 as equal to 100, to form the basis of a new series of index numbers, it has been possible to similarly assign a corresponding index number to the prices in succeeding years. For example, the Department's index number of wholesale prices in 1913, taking the average of May, Feb., Aug. and Nov., was 135.3. Making this 100 as the basis of a new series of index numbers, the Department's index number of 136.7 in 1914 becomes 101 in the new series; the Department's index number of 278.6 in 1918 becomes 206 in the new series, while the Department's index number of 356.6 in May, 1920, becomes 263 in the new series, and so on. By this means, an accurate comparison of prices as between 1913 and succeeding years, and quarter years, is made possible, and this is what is wanted. The line A.C. in fig. 1 shows accurately the fluctuations from 1913 to the end of 1921 on the basis of this true comparison.

The line C.P. in fig. 1 shows the fluctuation in the receipts per ton mile of revenue freight handled by the C.P.R. In 1913 that company was paid an average of seventy-seven hundredths of one cent for hauling one ton of freight one mile. Making that figure equal to 100 as the base of a series of index numbers, the average charge of 0.85¢ per ton mile in 1918 becomes 110; the average charge of 1.05¢ in the third quarter of 1920 becomes 138, and so on. By this means, an accurate comparison of freight rates as between 1913 and succeeding years and quarter years is made possible, and this is what is wanted. While the average freight receipts per ton mile for the last quarter of 1921 are not available at the time of writing, the figure has been approximated on the basis of conditions in the industry and with regard to the rate reduction effective Dec. 1, 1921, and it is felt that the figure is not far out.

By looking at fig. 1 it will be seen that in 1916, when wholesale prices as a whole were 37% above what they were in 1913, C.P.R. rates were 17% less than they were in 1913. In the middle of 1920, when wholesale prices as a whole were 163% above what they were in 1913, the rate decision effective Sept. 13, 1920, had

Fig. 1. All commodities: dry and chemical products, oils.

Fig. 2. Textiles, Brick, and All Buildings Material.

Fig. 3. Wheat and Implements.

Fig. 4. Hogs and Cattle.

in spite of the fact that the demand made by transportation upon our national annual production of wealth is smaller, proportionately, than when we were enjoying that much desired prosperity.

Leaving the discussion of generalities at this point, and coming to a review of concrete facts, some of the fluctuations in prices and freight rates which have taken place between 1913 and the end of 1921 will be examined. Let us compare

not been given, and yet there were men supposed to be rational human beings who went to Ottawa and fought the proposed rate increases, but how they expected a railway to do business when its materials had gone up in price as indicated by the line A.C., and when wages had been advanced proportionately, without some increase in rates, is beyond all comprehension. The lines C.P. and A.C. in fig. 1 show that in the second quarter of 1921, when the average rate was 84% above that of 1913, the wholesale price of all commodities was 82% above 1913. The point worthy of note is that the line C.P. rose up to this point for a few months only, while the line A.C., coming down from the dizzy heights of inflation, happened to temporarily strike the level of the line C.P. But the line C.P. soon got below the line A.C. again, ending 1921 at the level of 157, or 57% above 1913, while the line A.C. shows a wholesale price for all commodities in Nov. 1921 which was 69% above the 1913 level. According to figures presented by Prof. Michell, of McMaster University, Toronto, a recognized authority in these matters, in the Toronto Globe's recent Annual Financial Review, wholesale prices were 1.2% higher in Dec. 1921 than in November.

The line P.O. & G. in fig. 1 shows the fluctuation in the wholesale price of paint, oil and glass, considered as a group, from 1913 to 1921. This line was drawn in accordance with figures compiled in the same way as those for the line A.C., with the Labor Department's figures as the basis. It is worth noting that at a time when the wholesale price of paint, oil and glass was 241% above the 1913 price, C.P.R. freight rates were 36% above the 1913 level. At the end of 1921, the wholesale price of paint, oil and glass was 103% above the 1913 prices, while freight rates were 57% above.

The line D. & C. in fig. 1 shows the fluctuations in the wholesale price of drugs and chemicals from 1913 to Nov. 1921, and was also drawn on the basis of the Labor Department's figures. While inflation was not so pronounced in this line as in the other two, it is evident that the price of drugs and chemicals advanced much more than did the price of freight transportation during and following the war period, and it is also evident that at the end of 1921 the price of drugs and chemicals was 9% greater than the price of freight transportation on the 1913 basis.

In fig. 2, the line Tex shows the fluctuations in the prices of 20 lines of textiles, including woolsens, cottons, silks, jutes, flax products and oilseeds. In May, 1920, these prices were 221% greater than they were in 1913, while freight rates were 36% greater. At the end of 1921 the wholesale price of textiles was still 20% higher than the average C.P.R. freight rate on the 1913 basis. The difference in the amount of inflation in textile costs and transportation costs during and after the war is astonishing, and the same remark applies to practically every class of articles of human consumption as compared to freight transportation.

The line A.B.M. in fig. 2 shows the fluctuation in the price of all building materials. This line is drawn on the basis of figures furnished by the MacLean Building Reports, of Toronto, which were checked with the Labor Department's figures and found to practically coincide. The prices figured on include

those of several kinds of lumber, brick, cement, paint, roofing and 18 lines of building accessories. In the second quarter of 1920, when the cost of all building materials was 178% above the 1913 cost, the average C.P.R. freight rate was 36% above the 1913 rate, and at the end of 1921, the cost of building materials was 36% higher than the average C.P.R. freight rate, on the 1913 basis.

The line B in fig. 2 shows the fluctuations in the price of brick. This line also was based on figures compiled by the MacLean Building Reports, with the

brick in the last quarter of 1921 was much higher on the 1913 basis.

Now let us take a few specific commodities, and compare the fluctuations in their prices with the fluctuations in the freight rate applying to the movement of each individual commodity. In this process, it will be made plain that the agricultural interests of the country are the only ones with any excuse for complaint in connection with railway rates, so far as the few commodities chosen, and taken at random, will indicate. That is to say, they have some reason for complaint if the fact of rates having become relatively slightly higher than the prices of some of their products during the last few months, after the price of all their products had been relatively much higher than rates for the last few years, will afford any basis of complaint against rates. It is true that Canadian farmers are badly situated economically at this time; it is obvious that a restoration of their purchasing power is needed to restore good business conditions in this country. The railways know this well, and have made all the concessions in rates in favor of the farmers which it is possible to make. A little clear thought will show that there is a lot of deflation needed in things other than transportation costs to set things right.

The line W in fig. 3, representing the fluctuation in the price of no. 1 northern wheat at Winnipeg, is drawn from figures supplied by the Canadian Bank of Commerce statistical department, with the price in 1913 of 88c. a bushel, as equal to 100 for the base of the system of index numbers. In 1914 the price was \$1, making the index number 114; in 1918 and 1919 the price ran at \$2.22, making the index number 252, and in 1920 the price got up to \$3.15, making the index number 358. But freight rates did not increase by 258%. The line R.W. in fig. 3 shows the fluctuations in the rate on wheat. To begin with, the rate in carloads, Regina, Sask., to Port Arthur, Ont., was 18c. per 100 lb. Equating this to the index number 100, on June 1, 1918, after the price of wheat had gone from 88c. to \$2.22 a bushel, the rate was raised to 20c. per 100 lb. by the Board of Railway Commissioners' general order 212 (C.R.C. tariff W-1976, C.R.C. W-1059), making the index number for the purpose of constructing the line R.W. in fig. 3 equal to 111. On Aug. 12, 1918, the rate was increased by order in council 1863 to 24c. (C.N.R. tariff W-2135, C.R.C. W-1142); on Sept. 13, 1920, by the Board of Railway Commissioners' general order 308 the rate was increased to 32 1/2c. per 100 lb. (C.N.R. tariff W-2198, C.R.C. W-1164); on Jan. 1, 1921, the rate was reduced, by the terms of the same order, to 31c. per 100 lb. (C.N.R. tariff W-183, C.R.C. W-129), and on Dec. 1, 1921, by the Board of Railway Commissioners' general order 350, the rate was further reduced to 29c. per 100 lb. (C.N.R. tariff W-183, supp. 12, C.R.C. W-129). The line R.W. shows all these rate changes.

A comparison of the lines W. and R.W. tells the whole story. While, on the basis of price and rate relationship as of 1913, the price of wheat was about 150% higher on the average than the rate on wheat, during 1918, 1919 and 1920, it is seen that in the latter part of 1921 the price line fell a little below the rate line. After three months of this condition, following seven years and nine months of the reverse condition, the Canadian Coun-

price in 1913 made equal to 100, the price in the first half of 1921 was equal to 204, and it is evident that the average cost of freight transportation was never advanced in proportion to the cost of brick. As a matter of fact, the rate on brick itself has been advanced more in proportion to the advance in the cost of the commodity, but so far as the average freight rate is concerned, the price of

oil of Agriculture, as shown by the passing of a resolution at a recent meeting in Winnipeg, wants to practically throw out the Board of Railway Commissioners and make all the railways of this country the instrument of politics.

The line I in fig. 3 shows the fluctuation in the price of implements from 1913 to Nov. 1921. Labor Department statistics covering various classes of implements form the basis for this line, the index numbers being determined in the same way as for the commodities in figs. 1 and 2. In Nov. 1921 the price index number for implements was 132% greater than in 1913. The line R.I. shows the fluctuation in the rate on implements per 100 lb. from Toronto to Winnipeg, with the rate of 64c. in 1913 equal to 100. The rate changes have been as follows:—Sept. 1, 1914, rate 62c. (C.N.R. no. E-550, C.R.C. no. E-485); Sept. 1, 1917, rate 63c. (C.F.A. 5, C.R.C. 4); April 1, 1918, rate of 68½c. (C.F.A. 5-A, C.R.C. 8, general order B.R.C. 212); Aug. 20, 1918, rate 82½c. (C.F.A. 4-B, C.R.C. 16, order in council 1863); Sept. 1, 1919, rate 67½c., a voluntary reduction by the railways (C.F.A. 5-B, C.R.C. 19); Sept. 20, 1920, rate 92½c. (C.F.A. 5-C, C.R.C. 52, general order B.R.C. 308); Jan. 1, 1921, rate 68½c. (C.F.A. 5-A, C.R.C. 8, general order B.R.C. 308); Dec. 1, 1921, rate 82½c. (C.F.A. 5-E, C.R.C. 88, general order B.R.C. 350). The line R.I. shows all these changes, and the lines R. and R.I. show that while the Canadian National Rys. rate on implements was 29% greater at the end of 1921 than in 1913, the price of implements was 132% greater than in 1913.

In fig. 4, line H shows the fluctuations in the price of hogs, fed and watered, at Toronto, and the line C shows the price of cattle, choice butchers, at Toronto, from 1913 to the end of 1921, and the Canadian National Rys. rate on same, Winnipeg to Toronto. Canadian Bank of Commerce statistics form the basis of the lines H. and C., with the price of \$6.99 per 100 lb. for 1913 cattle, and \$9.06 per 100 lb. for 1913 hogs used as 100 in the index numbers supporting the lines. The line R.H.C., showing the fluctuation in the freight rate, is based on the rate of 60½c. per 100 lb. Winnipeg to Toronto in 1913, and all rate changes are shown by the line. It will be seen that the prices of hogs and cattle were relatively higher than the rate on them, on the 1913 basis, until the last quarter of 1920, when the rate became relatively higher. The last rate change was a voluntary reduction made by the railways Aug. 15, 1921, reducing the rate from \$1.05 to 85c. per 100 lb. (supp. 37 C.N.R. tariff W-1595 C.R.C. no. W-861), showing that the railways were willing to take a loss to help out the national live stock industry, whether anyone else was or not. At the end of 1921, the rate was 40% higher than in 1913, the price of hogs was 16% higher, and the price of cattle 11% lower.

In fig. 5, line F. shows the fluctuation in the wholesale price of furniture, and the line R.F. shows the fluctuation in the C.N.R. rate on furniture in carloads per 100 lb. from Toronto and Ontario points to Winnipeg, with the rate of 83c. in 1913 as equal to 100. The line F. is based on the Labor Department's figures, with the 1913 figure equal to 100. The highest rate was \$1.55½, effective Sept. 17 1920 (supp. 10 C.F.A. tariff 4-B, C.R.C. 16, B.R.C. general order 308). This rate was reduced to \$1.50 Jan. 1, 1921, and

to \$1.38½ Dec. 1, 1921, leaving it 66% higher at the end of 1921 than in 1913. The wholesale price of furniture, after being up almost out of sight for two years, had come down somewhat, but at the end of 1921, was 145% greater than in 1913.

Fig. 6 tells the story about coal. The line A starts in 1913 with the wholesale price of egg anthracite in Montreal of \$6.74 equal to 100, and finishes at the end of 1921 with the price of \$13.13 a ton equal to 195. The line B starts in 1913 with the average price of screenings, pea and nut bituminous f.o.b. Nanaimo, B.C., of \$4.19 a ton, equal to 100,

Montreal 95% higher.

In fig. 7, the line L. shows the fluctuations in the wholesale price of lumber, based on the Labor Department's statistics, with the average of Feb., May, Aug. and Nov. in 1913 of 180.6 equal to 100 as the basis of the new series of index numbers. In May 1920, the Labor Department's index number of 533.9 is equivalent to 295 in the index number series supporting the line L. The line R.L. shows the fluctuation in the rate on lumber in carloads from Vancouver, B.C., to Montreal, Que., with the rate of 70c. (C. P.R. tariff W-3380, C.R.C. W-2061) in 1913 equal to 100. On Sept. 21, 1920

Expecting too much of him.

"Excuse me, lady, that's a hefty load to ask a guy to carry in one trip."—Reproduced from Toronto Globe.

and finishes with the price of \$7 a ton at the end of 1921, equal to 167. The figures for coal prices are from information supplied by the Canadian Bank of Commerce statistical department. The line R.A.B. shows the variation in the rates on anthracite and bituminous coal from Buffalo, Black Rock and Suspension Bridge, N.Y., to Brantford, Ont.; the rate of 70c. as shown by G.T.R. tariff C.C. 21, C.R.C. 2534 in 1913, being taken as 100, and the rate of \$1.25 as shown effective in 1921 by G.T.R. tariff C.C. 76, C.R.C. 4327 figuring out to 178. While the rate at the end of 1921 was 78% higher than in 1913, the price of bituminous f.o.b. Nanaimo was 67% higher, and of anthracite in

(supp. 21 to C.N.R. W-2156, C.R.C. W-1157) the rate was \$1.06½, equivalent to an index number of 152. A voluntary reduction was made by the railways on April 21, 1921 (C.N.R. W-150 B, C.R.C. W-148), which brought the rate down to 95c., and a further voluntary reduction on Dec. 27, 1921 (C.F.A. 113, C.R.C. 30) brought the rate down to 90c., leaving it but 28% greater than in 1913, while the wholesale price of lumber remained 81% greater than in 1913.

Some may object to taking 1913 as the basis of comparison, as between freight rates and commodity costs, but if so they should realize that the further back a year is taken for the basis of comparison,

the more in favor of present freight rates will the comparison be. It may be said that back in 1905 the country was undergoing favorable development, that the people enjoyed prosperity, and that the costs of transportation, in view of these facts, were reasonable. If the costs of transportation at present are as low in relation to the cost of living now as they were in 1905, it is evident that transportation is not now putting a greater tax on industry than it was then. Fig. 8 shows a comparison of the cost of living and the C.P.R. receipts per ton mile of revenue freight handled from 1910 to the end of 1921, on the 1905 basis. The cost of living figures are from the Labor Department, and cover the costs of food, fuel, lighting, rent, etc., for a family, averaging the prices in various cities. In Dec. 1905, the family budget was \$10.50 a week; making this equal to 100, the figure of \$12.79 in 1910 was 122, the figure of \$26.60 in Aug. 1920 was 253, and the figure of \$21.60 in Nov. 1921 was 206. The average receipts per revenue ton mile of freight handled by the C.P.R. during a year before, and a year after Dec. 1905, was three quarters of a cent. Making this 0.75c. equal to 100, the receipt of 0.77c. in 1910 was 102, while the approximate receipt of 1.208c. in the last quarter of 1921 was 161. That is to say, while the cost of living in Canada at the end of 1921 was 106% greater than in 1905, the average C.P.R. freight rate was only 61% greater than in 1905.

It is desirable that freight rates in Canada be low, and so far as the general level of freight rates is concerned, they are low. It is possible for freight rates to be made too low; they were so made in the United States over a period of years, and the result was a great ultimate loss to the people of that country. After all is said and done, after proper wages and a proper return to capital are figured on, there are only two things which can give this country lower transportation costs. The first is increased efficiency in railway operation; the second is greater population, and consequently increased traffic for the railways. So far as increased efficiency in operation is concerned, it may be stated that operation is now highly efficient in so far as the handling of the existing facilities is concerned; increased efficiency in operation great enough to be of importance can be obtained only by making capital expenditures for the improvement of the properties, or for the adoption of economy devices or of more economical equipment as they are developed and appear from time to time. If rates are too low, the ultimate result is that these capital expenditures cannot be made. Rates, considered in relation to expenses, are now dangerously close to the line, the crossing of which means ultimate national loss. So far as increased population and greater traffic are concerned, the railways are doing their share in making this possible, creating prosperity, and eventually, lower transportation costs, for the people who now accuse them of charging too high rates.

While rates generally speaking are low, the agricultural interests are not without justification in their complaint, and those settlers who are getting out pulpwood are in the same class as the farmers in this connection; pulpwood is their main "crop" in the early years. It is questionable whether a reduction in transportation rates will have any effect in creating additional demand for the

product of any industry, but the view is not unreasonable that, it being finally decided that the railways could stand a small reduction, the 10% rate reduction of Dec. 1, 1921, should have been made in favor of these basic products, ultimately having a beneficial effect on industry throughout the whole country by thus contributing to the restoration of the purchasing power of the producers of such commodities into line with that of other classes, instead of being spread out so thinly that the saving has been absorbed, in many cases, before goods reach the ultimate consumer, with no appreciable advantage to any producer.

It has seemed to many that rates have been too high because they were increased, not when they should have been, but after commodity prices had reached and passed their maximum. To others they seem too high merely because they are subject to governmental regulation, while

prices are not. But to say that freight rates as a whole are too high, and are killing business, is to make a statement absolutely without foundation; it is an economic fallacy, pure and simple. The Canadian people are today paying a smaller average sum per unit of freight transportation bought, in proportion to the exchange value of the commodities transported, than in 1913, or in any time prior to 1913. The impression that freight rates are in any way responsible for business depression is due solely to the psychological effects of a combination of circumstances, and is wrong. In relation to costs and prices generally, freight rates are entirely reasonable, and it is time that the economic fallacy which represents freight rates as hampering business be placed on the scrap pile with the idea that the earth is flat, and the other fallacies and exploded theories of the past.

The United States Railways' Financial Position.

U.S. railways, as a whole, still continue to earn a net operating income lower than that prescribed by the Transportation Act. The nearest approach to the 6% maximum return was in Oct. 1921, when the earnings were at the rate of 5.4% annually. In that month the net operating income slightly exceeded \$105,000,000. Although October is usually a month of heavy traffic in the U.S. as in Canada, and although traffic was increased in Oct. 1921 by the strike threat, the number of ton miles of revenue freight handled by the railways was less than in any October since 1916, and 14% less than in Oct. 1920. Total operating revenues for the month were \$535,135,000, a decrease of over 16% from Oct. 1920; but total operating expenses, \$397,000,000, were 24% smaller, resulting in an improved net. The operating ratio was 74.2, compared with 82 in Oct. 1920. In Nov. 1921, U.S. roads had a less favorable month than in Oct. 1921, the net operating income being approximately \$66,000,000, representative of an annual return of 3.9%. With the removal of the strike threat, traffic fell off to a larger extent than it usually does. Total operating revenues were \$465,000,000, a decrease of 21.4% from Nov. 1920, but operating expenses, \$368,000,000, decreased 28.4% from Nov. 1920. The net operating income for the month was over \$37,000,000 short of the amount which should have been earned to allow the railways the return prescribed by the Transportation Act. In November, 49 class 1 roads had operating deficits, and the operating ratio for the railways as a whole was 79.06.

For the first 11 months of 1921 the net operating income was \$561,411,608, representative of an annual return of 3.3% on the value of the railways, as determined by the Interstate Commerce Commission for rate making purposes under the act. To earn at the rate the Transportation Act prescribed, the net operating income should have been \$464,605,000 greater.

Details have been given in Canadian Railway and Marine World of the funding legislation in connection with U.S. railways which had passed the House of Representatives but which had been held up in the Senate. After considerable argument in the Senate concerning amendments, one being that the bill

should not be passed unless the railways put into effect the reduction in grain rates ordered by the Interstate Commerce Commission, and another that no railways be given the benefit of the legislation while having contracts with foreign shipping lines, the bill was shelved for some time, and efforts to secure its passage now seem to have been abandoned. The agricultural interests represented in the Senate were greatly opposed to its passage.

According to a report of J. C. Davis, Director-General of Railroads, the U.S. Government owed the various railways on Dec. 1, 1921, a total of \$750,670,589, on accounts growing out of Federal control, while the railways owed the Government \$507,628,508 on account of unfunded additions and betterments made by the Railroad Administration, a balance in favor of the railways of \$243,042,080. At that time, the report stated, the Railroad Administration's available cash assets were \$152,380,880, but it holds equipment trust certificates which could be sold in the open market, the proceeds from such sales being available for settlement of railway claims. Over \$100,000,000 worth of these securities have already been sold, and if the balance could be sold the Railroad Administration would be enabled to meet all its obligations to the railways, provided, of course, none of the remaining debt of the railways is funded instead of being set off against the debt of the Government to the railways. With the funding legislation defeated, the prospects are that railways owing the Government for additions and improvements made by the Railroad Administration during the period of Federal control will have to issue their own securities to enable them to enable them to complete their settlements, although it is probable that in some cases some of these debts owed by the railways will have to be funded by the Railroad Administration, which will dispose of the securities without dealing with the War Finance Corporation.

\$429,808,649 has been paid by various U.S. railways on account of the guarantee applying to the 6 months period following the period of Federal control, and it is estimated that an additional \$105,000,000 will be required to settle all claims which originated in this period alone.

Steam Railway Operating Revenues, Expenses and Other Statistics for October, 1921.

The following comparative table for October, 1921 and 1920, has been arranged in Canadian Railway and Marine World's office, from information supplied by the Dominion Bureau of Statistics' Transportation Branch.

The figures in the column headed "All railways," include all steam railways with an annual operating revenue of \$500,000 and over, except the St. Lawrence and Adirondack Ry., which is not able to give the 1920 figures, and is therefore being omitted from 1921 reports, as its inclusion would not show a true comparison. The 1921 figures, however, will

be available for comparative purposes for 1922.

The column headed "Canadian Government," includes the Intercolonial, Prince Edward Island, National Trans-

continental and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government and added to the Canadian National Rys.

The column headed "Canadian Northern," includes the lines operated as the Canadian Northern Ry. System, prior to

its acquisition by the Dominion Government.

The column headed "Canadian Pacific, etc.," includes also the Montreal and Atlantic, and Esquimalt & Nanaimo Rys.

The column headed "Grand Trunk" includes its Canadian lines only up to Sep-

tember. The October figures are for all the company's lines. The revenues of these additional lines located in the United States averaged for the first nine months of 1921 less than one third of 1% of the revenue for October. Their inclusion will, therefore, have little effect on the report.

The Railways' Operating Results for October, 1921.

The figures of Canadian railway operation in Oct. 1921, show the kind of results the railways are able to obtain when they are afforded a volume of traffic which is more nearly in proportion to their carrying capacity than that which they had been securing in preceding months. On a volume of traffic almost as large as that handled in Oct. 1920, the gross operating revenues were necessarily reduced because of rate reductions, the reduction in revenue for all railways being about 12%, but a larger reduction in expenses resulted in greatly improved net earnings. Freight revenue decreased slightly more than \$4,000,000 for the railways as a whole, all the railways experiencing a decrease except the Grand Trunk Pacific, which had a very substantial increase. Passenger revenue decreased considerably, owing to a large reduction in fares and also decreased travel.

Operating expenses for the railways as a whole decreased 19%; good reductions were made in maintenance of equipment and maintenance of way and structures, but the most outstanding reduction was in the transportation account. Even with allowances made for the inclusion of somewhat over \$1,000,000 back pay in the Oct. 1920 expenses, the reduction in transportation expenses for the railways as a whole from the Oct. 1920 level is particularly gratifying. The reduction in maintenance expense does not reflect any restriction of maintenance as compared with the 1920 basis, the lower wages and decreased material prices prevailing, adequately accounting for the smaller sum spent in Oct. 1921. The operating revenues decreased, owing to lower rates and therefore benefited the country, while the decreased operating expenses were of great benefit to the railways which serve the country, resulting in an operating ratio of 79.10 for all railways, by far the best figure which has been attained since Jan. 1921.

The most noticeable thing in the operating statistics is the relationship between revenue ton mileage and freight train miles, and a little examination will show that operation in Oct. 1921 improved over that of Oct. 1920, for with a decrease in revenue ton mileage of less than 1%, train mileage decreased 4%. Total train mileage decreased 6%. A great aim in efficient railroading is to move the maximum number of ton miles in the minimum number of train miles, and the figures quoted show that Canadian railways have been obtaining improved results.

Passenger traffic for all roads was much lighter than freight traffic during the month, on the Oct. 1920 basis. As the freight traffic increase was largely seasonal, however, it must be recognized that passenger traffic was extraordinarily light, and it is probable that the figures covering passenger traffic more accurately convey an idea of the traffic trend than do the freight traffic

figures. Revenue passenger mileage decreased 16.8% from Oct. 1920. The total pay roll for Oct. 1920 included \$1,141,889 of back pay, but after deducting that from the Oct. 1920 figure, it is evident that the pay roll for Oct. 1921 represents a large decrease. While the greater part of this decrease is accounted for by the wage cut of July 16, 1921, the wage cut does not account for all of it, the remainder being accounted for by economy in maintenance and in operation.

The improvement evident in the train mileage figures is supported by the figures for freight train loading, which show that a substantial increase was secured in the number of revenue tons of freight per train, and also by the figures for cars per train, there being an average of 1.3 more cars hauled per train than in Oct. 1920. Despite the greater revenue tonnage in individual freight trains, the freight receipts per train mile decreased, but this was to be expected, owing to decreased rates, the average receipts per revenue ton mile being reduced from 1.166 to 1.055. Receipts per passenger train mile show a much greater falling off, accounted for not only by the fare reductions, but by the decrease in passengers carried per passenger train mile. The average receipts per passenger mile decreased 11.4%.

October was the first month in which the Canadian Government Rys. carried operating expenses. While revenues were smaller than in Oct. 1920 by 20%, expenses were decreased materially, and an operating ratio of 92.68 resulted. The ratio of 90.59 for the Canadian Northern was slightly higher than for Sept. 1921, but well below that of Oct. 1921. The large increase in freight traffic dwarfed the small decrease in passenger traffic into insignificance; incidentally, the larger freight traffic offering, allowed much better car loading and train loading, which goes far to explain the remarkable improvement made in C.N.R. operating in Oct. 1921, compared with Oct. 1920. The operating ratio of 69.56 for the Canadian Pacific was the best since the beginning of 1921; and its figures for the month were reviewed in Canadian Railway and Marine World for January, pg. 12. The detailed figures of operating expense show that maintenance was well kept up during the month as compared to 1920, while the decrease in transportation expenses was large.

Freight traffic on the Grand Trunk was almost equal to that of Oct. 1920, but passenger traffic fell off about 6.5%, which, in conjunction with reduced rates, meant a considerable falling off in revenue, but with the reduction in operating expenses, the operating ratio was decreased from 89.14 to 87.08.

The greatest improvement of all was on the Grand Trunk Pacific. Contrary to the predictions that this property would not be able to pay operating ex-

penses within the next 20 years, the G.T.P. in Oct. 1921 had an operating ratio of 94.38 and net operating revenue of \$120,712. This was accounted for by an increase in freight traffic of 33%, which, combined with a slight increase in the average freight rate, brought about an increase in freight revenue of over 40%. The average receipt of 0.769¢ per revenue ton mile is low compared to the average on other railways, but this is explained by the class of traffic handled. The passenger traffic on this road increased by 5%, but the lower passenger rate caused a decrease in passenger earnings of 7%. Transportation expenses increased about 20%, but this was not nearly so large proportionately as the increase in the amount of traffic handled, and with a substantial decrease in maintenance expenses, total expenses decreased 6%, resulting in the comparatively favorable operating ratio noted.

Leaving the review of a single month's operations as this point, and viewing the whole subject of Canadian railroading broadly it would be idle to maintain, merely on the basis of the October results, that Canadian railways, taken as a whole, have permanently reached an almost self-supporting basis. It must be recognized that October is the best traffic month of the year, and that the grain traffic which contributes so largely to the freight movement can be handled in heavy trainloads, making for economical operation. With some contraction in traffic in following months, accompanied by the reduction in rates effective Dec. 1, 1921, such good operating ratios as those secured in October cannot logically be expected. The October results do make plain, however, that with good traffic Canadian railways are able to do a lot better than with the comparatively light traffic experienced during preceding months. The results on the National lines show conclusively that even in traffic is all that is needed to make them able to pay their way; they have shown the ability to handle the traffic economically once it is secured. Before the railways as a whole can be permanently on a sound financial basis, however, it is probable that some further reduction in expenses will be necessary to balance the recent cut in rates as it cannot be expected that a permanent increase in traffic will be sufficient to move the future to compensate the railways for this loss in revenue.

Certain observers have expressed a great measure of dismay in connection with the performance of Canadian railways during 1921, to the end of October, but taken on the whole there seems no justification for great pessimism. It must be recognized that the year was a difficult one for every line of business, and it is probable that the railway industry has come through the deflation which has so far taken place in as good shape as any other industry. The year has seen a substantial reduc-

tion in expenses brought about; it has seen the Canadian Pacific with better net earnings than in 1920, even though not as large as in preceding years, and not as large as they well might be, having in mind the necessity of extending railway facilities which will face Canada in the future; and it has seen the Canadian National Rys. with net earnings in place of the large operating deficits of the past. It must be borne in mind that the expectation concerning Canada's newer railways has been that they would not be commercially self-supporting for some time, and the fact of their securing net earnings in some

months in 1921 is therefore gratifying. Taken on the whole, maintenance conditions are good, the proportions of cars and locomotives in bad order is not abnormally high, and the track, generally speaking, is in good condition. While undoubtedly 1921 was a year in which strict economy had to be exercised in the Canadian railway industry, the fact remains that it was a year in which much economy had to be exercised in any business undertaking with which tentative agreements, and while undoubtedly the recent rate reduction, without compensating expense reduction, does not help the situation any from a purely railway viewpoint,

we can see no reason for viewing the situation pessimistically, or for attempting to picture, for the benefit of all who care to look, Canadian railways as surrounded by a cloud of blue ruin. The past has been hard, and there will be more hard going in the future, but Canadian railways may be looked to to grow and prosper, and to serve a growing and prosperous country, altogether independently of any pessimist who, by painting a black picture of the Canadian railway industry, cannot fail to produce in the minds of those who gaze upon it an equally black picture of the country and of its future.

Railway Wages and Working Conditions in Canada and the United States.

The Canadian Association of Railway Enginemen is a new organization formed recently among Canadian National Rys. locomotive men. Its headquarters are in Winnipeg, the officers being: President, W. B. Best, formerly General Chairman of the Brotherhood of Locomotive Engineers' C.N.R. membership; Vice President, Jas. McLeod, Dauphin, Man.; Vice President and Insurance Secretary, S. E. White, Montreal; General Secretary, S. T. Starr, Winnipeg. The membership is stated to be now about 500. The reason for the breaking of international ties by the formation of this purely Canadian organization is that the former members of the Brotherhood of Locomotive Engineers who joined it were dissatisfied because they could not settle their disputes without appealing to the B. of L.E. headquarters in the United States. Mr. Best had previously withdrawn from the B. of L.E. because of differences with grand lodge officers.

The Railway Association of Canada, representing the member railways, early in January acquainted the representatives of the railway shopmen and conductors of the organizations making up the American Federation of Labor, Railroad Department Division 4, with its desire to make standard the rates of pay agreed upon tentatively following the application of the 1921 wage reductions. The Railway Association's attitude was that it was undesirable for the employees to continue working at rates which were but tentative, and that conditions were such that it was advisable to have the present rates incorporated into the existing schedules. Following the announcement by the Railway Association, the matter was put to a vote of all the employees concerned, about 30,000 in number, and including machinists, boiler-makers, blacksmiths, electrical workers and sheet metal workers. The result of the vote was that the majority of the shopmen agreed to accept the wage cut of 12 1/2%, amounting to 8c an hour, which has been in effect on Canadian railways since July 16, as permanent. The vote was taken among the membership of the various organizations and final compilation was in the hands of Chas. Dickie, Secretary of the American Federation of Labor, Railroad Department, Division 4. The agreement by which the reduction was accepted as permanent does not involve any changes in rules or working conditions, but merely incorporates the present rates into the schedule under which the employees of the various railways are now working, with such rate subject to further enquiry on 30 days notice from either the railways or the

employees.

Similar action was taken by the railways in connection with the five organizations with which tentative agreements concerning wages had been drawn up previously, as described in Canadian Railway and Marine World from time to time. The organizations concerned were the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen and Enginemen, the Order of Railway Conductors, the Brotherhood of Railroad Trainmen, and the Order of Railroad Telegraphers. In a conference at Montreal about the middle of January, the joint conference committee representing these organizations met railway representatives, and the following agreement was signed: "It is agreed between the above named railway companies (the C.P.R., Can. Nat. Rys., G.T.R. lines in Canada, and T.H. & B.R.) and their employees in engine, train and telegraph service, that the rates of pay made effective July 16, 1921 (Aug. 1, for telegraph engineers and firemen on the G.T.R.), and existing schedules of rules governing working conditions, shall continue in effect subject to 30 days notice, excepting where existing agreements show a longer period, from either the railways or their employees named herein, to the other. The terms of the agreement dated Oct. 8, 1921, in so far as that agreement affects working conditions and the effective rates of pay, shall continue in effect. It is understood and agreed that the rates provided for by this agreement shall be inserted in existing schedules on the individual railways party to this agreement, to govern the several classes of employees named herein. It is further understood and agreed that, based on the number of positions, the amount arrived at in the aggregate will be applied to adjust the rates for the same number of positions of agents and operators, assistant agents, and train dispatchers, respectively, on each general superintendent's district, as may be agreed upon mutually by the district officers and representatives of the employees. For line-men the rates will be similarly adjusted between the superintendents of telegraphs and representatives of the employees. The decrease applying to assistant agents in the so-called tentative agreement appears to be greater than the wage order which has been used by the railways as a basis for this decrease would show. This matter will be adjusted between the managements and representatives of the men concerned."

The agreement was signed for the C.P. R. and T.H. & B.R. by Geo. Hodge, As-

sistant to Vice President, Eastern Lines, C.P.R.; for the Canadian National Rys., including the Grand Trunk Pacific Rys., by A. J. Hills, Assistant to President, C.N.R.; for the Grand Trunk by C. E. Needham, Assistant to General Superintendent, Motive Power and Car Departments, G.T.R.; for the Brotherhood of Locomotive Engineers by Ash Kennedy; for the Brotherhood of Locomotive Firemen and Enginemen by G. K. Wark; for the Order of Railway Conductors by S. N. Berry; for the Brotherhood of Railroad Trainmen by W. J. Babe; for the Order of Railroad Telegraphers by M. J. Mein, and for the employees' conference committee by W. G. Chester, chairman. The effect of the agreement was merely to incorporate the reduced rates of pay into the existing schedules, with the usual proviso that both rates and rules may be given further consideration after the expiration of 30 days notice by either party.

The maintenance of way employees having accepted the reduced rates of pay as permanent some time previously, and other employees' organizations having done so above mentioned, the situation now is that all the railway employees' organizations in Canada have entered into agreements recognizing the reduced rates as permanent, except the Canadian Brotherhood of Railway Employees. Details of how this organization signed an agreement with the G.T.R. concerning wages, only to afterwards reject the terms of the agreement, were given in a previous issue of Canadian Railway and Marine World. According to a recent statement by A. R. Mosher, Grand President of the Brotherhood, the members of his organization are "still working on the 1920 schedule, subject to the 12 1/2% wage cut which was put into force last July, but are still pressing for a modification of the 12 1/2% cut for the poorer paid grades." Details of the arbitrations covering the wage relations between members of this organization and the G.T.R. and Canadian National Rys. were also given in previous numbers of Canadian Railway and Marine World. Further action to be taken by the Brotherhood regarding wages will be decided, according to Mr. Mosher, at the meetings of the general committees for the G.T.R. and Can. Nat. Rys. memberships respectively, which were scheduled for the last week in January.

Canadian Railway Board of Adjustment has heard and decided a few disputes recently. A case heard in Montreal Dec. 20, 1921, concerned a disagreement between the G.T.R. and the Brotherhood of Maintenance of Way Employees

and Railway Shop Laborers, over the method of paying signal maintainers in Toronto terminals. The employees contended that the payment of signal maintainers was governed by wage agreement 5, sec. 22, clause E, and the company contended that it was not for the reason that signal maintainers are not in road service. The employees' contention was upheld.

A case, also heard at Montreal Dec. 20, 1921, concerned a dispute between the G.T.R. and the Brotherhood of Maintenance of Way Employees and Railway Shop Laborers, in connection with the payment of crossing watchmen at Hamilton, Ont., for Sunday work. The company claimed it could have the work performed on Sunday by the regular man, or another if it so desired, and that some of the men had requested to be allowed to work on Sunday at straight time. The employees contended that this was a violation of the agreement, which prescribed time and one half for Sunday work. The decision was that crossing watchmen who worked on Sunday without being allowed a day off during the week be paid time and one half for such work, and be paid back time at this rate from the date when crossing watchmen were included in the schedule agreement.

A case heard in Montreal Dec. 20, 1921, concerned a dispute between the G.T.R. and the Brotherhood of Railroad Trainmen, over wages paid train baggage-man H. B. Thompson, who was held in his car after arrival at Point Edward dock for 85 minutes on one occasion and an hour on another occasion. The company contended that since the baggage-man had been paid during the whole day in accordance with schedule art. 3, clause B, he had been sufficiently paid, but the employees contended that he should have been paid extra compensation for being required to remain on duty after the completion of the trip, as set forth by rule 11 of the Trainmen's agreement. The employees' contention was upheld.

A case, heard at Montreal, Dec. 22, 1921, concerned a dispute between the C. P.R. and the Order of Railway Conductors, in connection with the discharge of trainman Bottrous for violation of rule G. The employees' application for his reinstatement was denied.

All decisions were signed by Geo. K. Wark, Chairman of the Board, and Geo. Hodge, Vice Chairman.

United States.—A development worthy of note in the wage and working conditions situation in the U.S. was a hearing before the Labor Board, in the latter part of December, concerning the right of railroads to contract with independent contractors for equipment repairs and track maintenance. A representative case was that of the Indiana Harbor Belt Rd., which had contracted with an independent company for the repair of its cars and the operation of its repair shops. Complaint was lodged with the Labor Board by the American Federation of Labor, Railroad Department, represented before the Board by F. P. Walsh, who charged that the railway's aim was to avoid paying its car repairers the wages determined as just by the Labor Board. The General Manager of the company, in rebuttal, pointed out that the company to which the work was given had previously done contract work of various kinds for the railway, and he also said that the annual saving to the road would

be about \$75,000. Counsel for the company expressed the opinion that the Board had absolutely no jurisdiction in the matter; in his opinion, the Board was there to decide disputes between railroads and their employees, and not between contractors doing work for the railroads and the employees of such contractors. The contractor's employees were not railway employees, he said, even though they might have been before the contractor took over the work. He pointed out that no part of the law gave the Labor Board jurisdiction to determine at what time and under what conditions a railway may employ independent contractors to do work for it. The labor representative, in his argument, said that the case involved the fundamental principle underlying the Board's creation, viz., the securing of justice for railway employees. He asked the Board to declare the contractor's employees to be still employees of the railway, and thus still under the Board's jurisdiction, and he also asked the Board to declare such contracts illegal. Many other railroads have been contracting for various portions of their repair work, some giving contractors charge of the operation of large repair shops at terminals, and in practically all cases the employees have lodged protests with the Labor Board. Other cases were dealt with at the same time that the Indiana Harbor Belt case was argued, and the Board reserved decision.

In an article in Canadian Railway and Marine World for May, 1921, dealing with the sections of the Transportation Act covering the regulation of railway labor, it was pointed out that the law provides for the formation of regional boards of adjustment. After the Transportation Act was passed, the labor organizations refused to join the railway managements in the formation of such regional boards, and none were formed till the latter part of 1921. In the latter part of that year, however, the labor organizations receded from their original position and expressed a willingness to join the managements in the formation of regional boards, with the result that a board was formed by the Baltimore & Ohio Rd. and the New York Central Rd. and the train service employees of those railways; another was formed to look after disputes between the train service organizations and a large number of southwestern roads, another for the same organizations and a number of western roads, and still others on the Pennsylvania Rd. The formation of such regional boards of adjustment should relieve the Labor Board at Chicago of a great mass of detail work. Judging by the number of reports of cases decided by the Labor Board received by Canadian Railway and Marine World, it is difficult to comprehend how the members of that body are able to find time for a proper study of all factors in the more important cases.

The Labor Board has recently been considering the formation of rules governing the service of clerical labor. U.S. railway clerks secured a national agreement during the Federal control period, and many disagreements have sprung up between the clerks' organizations and individual railway managements, in the attempt to negotiate rules and working conditions to replace the national agreement.

Although there has not been much action taken during the last month in connection with the efforts to be made by the railway executives to have wages fur-

ther reduced, to the end that the public may be given lower rates, it is evident that the U.S. Administration at Washington is somewhat concerned over the possibility of industrial strife in this connection, as shown by the Secretary of Commerce, Herbert Hoover, inviting several railway executives and the presidents of the train service brotherhoods to a dinner and conference at which it is presumed different aspects of the situation were discussed, although no details were given out.

Proposed Electrification of Timiskaming & Northern Ontario Railway.

In connection with the repeated reports that the Ontario Government proposes to electrify the Timiskaming & Northern Ontario Ry., either in whole or in part, we are officially advised that the T. & N.O.R. Commission's engineers are investigating the entire question of electrification, and the probable sources of hydro electric power. On previous occasions the question of electrification has been carefully considered under the Commission's direction, as there are many conditions met with in the operation of the railway that are favorable to it. During the war, and the readjustment period immediately following, it was considered that such large expenditures as would be involved, was not opportune, and that a decision regarding electrification should be based on more stable post-war conditions. The Commission was requested by the Ontario Government recently to report upon the question of electrification in particular reference to the sources of hydro electric power that are available. The investigation is being made by the Commission's Engineering Department, in which J. G. G. Kerry is Consulting Engineer, and S. B. Clement, Chief Engineer. A. L. Mudge is assisting as special electrical engineer, and A. T. McMaster, as special hydraulic engineer. It is expected that the report will be ready about the end of March.

Steps to Caboose Platforms.

The Board of Railway Commissioners passed general order 356, Jan. 12, as follows:—Re general order 102, dated Feb. 17, 1913, prescribing rules and regulations respecting safety appliances on trains. Upon reading the submissions filed on behalf of the Order of Railway Conductors of America, the Brotherhood of Railroad Trainmen, the Railway Association of Canada, and the Michigan Central and the Wabash Railroads; and upon the report and recommendation of the Board's Mechanical Expert, concurred in by its Chief Operating Officer, the Board orders that the provision covering caboose platform steps, under the heading, "Caboose Cars with Platforms," in general order 102, Feb. 17, 1913, be struck out and the following inserted in lieu thereof, viz.:—

"Caboose Platform Steps: "Safe and suitable open, or box, steps leading to caboose platforms to be provided at each corner of caboose. Where open steps are used, the bottom tread of said steps to be provided with a right and left foot stop at each end of tread, made of angle iron $3\frac{1}{2} \times 2\frac{1}{2} \times \frac{1}{4}$ in., the $2\frac{1}{2}$ in. face of angle iron to be bolted to the step."

Senator G. D. Robertson's Future Activities.

Canadian Railway and Marine World writes Senator G. D. Robertson, the ex-Minister of Labor, recently asking if he intended returning to the Order of Railroad Telegraphers' work, and has received a reply from him as follows:—"When I entered Sir Robert Borden's Cabinet on Oct. 23, 1917, it was intended by me to remain only during the duration of the war. I continued until Dec. 1919, after the Prime Minister returned from the Peace Conference and then tendered my resignation. Sir Robert was then in ill health and was leaving for the south. He asked that I continue, at least until his return. Upon his return, he himself retired and Mr. Meighen was called upon to form an administration. Mr. Meighen saw fit to ask me to remain. Because of my unbounded admiration for, and confidence in, him, and his ability, integrity, capacity and industry, I remained to aid him as best I could during a somewhat trying and difficult period. When I joined the Government in 1917, the Order of Railroad Telegraphers, of which I was the Canadian Vice President, granted me leave of absence. At their biennial convention held in May 1919, though not in attendance, I was re-elected by acclamation and the leave extended. At the next biennial convention in May 1921 the same courtesy was renewed. I have given four years of fairly strenuous effort to public service, during different times, and now propose to enjoy a little respite until after the next session of Parliament, after which I expect to return to my former and more congenial position as Vice President of the Order of Railroad Telegraphers."

Telegraph, Telephone and Cable Matters.

The Naval Service Department announced, Jan. 12, that 31 certificates of proficiency in radiotelegraphy were issued during December, distributed over all parts of the Dominion and Newfoundland.

E. G. Davies, who was elected mayor of the boys' council at Toronto, Jan. 16, which is said to be the first election of the kind on the continent is a son of J. Davies, Traffic Superintendent, Canadian National Telegraphs.

James Tucker, night receiving clerk, Montreal, died in the General Hospital there, Dec. 23, aged 51, after a short illness. He had been in the company's service for about 18 years, and prior to that was with the Great North Western Telegraph Co.

Senator Gideon Robertson, formerly Minister of Labor, will, after the next session of Parliament, return to active work in connection with the Order of Railway Telegraphers, of which he is still Vice President, having retained that position during his term as a member of the Dominion Government, as Minister of Labor.

Negotiations for the settlement of the dispute between the Western Telegraph Co., which is British controlled, and the All American Cable Co., regarding the landing of a cable at Miami, Florida, to connect with the Barbados line and link up with the Brazilian cable system, are stat-

ed to be proceeding. The Western Telegraph Co., with which is affiliated the Western Union Telegraph Co., has a monopoly of the cable business on the Brazilian coast, and the American company desires to enter the field. The negotiations are being conducted on the basis of a mutual surrender of certain exclusive cable landing rights.

The Canadian National Telegraphs have opened offices at Grand Falls, Tracadie, N.B.; Chaleurs, St. Poycarre Jet, Que.; Baptiste, Beardmore, Breakville, Brucefield, Dona, Gooderham, Highland Grove, Irondale, Kemptville, Mumfords, Parwa River, Pass Lake, Richmond Hill station, St. Yvon, Terry Hill, Wilberforce, Ont.; Delmas, Demaine, Eldersley, Lintlaw, and St. Walburg, Sask.; Beynon, Lesleville, Rowley and White Court, Alta. Offices have been closed at Abenakis Springs Hotel, Delorme, Little Meads lighthouse, South Quebec, Que.; Merrickville, Mowat, Richmond Hill, Ont.; Camper, Man; Dunvegan, Rocky Mountain House, Alta. The names of the offices at James Bay Jet, Ont., and Lochearn, Alta., have been changed to James Bay and Rocky Mountain House respectively.

Frederic Roper, Secretary-Treasurer, Dominion Telegraph Co., died at Toronto, Jan. 19, from heart failure. He was born in London, Eng., in 1840, and came to Canada in 1846 with his parents, who settled in Stratford, Ont. He entered Great Western Ry. service at the age of 14, and worked through various positions in the Auditing Department, becoming Chief Travelling Auditor. In 1861 he was appointed Chief Accountant, Prince Edward Island Ry., at Charlottetown, P.E.I., and in 1862 was appointed Secretary, Dominion Telegraph Co., Toronto, which position he held until his death. In 1880 and 1881, he was also auditor and Superintendent of Supplies, American Union Telegraph Co., and from 1881 to 1891, Secretary and Auditor, Great North Western Telegraph Co., now Canadian National Telegraphs. He was buried at Hamilton, Ont.

The Canadian Government Merchant Marine s.s. Canadian Conqueror, which is fitted with a standard Canadian Marconi 2 k.w. transmitter and crystal receiver, type 2846A, established the following ranges of communication during a recent voyage to Australia and New Zealand.

Received time signals for chronometer rating from Hector Observatory, Wellington, New Zealand, at a distance of 1,800 miles. The Wellington station is fitted with a 2½ k.w. transmitter.

Handled traffic to Auckland at a distance of 1,200 miles and also relayed for R.M.S. Athenic, which was 850 miles astern. The Auckland station is fitted with 2½ k.w. transmitter and single valve detector receiver.

Handled traffic with Sydney, N.S.W., in daylight at a distance of 450 miles. Sydney has a 5 k.w. set.

Handled traffic with Awanui, N.Z., at a distance of 1,000 miles, when between Adelaide and Wellington. Awanui station is fitted with 2½ k.w. transmitter and single valve receiver.

Communicated with s.s. Port Napier, about 1,100 miles. Communicated with s.s. Marama, about 1,300 miles. Communicated with several other ships at ranges of about 800 miles, being generally informed that the note and strength of signals were good.

Among the Express Companies.

The Interstate Commerce Commission has postponed the effective date, from Jan. 1 to May 1, for the American Railway Ex. Co.'s schedule of rates on fish shipped from Canada to the U.S., the increases ranging from 2 to 20%, according to distance between points.

One of the largest consignments of pedigreed silver black foxes to leave Prince Edward Island, consisting of 300, was sent by express recently, to points in New York, Colorado, Wisconsin and Washington. They occupied two express cars, and were accompanied by a caretaker, carrying certificates and the necessary exportation permits.

Canadian National Express Co.

Lintlaw, Sask., has been made an open office.

The office at Imperoyal, N.S., has been closed, and the place is now a star point.

The Canadian National Ex. Co.'s offices at Petite Riviere, Les Ebolements and Ste. Irene, Que., have been closed and the stations made star points.

The Canadian Ex. Co. was given judgment in Montreal, Jan. 11, on an appeal against a decision of the trustee in the bankruptcy of Standard Imports Ltd., Montreal, whereby the express company's claim of \$633.05 for money due on express money orders, issued by the bankrupt company's secretary, with the company's assent, was held to rank with ordinary creditors' claims. The express company claimed payment in full by privilege. The judgment held that the money received for express money orders was trust money, and the claim was not affected by the bankruptcy. The assignment did not vest the funds in the trustee, and the general creditors were not entitled to rank upon them. As the bankrupt company became financially embarrassed, it did not, during the last few days preceding the assignment, set aside, or retain sufficient cash to pay for the money orders, the total cash in the bank, for such purpose, at the date of the assignment, being \$347.42, instead of \$633.05. The evidence did not disclose what became of the balance, which should have been set aside. Only such money of the express company as could be identified was free from the claims of general creditors, and in these circumstances the express company was entitled to receive from the trustee, \$347.42 as trust funds held by the bankrupt company for it, and to rank as an ordinary creditor for the balance of its claim. Costs were assessed against the trustee.

Dominion Express Co.

A. W. Hodgson has been appointed agent, Weyburn, Sask., vice A. McMahon, transferred.

H. J. Cole, chief clerk, Calgary, Alta., died in the hospital there, Dec. 20, from injuries received through falling from a window on the third floor of the Customs Building.

The Dominion Ex. Co., and the C.P.R., have been given judgment on the appeal of three residents of Quebec, against a judgment on their claim for damages through the loss of a quantity of intoxicating liquor shipped from Montreal to Ontario, part of which was stolen in transit, part destroyed in a collision, and the balance delivered. The companies' defence was that as the importation into Ontario was made for illegal purposes they were not liable for damages.

Electric Railway Department

Gasoline-Electric Motor Bus, Toronto Transportation Commission.

The motor bus is rapidly establishing a field of usefulness for itself in urban transportation, chiefly as a feeder for electric street railway lines. The Toronto Transportation Commission, in recognition of this fact, has for some time been furnishing a bus service in the western portion of the city, the equipment used being motor busses secured from the Fifth Avenue Coach Co., New York, a detailed description of which, with an illustration of one of them, was given in Canadian Railway and Marine World for Oct. 1921, pg. 551. Recently, two more busses have been acquired by the Commission, one from Tilling-Stevens Motors, Ltd., Maidstone, Eng., and one from the Leyland Co., also an English concern. In addition, a bus is being secured from the Associated Equipment Co. in England, and another one from the Eastern Canada Motor Co., Hull, Que. The Tilling-Stevens and Leyland busses are being used on the Mount Pleasant Road run at present, pending the delivery of the trackless trolley busses ordered, and which were described in Canadian Railway and Marine World for January, pg. 39.

The Tilling-Stevens bus is a gasoline-electric powered unit, i.e., the power is primarily developed by means of a gasoline engine, and drives an electric generator, the electric power thus developed being used through a motor, for the propulsion of the vehicle. It is thus evident that there is no mechanical connection between the engine and the driving mechanism; mechanically, the gasoline engine is absolutely isolated from the differential gear and back axle. The body of the bus is arranged for passengers both inside and on the top. Following are the chief dimensions:—

Length over all	25 ft. 3 in.
Wheel base	15 ft. 9 in.
Height over all	12 ft. 6 in.
Width over all	7 ft. 0 in.
Inside length, interior passenger compartment	13 ft. 8 in.
Inside width, interior passenger compartment	6 ft. 6 in.
Inside height, interior passenger compartment	3 ft. 17 in.
Width between frames, inside frame	3 ft. 17 in.
Width between frames, outside frame	3 ft. 7 in.
Rear axle, hub cap to hub cap	3 ft. 7 in.
Height of chassis frame above ground line, loaded	3 ft. 10 1/2 in.
Diam. front wheels, outside tires	2 ft. 11 1/2 in.
Diam. rear wheels, outside tires	3 ft. 4 1/2 in.

The chassis is designed for a maximum load, including body, of 4 tons 10 cwt. for passenger work, or a gross weight of 8 tons 8 cwt. The frame is of pressed steel throughout, strongly braced by cross members which have large gussets formed solid with them. The dynamo and motor are carried on two longitudinal sub-members. Each of the main side members is pressed from one solid steel plate.

The engine, of 45 h.p., is of the 4-cylinder enclosed vertical type, with 5 in. diam. cylinders and 6 in. stroke. The cylinders, which are water jacketed, are cast in pairs with the inlet and exhaust valves on the near side. The valves are of large diameter, are operated by a single cam shaft, and are easily accessible, while the inlet and outlet valves are interchangeable. The camshaft is driven from the crank shaft by a silent chain.

The valve springs and adjustable valve tappets are enclosed in dustproof covers. The bottom half of the crank case is easily removable, without interfering with the fixing or alignment of the engine in the chassis.

For lubrication, the oil is circulated by a gear pump which draws oil from a sump formed in the bottom half of the crank case. The oil is delivered direct to the main bearings, and to troughs fixed directly below the connecting rods, which are provided with dippers to pick up the oil from the troughs, thus lubricating the big ends and providing enough splash to lubricate the other working parts of the engine. The surplus oil returns to the sump, which is provided with a large strainer. The lubrication of the engine

motor, the yokes are of high permeability magnet steel, supported by brackets from the sub-frame of the chassis, in such a way that the machines can be easily removed from either above or below. The main poles are built up of soft annealed iron laminations, "insulated" on one side. The interpoles are of high permeability steel, and both main and interpoles are securely bolted to the yoke in such a way as to ensure good magnetic joints. The field coils are of high conductivity copper, double cotton covered, and former wound. They are insulated with cloth and tape, and thoroughly impregnated with insulating varnish by the vacuum process, thus rendering them damp-proof. The armature shafts are designed to withstand severe working conditions, and

Gasoline-Electric Motor Bus, Toronto Transportation Commission.

is entirely automatic, and is in no way dependent upon the driver.

The ignition for the gasoline engine is by means of a high tension magneto, which is driven from the cam shaft by an enclosed screw gear. The magneto is easily removable by loosening two nuts, and can be replaced without disturbing the timing. As the magneto is running at right angles to the engine, the contact breaker is very accessible for inspection.

For cooling, a centrifugal water circulating pump is applied, and is driven from the same screw gear as the magneto. The water pipes are of large diameter, and large water outlet heads are fitted on top of the cylinders. The radiator is of the plain and gridded tubular type, with large water tanks, and the whole system is free from pockets in which steam or air might collect. A fan, mounted on ball bearings, and belt driven, is fitted between the front of the engine and the radiator, to assist cooling by induced air draft.

In connection with the dynamo and

the armature cores are built up of special stampings of high permeability, every stamping being secured by a feather extending the whole length of the core. Ventilating ducts are provided in the core, to ensure efficient ventilation. The core stampings are clamped under hydraulic pressure, between aluminum end plates, which also serve to support the windings. The copper armature windings, double cotton covered, are secured in place by steel binding wires, having a layer of mica underneath. The commutator is built up of hard drawn copper segments, insulated from one another by pure mica, and carried on cone rings which are bolted up under hydraulic pressure. The steel sleeve supporting the commutator is keyed to the shaft. The brushes are of carbon, carried in box type holders having adjustable spring pressure. Each brush is provided with a flexible connection, so that the sliding contact between the brush and the brush holder is not relied upon for carrying current. The insulation resistance of the armature and field coils of both genera-

tor and motor is not less than 2 megohms, and before being put into service are tested at a pressure of 2,000 volts a.c. between windings and frame.

The controller and speed regulator are carried in separate aluminum cases. The controller is of the tramway type, with screw adjustment to the contact fingers. The speed regulator is of the multiple contact type, and operates by varying the resistance in the shunt field of the generator, and by shunting the series field of the motor. Easily renewable resistance units are fixed on the base of this controller. The switches are made entirely of metal and micanite, no insulating compounds being used. The insulation resistance is not less than 2 megohms, and before being put into service is tested as above.

The drive from the electric motor to the back axle is by means of a propeller shaft, fitted with a universal joint at each end. The back axle is worm driven, the worm being placed above the worm wheel. The central portion of the axle consists of a steel case, with a large opening at the top. The worm casing carrying the worm wheel and complete differential, with its journal and thrust bearings, forms when placed in position, a covering for this opening. Steel tubes are pressed into the back axle case, and over the tubes are pressed steel castings, which form seatings for the springs, and provide the brackets to which the brakes are anchored. The steel tubes project through these castings and form the journals for the spring wheels. By securely bolting the spring bracket castings to the back axle case, the torque is transmitted through them to the springs. By this means the complication of torque or radius rods is entirely eliminated. The road wheels are driven from the differential bevel wheels, by means of cross shafts passing through the axle tubes. These cross shafts, of high quality steel, are castellated at each end, engaging the differential bevels, and the other ends are secured to the driving dogs. This construction allows the whole worm gear and differential, as a complete unit, to be lifted out of the axle case for inspection, by simply removing the nuts holding the driving dogs, and drawing driving dogs and cross-shafts out together.

The road springs are of oil tempered spring steel, the rear springs being specially designed to take both the torque and thrust of the drive. The road wheels are of cast steel, of the dimensions given in the table. Solid tires are used, double on the rear wheels. Both front and back wheels are provided with case-hardened renewable centers, which run on phosphor bronze floating bushes.

Two entirely independent brakes are provided, both operating on drums fixed securely to the back wheels, thus relieving the transmission of all braking stresses. Both brakes are of the internal expanding type, and are operated by pedal and hand lever respectively, the largest diameter brake being operated by the pedal. The brakes can be readily adjusted from the rear of the chassis, and the back wheels can be removed without interfering with the brakes in any way.

The steering gear includes an irreversible worm and sector, which are enclosed in a dust proof and oil tight casing. All of the joints are of the ball and socket type, provided with powerful springs to take up any wear, and all

wearable parts are case hardened.

The front axle is of H section, and is a solid steel drop forging in one piece. The 25 gall. gasoline tank is carried under the driver's seat, enabling the gasoline to be fed by gravity to the carburetor through an efficient filter. The engine speed is controlled by a pedal operated throttle.

The accompanying illustration shows the bus body construction. The passenger entrance is at the rear, from the right side. The total seating capacity is 48, viz., 22 in the interior, and 26 on top. The interior is finished in natural wood, with walnut trim. The large window space affords adequate natural lighting. Vertical brass stanchions, on each side of the central aisle in the interior, provide a hand hold for passengers entering or leaving the bus. Two longitudinal seats, one on each side of the aisle, are located in the rear, and forward of these are 8 transverse seats, 4 on each side of the central aisle. All seats in the interior are covered with red plush cushioning.

Canadian Electric Railway Association.

Honorary President, Thomas Ahearn, President, Ottawa Electric Railway.
Honorary Vice President, George Kidd, General Manager, British Columbia Electric Railway.

President, G. Gordon Gale, Vice President and General Manager, Hull Electric Co. President, H. J. Major, D. Burpee, Manager, Ottawa Electric Railway.

Treasurer, A. Gaboury, Superintendent, Montreal Tramways Company.

Executive Committee, E. P. Coleman, General Manager, Dominion Power & Transmission Co.; H. H. Couzens, General Manager, Toronto Transportation Commission; C. C. Curtis, Manager, Cape Breton Electric Co.; W. S. Hart, Managing Director, Three Rivers Traction Co.; W. McLintock, Vice President, Winnipeg Electric Ry.; R. Mayne-Read, Superintendent, Quebec Ry., Light & Power Co.; Lt. Col. G. C. Royce, General Manager, Toronto Suburban Ry.; and C. L. Wilson, Assistant Manager, Toronto & York Radial Ry.

Auditor, H. E. Weyman, Manager, Lewis County Railway.

Secretary, L. E. Moreland, Chief Clerk, Hull Electric Co., Hull, Que.
Official Organ, Canadian Railway and Marine World, Toronto.

ions, removable for cleaning. The floor is corrugated, to provide for drainage of moisture, the corrugations being not only in the central aisle, but also between the seats. The driver, who enters the bus by a separate door in the front, is separated from the passengers by a wood partition, fitted with plate glass panels. Artificial lighting for the interior is provided by three globes in the ceiling on each side of the central aisle, current being supplied by a C.A.V. lighting system, including a dynamo driven from the engine, and storage batteries.

The outside panel enclosing the stairs leading to the top, is of wood, surmounted by a brass hand railing, the inside panel being of metal. The stairs are of wood, with metallic corrugated strips on the steps. The floor of the top section is also corrugated. The seats on the top are arranged transversely, there being 7 on the right side of the central aisle and 6 on the left. On account of exposure to the weather, no cushions or upholstery are provided for these seats. The lower band encircling the top portion is of sheet steel, and the middle band is of wood, while at the top a brass railing encircles the top of the bus.

The bus service furnished by the Toronto Transportation Commission has been well patronized, and is deservedly popular. To date it has been reliable and characterized by freedom from accident, and no delays of consequence have been experienced on account of mechanical troubles, or weather conditions.

Electric Railway Freight and Passenger Rates.

British Columbia Electric Ry. — See under "Traffic Orders by Board of Railway Commissioners," order 31,994, Jan. 9, on an earlier page of this issue.

The B.C.E.R. Company, on Jan. 1, began enforcing the terms of the contract on its 50-mile books of tickets on the Central Park interurban line between Vancouver and New Westminster. The terms are that books must be used within 30 days or they become void and that they are not good for any person other than the buyer. These rules have not been enforced for several years and were grossly abused. Fares on this line work out at less than 1c a mile. There is no change in the regulations governing the 10-mile books of tickets.

Hamilton Street Ry. — Under a bylaw passed by the Hamilton, Ont., City Council, Dec. 8, 1921, the following question was submitted to the ratepayers on Jan. 2:—"Are you in favor of the council granting to the Hamilton Street Ry. Co. permission to charge a fare of 5c, where tickets are now used; the fares for children to remain unchanged?" The vote on the question was:—For, 7,588; against, 8,614. We are advised that about 18,000 voters did not vote. The effect of this vote was that the permission which the council gave the company on Dec. 8, to put the new fare into effect on Dec. 15, ceased, in accordance with the provisions of the bylaw 2592, which read:—"Provided that should the question be answered in the negative, the privilege hereby granted to the company shall cease and determine on Jan. 3."

We are officially advised that as a result of the vote the company has reduced its service by about 20%, necessitating laying off about 50 men.

The New Brunswick Power Co. put into operation recently a weekly pass system on its electric railway in St. John. The pass is sold at \$1, and is good for as many rides during the week as its owner desires to take. We are officially advised that the pass is sold on Mondays only, and is good for the bearer to travel on any car, up to and including the following Sunday. The fares have been as follows:—1st year, 60¢; 2nd year, 1.184; 3rd year, 1.532; 4th year, 1.368; 5th year, 1.392; 6th year, 1.597. The two off weeks of 1.368 and 1.392 were the Christmas and New Year weeks, when school children were not travelling. A census of the using of the passes which has been taken shows that the average is about five trips a pass on a week day. The system was introduced on account of the bus competition, and had something to do with killing it. Another reason for its introduction was to bring out the people to travel on the cars. The car service had been dislocated all summer, largely on account of paving operations, and the people had got out of the habit of travelling on the cars. The value of the pass system as a revenue maker is expected to be demonstrated in a short time, when the matter of its continuance

at the present or an increased rate will be determined. The color of the pass is changed each week, and each bears a large figure, showing the number of the week during which the pass holds good.

In addition to the passes the company has three other rates of fare, viz., cash 10c., three tickets for 25c., and 14 tickets for \$1.

St Thomas St. Ry.—A press report states that a proposal is being consid-

ered to increase the cash fare on the municipally owned electric railway in St. Thomas, Ont., to 9c.

The Waterloo-Wellington Ry. Co. will apply to the Ontario Legislature at its next session for power, among other things, to increase the fare on its electric railway extending from Kitchener to Bridgeport, Ont., subject to the Ontario Railway and Municipal Board's approval.

constructed at the city's expense. Some arrangement may be worked out by which the city will participate in the company's annual profits in return for granting the exclusive use of the streets to the company."

Hamilton, Grimsby & Beamsville Electric Railway Passenger Service.

John Hunter, and others, of North Grimsby and vicinity, applied recently to the Ontario Railway and Municipal Board, under the Ontario Railway Act, sec. 106, sub-sect. (3), for winter service on the Hamilton, Grimsby & Beamsville Electric Ry. at Grimsby East spur. A. B. Ingram, Vice Chairman of the Board, heard the matter at Grimsby on Dec. 2, 1921, and made the following report Jan. 11, 1922: "The petitioners, in their evidence it was agreed that the cars should be run to the end of the spur at Grimsby East, starting Dec. 5, and concluding on Jan. 5, a count of the passengers boarding and alighting to be taken by the company, and should the petitioners feel disposed to check up the count they were to be at perfect liberty to do so. The company started to make the count on the morning of Dec. 5, and continued to the evening of Jan. 5, filing with the Board each week a copy of the count taken from day to day. The number of passengers boarding is given as 1,941, and passengers alighting, 1,750, total 3,691. The ordinary schedule during week days was 18 cars in and out, and on Sundays 14 in and out. Owing to interruptions to the service by storms on Dec. 18 and 21, I have deducted from the total number of cars in the ordinary schedule on account of these interruptions, making the total number of cars in and out 1,122. This number of cars, divided into the total number of passengers carried, would average about 3 1/3 passengers per car. A count was taken on behalf of the petitioners from Dec. 5 to 10 inclusive, and from Dec. 18 to Jan. 4, inclusive, 24 days in all, the figures being, passengers boarding 1,484, passengers alighting 1,363, making a total of 2,847. Applying the same rule to a reduction of the total number of cars in a schedule for those days as I did to the company, about 834 cars went in and out of the spur; this total divided into 2,847 would average about 3 1/2 passengers to the car. After analyzing these figures and taking into account the length the spur, viz., 1,500 ft., and the limited patronage, I am of the opinion that the Board should not insist on the company providing a winter service at this point. The Board's Inspector, E. A. Crosland, has devoted considerable attention to the working of the cars at this spur and the service generally, and he fully agrees with my views in this regard.

The total number of passengers carried by this company during the years 1917 to 1920 inclusive, were as follows: 1917, 660,420; 1918, 739,386; 1919, 886,406; 1920, 882,069. The last time table filed with the Board, effective Sept. 11, 1921, shows the running time eastbound between Hamilton and Beamsville to be 1 hr. and 30 min., and westbound between Beamsville and Hamilton 1 hr. and 35 min., a distance of 22.6 miles, a speed at the rate of less than 15 miles per hour. I am of the opinion that the Board should require the company to

Ottawa Electors Vote for Extension of Street Railway Franchise.

On Jan. 3 Ottawa electors voted on three proposals laid before them for the settlement of the local street railway question, viz., municipal ownership, extension of the present franchise, or service at cost. The three questions submitted, with the vote on each, were as follows:—

1. Are you in favor of the city giving the Ottawa Electric Ry. the required notice to take over the street railway at a price to be fixed by arbitration, as provided by the agreement between the city and the company? Yes, 6,003; no, 8,430.

2. Are you in favor of the present franchise of the Ottawa Electric Ry. being extended for a further period of 30 years? Yes, 8,415; no, 6,070.

3. Are you in favor of the city entering into an arrangement with the Ottawa Electric Ry. for service at cost? Yes, 3,345; no, 10,639.

The vote cast was about 1,000 short of the vote in the mayoralty contest. Although the company's proposal of service at cost was decisively negated, the defeat of municipal ownership was complete, and the confidence shown in the present management by the large majority for the extension of the franchise is regarded as a testimony to the fair way in which the Ottawa Electric Ry. Co. presented the facts of the case during the last two years. This evidenced by the surprising reversal of the municipal ownership vote taken three years ago, before the company had done any work in the way of publicity. In 1919 the vote on a proposal to buy the railway in 1923 stood: for, 8,770; against, 2,309. In 1921 the question came before the property owners alone, on a bylaw to buy the road. The result was: for, 2,326; against, 4,438. By comparing these figures with this year's vote it will be seen that not only the property owners, but also the other electors, are opposed to city ownership and operation.

The vote on service at cost is not, perhaps, a fair indication of the electors' opinion on this phase of the question, as the contest narrowed down, as it so often does in three cornered contests, to between two of the three proposals. The company's frank statement that it would consider a renewal of its franchise only on terms involving a readjustment of fares, whenever economic conditions demand such, enabled those who approved the service at cost plan to vote also for the franchise extension. The educational campaign carried on in connection with service at cost has, therefore, borne good fruit in helping the electors to reach a sane decision on the merits of public as compared with private operation.

Mayor Plant, in his inaugural address to the Ottawa City Council, on Jan. 9, said: "No delay will be made in giving

effect to the will of the people, but before you are called upon to vote on the question, you should carefully study the three propositions. Paradoxical as it may seem, the most important question to study is the one which received the smallest vote for its adoption. The fundamental principle of service at cost, as I take it, is that the fares charged shall be such as to provide for all expenses, salaries, etc., and also a fair dividend to the shareholders. This was voted down by an overwhelming majority. It is safe to say that a very large percentage of those who voted for an extension of the franchise did so because various candidates emphasized that an extension of the franchise would mean a continuance of the 5c. fare. True, the company did not say so, but many people had that impression. If the franchise is to be extended by an agreement which will provide for an increase in fares just as soon as the operation of the system does not provide for all expenses, any salaries which may be paid for management and a satisfactory dividend to the shareholders, the city company would have to present very much similar to service at cost, which was voted down by the people.

"The first step in negotiating for a new agreement, I take it, will be for the city to ask the company what it is prepared to do in the way of extensions of its lines, improving the service as regards equipment on some of the best patronized lines, the continuance of the present fares, and annual payments to the city. The Board of Control asked the company these questions last year, but the answer was indefinite. Now that the people have shown that they favor an extension of the franchise, the company will naturally co-operate to a greater extent. Regarding the extensions, these must be worked out on a double basis, viz., to better serve some of the outlying sections of the city such as Ottawa East and Ottawa South, to relieve the congestion on Sparks, Bank and Somerset Sts., and to give a shorter cross town line to connect with Sandy Hill. A more direct route from the western part of the city might also be worked out. For some time past the company has frankly admitted that its equipment is inadequate, but with good reason argued that it should not be expected to build new cars in view of the expiring franchise. The number of cars required will have to be looked into, but it would seem that 25 to 35 should be put on as soon as they can be built. At present the city receives from the company an annual mileage rate for the use of our city streets. T. U. Fairlie, in his report, claimed that the city has an equity of \$827,137 in the street railway system, i.e., the value of the roadbed

shorten the running time between the above named points, in order that the hundreds of thousands of passengers travelling between Hamilton and Beamsville shall be accommodated with greater

speed than at present, and in order to do this I recommend that the company be instructed to file with the Board forthwith a time table that will carry out the objects sought by this recommendation.

Electric Railway Employees' Wages, Working Conditions, Etc.

British Columbia Electric Ry.—As World for January, the company gave notice that it would accept the majority award of the Board of Conciliation, authorizing a reduction of wages by 10%, instead of the 15% proposed by the company. The men voted on the matter Dec. 23, and by 1,039 to 311 refused to accept the majority finding. Some negotiations followed, but neither side would recede from the position taken up, the company giving notice that the new scale of wages based on the majority award would be put into effect Jan. 1, and the men threatening a strike. On a vote taken on Jan. 31 on the strike issue, 503 voted to strike, and 814 against it. A new agreement was entered into Jan. 5, between the company and the Amalgamated Association of Street and Electric Railway Employees of America, representing the employees, and including all employees except conductors, motormen and trainmen on the Lulu Island Branch, Fraser Valley line and Saanich Division. The rates on city and suburban lines are as follows per hour. Conductors and motormen, 1st 6 months, 48½¢; 2nd 6 months, 53¢; 3rd 6 months, 58¢; thereafter, 58½¢. One-man car operators, 64½¢. Conductors and motormen in work train service, 2c. an hour extra. On interurban lines, District 1, District 4, 16th St. yard and Carroll St. yard the rates per hour are: passenger conductors and motormen, 1st 6 months, 48½¢; 2nd 6 months, 54¢; 3rd 6 months, 57½¢; thereafter 60½¢. Freight conductors and motormen, 1st 6 months, 52½¢; 2nd 6 months, 56½¢; 3rd 6 months, 60½¢; thereafter, 63¢. Passenger brakemen, 1st 6 months, 48½¢; 2nd 6 months, 52¢; 3rd 6 months, 55¢; thereafter, 57½¢. Freight brakemen, 58½¢. Trolleyman, 56½¢. Sunday work to be paid at rate of time and a quarter, holidays, time and a half. Extra men to be guaranteed a minimum monthly earning of \$87.50.

The Hamilton St. Ry. is reported to have advised its employees Jan. 13 that a cut of 13% would be made in their wages from Feb. 15. The present wage schedule, which was fixed by a majority report of a board of conciliation as from April 1, 1920, is as follows per hour: 1st 6 months, 38c.; 2nd 6 months, 40c.; 2nd year, 45c.; 3rd year, 50c. The men were reported to have decided Jan. 14 to fight the reduction. A conference between a committee representing the men and E. P. Coleman, General Manager, Dominion Power & Transmission Co., is reported to have taken place Jan. 16. An application is expected to be made by the men for the appointment of a conciliation board.

Hull Electric Co.—The board of conciliation appointed in connection with the dispute between the company and its employees, arising out of the company's notice that wages would be reduced by 10% from Dec. 1, 1921, consisted of W. F. O'Connor, K.C., chairman; G. D. Kelley, Ottawa, representing the company, and F. Bancroft, Toronto, representing the men. On Jan. 9, the chairman and Mr. Bancroft sent a report to the Minis-

ter of Labor, pointing out that the board did not have authority to deal with the complaint of the men that on Dec. 23, 1921, the company had paid the men on the basis of the 10% reduction of which notice had been given, while the matter was being considered, thus it was alleged contravening one of the provisions of the act. After reviewing the evidence given and the statement submitted by the company and the men, the majority report concluded with the following recommendations:—"That from Dec. 1, 1921, until July 1, 1922, the wages continue as recommended under the award made under the Industrial Disputes Act, on Aug. 26, 1920, by W. P. Grant, chairman, and G. D. Kelley, and subsequently accepted by the company and the employees, and likewise that in all other respects the terms of the said award be continued in effect for the like period. "That the company pay its employees any difference between wages payable under the immediately preceding recommendation and wages paid or earned or which may be paid or earned on any lower scale imposed by the company on its employees or on any of them at any time or times between July 1, 1921, and the first day of July, 1922."

A minority report dated Jan. 11 was submitted by G. D. Kelley, who gave his reasons for dissenting from the other members of the board. He stated that the facts disclosed to the board did not bear out the men's argument that the rate of wages paid had not been and was not now commensurate with the cost of living; that the employees' wages were lower and had been for some time lower than the wages of men engaged in similar classes of work elsewhere, and that the financial condition of the company justified its paying liberal wages. Mr. Kelley showed in regard to the latter point that no dividend had been earned or paid on capital investment since 1909; and that the company was a heavy borrower for capital account, and that there was no immediate prospect of liquidating the arrears of interest on its \$1,300,000 of borrowings. Under the circumstances, he considered that the working conditions and scale of wages in force are fair and equitable.

The following is the scale of wages per hour for motormen and conductors put in effect under the award of Aug. 26, 1920, which the majority report recommends should be continued in force until July 1:—First six months, 41c.; second six months, 44c.; second year, 46c.; third year and thereafter, 48c. Under the reduction put in effect by the company the maximum rate is 43c. an hour.

We are advised that in view of changed conditions, the company cannot agree to the board of conciliation's majority report, recommending that wages be continued until July next on the present high basis.

The London St. Ry. management states that it is using every available car during the rush hours, and that the service cannot be improved without the purchase of additional cars.

Mainly About Electric Railway People.

Alderman W. Douglas has been elected Chairman of the Winnipeg City Council's public safety committee, which deals with electric railway matters.

W. Carys Ely, from 1904 to 1906, President, American Electric Railway Association, died suddenly in New York, Dec. 14, 1921, from heart failure. He was born at Middleford, N.Y., Feb. 15, 1856, and was educated for the legal profession, being admitted to the bar in 1882. He gave up law practice in 1899 and became President, International Traction Co. and International Ry., Buffalo, N.Y. In 1899 he was active in combining into one system, the electric railways in and between Buffalo, Niagara Falls, Tonawanda, Lockport and adjoining towns and uniting them with the Niagara Falls Park & River Ry. in Canada, by a steel arch bridge at Niagara Falls, and a suspension bridge between Lewiston, N.Y., and Queenston, Ont. He retired from the Presidency of the International Traction Co. and International Ry. in March 1905.

Maurice C. Gilman, whose appointment as Sales Manager, Electric Utility, Winnipeg Electric Ry., Winnipeg, was announced in our last issue, was born at Houlton, Me., May 13, 1887. He has been, from July 1907 to July 1910, Power Engineer, Brooklyn Edison Co., Brooklyn, N.Y.; July 1910 to Aug. 1911, Power Engineer, Public Service Electric Co., Newark, N.J.; Aug. 1911 to Oct. 1912, Power Engineer, Toronto Electric Light Co., Toronto; Oct. 1912 to Nov. 1913, Assistant Chief Engineer, Toronto Electric Light Co., Toronto; Nov. 1913 to July 1, 1918, Sales Manager, Toronto Electric Light Co., Toronto; July 1, 1918 to Nov. 1, 1921, Special Agent and Research Engineer, Montreal Light, Heat & Power Co., Montreal.

A. G. Graves, who retired from the position of City Commissioner of Calgary, Alta., at the end of 1921, was presented with an address and a cabinet of silver, by the heads of departments. He was elected City Commissioner in 1906, and held the position continuously until his retirement.

Lt. Col. G. C. Royce, General Manager, Toronto Suburban Ry., and Mrs. Royce, are visiting Florida.

J. F. Saint Cyr, Chairman, Montreal Tramways' Commission, addressed the Chambre de Commerce, there, Jan. 11, on the economical aspects of the Montreal Tramways Co.'s contract.

Angus Smith has succeeded A. G. Graves as City Commissioner of Calgary, Alta., and has charge of the municipal street railway.

Voting on Toronto Eastern Ry. Purchase.—The voters of the City of Toronto, and of a few of the municipalities interested in the proposal to purchase the uncompleted Toronto Eastern Ry. from the Dominion Government, voted on Jan. 2 on a bylaw favoring the purchase of the line without a guarantee of bonds by the Ontario Government. The vote in Toronto was 18,532 for and 16,766 against; Scarborough Tp., 4,933 for, 827 against; Pickering Tp., 302 for, 55 against. The Ontario Government intimated, prior to the voting, that the matter was irregular and that it would not consider itself bound by the vote.

Flat Wheels on Street Railway Cars.

The Toronto Transportation Commission experienced during Nov. and Dec. 1921, and the early part of Jan. 1922, a large number of flat wheels, particularly on the new cars. This was due in part to the motormen not being acquainted with the brake equipment on these cars, the wheels skidding frequently after brake applications, until the men had learned to handle the air correctly. The condition of the rails in November is always such that a certain amount of skidding is difficult to avoid, and in Dec. 1921 these conditions continued, there being just enough snow to make the rails very greasy. As a general rule, the trouble with flat wheels in Toronto usually ends with November, December generally being so wet that the rail is

are operating is new or rehabilitated. With the old track, which, generally speaking, was in poor line and surface, and full of low joints and high centers, the sound made by a slight flat spot in a wheel was completely drowned in the confusion of noises incidental to the passing of a street car; now, however, with the track in first class line and surface, and the joints all in good shape, the slightest flat spot immediately attracts attention. Still another feature of this flat wheel epidemic worthy of mention is the fact that on the streets where the track has been rehabilitated, or new track laid, the roadway between and adjacent to the tracks has been resurfaced and put in good condition, which attracts trucks, automobiles, and horse drawn ve-

arranged that the stone, either emery or corundum being used, is supported near the top of the repair pit, one under each rail. The rails in the proximity of the grinding wheels are short lengths, and provision is made, by recesses in the walls of the pit, so that the short lengths of rail can be moved aside. The grinding wheels are operated by a 25 h.p. motor located in the pit, and are belt driven. They can be adjusted for position both horizontally and vertically by the two adjusting screws shown in the accompanying plan, which gives the details of half the grinder installation.

When a car comes into the shop with wheels slid flat, it is placed on the pit in which the grinder is located, and the car body is jacked up till the weight is off the truck containing the defective wheels. The truck is jacked up, lifting the wheels off the rails. The short sections of rail are then moved outward from the wheels, and the truck is let down on two supports placed across the pit, leaving the defective wheels free to revolve. The grinding wheels are then adjusted to position against the skidded wheels. In the grinding operation, power is supplied to turn both the grinding wheels and the car wheels, the grinding wheels being run from the motor in the pit, as mentioned, and the car wheels as follows:—Each car has four motors, one connected to each axle, and operating in pairs. The pair which does not include the one connected to the defective wheels it cut out; the carbons are taken out of the machine coupled with the one driving the defective wheels, and this latter is operated by power cut down by a special rheostat.

The wheels of the car and the grinding wheels turn in opposite directions, and at different speeds. Flat spots 3 in. long can be taken out of a pair of wheels in less than an hour. The immense saving which this device makes possible is realized when one considers the labor cost of changing a pair of wheels, or turning up wheels to take out skid-flats.

Detroit United Railways' Affairs.

It is reported that something like a settlement of the negotiations between the Detroit, Mich., City Council, and the D.U.R. Co. for the purchase of the electric railways in the city, will be reached after the annual meeting of shareholders, called for Feb. 7. In 1919, the company offered to sell its entire city lines to the city for \$31,500,000, and since then there has been much negotiation, two or three votes of the ratepayers, some sales, and considerable litigation. The city has acquired for \$2,500,000 certain of the company's lines, referred to in negotiations as the "day to day lines." It is reported that the company has offered to sell its remaining lines in the city for \$24,500,000. A press dispatch of Jan. 12, said that after a conference the Mayor stated he had no desire to take an unfair advantage of the company and he would permit the situation to continue unchanged until the annual meeting. A. J. Ferguson, Vice President, D.U.R. Co. is reported to have stated Jan. 16, that the arrangement to sell the company's lines to the city in 1919 for \$31,500,000 was not completed because the City Council endeavored to put it through without

Device for grinding flat spots out of car wheels.

thoroughly washed and ceases to be greasy. As a matter of fact, conditions in the usual December are such that a certain amount of wet grit is to be found on the rail, and the action of this is to reduce any flat spots caused previously. November conditions continuing in Dec. 1921, however, flat spots in wheel treads started in November had an opportunity to grow more pronounced during December.

Flat spots in wheels are ground out at the Commission's car houses, but the facilities for doing this work were limited owing to the St. Clair and Danforth car houses being under construction, with no facilities available until recently, and also on account of the fact that until Dec. 25, 1921, there was not sufficient track clearance at the Yorkville car house to get the large new cars in for wheel grinding or changing.

Another thing which made the flat wheels so noticeable was that a great deal of the track on which the new cars

wheels in greater number than when the roadway was of the corduroy variety. This condition calls for frequent application of the brakes on the street railway equipment, many of them necessarily being emergency applications, causing skidding when the rail is bad.

Contrary to the statements of some of the daily newspapers, flat wheels were not caused by negligence of the Transportation Commission in leaving the heavy new cars standing too long in one place when out of service. At present, the motormen have become trained in the proper use of the brake, and with more favorable weather conditions prevailing, skid flats are becoming rare on the Commission's lines.

A device which is very efficient in operation, and which does away with a lot of work and handling of wheels, is a grinder used in the Commission's shops, to take the flat spots out of wheels without the necessity of removing the wheels from under the car. The grinder is so

first having a vote of the ratepayers thereon, and that when the matter was voted on it was defeated by a large majority. The company and the city had

failed to come together in the recent negotiations, and when the reasons for this were made known at the annual meeting the whole matter would be cleared up.

Electric Railway Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.—A press report states that to assist in relieving unemployment in Victoria, the company has decided to start work at once upon the construction of a second track on Cook St., from Rockland Ave. to Pakington St., which was intended to be done next summer. (Nov. 1921, pg. 601.)

Calgary Municipal Ry.—As a result of a small fire at the car barns, it is reported that some alterations are to be made there, and that towers are to be erected in various parts of the barn and yards from which streams of water could be thrown over the cars and other property. (Nov., 1921, pg. 601.)

Fort William Municipal Ry.—The Fort William City Council will apply to the Ontario Legislative Assembly to validate a bylaw to raise \$30,000 by debentures for street railway purposes; to authorize that council to use the \$30,000 previously voted for street railway extension and now on hand for the purposes mentioned in the bylaw above mentioned, instead of issuing the debentures therein authorized; declaring that the right of way for the Mission Park street railway extension recently arranged for with the Fort William Indian mission band shall form part of the City of Fort William as soon as the same has been acquired, and declaring that the city has the right to construct and maintain the projected Mission Park street railway extension. (Jan., pg. 42.)

Guelph Radial Ry.—We are officially advised that during 1921, one mile of track in Guelph, Ont., was rebuilt, and that it is proposed to build about 0.4 of a mile of new track this year.

Kitchener & Waterloo Electric Ry.—Kitchener, Ont. voters, on Jan. 2, passed a bylaw authorizing the issue of \$65,000 of debentures for building about a mile of double track line on King St., from Albert St. to the city limits, and for the payment of the city's portion of the cost of a station on King St. east (Jan., pg. 42.)

Nipissing Central Ry.—The surveys made recently for an extension from New Madrid were, we are officially advised, under the charge of A. J. McDougall, locating engineer. The route surveyed is approximately 16 miles long from New Liskeard, Ont., to North Timiskaming, and a route thence to Quinze Lake, Que., would be approximately 14 miles long.

G. W. Lee, Chairman of the Timiskaming & Northern Ontario Ry. Commission, which operates the line for the Ontario Government, is reported to have said in North Bay, Jan. 13: "We have the railway laid out and surveys have been completed in North Timiskaming. We are going to complete them to Lock's Depot. We have filed our application with the Quebec Government, and are waiting for its decision, and if this is favorable, consideration will be given to commencing the work on the extension at once."

Ontario Hydro Electric Ry. & Essex Division.—We are officially advised that arrangements are being made for rebuilding the interurban track, about 5 miles, between Windsor and Amherstburg, and for the rearrangement of the car barn layout.

The Hydro Electric Power Commission of Ontario invited tenders recently for the purchase of \$500,000 of 6% hydro electric railway bonds guaranteed as to principal and interest by the Ontario Government, the bonds to be redeemed July 1, 1961. The proceeds of the sale will be utilized for rebuilding track and other rehabilitation work on the Essex Division. (Jan., pg. 42.)

Regina Municipal Ry.—A special committee of the City Council has recommended that the West End Electors' Association's application for an extension of the Blue Line be not entertained. The County Commissioners in their report on the matter stated that to extend the Thirteenth Ave. track westerly the city would have to comply with the Board of Railway Commissioners' order to install a half interlocking plant at the steam railway crossing. The city's share of the cost of this installation would be close to \$4,000. The derails are in stock, and the Superintendent understands that the railway company, which would be responsible for the diamond, have it in stock. Even if the city were able to supply all the materials required from stock, or by lifting existing trackage, the cost of hauling and labor for installing approximately 2,680 ft. of track with the necessary overhead would entail a cash outlay of \$4,000. To operate the extension would require placing another car on the blue line service, and in order to pay a proper return on this additional service and expense there should be an additional daily patronage of at least 350.

Waterloo-Wellington Ry.—The Ontario Legislature will be asked at its next session to amend the letters patent incorporating the company under the name of the Berlin & Bridgeport Electric Street Ry. Co., by authorizing it to build an extension of its railway from Bridgeburg through Waterloo and Guelph Townships to Guelph, and for other purposes. (Jan. 1921, pg. 36.)

Windsor, Essex & Lake Shore Rapid Ry.—We are officially advised that the company is contemplating building a siding into its proposed freight terminal at Leamington, Ont., and erecting a freight shed and office. A. Eastman is Vice President and General Manager, Kingsville, Ont. (Dec., 1921, pg. 660.)

Electric Railway Notes.

The International Transit Co., Sault Ste. Marie, is contemplating ordering 5 one-man safety cars.

The New Brunswick Power Co. is negotiating with car manufacturers in Europe for new cars for its electric railway in St. John, and hopes to have them in operation by the spring.

Winnipeg City Council's public safety committee is reported to have approved of the operation of one-man cars by Winnipeg Electric Ry. on Euclid Ave., from Main St. to Sutherland Ave., and from Sutherland Ave. to Higgins Ave.

The Cape Breton Electric Co.'s ferry service between Sydney and North Sydney, N.S., in connection with its electric railway service, is reported to have been operated at a loss during 1921, the fares

received falling about \$500 short of the operating cost.

The British Columbia Electric Ry. is reported to be considering the setting apart of the rear end of cars on its Victoria lines for the smokers. The Calgary, Alta., City Council has been asked to pass a bylaw to prevent smoking on the municipal railway cars.

The St. Thomas, Ont., City Council's railway committee took up the question recently of providing a motor bus service on the streets in conjunction with the municipal railway service. Alderman Jacque, who advocated the plan, was authorized to prepare figures of the cost of operation.

The Toronto Transportation Commission's order given the Canadian Car & Foundry Co., Montreal, for 140 motor cars and 60 trailer cars has been completed, and the cars delivered. Of the 50 motor cars ordered from Canadian Brill Co., Preston, Ont., 8 were delivered by Jan. 14, and further deliveries are being made at the rate of 4 or 5 a week.

The Montreal Tramways Co. was reported recently to have notified conductors and motormen that cars must not be heated during the evening rush hours, from 5 to 7. L. C. J. E. Hutcheson, General Manager, on Jan. 13, issued the following explanation:—"In the rush hours, between 5 and 7, every evening the cars are not heated because of the crowds in them. This is not effective on very cold nights, but only when the temperature is reasonable and warrants it."

The Fort William, Ont., Municipal Ry. is, we are officially advised, ready to start converting its present cars for one-man operation, but will not do so until the Port Arthur Civic Ry. is ready to start converting its cars. The City of Port Arthur has made application to the Board of Railway Commissioners and to the Ontario Railway and Municipal Board for permission to operate one-man cars over the Canadian National Ry.'s crossing at Inter City.

The Ontario Railway and Municipal Board is reported to have given judgment on an appeal as to the assessment of the Ottawa Electric Ry.'s fixed machinery in the power plant and substations. The machinery was assessed at \$392,350 by the city, which assessment was sustained by the court of revision. The company appealed to the County Judge, who held that the fixed machinery was exempt under the franchise. The Ontario Railway and Municipal Board disagrees with this and restores the court of revision's decision.

Answers to Questions on Electric Railway Topics

The following answers have been sent, by Canadian electric railway officials, to questions addressed to the American Electric Railway Association's question box:—

Welding Hard Centers.—Have any companies had any experience in welding hard centers with electric welder, if so, what is the method of doing the work?

John Whitsell, Manager, Winnipeg Electric Ry., Winnipeg.—We have been using the Lincoln welding machine type W in welding rail joints, building up cupped rail ends also in recovering frogs, crossings, etc. We are using this machine for welding hard centers and are getting fairly good results. Our method is to weld a thin ribbon of high carbon

steel on the outside edge of flangeways, then fill in first with the low carbon steel for a base and high carbon steel for wearing surface.

F. D. Burpee, Manager, Ottawa Electric Ry., Ottawa.—We have had some success in this work. First, Swedish iron is welded to manganese, as we believe it amalgamates better than harder steel. Next we lay on a very high grade of carbon steel, followed by a high grade of carbon steel but a shade milder than the first. This is laid on in alternate rows. As a filler, Swedish iron is used as the occasion presents itself.

Bolts for Crossings.—What has been the experience of member companies with bolts for railway crossings? Is a special high power bolt used, or an ordinary machine bolt? If a high power bolt is used, what is the reason?

John Whitsell, Manager, Winnipeg Electric Ry., Winnipeg.—We have not used high power bolts in railway crossings; only plain forged machine bolts.

Air Compressor Repairs.—(a) Is it the practice of member companies to put air compressors into service after bushing and reboring the cylinders without grinding? (b) Do any companies use over-size pistons where cylinders have worn, or are they brushed?

E. Blair, Superintendent Rolling Stock, Montreal Tramways Co., Montreal.—(a) We have tried both grinding and reboring of worn air compressor cylinders. We find that a completely rebored cylinder is not only cheaper but better. (b) Our original practice was to use over-size pistons in rebored cylinders. We now find it more economical to bore out all bushings, making the bore of bushing 0.030 mills smaller than the original size, using the old pistons, trimmed to size. When these are worn they will be bored to standard. When new standard pistons with proper jigs are provided, the cost of reboring and bushing is very small.

John Whitsell, Manager, Winnipeg Electric Ry., Winnipeg.—(a) We have not rebushed any air compressors. (b) Where cylinders are worn, we bore and grind same, and use over-size pistons.

F. D. Burpee, Manager, Ottawa Electric Ry., Ottawa, Ont.—(a) We install compressors after bushing and reboring the cylinders without grinding. We have used over-sized pistons where cylinders have worn, with success. However, we understand that recently the Westinghouse Co. is sending out all new cylinders already bushed, and we believe that they should meet with success.

Drafting Offices.—Do member companies maintain individual drafting departments for several branches of their organization, or is all drafting work handled by a central department?

D. E. Blair, Superintendent Rolling Stock, Montreal Tramways Co., Montreal.—It is this company's practice to have separate drafting rooms for its track and car departments.

Track Spiral Standards.—(a) Have you adopted and do you now use the Association's standard track spiral, if not, please state your reasons. (b) Have you permitted track manufacturers to specify other types of track spirals in preference to the Association's standard, and if so, for what reason?

John Whitsell, Manager, Winnipeg Electric Ry., Winnipeg.—

(a) We have not as yet adopted the Association's standard track spiral, because we have not designed any new track intersections or curves since the

Association spirals were adopted, and I think it would be essential for the trade manufacturers to adopt these spirals or the cost would be prohibitive.

Instructing Platform Men.—What methods of instructing trainmen have proved most effective in improving their efficiency, courtesy, etc., and in arousing their interest in their work? F. D. Burpee, Manager, Ottawa Electric Ry., Ottawa.—By the publication of a monthly employees' paper; by training employees to give unfailing courtesy and attention to passengers and impressing on them the importance of winning and retaining the good will of our patrons.

John Whitsell, Manager, Winnipeg Electric Ry., Winnipeg.—We find that the maximum efficiency has been gained by the following method: When a motorman or conductor is employed he is first put through an eye-color test; he then has to pass the company doctor. If he

Proposed Equipment of Electric Railway Cars with Drop Fenders and Pilots.

The Board of Railway Commissioners issued a circular to electric railway companies, a short time ago, as follows:—"Equipment of cars with drop fenders in addition to pilots; drop fenders to be used while running through cities. Referring to the above matter, I am directed by the Board to enclose you herewith a copy of a blue print showing four different kinds of fenders and their application to the cars, and to ask for such comments or criticisms as you desire to make regarding the utility of the device and the advisability of its adoption."

The matter having been considered by the Canadian Electric Railway Association's executive committee, a circular was sent from the Association's office to all member companies, following receipt of replies to which the Association's President, G. Gordon Gale, wrote the Board of Railway Commissioners' circular as follows:—"On receipt of your letter re fenders or wheel guards on electric cars, a circular letter was sent out to all the Association's members, together with copies of the blue prints supplied by you, asking for comments, criticisms and suggestions regarding the use of this appliance on cars fitted with pilots. Very complete replies have been sent in, and I have summarized them as follows:—

"1. The advantage in having a fender, in addition to the pilot, for the protection the device might afford to the pedestrian while the car is travelling on a city street. In rare cases the fender would carry the body and prevent it from passing under the wheels. It is pointed out, however, that the large majority of accidents occur with vehicles, and a projecting fender is not without objection.

It is, in itself, on occasion, a cause of accident, particularly where the car is on a curve. The number of pedestrians struck by the front of a car and thrown on the fender is very small. The pedestrian is usually struck by the corner of the car, outside the fender area, and the body is usually thrown clear of the track. It is therefore questionable whether the addition of such a fender would be more of a protection than an additional hazard. A point of interest indirectly related to this matter is the fact that large and heavily laden trucks operate through the city streets without pilots, fenders or air brakes, at comparatively high

speeds, and without being restricted to the definite area of the track allowance. "2. While the value of the fender on the city streets is questionable, it is felt that the use of this device on an interurban car would be a menace to the passengers on the car, on account of the possibility of derailment. The protection to the passengers on a high speed interurban car is more important than the possible protection afforded to the individual who might be struck by the car. Even if the individual was caught on the fender, the car would probably be derailed, and injury result to a number of passengers. Very rugged construction would be necessary to ensure safety. On many lines interurban cars are fitted with nose-ploughs during the winter. It would be impossible for the crew to remove these ploughs and place the fenders at the city limits.

"3. The danger of operating with a fender on interurban sections would necessitate the application of the fender before entering a town, and its removal when leaving the town limits. This is not considered practicable, as the delay to the service would be considerable, and it would hardly be possible for the crew to handle a fender which was built heavily enough to afford the required protection. Where an interurban line passed through a number of towns it would be necessary to have a stock of fenders at the town limits.

"4. In order to provide clearance for the fender under the pilot, the space between the pilot and the rail would be excessive and the protection afforded by the pilot would be reduced considerably. The space available at the end of an interurban car for air brake attachments, radiator, drop rigging, and pilot, is now fully taken up, and it would not be easy to introduce a suitable fender in addition to this apparatus. The fender could not be used on cars operated in multiple.

"It would appear, therefore, that the fender is not particularly necessary in city operation, that it is undesirable on interurban sections, and that the use of the fender and pilot would involve practical difficulties, many of which could not be satisfactorily taken care of. We are of the opinion, therefore, that the proposed fender and pilot arrangements should not be adopted."

Change of Rule of Road in British Columbia.

British Columbia's coastal region changed to the right hand rule of the road on Jan. 1 at 6 a.m. with practically a total absence of traffic accidents of any kind. Details of the work which had to be done by the B.C. Electric Ry. Co. in this connection in Vancouver, Victoria and New Westminster were given in previous issues of Canadian Railway and Marine World. In practically every particular the anticipated problems were fully met and the change was made in what is admitted by the public as a marvel of smoothness and safety. It was not expected that all the cars would be changed over on the mainland in time for the first day of 1922, but work had been so organized in the Prior St. shops, under G. A. Dickie, Master Mechanic, that not only had most of the single end cars had right hand steps cut in them, but five had been completely changed and 20 double-end cars had also been completely and permanently transformed.

The company's greatest problem was in Vancouver, where it operates 208 in regular service. On Sunday, Jan. 1, only 160 cars were required and on Monday only 170. It thus had two full days to prepare for the first rush hour on Tuesday, Jan. 3. On New Year's Eve, the car shops began work as soon as cars came off the afternoon runs. It was not expected that the full equipment would be finished until about 10 the next morning, 15 crews working, but they were finished at 6 a.m. and the men started refitting the temporary sides taken from the right hand openings, to the old exits and entrances on the left side. Each part was numbered and made so that it would change over with the least possible handling. Batts were provided for fastening up rear gates and front doors. Rails had been removed from the rear platform some days before. Cars were tacked to the new entrances and exits, so that passengers would not be confused. Other cars were nailed at the front exits reading: "Out opposite door," to remind passengers who from force of habit would go to the left.

At midnight on New Year's Eve, the track gangs set out. Vancouver was divided into four districts, to each of which was assigned a crew with an automobile. There were 125 separate operations to perform, such as blocking up old tracks, taking out old and replacing springs in switches, and so forth. This work was completed before morning. The line crews had five additional tower wagons built on motor trucks, making seven in all. To them fell the work of connecting the new electric switches, changing the position of frogs and the curves of trolley wire. Seven of the 17 electric switches had been installed in new positions, duplicate equipment having been used for the purpose, so that the only operation needed was to make the electrical connection. Five more required only the installation of coils from the old switches.

The company anticipated trouble from its trolley wires. Some weeks previously a car was run around the city on the right hand tracks before cars began operating on the Sunday morning and the defects of right hand operation were noted. On Sunday and Monday, cars maintained their schedules, but fell down badly on Tuesday, many lines running half an hour late. This was on account

of trolley trouble, and the slower speed made on curves. It was found that with switches and crossovers worn with left hand traffic, there was danger of a car leaving the track. Considerable grinding was necessary before this danger was overcome. In addition to that, all traffic was involuntarily slowed up, due to motormen and drivers taking extra precautions, but it is expected to be back to normal in a short time.

On the interurban lines, there was little or no trouble. Most of the stations on the Central Park line, on the mainland, were changed to their new positions. No changes were necessary in rolling stock on this line. Some difficulty was experienced in getting cars out of the barns, owing to switches and tracks being set for left hand operation, but this was rectified as quickly as possible.

Leading up to the change, the company did considerable publicity, and the newspapers credited the absence of accidents largely to this campaign. This included a booklet to school teachers for instruction of children, a safety essay competition, an issue of 29,000 leaflets to automobile owners printed by the company and distributed by the B.C. Electric Ry. Co. cards and full page advertisements in the newspapers. The slogan "Safety First" was used continuously. The company is now devoting its publicity to inducing passengers to speed up their service to their old standards.

The Winnipeg Electric Railway's Relations with the City.

The Mayor of Winnipeg, in his inaugural address on Jan. 2, dealt with the city's relations to the Winnipeg Electric Ry. Co. He expressed satisfaction with the avoiding of wasteful expenditure on litigation and the adoption of a policy of negotiation with the company. After alluding to a number of matters settled or in process of settlement between the city and the company, he said:—"The several outstanding matters have all converged to the point where they become purely a matter of finance, and the city and company are confronted with the problem of whether or not the company is able to go into the financial market and obtain the necessary money for its works under existing conditions. The company contends that this cannot be done unless it can obtain an extension, beyond 1927, of its existing franchise. Under the terms of this franchise, the city is able to assume the ownership of the system in 1927 under the conditions set forth, but must give the company one year notice of its intention so to do, 1926 to notify the company of its intention, if it intends to assume the ownership in 1927. In my opinion if it is the city's intention to assume the ownership of the system, the matter should be taken under consideration at the earliest possible moment. On the other hand, if that be not the city's intention, it would be not only fair to the company, but of the advantage to the city to give, if possible, to make up its mind and inform the company so that the company can make its arrangements to meet the capital expenditures which will be involved in the work required to be performed by it under the headings which are now the subject of negotiation, the

company having asserted that it would be impossible for it to make any arrangements without an extension of the franchise. It would, therefore, appear that the subject should have the council's serious consideration, and that the matter of either extending the franchise or of taking over the system as a municipal utility be very carefully canvassed, as it should be obvious to everyone that the city is vitally interested in the maintenance of a first class street railway system."

Electric Railway Track Laid in 1921.

Revised figures in two instances have increased the total mileage of new track laid by electric railways in Canada by about 2.5 miles over the figures given in Canadian Railway and Marine World for January. The revised figures are:—

	Miles. Miles.
Brantford Municipal Ry.—	
St. Paul's Ave. extension.....	1.47
South Market St. extension.....	.42
Along West Mill St.	1.00
	2.890
Hydro Electric Ry., Essex Division—	
New track in Windsor, Ont.	1.500
Montreal Tramways Co.—	
Sherbrooke St. extension.....	0.14
Bordeaux extension.....	1.22
Park Ave. extension.....	.72
Cremazie Road-Bagge Ave.11
	2.190
Quebec Ry., Light & Power Co.—	
Boisclair Ward extension.....	0.880
Toronto Transportation Commission—	
Coxwell Ave., Queen St. to Danforth Ave.	1.040
Greenwood Ave., Danforth to Toronto Ry. and Toronto Civic Ry. lines.....	0.941
Danforth Ave., connecting Toronto Ry. and Toronto Civic Ry. lines.....	0.923
Ternallyn St., College St. to Bloor St.	0.625
Albert & James St. extension for Bloor St., Rummymede Road to Jane St.	0.115
Jane St., Dupont St. to St. Bathurst St., Dupont St. to St. Clair Ave.	0.416
	0.527
	2.787
Total.....	19.247

The Hydro Electric Railways reports that it rebuilt 3.3 miles of track in Windsor, Ont., and one mile of track on the Guelph Radial Ry., Guelph, Ont.

Vote on Proposed Purchase of Toronto Suburban Railway.

Toronto voters were asked on Jan. 2 to vote on a bylaw authorizing the Toronto City Council to acquire the Toronto Suburban Ry. Co.'s lines owned by the Dominion Government and operated as part of the Canadian National Rys. system, and to confirm an agreement for the operation of the portions outside the city by the Hydro Electric Power Commission of Ontario. The number of votes for the bylaw was 16,087, and against 13,580, a majority of 2,507 for the bylaw.

The agreement referred to in the bylaw provides for the taking over of the whole of the Toronto Suburban Ry. lines within and without the city, payment to be made by the city taking over outstanding bonds for \$2,628,000, paying in cash \$202,000 for the line within the city limits (the franchise for which has expired, and preparations are in progress for a valuation by arbitration under the franchise), and the provision of \$150,000 for betterments within the city. The sections of the line in the city would then become part of the city's system, and the lines outside would be handed

over to the Hydro Electric Power Commission of Ontario for operation, the city to be responsible for any deficits on operation and only to receive surpluses at the Commission's discretion. The bylaw not having been approved by the Ontario Government before submission will not be effective unless confirmed by the Ontario Legislative Assembly.

The large vote against the bylaw suggests that there are features about the proposal which will have to be very carefully considered before full effect is given to the agreement. The ownership by one municipality of electric railways in other municipalities has been referred to by the Premier of Ontario in connection to the consummation of the agreement, but the principal reason urged against the bylaw was that the lines outside the city are to be handed over for operation to the Hydro Electric Power Commission of Ontario, which would be given power to fix fares and rates, to make expenditures, and to call upon the City of Toronto to pay deficits, while any profits could be retained by the Commission.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies.—

Interest	5,681	5,722	68,828
Balance	6,639	7,883	48,938

London and Port Stanley Ry. Co.—The annual meeting of shareholders was held in London, Ont., Jan. 16, the City of London being the only shareholder represented. The directors are appointed by the London City Council, and are the Mayor, Aldermen Holmes, May, Watkinson, Ashton, Childs, Cunningham, Watkinson and Judd. The directors' duties are nominal: they receive the rent from the London Railway Commission and hand it over to the London City Council, and transact certain formal business. The directors' report showed the receipt of \$63,461.48, as rent and interest, and the payment out of the same sum. The City of London owns 8,631 shares; the G.T.R. Co. controls 2,317 shares, and 270 shares are held privately.

Regina Municipal Ry.—The interim report of the auditors on the City of Regina's finances for the 11 months ended Nov. 30, 1921, shows that the deficit on the municipal railway was \$20,982.22.

The city commissioners have had under consideration for some time questions relating to the municipal railway accounts and their adjustment. The commissioner's report has been approved by the finance committee and recommended for adoption by the city council. The report deals with the adjustment of the street railway accounts respecting the contributions from property sales and the consequent change in depreciation reserve. The result of the adjustments made would reduce the deficit of \$312,

095.62 shown in the accounts by \$101,909.80.

Winnipeg Electric Ry.—

Surplus	52,813	55,447	649,420

Arbitration of Value of Toronto Railway Co.'s Property.

The proceedings to determine the value of the Toronto Ry. Co.'s property, transferred to the city on Sept. 1, 1921, before the arbitrators, Hume Cronyn, of London, Ont., chairman, Sir Thos. White, nominated by the company, and Sir Adam Beck, nominated by the city, were on December 23, 1921, adjourned until Jan. 10, as far as the examination of witnesses was concerned, but on Dec. 31, Chairman Cronyn announced the following decision:—"Following the judgment delivered in this matter by the Second Divisional Court on Dec. 16, Mr. McMaster has renewed the City of Toronto's application for inspection of the Toronto Railway Co.'s books and records. After reading the argument before the court and perusing the judgment delivered, it is obvious I failed to make clear the reasons which impelled me in the ruling under review. No useful purpose would be served by entering at this stage into further explanations, save in so far as these may be necessary to clarify the opinion which follows. As shortly stated by Mr. Tilley in the course of his address to the court, our ruling, so far as any view was taken, was that the evidence was not relevant and was therefore inadmissible. The court holds unanimously that the evidence is admissible, although, in contrast to the decision in the Rogers and London and Canadian case, no opinion is expressed by a majority of the court as to its relevancy, and the Chief Justice makes it plain that, upon the arbitrators lies the burden of its admission or rejection.

"After a careful review of the whole matter, in the light of the above judgment, I have reached the conclusion that we should receive evidence of original cost, and to that end should require the railway company to produce its books and records. Our ruling, therefore, is that upon the conditions as to sealing or covering up, laid down on Oct. 28, 1921, the company shall forthwith produce for inspection by the city all its vouchers, books, records and other documents covering the items mentioned by the city in its notice of Nov. 2, 1921.

"Mr. Rowell, for the railway, has asked for a decision on the request made by him for the production and inspection of certain books and records of or in the control of the city. Our ruling is that, subject to the conditions as to sealing or covering above mentioned, the city shall forthwith produce for inspection by the railway company all the vouchers, books, records and other documents in the possession or control of the city or in the possession or control of the Toronto Transportation Commission covering the items requested by the railway company on Nov. 10, 1921. But the said production and inspection shall not be limited to the period since Jan. 1, 1918, but shall cover the period since the inception of the construction of the first city lines."

The arbitrators resumed the taking of evidence on Jan. 10, the witnesses examined up to Jan. 24, for the company, including F. G. Farley, Chief Engineer; B. F. Wood, electrical engineer, New York; and L. A. Herdt, Professor of Electrical Engineering, McGill University, and Vice Chairman, Montreal Tramways Commission.

Voting on Niagara, St. Catharines & Toronto Railway Bylaws.

The position in regard to the proposed purchase of the Niagara, St. Catharines & Toronto Ry., from the Dominion Government, by the municipalities which it serves, was fully described in Canadian Railway and Marine World for January on pg. 41. The voters of a number of the municipalities voted on bylaws submitted to them on Jan. 2, and gave majorities in favor of the proposal, except Humberstone Village, which voted against it by 175 to 157, and it was subsequently decided to resubmit the bylaw there on Jan. 30. Following are the votes in the various municipalities:

	For	Against
Humberstone Village	157	175
Leith Township	225	215
Niagara-on-the-Lake	309	72
Pelham Township	375	327
Port Colborne Town	389	271
Port Huron	122	24
St. Catharines City	1,558	500
Thorold Town	319	248
Welland City	302	302

There is some question as to the votes in Pelham Township, as voters of Ponthill Village, part of which was formerly in that township, voted in the township, no arrangements having been made for separate voting in the village.

Similar bylaws were arranged to be voted on in Crowland, Grantham, Humberstone and Thorold Townships, on Jan. 30. Bylaws have not yet been submitted to the voters of Niagara Falls City, Niagara Township, and Stamford Township, which are included among the 17 municipalities interested, and in which bylaws either have been or are to be submitted.

The Ontario Government, having refused to approve of the bylaws before their submission, the votes on them by the various municipalities will apparently have no legal effect.

London's Electric Railway Problem.

Mayor Wilson, of London, Ont., in his inaugural address on Jan. 9, said:—"One of the most serious problems which the city will have to face in the near future is that of transportation. The franchise of the London Street Ry. Co. will expire in 1925. The question will then, or at an earlier date, arise as to whether it will be better, in the interests of the citizens, to extend the company's franchise or to take over the street railway as a municipally owned utility. I believe that the question of the solution of this problem should be taken up immediately, so that when the time arrives for the decision to be made, our successors in office will have the solution at hand. With this object in view, I suggest the formation of a transportation committee, to consist of members of the city council, prominent ratepayers and technical advisers, to thoroughly investigate the future transportation needs of the city and to report upon the solution of the transportation problem."

Marine Department

Canadian Shipping, Its Growth and Present Position.

By E. W. Beatty, K.C., President, Canadian Pacific Railway.

One of the most interesting features in Canadian development during recent years has been the growth of the shipping facilities for Canada's overseas trade and traffic. An indication of this can be seen in returns from the port of Montreal for 1921, which show that up to the close of navigation 980 ships had docked there, compared with 654 for the previous season. The shipments included more than 140,000,000 bush. of grain, an increase of nearly 100% over the previous highest figure, that of 1914.

The prosperity of a country depends upon the ease with which its produce can be marketed, and in the case of Canada, which exists so largely on overseas markets, the conditions of trade are undoubtedly governed by the facilities for transport. The development of shipping sufficient to ensure the speedy conveyance of passengers and freight is therefore of vital importance, and accounts for the steady increase in the size of the C.P.R. fleets on both the Atlantic and Pacific oceans.

The phenomenal growth of Canada's mercantile marine during the last few years has been taken as indicative of the country's progress. There is danger, however, in a too rapid growth if the increase has not been directed along commercially profitable lines. What we have to consider is whether the new tonnage is justified by the country's production, whether the ships are suited to the kind of traffic available, and whether they are the kind of ships that are likely to pay their way. If those factors are not taken into consideration, we may find that a portion at least of Canada's large mercantile fleet is the kind of asset popularly referred to as a "white elephant."

A statistical comparison of Canada's mercantile marine over a period of years is apt to be misleading, unless we thoroughly understand what these statistics represent. In a letter written in 1851, addressed to Earl Grey, then Colonial Secretary in Britain, Jos. Howe, the distinguished Nova Scotian statesman, said: "The best criterion of the comparative civilization of countries may be found in the growth of commerce and the increase of a mercantile marine. Tried by this test, the North American provinces will stand comparison with any other portion of the Queen's dominions. The West Indian colonies, the Australian group, including New Zealand, the African colonies, and the East Indies, or the Mauritius and Ceylon, owned collectively in 1846 but 2,128 ships, or 42,610 tons of shipping. The North American group, including Canada, Nova Scotia, New Brunswick, Newfoundland and Prince Edward Island, owned in that year 5,119 ships, measuring 393,822 tons. Of these, Nova Scotia owned in tonnage 141,093, and in number more than the other four put together, or 2,583."

In 1863 the British American provinces stood fourth in the world's shipping, with 7,101 ships, totalling \$42,643 tons. In that year alone 602 ships totalling 224,314 tons were built in the Canadas and the Maritime Provinces, only 9,000

tons less than the tonnage built in the United States, which, moreover, in that year bought Canadian-built ships to the value of \$9,000,000. The highest tonnage on the Canadian register previous to the great war was reached in 1878, with a total of 1,333,015 tons. These, however, were not mostly wooden sailing ships, and under the competition of steamships and trade depression, the tonnage had dropped by 1902 to less than 50% of that total, or, to be exact, 652,613 tons.

It was not till 1900 that steel ships began to appear to any extent on the Canadian register, and not till 1918 were steel ships in the majority, the figures being 4,366 steamships out of a total of

cost was high, and represents a hectic element in our maritime progress. It is indeed a mystery why construction of so many of these ships was undertaken after the armistice. Contracts were given by the Government to Canadian shipbuilders for cargo ships in Jan. 1919, on a price basis of \$200 a ton, at a time when the C.P.R. was being offered by the British Ministry of Shipping any number of cargo ships, well adapted to the requirements of Canadian trade, at \$100 a ton, and actually bought two at that price. The experience of Canadian ship owners has been that cargo ships are a speculative investment, unless they are operated as supplementary to a regular service of combined passenger and cargo steamers, when they may come in useful as an adjunct to regular liners when more business than usual is offered. The Government cargo steamships contracted for after the armistice, seem to have been built without any particular trade in view, and without the support of a passenger service. Unless their initial high cost is written down, they must be run at a loss, except during periods of high freights, and high freights are certainly not welcomed by any country looking for export business.

Experience has shown that for Canadian trade the ideal ship for Atlantic business is the steamship which will combine passenger and freight business in a certain proportion. This accounts for the construction of the new one-off cabin type of ship such as the *Montcalm*, with a gross register of 16,000 tons, a speed of 16 knots, a capacity of 1,500 passengers and 5,000 or 6,000 tons of freight. Of the 35 steamships plying for the C. P.R. on ocean service, only 9 are cargo ships. Although some of the Government steamships are run on regular lines, where there is some prospect of a cargo both ways, a large percentage of the fleet has been forced into tramping, without any particular benefit to Canadian commerce, although the tonnage may swell the Canadian register.

The increase in tonnage credited to the steamship companies carrying on regular service, particularly where the liners are passenger steamships, is in another category. The natural development of Canadian shipping under present conditions is undoubtedly in the field of passenger traffic, rather than cargo ships. In the first place, Canada's crying need is for more population, particularly of the farming classes, and over in Great Britain and Europe there are hundreds of thousands of good settlers eager to come to this continent if only the doors are not shut in their faces. In the second place, owing to Canada's geographical position, the St. Lawrence route to summer and the port of Vancouver all the year round are in a favorable position to attract large passenger traffic to and from the United States, with its 100,000,000 population, as well as to and from Canada itself. The St. Lawrence route enables Atlantic steamships of reasonable speed to cross the Atlantic with only four days open sea, while the comparatively short distance between Van-

8,568 ships. On Oct. 31, 1921, there were 8,322 ships on the Canadian register, of which 4,455 were steamships, the gross tonnage of these 8,322 ships being 1,750,750 tons.

The large tonnage of British North American ships in the middle of the nineteenth century is, however, deceptive, unless one analyzes the character of the trade in which the ships engaged. The Nova Scotian ships, in particular, were built of soft wood, iron and copper fastened, and, unlike the more substantial and more expensive British built ships, were not always destined for a long life. They carried possibly a cargo of Nova Scotia lumber to England, then reloaded with a cargo for South America and tramped to and fro on many oceans without seeing their home port again till they were practically used up. The steel steamship of today is built for a longer life, and tonnage involves a greater initial cost.

In the case of the mercantile fleet built for the late Canadian Government, the

couver and Yokohama has given Canadian liners a substantial time handicap over their competitors using the longer southern routes.

The total tonnage of ocean going lake and river steamers which will carry the C.P.R. house flag in 1922 will be only a few tons short of 500,000, or nearly nine times as large as the great Spanish Armada. This is in spite of the fact that the C.P.R. lost tonnage by enemy action during the recent war to the extent of 101,081 tons.

The growth of the C.P.R. steamship interests is significant of the contribution made by that company toward Canada's progress. Starting with a fleet on the Pacific, the railway entered the Atlantic trade by buying 15 ships from the Elder-Dempster Line in 1902 for \$7,500,000. The change of conditions in steamship business is illustrated by the fact that this sum today represents the cost of one single new ship destined for the Pacific trade, the Empress of Canada. In 1906 the Empress of Britain and Empress of Ireland were added to the Atlantic fleet. In 1913 the Pacific service was strengthened by the Empress of Russia and Empress of Asia. Two steamers of the one cabin type, the Metagama and the Missanabie, were added in 1914, followed in 1917 and 1918 by the Melita and the Minnedosa, but the chief increase was due to the taking over of the Allan Line fleet of 18 steamships. This year will see the addition of several fine passenger steamships for both Atlantic and Pacific service, the Empress of Scotland, 24,584 tons, which will be the largest ship in the Canadian trade; the Empress of Canada, 22,000 tons, built for the Pacific service; the Empress of Australia, 19,300 tons; the Empress of India, 17,052 tons, and the Montcalm, Montclare, and Montrose, each of 16,000 tons. This represents an addition of 130,000 tons to the C.P.R. fleet in a single year, and should convince the most pessimistic that the directors of one Canadian enterprise, at any rate, are looking forward to increased trade and traffic.

That traffic, however, can only continue to make progress if Canada pursues a broad minded immigration policy,

and does not shut her doors against the settlers anxious to come from overcrowded Europe, and work upon her vacant and undeveloped resources. The Imperial Government during the past year spent \$100,000,000 in doles to unemployment, a large percentage of whom were

recently living on the land. At the same time less than 10% of our available agricultural land in the west is under cultivation. Surely there is an opportunity for shipping here, to transfer the worker to a place where he can work and thus benefit both the old country and the new.

Sault Ste. Marie Canals Traffic.

Summary for 1921.

Articles	Eastbound	M. ft. E.M.	Canal	U.S. Canal	Total
Lumber	25,661	180,645	206,306

Canadian Pacific Railway's Twin Screw Steamship Montclare.

The launch of the s.s. Montclare, Dec. 17, 1921, by Lady Brown, wife of Sir George McLaren Brown, European General Manager, C.P.R., London, Eng., at Clydebank, Glasgow, Scotland, was announced in Canadian Railway and Marine World for January. The s.s. Montclare is the last of the three steamships of the M class, which the company ordered for the Atlantic service between Liverpool and Montreal, or St. John, N.B. Two of these, Montcalm and Montclare, were ordered from John Brown & Co., and the Montrose from Fairfield Shipbuilding & Engineering Co., Glasgow.

The Montclare has been built to Lloyd's highest class, and to the British Board of Trade's requirements for passenger service. Her principal particulars are:—Length on water line, 563 ft.; breadth moulded, 70 ft.; depth to shelter deck (C), 43½ ft.; depth to boat deck, 68 ft.; tonnage, about 16,200 gross. She is of the shelter deck type, with bridge deck extending almost the full length, and has a cruiser stern, 2 masts and 2 funnels. The hull is divided into 13 watertight compartments, by 12 bulkheads protecting a high standard of subdivision. The cellular double bottom, in which is stored oil fuel, reserve feed water, fresh water and water ballast, extends the full length of the ship, and is carried well up the bilges, giving additional protection, and the machinery spaces are further protected by longitudinal bulkheads and inner skins. Fresh water tanks are also built along the shaft tunnels. Accommodation for 1,242 cabin passengers is provided amidships on the B and C decks, staterooms being arranged for 2 and 4 passengers, and comfortably furnished. The cabin dining room extends the full width of the ship, on D deck amidships, and is decorated in the Georgian style, a number of the tables being arranged for small parties. The cabin lounge is forward on A deck, and there are separate writing and card rooms. The cabin smoke room is aft, on the same deck, and decorated in the Jacobean style. Promenade space is provided on A and B decks, the forward end of A deck being screened off, and there is an open air dancing space on this deck. Third class accommodation is arranged on D and E decks, for 1,268 passengers, arranged in 2, 4 and 6 berth rooms. The dining room is on D deck aft, with 2 smoking rooms and 2 lounges on B deck aft, and smaller ones on C deck forward. The captain's quarters are on the navigating bridge, the officers on A deck forward, the engineers on C deck aft, and the remainder of the crew on C, D and E decks amidships. Heating and cooling are provided on the thermotank principle, ensuring a least average temperature of 65 deg. Ten thermotanks are fitted, sufficient to change the air in any compartment with which they are connected, at least eight times an hour. Cargo is handled by steel tubular derricks on the masts and derrick posts, operated by 14 electric winches, and each hatch is supplied by 3 derricks. Lifeboat accommodation is the standard of the International Convention, the nested boats are fitted on sliding chocks so that they can be moved from one side of the ship to the other, and all are placed under Babcock & Wilcox patent double acting davits, the other lifeboats have Australian patent davits. The ship is equipped

with wireless telegraphy, submarine signalling, gyro compass, complete fire extinguishing service, and pneumaticator gauges are fitted in all oil fuel and fresh water tanks, with indicators in the machinery space, so that the tanks are all ways under the engineers' supervision.

The propelling machinery is placed in one room, and consists of 2 sets of steam turbines of the latest Brown-Curtis marine type, arranged to work with superheated steam and driving twin screws through double reduction helical gearing. Each set of turbines consists of one high pressure, and one intermediate pressure turbine, in tandem, driving through one portion, and one low pressure turbine driving through the other portion of the gearing. A stern turbines are incorporated in the casings of the intermediate and low pressure ahead turbines. Adjusting blocks are fitted to the turbines, and the bearings of the turbines and gearing are arranged to work under forced lubrication. One condenser of the underhung type is fitted for each set of turbines, and bolted direct to the exhaust branch of the low pressure turbine. The main shafting is of ingot steel, and each line has a main thrust block fitted next to the gearing, to take up the propeller thrust. The propellers are of the built-up type, with 4 manganese bronze blades and bosses of cast steel, with cast iron cones fitted over the propeller nuts. The auxiliary equipment includes Weir air, feed and hot well pumps, Weir surface and direct contact feed water heaters, water filters, evaporating and distilling plants, etc.

There are 10 single ended, cylindrical boilers arranged for burning oil fuel, and suitable for a working pressure of 215 lb. a sq. in., fitted with smoke tube generators, and each boiler fitted with 3 furnaces arranged for forced draft. The

boilers are placed in 2 compartments, each equipped with a working and stand-by oil fuel installation complete. The ship was designed by Hugh Macdonald, Naval Architect, C.P.R., and built under the supervision of Sir J. H. Biles & Co., London and Glasgow, the company's consulting naval architect.

Sir Thomas Fisher, General Manager, Atlantic Lines, Canadian Pacific Steamships, Ltd., in speaking after the launching, said that the s.s. Montcalm, of which the Montclare is a sister ship, was one of the first steamships to be equipped with double reduction geared turbines. The greatest engineering skill and finest workmanship were necessary to cut the gear to transmit the power from the turbine engines, running at approximately 3,000 revolutions, to the propeller's 95 revolutions a minutes. In the Montcalm they were transmitting 13,000 h.p. and reducing the speed 30 times, and it was hardly an exaggeration to say that the noise of the engine was not more than that of a motor car of 10 h.p. That ship made a consumption of not more than 1 lb. per shaft horsepower, and the speed obtained for the given shaft h.p. was in excess of what should be obtained from a similar class of ship.

Sir George McLaren Brown traced the development of the company's operations, both railway and steamship, from the commencement, emphasizing the benefits accruing therefrom to the country at large, and incidentally mentioned that the company had spent about \$100,000,000 on the Clyde.

Marine Public Works Contract.—The Public Works Department awarded a contract Dec. 21, 1921, for repairs to wharf at Sheguiandah, Manitoulin Island, Ont., to McNamara Bros. & Thornton, Sault Ste. Marie, Ont., at schedule of prices.

Grain Shipped from Fort William and Port Arthur.

The following table, prepared by the Dominion Bureau of Statistics, Internal Trade Division, shows the bushels of each kind of grain shipped from Fort William and Port Arthur, with ports of destination, during the 1921 navigation season.

	Wheat	Oats	Barley	Flaxseed	Rye
	bu.	bu.	bu.	bu.	bu.
To Canadian ports—					
Goderich	8,618,999-50	5,344,562-11	45,000-00	186,818-42	296,715-08

Icebreaking Steamship for St. Lawrence River.

In Nov. 1921, the Marine Department gave an order to Canadian Vickers Ltd., Montreal, to build an icebreaking steamship, practically similar to the icebreaker J. D. Hazen, which is illustrated on this page, and which was being built by that company when the Great War broke out, and was completed in 1916, when it was, at the British Government's request, sold to the Russian Imperial Government for use in the White Sea. The new ship was to be delivered next autumn. A descrip-

sued at Ottawa on behalf of the former Meighen Government:—"The contract was given by Hon. C. C. Ballantyne, in the belief that the icebreaker was needed, and that it would be cheaper to build a new one than buy the J. D. Hazen, which had been sold by Canada to the Russian Government, and twice sunk during the war, therefore requiring heavy costs for repairs. In addition that ship is now claimed by both the French and Russian Governments. The J. D. Hazen

Government claim the ship and the Russian Soviet Government also claim it. Therefore the Meighen Government, while recognizing that there might be a possible saving on the purchase of this ship, considered that, with the great need of employment in Montreal at present it would be the better course to order a new icebreaker. This was done, at the earnest request of Mayor Martin, who had written both Premier Meighen and Hon. C. C. Ballantyne, while representa-

Icebreaking Steamship J. D. Hazen.

tion of her was given in Canadian Railway and Marine World for Dec., 1921.

The general election which took place in Dec., 1921, having resulted in a change of Government, a Montreal press report, early in January, stated that the contract had been cancelled. We have, however, been officially advised that it has not been cancelled, but that Canadian Vickers Ltd. has been instructed not to proceed any further with the work, for the present, and also that only a certain amount of preliminary work had been done under the contract.

The following statement has been is-

sued twice during the war, and underwent some very hard experiences, and during the past 18 months has been at Cherbourg, France. The Meighen Government looked into this icebreaker proposition very thoroughly. The J. D. Hazen has been tied up at Cherbourg at the expense of the French Government, who claim that they are now owners of the ship. Reports furnished the Canadian Government were to the effect that after having been twice sunk and badly battered it would take a great deal of money to put the icebreaker into condition for efficient service, while the French

tions had also been made to the Government by the labor organizations of Montreal urging the construction of this icebreaker, both as a national necessity and as a help to tide over the present period of unemployment. The Government, under the circumstances, felt justified in letting the contract to the Canadian Vickers Co., as the lowest tenderers, at \$1,598,000."

We are officially advised that the s.s. J. D. Hazen, which is in the French Government's possession at Cherbourg, has been offered to the Dominion Government for \$95,000, or approximately \$427,500.

Some of the Prince Edward Island members of the House of Commons have suggested that if a new icebreaker is

built, it should be designed so that it might also be used as a car ferry, in case the s.s. Prince Edward Island, which

operates the car ferry service between New Brunswick and Prince Edward Island should be disabled at any time.

International Joint Commission's Report on St. Lawrence Waterway.

A Washington, D.C., press dispatch of Jan. 16, stated that the International Joint Commission has presented a detailed plan for the construction of a deep waterway between the Great Lakes and Montreal, with a recommendation that the project be undertaken at once by the United States and Canada. The Senate referred the report to its Foreign Relations Committee. The report was also submitted to the Dominion Government at Ottawa. The cost of construction of the proposed St. Lawrence ship channel, of 25 ft. draft, is estimated at \$250,000,000, and of the Welland ship canal, \$60,000,000. It is proposed that the project be financed by the sale of bonds of the two countries, and the bonds retired from the proceeds of the sale of electrical power to be developed on the route. The Commission's recommendations are as follows:—

1. That the governments of the U.S. and Canada enter into an agreement by way of treaty for a scheme of improvement of the St. Lawrence River between Montreal and Lake Ontario.

2. That the new Welland Ship Canal be embodied in the scheme and treated as a part thereof.

3. That the proposed works between Montreal and Lake Ontario be based upon the report of the engineering board accompanying this report, but before any final decision is reached, the report of the board, together with such comments, criticisms and alternative plans as have been filed with the Commission, be referred back to the board, enlarged by other leading members of the engineering profession.

4. That there shall be an exhaustive investigation of the extent and character of the damage through flowage involved in the plan of development finally adopted.

5. That, assuming the adoption of the plan of the engineering board, or of other plans also involving a readjustment of the international boundary, in order to bring each of the power houses on its own side of the boundary, appropriate steps be taken to transfer them to one country or the other, as the case may be, and the slight acreage of submerged land involved.

6. That Canada proceed with the works necessary for the completion of the new Welland Ship Canal in accordance with the plans already decided upon by that country.

7. That such navigation works as do not lie wholly within one country or are not capable of economical and efficient construction, maintenance and operation within one country, as complete and independent units, be maintained and operated by a board hereinafter called The International Board, on which each country shall have equal representation.

8. That such navigation works as lie wholly within one country and are capable of economical and efficient construction, maintenance and operation as complete and independent units, be maintained and operated by the country in which they are located, with the right of inspection by the International Board, to ensure economy and efficiency.

9. That power works be built, installed

and operated by and at the expense of the country in which they are located.

10. That except as set forth in recommendation 11 the cost of all navigation works be apportioned between the two countries on the basis of the benefits each will receive from the new waterway, provided that during the period ending five years after completion of the works—and to be known as the construction period—the ratio fixing the amount chargeable to each country shall be determined upon by certain known factors such as the developed resources and foreign and coastwise trade of each country within the territory economically tributary to the proposed waterway, and that that ratio shall be adjusted every five years thereafter and based upon the freight tonnage of each country actually using the waterway during the previous 5-year period.

11. That the cost of navigation works for the combined use of navigation and power over and above the cost of works necessary for navigation alone should be apportioned equally between the two countries.

The Ottawa Viewpoint.

A summary of the report, with comments, was issued at Ottawa, Jan. 16, which is in part as follows:—"It appears from the report that the members of the Commission, as a result of their long and careful study of the situation from every possible angle, have reached the conclusion that the proposed deep waterway is practicable both from an engineering and an economic standpoint, and that it would result in adding very materially to the prosperity of the two countries. So far as the U.S. is concerned, they believe that the benefit would be immediate. In the case of Canada, it might take a somewhat longer time to reap the full advantages of such a route.

"As to the engineering features of the improvement, the Commission has had the benefit of the expert advice and assistance of a board of engineers created by the two governments, Canada being represented by W. A. Bowden, Chief Engineer of the Railways and Canals Department, and the U.S. by Col. W. P. Wooten of the Corps of Engineers. This board, as the result of over a year's painstaking study and field work, filed with the Commission a comprehensive report as to the best means of improving the river for both navigation and water power development in the international section of the river—that is, from Lake Ontario down to Cornwall—with the principal power works in the vicinity of the Long Sault Rapids, designed to produce about 1,500,000 horsepower, one-half of which would go to each country.

In the purely Canadian section of the river, from Cornwall down to Montreal, only a navigation system is provided, the development of power to be undertaken at some future date, when the growing markets in Canada make it desirable. Locks and canals with a depth of 25 ft. are provided for at the Long Sault, Valleyfield and Lachine. The estimated cost of the entire improvement, both for navigation and water power, is about \$252,000,000.

"Probably the most difficult and delicate problem the Commission had to settle was how the cost of this international project could be divided between the two countries so as to put the thing on a fair and equitable basis. The Commission's solution, as embodied in its report, is that the cost of that portion of the work chargeable to navigation should be divided on the basis of benefits received; that is to say, that each country should pay a proportion of the cost equivalent to the benefit it actually derives from the waterway. Obviously, this principle involves readjustment at periodical intervals, as the traffic develops on one side or the other. Provision is made for a tentative distribution during the construction period, based on the production and foreign trade of the territory economically tributary to the waterway on each side of the boundary. Further, in distributing the cost of the waterway, Canada is credited with her expenditures on the Welland Ship Canal, which is considered an essential part of the general scheme of improvement."

After considerable discussion, the House of Representatives' Speaker referred the report to its Interstate Commerce Committee. This decision was challenged by the Chairman of the Rivers and Harbors Committee, who desired that his committee handle the report, and he gave notice of motion of a resolution to change the reference.

United States Mercantile Marine Grain Rates.

H. C. Hoover, U.S. Secretary of Commerce, who is also Chairman of the American Relief Committee, in speaking of the rates charged by various U.S. ships for transporting relief grain to Russia, is reported to have stated that the rate quoted by private U.S. shipping interests, to Baltic ports, had been \$6.80 a ton, but that it was, at once, increased to \$8.50 and \$8.75 a ton. He is also quoted as saying:—"I cannot understand why rates should increase about 30% within one week after Congress passed legislation providing that the grains purchased with the money appropriated by the Government must be moved in U.S. bottoms. It would cost us \$3 more a ton to move the grain in U.S. ships than to move it in foreign tonnage. Every dollar spent for transportation means a reduction in the amount of grain which can be bought for the relief work. If that \$3 a ton correctly represents the difference in the operating cost of ships under U.S. and foreign registry, I can only say that it presents a sorry outlook for the future of a U.S. merchant marine."

Newfoundland Shipbuilding Subsidy.—The Newfoundland Government has decided to pay a bonus of \$30 a ton on all schooners over 25 tons, and up to 50 tons registered, built in the colony during this winter, and fully equipped and ready for sea by July 1. Schooners now building, the keels of which were laid after Oct. 14, 1921, will be eligible for the bonus.

North Vancouver Floating Drydock.

The floating drydock which is to be built at North Vancouver, B.C., by the Burrard Drydock Co., under an agreement with the Dominion Government in accordance with the Drydocks Subsidies Act, the principal details of which were given in our last issue, will be of 15,000 tons capacity. The drydock is to be of the following dimensions,—length over keel blocks, 556½ ft.; length over walls, 495½ ft.; width over all, 126 ft.; width between side walls, 98 ft.; draft of drydock afloat and fully loaded, 24 ft. over 4 ft. keel blocks. It will be of the composite type, with pontoons of wood, and wings of steel, and will be built in two sections, one 200 ft. long, and the other 300 ft. long, and provision is made so that, should the necessity arise at some future time, a third section of 200 ft. may be added. There will be 7 pontoons in one section and 4 in the other, each pontoon being 126 ft. long by 44 ft. wide by 14 ft. deep, and all of heavy timber and rigidly connected to the side walls or wings by steel links and pins, so arranged that any pontoon may be quickly detached and drydocked on the remaining part of the dock for examination or repair. Howe trusses will be fitted every 3 ft., consisting of top and bottom chords, diagonal trussed members, heavy stanchions, and iron rod tension members. There will be a solid center line bulkhead, and 3 non-water-tight bulkheads on each side. The deck and bottom planking will be of 5 x 12 timbers, and the sides and ends, 6 x 12. The pontoons will be covered on the outside by 3 layers of prepared felt, fastened by 1 x 12 creosoted sheathing. The pumping equipment will comprise 22 18 in. centrifugal pumps, one on each side of each pontoon, all electrically driven and controlled from a central station.

In conjunction with the floating drydock there will be constructed a pier 300 ft. long by 50 ft. wide, built of concrete cylinders, on a similar plan to the Balantyne pier at Vancouver. It will be equipped with heavy cranes and pier legs, up to 75 tons capacity. Considerable dredging will be necessary to obtain the necessary depth for sinking the drydock, and with the material removed, a large area will be reclaimed, on which the machine shops to be operated in conjunction with the drydock will be erected. They will consist of steel buildings, including machine shop 250 x 60 ft., equipped with gravity crane of 30 tons capacity and galleries for small machine tools; blacksmith shop 100 x 40 ft., equipped with gantry and jib cranes, furnaces, forges, etc.

The floating drydock will be built by Wallace Shipbuilding & Drydock Co., North Vancouver, on a portion of the company's present site, extending eastward from Lonsdale Ave. for 700 ft., from plans drawn by W. T. Donnelly, New York, and preparations for the first section were started Dec. 1. The general design is similar to drydocks built from his designs for the U.S. Steel Corporation, Bethlehem Steel Corporation, Sun Shipbuilding Co., & A. Fletcher Co., Jahmke Drydock & Ship Repairs Co., Galveston Drydock & Construction Co., Grand Trunk Pacific Ry., Prince Rupert, B.C., and one at Honolulu. The other works, including dredging, pier construction, ship designing and erection, etc., will be carried out to plans and spec-

ifications prepared by A. D. Swan, M. Inst.C.E., M.I.Mech.E., Montreal.

The Burrard Drydock Co.'s directors are:—A. Wallace, President, Wallace Shipbuilding & Drydock Co., President and Managing Director; Clarence Wallace, Secretary; R. S. Lennie, Solicitor; H. A. Wallace and J. J. Coughlan. All the directors are associated with Wallace Shipbuilding & Drydock Co., except J. J. Coughlan, of J. Coughlan & Sons, Shipbuilders, etc., Vancouver, who were largely instrumental in securing the drydock subsidy, but who is said to be only nominally interested in the company.

A Victoria press dispatch of Jan. 23, says that the new Dominion Government contemplates the suspension or cancellation of the Burrard Drydock Co.'s contract, and also the suspension of work on the additional drydock at Victoria and the pier at Vancouver.

The C.P.R. Steamship Princess Louise for British Columbia Coast Service.

The C.P.R. s.s. Princess Louise, built at North Vancouver, B.C., recently, for its British Columbia Coast Service, was expected to be completely finished and ready for service by the end of January, when she was to be placed in service locally, between Victoria and Vancouver. It is expected that she will take her place on the Alaska route, for which she was specially designed, about June 9, sailing in conjunction with the company's s.s. Princess Alice, and calling at Alert Bay, Prince Rupert, Ketchikan, Wrangell, Juneau and Skagway.

Her beam, 48 ft. 6 in.—length 317 ft., beam 48 ft., depth of hold 18½ ft. She is equipped with vertical triple expansion type of engines, balanced on the Yarrow, Schlick & Tweedie system, with cylinders 28, 43, 50 and 50 in. dia. by 39 in. stroke, and driving a propeller 13½ ft. dia. having four bronze blades. Steam is supplied by four 16 ft. Scotch boilers, equipped for using oil fuel, and there is sufficient tankage capacity to take her 4,000 miles without replenishing. She has been built to the highest class of the British Corporation, under special survey, and is elaborately fitted up with all modern comforts and appliances, with berthing accommodation for 280 first class and 44 second class passengers, and seating capacity in the dining room for 140.

While designed primarily for passengers, she has a cargo capacity of 600 tons and refrigerated space for about

two carloads. She has a double bottom from the fore peak to the after peak, and her tank tops run directly out to the sides of the ship. The hull has numerous watertight compartments and watertight flats, the decks are of steel throughout, except the boat deck, and the deck houses are all steel. The equipment includes a complete wireless installation, and an electric elevator.

While on her test trips, during Dec. 1921, runs were made over the measured mile near Victoria, on different revolutions, a maximum speed of 17.48 miles an hour being obtained on 145½ r.p.m., 48.15 h.p. Throughout the trials she was loaded to a mean draft of 14 ft. 5½ in., showing a displacement of 3,300 tons. The slip varying from 7.78 to 11.4%.

Winter Moorings of Canadian Steamships.

Following is a list of Canadian steamships and the ports at which they are berthed for the winter, of which Canadian Railway and Marine World has been officially advised, in addition to those given in our January issue:—

British Yukon Navigation Co., White Horse, Yukon—Canadian, at Hootalinqua, Yukon; Nasutin, at Lower Le Barge, Yukon; Casca, Dawson, Neechea, White Horse, at White Horse, Yukon.

Canadian Government Merchant Marine—Canadian Adventurer, at Port McNicoll, Ont.; Canadian Engineer, Canadian Sailor, J. A. McKee, at Goderich, Ont.; Canadian Pathfinder, Canadian Sower, Canadian Trader, Thomas J. Drummond, at Midland, Ont.

Great Lakes Transportation Co., Midland, Ont.—Glenbrae, Glencairn, Glenfinnan, Glenisla, Glenlivet, Glenlyon, Glenmavis, Glenorchy, Glenesche, Glenstriven, at Midland, Ont.

Keystone Transports Ltd., Montreal.—Keybell, at Collingwood Shipbuilding Co.'s drydock, Kingston, Ont., undergoing repairs; Keynor, Keyport, Keyvive, Keywest, at G.T.R. dock, Kingston, Ont. La Have Steamship Co., West La Have, N.S.—Fussile, at La Have, N.S.

Niagara, St. Catharines & Toronto Navigation Co., St. Catharines, Ont.—Dalhousie City, at Port Dalhousie, Ont.; Northumberland, at Toronto.

Northern Trading Co., Edmonton, Alta.—Northland Echo, at McMurray, Alta.; Northland Pioneer, Northland Trader, at Fort Smith, North West Territories.

Ross Navigation Co., Pas, Man.—Nipawin, at Pas.

Ships Added to and Deducted From the Canadian Register During November, 1921.

The Panama Canal's Influence on British Columbia's Trade.

F. C. Wade, K.C., Agent General for British Columbia in England, read a paper, "British Columbia, the awakening of the Pacific," before the Royal Society of Arts, Dominion and Colonies Section, in London, Eng., recently. After glancing back to the early explorers' voyages, he said in part:—

"The cutting of the Panama Canal has reduced the distance from Liverpool to Victoria, B.C. from 14,558 miles to 8,512. The distance by land and sea from Vancouver to Liverpool, via Montreal, is about 5,852 miles, as against 8,512 miles by the Panama Canal, the all-sea route. The difference between the old all-sea route around Cape Horn and the transcontinental and Atlantic route is 8,706 miles. The difference between the all-sea route by the Panama Canal and that via Montreal and the Atlantic is only 2,660 miles. The disadvantage in distance by sea, as against that over land and sea, has been lessened more than two thirds, if it does not approximate to three fourths. What this means to commerce and civilization in and around the Pacific can scarcely be conjectured. The discovery of America by Columbus has been described as 'the God-like gift to humanity of half a world.' The opening of the Panama Canal is the gift of another half."

"Brandon, in central Manitoba, is 30 miles nearer to Vancouver than to Montreal, and 871 miles nearer to Vancouver than to Halifax. Regina, in Saskatchewan, is 471 miles nearer to Vancouver than to Montreal, and 1,312 miles nearer to Vancouver than to Halifax. Edmonton, in Alberta, is 1,397 miles nearer to Vancouver than to Montreal, 2,238 miles nearer to Vancouver than to Halifax. It is obvious that the rail haul is much shorter to the Pacific than to either Montreal or the Atlantic from most points in western Canada. Just as the Great Divide marks the point where the great rivers of the west have their common source, and then separate to flow east and west, there is a great economic divide, between conditions and distances which will determine how much of the product of central and western Canada will be carried east and west respectively. Whether that point is Regina or Moose Jaw remains to be determined."

"But there are even other important factors to consider. The great inland waterways of Canada are available only in the summer. Montreal is available as a port after the snow flies. Vancouver and Prince Rupert and the whole coast line of British Columbia are open throughout the year. Not only are the ports open, but there is not a day in the year when the weather is cold enough to interfere with work."

"Another serious factor which alone will force the adoption of the western route for moving a great part of the crop is the danger of freight congestion, and a shortage of cars in the east. How many of us have any idea of the causes which go to make up congestion in traffic in western Canada? Taking the cereal crop of Canada for 1921 as 288,493,000 bush, we have 288,493 carloads, at 1,000 bush, to the car, which, divided into trains of 20 cars each, will give us 14,429 trains of cars loaded with grain. At 53 ft. to the car we would have five trains to the mile, or a single train 2,889 miles long. As there are only 365 days

in the year, if the entire crop had to be handled through Montreal on a single track, it would be at the rate of about 40 cars a day or nearly two every hour. As there are still 37,000,000 acres in easy reach of the railways in western Canada, and hundreds of millions as yet untouched, and which yet have to be developed, the folly of handling the crops of the future, not to speak of the present, overland and by only one ocean route, can easily be realized."

"Assuming, then, that the export traffic of Canada in the future will move west as well as east, there is an important point to consider which is bound to affect immensely the development of the west, as against the east, and in the end develop our Pacific ports to an extent as yet undreamed of. It has been estimated that the arable land of what may be called Pacific or western Canada comprises 333,000,000 acres, against 160,000,000 in eastern or Atlantic Canada. On this basis it is evident that with the development of traffic westward and via the Panama Canal, the products and traffic of Pacific Canada may double those of Atlantic Canada. This is one of the results to be expected from the awakening of the Pacific."

"It is too soon to make a comparison of freight rates from the Pacific coast and central Canada to Europe via the Panama Canal with the rates across the continent and via the Atlantic. Traffic by the new route is only in its inception, and rates have not become stabilized. It can be pointed out, however, that the Vancouver route embraces a much larger proportion of water mileage, that it is on the water that the greatest competition exists, and consequently the greatest tendency to shrinkage in rates. As an instance of what water carriage means as against land carriage, take Regina, situated almost the same distance from Halifax as Halifax is from Liverpool. The shipment of a quarter of wheat from Regina to Liverpool costs, say 21s., but of this total only 4s. represents the water carriage, while 17s. represents land carriage, though the distances in each case are practically the same."

"The Great War has produced several new factors which profoundly affect the whole portion of the railroad and grain interests in the Dominion: (1) Great increase in the cost of rail haulage; (2) great expansion of ocean transport; (3) the availability of some of this tonnage to provide new services for Canada's west coast at rates based upon the highly competitive nature of sea transport under peace conditions."

"Another important factor to be considered is the revolution in transportation by the introduction of the motor boat with Diesel engines using oil for fuel. It is unquestionably the fact that the Swedish line of motor freighters of the North Star or Johnson Line, now operating out of Vancouver through the Panama Canal, is run at a saving of one third the cost of steam transportation. Grain is transported to Europe by the cheapest of all kinds of transport, viz., by all water, or almost all water, from the Argentine, Australasia, East Mediterranean, India, etc., and it is no rash prophecy to say that before long the great bulk of the grain of western Canada will adopt the sea route as well. Indeed, the

movement is already in full swing. On Feb. 9, 1921, the Buenos Aires, of the North Star or Johnson Line, of Stockholm, brought the first direct commercial shipment of Canadian wheat, 3,200 tons, from Vancouver to London. It was No. 2 Northern Manitoba wheat, and arrived in perfect condition. During the year ended June 30, 1921, there were sailings through the canal from British Columbia to the United Kingdom and Northern Europe, to the Atlantic and Gulf coast of the United States, to Mexico, the Mediterranean, Cuba, the east coast of South America, and eastern Canada; and of these, 20 cargoes, aggregating 138,433 tons, were bound to the United Kingdom and Northern Europe alone."

"In considering the extent to which the wheat of western Canada will be routed to Europe via Panama, it is important to remember how much nearer the wheat centers of western Canada are to the Pacific than to the Atlantic seaboard. Following is a table of distances from some of the principal cities in the great western provinces, Manitoba, Saskatchewan, and Alberta, to Vancouver, Montreal and Halifax respectively:—

	Miles from		
	Vancouver	Montreal	Halifax
Brandon	1,477	1,507	2,348
Regina	1,477	1,507	2,348
Saskatchewan	1,096	1,842	2,498
Battleford	1,025	1,983	2,824
Edmonton	770	2,167	3,003

Lake Steamships Ordered.—The Ontario Paper Co., Thorold, Ont., which is controlled by Robt. McCormick, of the Chicago Tribune, has, as mentioned in a previous issue, ordered 2 lake steamships of Welland Canal size, one of which will be built by Swan, Hunter & Wigham Richardson at Wallsend-on-Tyne, Eng., and the other by the North of Ireland Shipbuilding Co., at Londonderry, Ireland. Their dimensions will be—length b.p. 250 ft., breadth extreme 43 ft., depth moulded 19 ft. 4 ins.; approximate d.w. tonnage 2,300, draft 14 ft. The propelling machinery will consist of triple expansion engines with cylinders 16, 27 and 44 in. diam. by 30 in. stroke, supplied with steam by two boilers, each 12 ft. diam. by 11 ft. long, at 180 lb. working pressure, and fitted for natural draft."

The Minister of Trade and Commerce and Transportation.—Hon. J. A. Robb, the newly appointed Minister of Trade and Commerce, in addressing the Export Club of Montreal and the Canadian Manufacturers Association's Quebec Division, in Montreal, recently, said that Canada has lots of transportation, some say too much. He suggested that if Canada is to successfully compete with other countries in the markets of the world it must be prepared to carry its goods as fast and as cheaply as those countries. Canada has the railway lines, she has ships. Surely Canada should carry Canadian exports from Canadian ports at as favorable rates as those offered at any other ports on this continent."

How a Ship Finds Her Way at Sea was the title of a lecture delivered to students at McGill University, Montreal, recently, by Professor T. H. Matthews, who explained the works of the gyroscopic compass, sounding machine, etc., and demonstrated how a ship is actually steered at sea.

Canadian Government Merchant Marine Ltd., Shipbuilding, Operation, Etc.

Deliveries of Steamships.—In addition to the steel cargo steamships mentioned in Canadian Railway and Marine World previously, the following have been delivered to Canadian Government Merchant Marine for operation:—

Dec. 18, 1921, s.s. Canadian Freighter, Marine Department contract 63, builder's yard no. 21, approximately 8,390 d.w. tons, J. Coughlan & Sons, Vancouver, B.C.

Jan. 7, 1922, s.s. Canadian Constructor, Marine Department contract 39, builder's yard no. 4, approximately 10,500 d.w. tons, Halifax Shipyards Ltd., Halifax, N.S.

All of the 63 steel cargo steamships ordered by the Marine Department for Canadian Government Merchant Marine, have now been delivered.

Officers of Steamships.—The following appointments of masters and chief engineers have been made, in addition to those mentioned in previous issues:—Canadian Aviator, Capt. E. Randall, vice Capt. W. J. Davies, transferred to Canadian Raider; Canadian Coaster, Capt. J. B. Hubley, vice Capt. S. B. Corkum; Canadian Constructor, Capt. H. E. Webb, formerly on Canadian Raider; Canadian Explorer, chief engineer, E. Sutherland; Canadian Hunter, Capt. P. H. Murphy, formerly on Canadian Spinner, vice Capt. R. V. Bennett, transferred to Canadian Spinner; Canadian Leader, chief engineer, F. W. Cunningham; Canadian Navigator, chief engineer, C. Underwood; Canadian Raider, Capt. W. J. Davies, formerly on Canadian Aviator, vice Capt. H. E. Webb, transferred to Canadian Constructor; chief engineer, W. D. McGregor; Canadian Sapper, chief engineer, T. H. Angell; Canadian Spinner, Capt. R. V. Bennett, formerly on Canadian Hunter, vice Capt. P. H. Murphy, transferred to Canadian Hunter; chief engineer, W. Percival; Canadian Squatter, chief engineer, F. Stanley; Canadian Victor, chief engineer, W. Humphreys.

C. G. M. M. Employees' Personnel.—The Canadian National Rys. management has issued the following statement: "The Canadian Merchant Marine is a Canadian institution, built with Canadian money, operated to further and facilitate the foreign commerce of this country. Somehow or other, a report was circulated to the effect that outsiders were employed by the Canadian Merchant Marine to the exclusion of Canadians and British subjects. In denial of this report, the C.N.R. management offers the statement that of the 674 employees on the payroll at Dec. 31, 1920, exactly half were Canadian by birth, or adoption, and the balance were of British birth. It is the management's invariable practice to employ only British subjects in the management and operation of this Government owned line of steamships."

Fare Reductions.—We are advised that the passenger fares from Halifax, N.S., to Kingston, Jamaica, and Belize, British Honduras, have been reduced to \$102 and \$175 respectively, or about 15%, to meet C.P.R. competition from Boston to Jamaica. In conjunction with this, a reduced train fare of \$11.80 between Montreal and Halifax has been put into effect on the Canadian National Rys. to equalize the train fare between Montreal and Boston, Mass. This puts Halifax on a

parity in competition with business for Bahamas, Jamaica and British Honduras. The reduced rate applies only to the minimum fares, the rates for special state rooms, etc., remaining as hitherto.

Change in Trading Advocated.—The Canadian National Rys. management has issued the following statement:—"Examination of Canada's trade figures brings out a number of peculiar circumstances. First of all, the figures demonstrate that we are buying too much from the United States in comparison with its purchases from us. Secondly, while our sales abroad are in a measure satisfactory, we are not buying enough from the foreign countries that buy from us. Broadly speaking, this results in two sets of adverse conditions. The amount we purchase from the U.S. being too large results in depreciation of the Canadian dollar there.

We must change our policies on the basis of what they buy from us as only by that means can the adverse exchange be adjusted. Another condition is that the Canadian Merchant Marine ships are at present returning from foreign ports with inadequate cargoes. It is not sufficient to load ships one way only. Return cargoes are necessary to the economical operation of ships. The countries to which Canadian Merchant Marine ships are operating, British West Indies, China, Belgium, France, Britain and South American ports, offer opportunities for the purchase of many commodities which Canada does not, or cannot, produce herself. We must not simply sell to these people, we must trade with them. The revision of our buying and selling operations on this basis would result in the advance of the Canadian dollar to par in the U.S. and have a most salutary effect on the financial condition of our nationally owned railways and ships. By diverting to Canada's seaports a much larger proportion of the tonnage which for years has entered and left Canada through U.S. seaports."

Agents in China Boycotted.—A few weeks ago it was stated in a press cablegram that the Chinese had declared a boycott at Amoy against Butterfield & Swire, who are the agents in China for Canadian Government Merchant Marine and several other steamship lines. A Peking dispatch of Jan. 6 said that relations between the British Legation there and the Chinese Government, which had been interrupted because of the Amoy incident, had not been resumed, and that it was hinted in official circles that the British Minister's recall might be requested.

The s.s. Canadian Observer, when passing through Discovery Passage, about 150 miles from Victoria, on the inside coast of Vancouver Island, Jan. 12, during a dense fog, struck ground at Deep Bay. She was refloated by the incoming tide, about 2 hours later, without any apparent damage.

The s.s. Canadian Seigneur was reported, Dec. 17, 1921, to have arrived at Novorossiisk, on the Black Sea, with 90 oil tank cars, being the first consignment of 500 built by Canadian Car & Foundry Co., Montreal, for the Russian Soviet Government for the Caucasian oil trade. She sailed from Montreal, Nov. 10.

The s.s. Canadian Voyageur, which was laid up in Bedford Basin, Halifax, N.S.,

for the winter, broke from her moorings, Dec. 30, 1921, during a blizzard, and was blown ashore. We have been advised that the extent of the damage sustained cannot be ascertained until she is drydocked for examination.

J. Coughlan & Sons, Vancouver, B.C., delivered the steel cargo steamship Canadian Freighter, Marine Department contract 63, builder's yard no. 21, approximately 8,390 d.w. tons, to the Marine Department, and she was transferred on Dec. 18, 1921, to Canadian Government Merchant Marine for operation, and sailed from Vancouver on Jan. 4, for Kobe and Yokohama, Japan.

Halifax Shipyards Ltd., Halifax, N.S., delivered the steel cargo steamship Canadian Constructor, Marine Department contract 39, builder's yard no. 4, approximately 10,500 d.w. tons, to the Marine Department, Jan. 7, and she left Halifax Jan. 9 for Sydney, N.S., to load a cargo of coal. From Sydney she went to Rockland, Me., to make standardization runs over the U.S. naval course of a measured mile in 60 fathoms. She made the mile at an average of 13 1/4 knots an hour, and on 5 full speed runs averaged 13 1/3 knots. The contract called for a speed of 12 knots. She is the last of the 63 steamships built for the Canadian Government Merchant Marine under the Dominion Government shipbuilding programme inaugurated in 1918, and is also one of the two largest ships built under that programme. The contract was placed Dec. 10, 1918, the keel was laid Oct. 6, 1919, and she was launched Sept. 24, 1921. We were officially advised Jan. 14 that after discharging her coal cargo at Halifax, she would load a general cargo for Australia and New Zealand and sail about Jan. 25.

Portland Longshoremen's Strike.—Canadian Railway and Marine World for January stated that the Longshoremen's Union members at Portland, Me., had gone on strike on Dec. 21, as they refused to accept wages and working conditions in force at Boston and New York. Work was suspended for eight days, causing the diversion of a number of ships to other ports for loading. The strike was brought to an end Dec. 28, through the efforts of a committee nominated by shipowners and Portland citizens, and headed by the Mayor, the men accepting the same basic rate as paid in Boston and New York, viz., 65c. an hour. The basic rate in 1921 was 80c. an hour.

Peninsula Transportation System Ltd. has been incorporated under the Ontario Companies Act with \$150,000 authorized capital and office at Toronto, to own and operate all kinds of conveyances and vehicles moved by any form of power, for the transportation of merchandise by land, water or air. The incorporators are, F. J. Hart, G. H. Riches, T. M. Munro, J. H. Rowland, W. Gordon, B. F. Walsh and M. Young, Toronto.

Interlake Navigation Co. Ltd. has been incorporated under the Dominion Companies Act, with \$500,000 authorized capital, and office at Montreal, to own and operate ships of all kinds, wharves, docks, and general transportation facilities, and to carry on a general navigation and forwarding business. The incorporators are, W. W. Skinner, G. G. Hyde, J. F. Ahern, R. C. Grant, R. J. Forster, Montreal.

Canadian Pacific Railway Ocean Steamship Services.

W. H. Perry, heretofore chief steward, s.s. Scandinavian, has been appointed chief steward, s.s. Empress of Russia, vice G. B. Macfarlane, transferred to s.s. Empress of Australia.

The s.s. Empress of Canada was scheduled to sail from Liverpool, Eng., direct to Hong Kong, China, on the conclusion of her final speed trials, which took place Jan. 28. She is in charge of Commander A. J. Hailey, R.N.R. A description was given in previous issues.

The s.s. Sicilian opened the company's new direct steamship service between St. John, N.B., and Havana, Cuba, Jan. 3. The service between these ports has hitherto been handled by the United Fruit Co. and the Eastern Steamship Line, jointly, via New York.

Capt. Samuel Robinson, R.N.R., has been appointed master of the s.s. Empress of Australia. He entered C.P.R. steamship service in 1895, and has been master of the company's steamships Empress of China, Empress of India, Euthenia, Athenian, Montcalm, and, during the war, Empress of Russia.

The s.s. Montcalm, which underwent her trials in the Clyde, during Decem-

ber operated in the Atlantic service during this current year, was formerly the German s.s. Prinz Friedrich Wilhelm, and when she was acquired by the C.P.R., she was renamed Empress of China, but has now been renamed Empress of India. The former s.s. Empress of India, owned by the C.P.R., was built for, and operated on the Pacific Ocean, but was sold during the war to one of the Indian princes, who had her fitted as a hospital ship and presented her to the British Government.

The C.P.R. has given the Marconi Wireless Telegraph Co. an order to equip its trans-Pacific steamships Empress of Canada and Empress of Australia with the most comprehensive range of the latest type of wireless apparatus, which will enable them to make the fullest possible use of the latest developments in radio engineering as a means of securing additional safety for passengers and crew, as an aid to navigation, and as long distance telegraph service. The equipment will comprise a direction finder, an aid to navigation spark set, a complete emergency equipment and a long range continuous wave valve transmitter and receiver.

been added from time to time, including the splendid type of Empresses, on both the Atlantic and Pacific. In 1916, the company absorbed the Allan Line, with which it had been working in close conjunction for some years, thus acquiring 18 steamships with an aggregate gross tonnage of 153,000. The war service of the company's ships is a history in itself. Between Aug. 1914 and Oct. 1919, they carried over 1,000,000 troops and passengers on war business, and over 4,000,000 tons of cargo and war munitions, and several thousand horses and mules. During the war, the company lost 12 ships through enemy action, with a total tonnage of 101,081 gross. Of the company's ocean steamships, 7 are using, or are being arranged to use, oil as fuel, with advantage in efficiency of operation, cleanliness, etc.

The s.s. Empress of Scotland was scheduled to sail from Southampton, Eng., Jan. 22, direct to New York, whence she will sail on a special Mediterranean cruise, Feb. 4. She was originally the German s.s. Kaiserin Auguste Victoria, and was bought from the Reparations Commission. She is of the shade

Twin Screw Steamship Montcalm, 16,000 tons gross, C.P.R. Atlantic Steamship Service.

ber, attained the maximum speed of 17.96 knots an hour, without pressing her boilers or engines, and on her 12 hour trial, averaged over 17 knots. She later proceeded to Liverpool, where she was taken over by the company, and sailed for St. John, N.B., on her maiden trip, Jan. 17, arriving Jan. 28.

Dr. W. C. Whittaker, surgeon; E. Synder, purser; and G. B. Macfarlane, chief steward, s.s. Empress of Russia, were presented with a silver goblet, a pair of mounted shields engraved in English and Chinese, and a wardrobe trunk, respectively, by the Chinese crew, at Vancouver, recently, on leaving for the Orient, where they will be transferred, the first two named, to the Empress of Canada, and the last named to the Empress of Australia.

On account of the success of the moving pictures established on some of its trans-Atlantic steamships, the company has decided to place similar service on its trans-Pacific steamships, the s.s. Empress of Russia, which sailed from Vancouver Jan. 5, for the Orient, being the first to have it installed. The series shown covers Canadian scenes from the Atlantic to the Pacific. The s.s. Empress of Asia, which will sail from Vancouver Feb. 2, will be similarly equipped, as also will other ships on the trans-Pacific routes.

The s.s. Empress of India, which will

The C.P.R. Passenger Department has issued an excellently designed and printed booklet, giving the history of its ocean steamship services, from the commencement in 1886 with the arrival at Port Moody, B.C., of the brig W. B. Flint, with a cargo of tea from Yokohama, to this year, with 19 passenger steamships, total 254,103 gross tons, and 8 freight steamships, total 77,275 d.w. tons, on the Atlantic, and 6 passenger steamships, total 89,720 gross tons, and 2 freight steamships, total 15,950 d.w. tons, on the Pacific. The first regular trans-Pacific service was established in 1887, with the chartered steamships Abyssinia, Batavia and Parthia. In 1890 the company concluded a contract with the British Government, under which it was paid a mail subsidy of £60,000 a year for the service of three twin screw steamships between Vancouver, Japan and China. In this connection, the steamships Empress of China, Empress of India and Empress of Japan, 6,000 gross tons each, were built and placed in operation in 1891. For several years the company's steamship business was confined to the Pacific Ocean, and it was not until 1903 that its ships appeared on the Atlantic. In this year, 15 steamships of the Beaver Line, owned by Elder, Dempster & Co., were bought, and a regular freight and passenger steamship service inaugurated on the Atlantic. Other steamships have

deck type with bridge deck extending about half her length, and with a long forecastle deck. Above the bridge deck there are lower and upper promenade decks the full length of the bridge deck and above the 'tween decks, and a lower and orlop 'tween decks at the forward and after ends. She has a straight stem, elliptical stern, 2 funnels and 4 masts. There is accommodation for 465 first class, 450 second class and 900 third class passengers, and a crew of about 510. The first class accommodation is on A, B, C, D and E decks, in staterooms arranged for 1, 2 and 3 persons, all being equipped with bedsteads, no upper berths being fitted in any of the first class rooms. There are also 25 large suites of rooms with private baths and lavatories. The dining saloon is on E deck and has accommodation for 420 persons, the tables being arranged for small parties of from two to six. The lounge is on B deck, and at the forward end of the ship there is another lounge with writing room. The ball room is on B deck forward, and there is a double smoking room on A and B decks, that on A deck being a balcony looking down to B deck. A winter garden is provided at the forward end of the boat deck and extensive promenade space is arranged on A and D decks, the forward end of A deck being screened off by glass windows. The length of each promenade

space is over 400 ft. Barber shops, book stalls, dispensaries, hospitals, information bureaus, etc., are also provided and there is an electric elevator for first class passengers from E deck to the boat deck. The ship is equipped with wire-

less telegraph, long range installation, and apparatus for taking bearings for wireless, submarine signalling, electric clock, gyro compass, etc. Her dimensions are,—length 677½ ft., breadth 77 ft., depth to shade deck 54 ft.

General Shipbuilding Matters Throughout Canada.

Canadian Shipbuilding Statistics.—Ottawa press dispatch, Jan. 5.—During the year ended March 31, 1921, the shipbuilding in Canada amounted to 95,838 tons. During the year ended March 31, 1920, 164,074 tons of shipping was built. During 1921, 34,623 tons of shipping, with a value of \$8,456,573, was sold to other countries. In 1920 the tonnage sold to other countries was 53,407. The value was \$17,819,477. In 1868, the first year for which statistics are given, 87,230 tons of shipping was built in Canada. This industry reached its highest peak in 1875, when 188,098 tons reached the ocean. From 1875 tonnage built each year gradually declined until in 1896 only 10,753 tons passed from Canadian yards. After 1896 the amount increased until another peak was reached in 1920. In 1918, 53,912 tons were built, and the figures given show that this more than doubled in 1919 and more than tripled in 1920. Of the total of 220 ships built in the year ended March 31, 1921, 139 were steamships and 81 sailing ships. The steamship tonnage was 80,174, and the sailing ship tonnage 15,664.

G. F. Askew, Vancouver, B.C., is reported to have an order from the Hudson's Bay Co. for a stern wheel steamboat for the Athabasca River, length 172 ft., breadth 35 ft., draft, light, 17 in.

Collingwood Shipbuilding Co., Kingston, Ont., has been given a contract for repairs on the Keystone Transports' s.s. Keybell. Work was commenced in January, and it is expected that it will be completed during March.

Port Arthur Shipbuilding Co., Port Arthur, Ont.—As mentioned in our last issue, this company has a contract from Mathews Steamship Co., Toronto, for building a steel bulk freight steamship for Great Lakes service. Her dimensions will be, length 550 ft., breadth 58 ft., depth 31 ft., and she will have capacity for over 400,000 bush. of grain. The propelling machinery will consist of triple expansion engines with cylinders 25½, 41 and 67 in. diam. by 42 in. stroke, supplied with steam by 3 Scotch boilers, each 13½ ft. diam. by 11 ft. 2 in. long, at 185 lb. working pressure, and equipped with interchangeable furnaces. She will be built to the highest class for Great Lakes service, of the American Bureau of Classification. At the time of writing, no date has been fixed for the laying of the keel, but the contract calls for delivery by Sept. 15.

Vancouver Shipyards Ltd., Vancouver, B.C., launched the harbor service boat Atkinson recently, for the Vancouver Harbor Commissioners. She has a wooden hull, of the following dimensions,—38 ft. long, 9 ft. wide and 4 ft. deep, and is equipped with a 2-cycle steam Diesel engine of 30 h.p., with air compression integral with the engine. She is to be used chiefly for night patrol work in keeping the harbor clear of drifting logs, etc., and for yarding booms.

Victoria Machinery Depot Co., Victoria, B.C.—The Canadian Government Merchant Marine s.s. Canadian Winner was

drydocked at Esquimalt, Jan. 13, for general overhaul by this company, which has recently completed a similar overhaul of the C.G.M. s.s. Canadian Traveller there. Both these ships were built by Harbour Marine Co., a V.M.D. Co. subsidiary. It is also stated that the company has been given a contract for overhauling the Marine Department's s.s. Newington.

Wallace Drydock & Shipbuilding Co., North Vancouver, B.C., has received a contract for repairing the Admiral Line's s.s. Admiral Farragut, the amount being stated as approximately \$63,500. It is also stated that the Wallace Co.'s tender was about \$35,000 below the lowest U.S. tender.

Yarrows Ltd., Victoria, B.C., did the following steamship repairing and overhauling recently:—C.P.R. British Columbia Coast Steamship Service steamships, Charmer, engine room repairs; Princess Adelaide, docked, cleaned, painted and repaired; Princess Alice, docked, cleaned, painted and propeller repaired; Princess Louise, minor engine room repairs; Princess Maquina, engine room repairs; Princess Mary, engine fittings supplied; Princess Royal, castings and minor repairs; Princess Victoria, docked, cleaned, painted, and brass liner for propeller shaft bracket; Canadian Government Merchant Marine, s.s. Canadian Importer, docked, cleaned, painted and repaired; Thurgut, Simon F. Tormie, storm damage to rigging and steering gear repaired; Dominion Government, steamships Estevan, fittings to engine room; Givenchy, docked, cleaned, painted, and repairs due to stranding and being submerged; Thiepval, docked, cleaned, painted and repaired; Coastwise Steamship Co., s.s. Amur, docked, cleaned, painted, repaired and propeller changed, and later, repairs due to stranding; Canadian Western Steamships Ltd., s.s. Margaret Coughlan, docked, cleaned and painted; Cascade Towing & Freighting Co., s.s. Cascade, docked, cleaned and painted; Sir John Jackson (Canada) Ltd., ship Mafalda, docked, cleaned, painted and repaired, and electric welding; C. T. Bowring & Co., s.s. El Lobo, docked, cleaned, painted and repaired; Kinsley Navigation Co., s.s. E. D. Kingsley, new cast iron propeller.

American Association of Port Authorities.—At a meeting of the executive committee at Montreal, Dec. 31, 1921, the resignation of the Secretary, M. P. Fennell, Jr., Secretary, Montreal Harbor Commissioners, was accepted, but at the request of the executive committee, consented to continue to act until an appointment is made. W. D. Lighthall, K.C., has been appointed Canadian Counsel for the Association. The annual convention will be held at Toronto in October.

Godrich Elevator & Transit Co., Goderich, Ont., has given J. H. Troman-hauer, Toronto, a contract to build an addition of a marine tower to its elevator at an approximate cost of \$50,000.

Montreal Harbor Commission.

Dr. W. L. McDougald, President, Century Coal Co. and Ogdensburg Coal & Towing Co., and a director, Canada Steamship Lines Ltd., and British Empire Steel Corporation, has been appointed President, Montreal Harbor Commissioners, succeeding W. G. Ross, who resigned to become a candidate for St. Antoine, Montreal, in the recent Dominion general elections, but was defeated. Dr. McDougald was sworn in, Jan. 16, by M. P. Fennell, Jr., Secretary of the Commission, and was welcomed by the retiring board.

On the re-organization of the administration of Montreal harbor in Jan. 1913 the Commission appointed consisted of W. G. Ross, President, Brig. Gen. A. E. Labelle and Farquhar Robertson. Following the recent change in the Dominion Government the two latter also resigned, but their successors had not been announced at the time of writing, Jan. 20.

During the commissioners' term of office Montreal has become, in volume of traffic, the second port on the continent, the first as a grain shipping port, and the seventh of the great world ports.

Naval Dockyards at Halifax and Esquimalt.

In the Naval Service Department's report for the year ended March 31, 1921, issued recently, the Deputy Minister, G. J. Desbarats, C.M.G., says:—"Concurrent with the other services of the Department, a complete reorganization of the technical branches of both dockyards was effected. The management of dockyard workshops has been much simplified and has been placed under the charge of an engineer manager. The reorganization has resulted in a considerable reduction of both labor and clerical personnel and has produced a more centralized and compact system of control and operation.

"A number of workshops at Halifax, which were established owing to extra work during the war, have been closed. These are held in reserve, and are in condition to be put in full operation at short notice.

"During the year, repairs and refits, as required, have been carried out at Halifax, to Canadian Naval Service, Imperial Navy and French Navy, and also to Fisheries Protection, Hydrographic Survey and other Canadian Government ships.

"Upon the return to normal conditions the Department ascertained that known and anticipated requirements for ship repairs and refits would not justify the maintenance of Esquimalt dockyard in active operation. It was therefore, decided to close the workshops and repair plant, which was done early in the year. The shops and equipment are in readiness for reopening without delay, should they be required."

Welcome, to the Land of Liberty.

The incoming ocean liner was proceeding up New York Bay.

"What is that island on the left with the statue on it?" asked the immigrant. "That's Bedloe's Island, and the Statue of Liberty," explained the steward.

"And what is the other one over there?" asked the immigrant.

"That's Ellis Island, where you'll be locked up," replied the steward.

Atlantic and Pacific Oceans.

The White Star Line has reduced its second class fare to Hamburg and Bremen, Germany, by \$5, making the new rate, \$125.

The Anchor-Donaldson Line's s.s. Saturnia, scheduled to sail from Halifax, N.S., for Londonderry, Ireland, and Glasgow, Scotland, Feb. 18, having been withdrawn from service for her annual overhaul, the Anchor Line's s.s. Algeria will sail from Halifax, on the same route, Feb. 28. The s.s. Algeria was formerly under German ownership.

The Blue Funnel Line (Alfred Holt & Co.) is inaugurating a new regular steamship service between Great Britain and European ports and Vancouver, Victoria, B.C., and certain U.S. Pacific ports. Four steamships will be operated on the route on a 60 day schedule. The s.s. Memnon is now en route to Vancouver via the Panama Canal, and will be followed by the s.s. Hector sailing from Liverpool, Eng., Feb. 17.

The Newfoundland Supreme Court has rendered judgment in the case of the s.s. Portia against the s.s. Basaan on a claim for salvage, holding that though the service rendered was admittedly of a meritorious character, it was more in the nature of pilotage and towage, than of salvage proper, and \$1,000 was awarded as fair compensation for the service, together with \$120 to cover certain small damage to the sailing ship. The s.s. Portia was also awarded costs of the action, but the s.s. Basaan's costs, occasioned by the excessive amount in which she was held to bail, were assessed against the Portia.

Judgment was entered recently in the Newfoundland Supreme Court, in favor of the Danish s.s. Storborg, on a salvage claim against the s.s. Delco, bound from Gothenburg, Sweden, to New York, in Feb. 1921. The service rendered by the Storborg, without aid from the Delco's engines, from the time she picked her up at a point west of Malins Head, about 1,000 miles from St. John's, Nfld., to the time of landing at St. John's, lasted 14 days, and was carried out during heavy weather, and in considerable danger from meeting icebergs. The judgment laid special stress on what was described as a "very meritorious salvage," and stated that shipmasters should be encouraged by liberal award to offer their services to ships in distress. The amount of \$50,000 was awarded to the ship Portia, against the Delco, her cargo and freight, with costs, the award to be apportioned according to the laws of the ship's domicile, with the court's recommendation that a liberal share should be assigned to the master, officers and crew, whose skill and care were so well bestowed and whose risk and labors were so largely increased during the tow.

Shipbuilding on the Clyde.—It is stated that 314 ships were launched on the Clyde, in Scotland, during 1921, the aggregate tonnage being 514,000, compared with an aggregate tonnage of 669,000 during 1920. The largest ship launched was the Windsor Castle, 19,000 tons.

Empire Shipping Co. Ltd. has been incorporated under the British Columbia Companies Act, with \$10,000 authorized capital, and office at Vancouver, B.C., to own and operate ships, and to carry on a general transportation business between any ports in the world.

Maritime Provinces and Newfoundland.

The s.s. D. D. Mann, owned by the Town of Lockport, N.S., was considerably damaged by fire while lying at her wharf there, Jan. 5.

The s.s. Cabot, owned in Newfoundland, was sold by auction, Jan. 9, to Sir Michael Cashin for \$6,150. She was built in Norway for whale fishing.

The Reid Newfoundland Co.'s Cabot Strait mail steamship Kyle is being fitted with direction finding apparatus, by the Marconi Wireless Telegraph Co. of Canada.

The Dominion Public Works Department has, we are officially advised, awarded the contract for repairs, etc., to its steel hopper scow 157, to Sydney Foundry & Machine Works, Sydney, N.S.

The Newfoundland schooner Bohemia, with coal from Sydney, N.S., for Burin, Nfld., was blown ashore in the harbor at St. Pierre, Miquelon, during a hurricane Dec. 31, and with her cargo became a total loss.

Longshoremen's wages for the current winter season, at Halifax, N.S., dating from Jan. 1, have been arranged as follows,—day work, 55c. an hour; night work, 65c. an hour, to remain in force until June 30. The rates hitherto paid were,—day work, 65c. an hour, night work, 73c. an hour.

The wreck of the steam trawler Baleine is lying sunk in the south entrance to the Gut of Canso, about 1,500 ft. from Cape Argos whistle buoy, with the smoke stack and spars showing above water. To make the wreck more conspicuous, the Marine Department is attaching a barrel painted green to one of the spars.

The s.s. San Zotico, which arrived at St. John, N.B., Dec. 28, with 55,000 barrels of fuel oil, was the first cargo bearing ship to carry cargo to the new oil tanks in Courtenay Bay. She was also the first ship to take fuel oil to St. John, and carried the largest bulk cargo of any description to enter the port.

The Nova Scotia schooner Frederick H., 525 tons, ran ashore on the Negrotown breakwater, at the entrance to St. John, N.B., harbor, Jan. 7, when inbound with 426 tons of coal from New York. There was a pilot on board, and it is believed that, during the darkness, he kept too close to the shore.

The s.s. Inio, one of the steamships held to have been responsible for the Halifax disaster of Dec. 1918, when a munitions ship exploded in the harbor, causing large loss of life and destruction of property, was wrecked on the East Falkland Islands, in Dec. 1921, and became a total loss. She was originally the White Star Line's s.s. Runic.

A New York press dispatch states that an involuntary petition of bankruptcy has been filed against the Nova Scotia Transportation Co., the largest creditor being mentioned as the Federal Line Inc., which claims \$300,000. The principal place of business is given as Halifax, N.S. The company, which has its registered office in Toronto, owned the s.s. Lequesnoy, built by Dominion Shipbuilding & Repair Co., Toronto, which was reported recently to have been sold to German interests for \$60,000.

The oil tank s.s. San Zotico, which arrived at St. John, N.B., Dec. 28, from Mexico, with a cargo of oil equalling

50,000 barrels, and with a draft of over 26 ft. of water, was the ship with that draft to enter Courtenay Bay and unload a cargo, which she discharged at the rate of 200 tons an hour into three large tanks built recently by Allen McAvity. During the time the San Zotico was in the bay, there was a severe gale, but the ship experienced no trouble, being amply protected by the breakwater which has been built by St. John Drydock & Shipbuilding Co., as part of its Dominion Government contract. The C.P.R. s.s. Montcalm was the first ship to take fuel oil from the tanks.

The crews of the Newfoundland schooners Amy B. Silver, and Kinsman returned to Newfoundland early in January, both ships having been wrecked. The Amy B. Silver sailed from the Argentine in Nov. 1921 for Oporto, Portugal, and foundered 400 miles south of Cape Race, Dec. 4, the crew being rescued by the German s.s. Sophia Buckman, and taken to Bremen, Germany, later being sent to Liverpool. The Kinsman sailed from Battle Harbor for Gibraltar, Dec. 1, and collided with the s.s. Gilarosa, being badly damaged. The crew were eventually taken off by the Portuguese s.s. Gilan. Dec. 4, and taken to Lisbon, whence they were sent to Liverpool. Both crews returned on the C.P.R. s.s. Minnedosa.

The s.s. Yarmouth, owned by the Black Star Steamship Corporation, which is composed entirely of New York colored people, was sold there recently, by the U.S. Marshal, for \$1,625. She was built at Dumbarton, Scotland, in 1887, for Yarmouth Steamship Co., Yarmouth, N.S., for operation between there and Boston, Mass. Her dimensions are, length 220.3 ft., breadth 35.2 ft., depth 21 ft.; tonnage, 452 gross, 725 net. In 1901, she, with her sister ship, Boston, was taken over by the Dominion Atlantic Ry., and used for winter service between Digby, N.S., and St. John, N.B., and was continued on that route when the service was taken over by the C.P.R. She was later sold to the North American Steamship Co., a U.S. concern, and was operated in North Atlantic service for some time, and during the war made several trips to European ports. In 1919, she was sold to the Black Star Steamship Corporation, and, for a time was run between U.S. ports and the West Indies, but she has been laid up for some time, and it is now said, will be broken up.

Grain Congestion at Vancouver.—Press dispatches at the end of December reported congestion at the Dominion Government grain elevator there and said that prospects were that there would be great activity in shipping circles there, moving the grain for the next few weeks. Wheat was mentioned as the principal cereal in store, and further large quantities were either in cars waiting to be unloaded as soon as elevator space became available, or were on the way from the prairies. A grain carrier was expected to arrive at Vancouver on Dec. 25, and another about Jan. 1, and after that a whole fleet of vessels were due. Up to the end of December something like 80,000 tons of wheat had been booked to the Orient and the United Kingdom, of which some 25,000 tons had been moved. It was stated that there were 85,000 bush. of grain in the elevator at the end of December.

Ontario and the Great Lakes.

The steam tug *Carlotia*, now owned in Port Stanley, and formerly by Jas. Playfair, Midland, was badly damaged by fire at Port Stanley, Jan. 8.

The limits of Port Colborne harbor have been defined as covering all the waters in Lake Erie, situated north of a line drawn from the extremity of Georgian Point to the extremity of Point Albino.

Imperial Oil Ltd. is reported to have bought an additional 315 ft. of land along the St. Clair River, at Sarnia, making a total of 680 ft. acquired recently. It is stated that the company intends building a dock for berthing and repairing its ships there.

The George Hall Coal Co. of Canada is reported to be negotiating for the purchase of two new steel steamships of full Weland Canal size, for operation between Montreal and Chicago. It is said that they will be equipped for both salt and fresh water service.

The Detroit & Windsor Ferry Co. announce that a new ferry steamship will be placed in operation between Detroit and Windsor, in June, with accommodation for about 4,000 passengers and 70 automobiles. This ship which, it is stated, is under construction, will be 65 ft. wide, and will have no cabins on the main deck, which will be reserved exclusively for automobiles and trucks.

The U.S. Lake Survey reports the mean stages of the Great Lakes in feet above mean sea level, for Dec. 1921, as follows: Superior, 601.99; Michigan, 599.54; St. Clair, 574.58; Erie, 571.71; Ontario, 244.83. Compared with the average December levels for the past 10 years, Superior was 0.39 ft. below; Michigan and Huron, 0.62 ft. below; Erie, 0.09 ft. below; Ontario, 0.68 ft. below.

The s.s. *Trevisa*, which is berthed for the winter at Kingston, arrived there towards the close of St. Lawrence navigation, and too late to enter the lake trade, for which she was built. She is owned by Export Steamships Ltd., Montreal, and was built at Londonderry, Ireland, in 1915, when she was taken by the British Government for war purposes, and was operated between the north of England and France, being successful in sinking and destroying four German submarines. Two of her captains received decorations for their work.

Manitoba, Saskatchewan, Alberta and Northwest Territories.

The Ross Navigation Co.'s s.s. *Nipawin* has been hauled out at Pas, Man., for repairs to her hull, after being wrecked at Big Stone Rapids in the Saskatchewan River, in Aug. 1921, when she sank in 7 ft. of water. She was subsequently raised and a bulkhead built securely round the damaged part, to enable her to complete the season's work and enable her to reach Pas. The method used to raise her required the use of two barges, cross timbers through the housing of the boat with cables slung underneath, and screw jacks placed under the timbers for the lift.

Montreal Grain Elevator.—It is reported that work will be commenced in the spring on an additional grain elevator at Maisonneuve, to be known as no. 3 for the Montreal Harbor Commission.

British Columbia and Pacific Coast.

An experimental shipment of 200 tons of frozen fish, the first to go from British Columbia to the Atlantic coast by water, left Vancouver on the s.s. *Neponset* for New York via the Panama Canal.

The Grand Trunk Pacific Coast Steamship Co.'s s.s. *Prince Albert* was docked at Prince Rupert drydock early in January, owing to an accident and her trip from Prince Rupert south was cancelled. The company's s.s. *Prince John* took up the *Prince Albert*'s service, sailing from Vancouver Jan. 13.

North Vancouver voters on Jan. 12 voted on a bylaw to provide approximately \$300,000 for buying an additional ferry steamboat, tenders for which had been received, the details being given in our January issue. The voters were 474 for and 426 against. As a three-fifths majority, or 540 votes, was required to pass the bylaw, it was not carried.

The s.s. *Celestial Empire* has been sold by The Canadian Fishing Co., Vancouver, to B. L. Johnston, Walton & Co., Vancouver, for towing on the north coast. She was built at Hull, Eng., in 1897, when she was named *Jupiter*, and was lengthened in 1902, when her name was changed to *Celestial Empire*. Her dimensions are,—length 121.2 ft., breadth 21 ft., depth 13 ft.; tonnage, 204 gross, 80 net. She is screw driven by engine of 59 h.p.

The British Columbia Public Works Department called for tenders recently for a steam cruiser for the Boiler Inspection Department. The details given were,—length 55 ft., breadth 11 ft., depth 7½ ft., draft 4 ft., speed 10 miles an hour, engines to be of English make, 55 i.h.p., the hull was to be of timber construction, with cabin accommodation for 7 persons. We are officially advised that it has been decided not to accept any tender at present.

The U.S. Government has stationed the pilot ship *King and Wine*, radio call KBYU, off Cape Flattery, Juan de Fuca Strait, to render service to ships navigating in the waters of southeastern Alaska, British Columbia and Puget Sound. She is a power schooner, painted white, with the word *Pilot* in black letters on the sides, and is equipped with a half kilowatt radiotelegraph installation, with a sending radius of 300 miles by day and 400 to 600 miles at night.

The steam tug *Clinton*, registered in the name of the Pacific Great Eastern Ry., was sunk Jan. 15 in Burrard Inlet, after collision with the C.P.R. s.s. *Princess Royal*. The crew of nine were rescued, and the *Princess Royal* was reported to have received no damage. The *Clinton* was built at Tacoma, Wash., in 1909, and was originally named *Daring*. She was screw driven, by engine of 39 h.p., and had the following dimensions, length 98 ft., breadth 19 ft., depth 6.9 ft., tonnage 123 gross, 30 net.

The C.P.R. car transfer barge no. 8, whilst in tow of the company's s.s. *Naanoo*, ran aground at Porlier Pass towards the end of December. She was loaded with 18 freight cars, carrying, mainly, Christmas and perishable goods from the mainland, for island points. The front light tower of the Porlier Pass range had been destroyed during a storm a few days earlier, and it is stated that this loss probably caused the casualty. The barge was refloated by the Pacific Salvage Co. and towed to Ladysmith, Dec. 28.

D. C. Coleman, Vice President, Western Lines, C.P.R., is reported to have said, when in Vancouver, recently, that the work on the company's new pier in Burrard Inlet, Vancouver, will be commenced shortly. The dredging and fill were completed last spring, but the steel and concrete construction was held up to await better market conditions. The pier, which will be 700 ft. long, will be of modern construction, equipped with the latest machinery for handling cargo, and will be able to accommodate any ship operating on the Pacific Ocean.

Frank Waterhouse & Co., shipping agents and managers, etc., Seattle, Wash., with branches at various Pacific ports, including Vancouver, B.C., have been placed in receivership, on the application of the Northern Pacific Ry., a creditor for \$6,833. It is stated that other liabilities amounting to about \$500,000 fall due shortly. C. E. Bisset, Professor of Law, Washington University, has been originally named Receiver. E. D. Shalley, Vice President, stated recently that a statement of the company's assets was not then available at that time, and that the company's activities had been greatly restricted recently on account of the sale of its shipping and insurance interests.

The s.s. *Victoria*, at one time operated by the C.P.R. in its trans-Pacific service, and latterly by U.S. interests in the Alaska trade, has been surveyed by U.S. inspectors, and may be condemned unless extensive repairs are made. She was built in Scotland in 1870, and was originally named *Perthshire*. Shortly after the completion of the C.P.R., she was chartered by that company, with the steamships *Abyssinia* and *Batavia*, to establish its trans-Pacific service. In 1890 the C.P.R. made a contract with the British Government for a mail subsidy on the Pacific of \$60,000 a year, and in 1891 the three ships named were replaced by the steamships *Empress of China*, *Empress of India*, and *Empress of Japan*, which were specially built for the service.

Canadian Notices to Mariners.

The Marine Department has issued the following:—

81. Dec. 16.—218, British Columbia, Juan de Fuca Strait, Swiftsure Bank lightship, characteristic of submarine bell not to be changed. 219, British Columbia, Strait of Georgia, entrance to Baynes Sound, Yellow Island, new back range light to be established. 223, British Columbia, Queen Charlotte Sound, Hudson harbor, correct position of uncharted rock. 221, United States, Juan de Fuca Strait, Cape Flattery, pilot ship established.

82. Dec. 19.—222, Ontario, St. Lawrence River, Lake St. Francis, western portion, Lancaster to Cornwall, new edition of chart. 223, Ontario, Lake Huron, new editions of charts. 224, United States, Lake St. Clair, St. Clair Flats canal gas buoy permanently discontinued.

83. Dec. 23.—225, Canada, Atlantic coast, list of harbor and fishing lights.

84. Dec. 30.—226, Nova Scotia, southwest coast, Cape Fourchu gas and whistle buoy, color of light to be changed. 227, Nova Scotia, south coast, south entrance to Gut of Canso, wreck, temporary beacon to be placed. 228, Quebec, River St. Lawrence between Quebec and Montreal, Beaucoueur to Champlain, new edition of chart.

Mainly About Marine People.

Capt. W. J. Boyce, master in the C.P. R. British Columbia Coast Service, has been elected President, Canadian Navigators Federation's Pacific Division, vice Capt. F. H. Parker, master in the Union Steamship Co. of British Columbia's service.

G. W. Crossan, Superintendent, Engineering Department, Halifax Shipyards Ltd., Halifax, N.S., was presented with a case of ivory toilet articles by the department employees, recently, on leaving there for Toronto.

M. P. Fennel Jr., Secretary, Montreal Harbor Commissioners, and Secretary, American Association of Port Authorities, has resigned the latter position.

Sir Thomas Fisher, General Manager, Atlantic Lines, Canadian Pacific Steamships Ltd., London, Eng., has been adopted as a coalition liberal candidate for Portsmouth, Eng., for the next general election.

W. I. Gear, Vice President, Robert Redford Co., returned to Montreal, at the end of December, after an extended European trip.

Hon. G. P. Graham, M.P., who has been appointed Minister of Militia and Defence, and of the Naval Service, was born at Eganville, Ont., March 31, 1859, and in his early years was a school teacher. He went into newspaper work in 1880, and entered politics in 1890, when he unsuccessfully contested Dundas for the Ontario Legislature, but he was elected for Brockville in 1898, and represented it there, until 1907. He was Provincial Secretary of Ontario from 1904 to 1905, and in 1907 was leader of the opposition in the Ontario Legislature for a few months. He was elected to the House of Commons, for Brockville, in 1907, and was appointed Minister of Railways and Canals, Aug. 29, 1907, and continued to represent Brockville, until the defeat of the Laurier Government in 1911, when he was also defeated. He was elected to represent South Essex, Ont., at the recent Dominion general elections.

Sir William Hearst, a member of the International Joint Waterways Commission, and former Premier of Ontario, has been elected President of the Empire Club, Toronto.

Francis King, M.A., of Kingston, Ont., Counsel, Dominion Marine Association, has been appointed a King's counsel by the Ontario Government.

Hon. Ernest Lapointe, B.A., LL.B., K.C., M.P., of Rivière du Loup (en bas) Que., who has been appointed Minister of Marine and Fisheries, was born at Quebec, Que., in 1876, and entered the Dominion Parliament Feb. 12, 1904, when he was elected by acclamation for Kamouraska, Que., in a bye election, and was re-elected for the same constituency in 1904, 1908, 1911 and 1917. He resigned that seat in 1919 and was elected to represent Quebec East, being re-elected in 1921.

W. D. Lighthall, K.C., Montreal, has been appointed Canadian Counsel for the American Association of Port Authorities.

F. J. McClure, General Passenger Agent, Robert Redford Co., Montreal, sailed for Europe at the end of December on an extended tour of the continent in the interests of the Cunard Line.

Sir James McKechnie, Managing Director, Vickers Ltd., Barrow-in-Furness,

Eng., visited Canada and the U.S. in January.

Capt. William Playter, master mariner on the Great Lakes, died at Batavia, near Collingwood, Ont., Jan. 7, aged 52. He retired from the marine service in 1917, when master the Dominion Government s.s. La Canadienne. During his service on the Great Lakes, he was master of the steamships Northern Belle, Pacific and Majestic.

J. W. Troup, Manager, British Columbia Coast Steamship Service, C.P.R., Victoria, B.C., is making a trip to Japan and China.

F. W. Young, who formed the Lake Shippers Clearance Association, of which he was Manager for some years, died suddenly at Winnipeg, Jan. 9.

Panama Canal Traffic.

The Panama Canal report for Oct. 1921 shows that in point of tonnage, more than 50% of the Atlantic to Pacific traffic was routed to the U.S. and Canadian west coasts, and in tons of cargo, more than 36% was destined for points on those coasts. In the Pacific to Atlantic traffic, more than 50% of all tonnage, and 63% of all cargo, originated on the U.S. and Canadian west coasts. There were considerable increases, both in tonnage and cargoes, the greatest increase in traffic being from the U.S. and Canadian west coasts to Great Britain and Europe. There were heavy grain shipments, 22 full cargoes of wheat and barley passing through the canal during the month, and many of the ships with mixed cargoes included grain.

A considerable number of ships passed through the canal from the Atlantic to the Pacific, light, the majority being en route from Europe to the U.S. and Canadian west coasts for cargoes. Several were charged full tolls, owing to their carrying more coal than allowed under ballast rates. British steamships head the list of those using the canal.

A new day's record was made Nov. 23, when 18 merchant ships, the British cruiser Raleigh, and a launch, passed through the canal. The cargo carried aggregated 78,648 tons, the total of tolls levied being \$79,808.50. Omitting the launch, 10 of the ships passed from the Atlantic to the Pacific, and 9 from the Pacific to the Atlantic.

Coal Docking for Vancouver.—An Edmonton, Alta., press report, published in our January issue, stated that the Alberta Government was negotiating in regard to new markets for Alberta coal, that the Vancouver harbor commissioners were considering the construction of an extensive dock at which to store the coal, for bunkering steamships and other purposes, and that a similar scheme was being proposed for Prince Rupert. We have reason to believe that plans are being made to be built by the Vancouver harbor commissioners have been prepared, but that nothing has been done in regard to construction, probably owing to the change in the Dominion Government.

Welland Canal Statistics.—St. Catharines, Ont., press dispatch, Jan. 15.—During 1921 a total tonnage of 3,070,966 passed through the Welland Canal, an increase of 800,000 tons over 1920. The largest up cargo was carried by the Winona with 2,800 tons pulpwood; the Beren-ton, with 2,750 tons of oats, had the largest down cargo. During the year

3,750 ships passed through, 1,859 up and 1,848 down. Fifteen new ships passed through on their way to the Atlantic. The principal increases in tonnage were: Barley 7,732; corn, 747,776; oats, 122,226; rye, 45,694; flax, 108; wheat, 502,939; agricultural implements, 6,432; iron and steel, 14,415; coke, 4,700; ore, 2,347. The main decreases were cement, brick and lime, 23,470 tons; petroleum and oils, 2,790; pulpwood, 15,750; soft coal, 702,000; sand, 17,255.

Nautical Assessors' Appointments.—In connection with the selection and appointment of nautical assessors in investigations of marine casualties by wreck commissioners, comments on which, following a British Columbia Supreme Court judgment, have been made in previous issues, we are officially advised that the Minister of Marine will in future act on the Justice Department's recent report and appoint the persons to act as nautical assessors.

Guy Tombs Ltd., 285 Beaver Hall Hill, Montreal, has been appointed ticket agent, Anchor-Donaldson and Cunard Lines, Canadian Pacific Steamships, French Line, Holland-America Line, and White Star-Dominion Line.

Trade and Supply Notes.

Orton & Steinbrenner Co., Chicago, manufacturers of locomotive and special cranes, clamshell and orange peel buckets, coal and ore handling plants, etc., has appointed Walter Hasendahl, 1213 Fuller Ave., Los Angeles, Cal., to represent it.

S. F. Bowser Co. Ltd., incorporated under the Dominion Companies Act, has been granted an Ontario license under the Mortmain and Charitable Uses Act, to acquire, hold and assure land in mortmain in Ontario to the value of \$52,000 for its actual use and occupation, or to carry on its undertaking. The company manufactures oil storage and handling equipment for railway, steamship and general purposes.

Transportation Conventions in 1922.

March 14 to 16.—American Railway Engineering Association, Chicago, Ill.; E. H. Fritch, 431 South Dearborn St., Chicago, Ill.

March 21 to 23.—American Railway Association, Telegraph and Telephone Division, Colorado Springs, Colo.; W. A. Fairbanks, 73 Church St., New York, N.Y.

May 2 to 5.—Air Brake Association, F. M. Nellis, 10 Broad St., New York, N.Y.

May 17 to 19.—Association of Railway Claim Agents, Montreal; H. D. Morris, Northern Pacific Ry., St. Paul, Minn.

May 24 to 26.—Master Boiler Makers Association, Chicago, Ill.; H. D. Vought, 26 Cortland St., New York.

June 1.—Canadian Electric Railway Association, Quebec, Que.; L. E. Moreland, Hull, Que.

June 14 to 21.—American Railway Association, Mechanical Division, Atlantic City, N.J.; V. E. Hawthorne, 431 South Dearborn St., Chicago, Ill.

June.—American Society for Testing Materials, Atlantic City, N.J.; C. I. Warwick, University of Pennsylvania, Philadelphia.

Aug. 23 to 25.—American Association of Railroad Superintendents, Kansas City, Mo.; J. Rothchild, 400 Union Station, St. Louis, Mo.

Sept. 22 to 14.—Roadmasters and Maintenance of Way Association, Cleveland, Ohio; P. J. McDermott, Chicago & Northwestern Ry., Sterling, Ill.
 Sept. 25 to 30.—American Society for Steel Treating, Detroit, Mich.; W. H. Edman, 4600 Prospect Ave., Cleveland, Ohio.
 Oct. 17 to 19.—American Railway Bridge and Building Association, Cincinnati, Ohio; C. A. Litch, Chicago & Northwestern Ry., 319 North Waller Ave., Chicago, Ill.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:
 American Association of Port Authorities—Canadian Council, W. L. Litchfield, K.C., Montreal.
 Belleville Railway Men's Educational Club, Meets each Tuesday, 7.30 p.m. F. A. Pinkston, Belleville, Ont.
 Canadian Car Demurrage Bureau—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal.

ESQUIMALT & NANAIMO RAILWAY COMPANY.

Notice.

The Esquimalt & Nanaimo Railway Company will apply to the Parliament of Canada, at its next session, for an Act extending the time for commencement and completion of the line of railway which it was authorized to construct by Statutes of Canada, 1920, chapter 77, namely:—

From a point at or near its present terminus at Courtenay, thence in a generally northerly and northeasterly direction to a point at or near Duncan's Bay on the east coast of Vancouver Island.

Dated at Vancouver, this seventh day of January, 1922.

A. F. ARMISTEAD,
Secretary.

Andrew T. Thompson, K.C.,
Pringle, Thompson, Burgess & Cote,
122 Wellington St., Ottawa,
Parliamentary Solicitor.

LA COMPAGNIE DU CHEMIN DE FER DE COLONISATION DU NORD.

Notice.

La Compagnie du Chemin de Fer de Colonisation du Nord will apply to the Parliament of Canada, at its next session, for an Act extending the time for the completion of the railway which it was authorized to construct by Statutes of Canada, 1899, chapter 62, namely:—

From a point at or near Labelle, thence in a westerly direction to the Village of Rapid de L'Original (now called Mont Laurier), thence in a westerly direction to a point at or near Lake Temiscamigue, in the County of Pontiac.

Dated at Montreal, this ninth day of January, 1922.

H. C. OSWALD,
Secretary.

Andrew T. Thompson, K.C.,
Pringle, Thompson, Burgess & Cote,
122 Wellington St., Ottawa,
Parliamentary Solicitor.

Canadian Electric Railway Association—L. E. Moreland, Hull Electric Co., Hull, Que.

Canadian Freight Association (Eastern Lines)—G. C. Ransom, 909 Shaftesbury Bldg., Montreal.

Canadian Freight Association (Western Lines)—W. E. Campbell, 805 Boyd Block, Winnipeg.

Canadian Passenger Association—Eastern Lines, G. H. Webster, 54 Beaver Hall Hill, Montreal; Western Lines, E. J. Stone, 306 Union Station, Winnipeg.

Canadian Railway Board of Adjustment No.1—R. Chapple, 365 St. James Street, Montreal.

Canadian Railway Club—W. A. Booth, 53 Rushbrooke St., Montreal. Meetings at Montreal 2nd Tuesday, each month, 8.30 p.m., except June, July and August.

Canadian Ticket Agents' Association, E. de la Hooke, London, Ont.

Canadian Traffic League—R. J. Fitzgerald, 4 Queen St. West, Toronto.

Dominion Marine Association—F. King, K.C., Counsel, Kingston, Ont.

Engineers' Club of Montreal—C. M. Strange, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto—R. B. Wolsey, 84 King Street West, Toronto.

Engineering Institute of Canada—F. S. Keith, 176 Mansfield St., Montreal.

Express Traffic Association of Canada—C. N. Ham, Montreal.

Great Lakes and St. Lawrence River Rate Committee—A. E. Storey, 310 G.T.R. General Office, Montreal.

Hydro-Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.

International Water Lines Passenger Association—M. R. Nelson, 89 Chatham Ave., Buffalo, N.Y.

Niagara Frontier Summer Rate Committee—James Morrison, Montreal.

Quebec Transportation Club—A. F. Dion, Harbor Commissioner's Office, Quebec, Que.

Railway Association of Canada—C. P. Riddell, General Secretary, 263 St. James Street, Montreal.

Western Operating Committee, E. J. Stone, 306 Union Station, Winnipeg.

Shipping Federation of Canada—Thos. Robb, Manager, 42 St. Sacrament Street, Montreal.

Transportation Club of Toronto—W. J. Holtrum, 595 Runnymede Road, Toronto.

Transportation Club of Vancouver—C. E. Blaney, Travelling Passenger Agent, Canadian Pacific Steamships Ltd., Vancouver, B.C.

THE LUNDIE TIE PLATE

One of the most distinguished, successful and honored Engineers of Canada writes as follows of the

LUNDIE TIE PLATE

"It is by far the most scientifically designed and practically efficient tie plate ever evolved."

MILLER BOILER WASHING SYSTEM—FOR LOCOMOTIVES

Washout Water at 120°.

Refill Water at 200°.

F. W. MILLER HEATING CO.

MCCORMICK BUILDING

CHICAGO, ILLINOIS

Fig. 2, a part plan, shows the car cleaners' house and platforms in somewhat more detail than fig. 1, and fig. 3 shows a cross sectional view of the new facilities as seen in looking toward the house from the ends of the platforms. Tracks between the platforms are equipped with 12 in. R.R. standard cast iron car stops. The space between the wall of the house and the beginning of the long platforms proper will be occupied by a covered platform 20 ft. wide at the same level as the long platforms, the slope of the roof over this portion of the platform structure being shown by the side view, fig. 4. The $\frac{1}{2}$ in. shiplap boarding enclosing the side of the platform is shown in side view along the side of this portion to the wall of the house. Access from the car cleaners' house to the platform will be

through two $8\frac{1}{2} \times 8\frac{1}{2}$ ft. mill doors.

The car cleaners' house will be set on piles 12×12 in. surmounted by caps 10 in. wide by 14 in. deep and 3×11 in. sills at 16 in. centers. The floor will be of two layers of $1\frac{1}{4}$ in. tongue and groove plank, with tar paper between,

in. away from the platform side. It will be covered with asbestos roofing, as will also the roof over the platform immediately adjoining the house. The 10 interior posts supporting the roof of the house, and spaced 16 ft. c. to c. in both directions, will be of 10 x

12 in. piped for steam, compressed air, water and vacuum lines, for car cleaning and for fire service, and these lines will also be extended along the platforms.

Canadian Railway and Marine World is indebted to J. M. R. Fairbairn, D.Sc., Chief Engineer, C.P.R., for the plans and

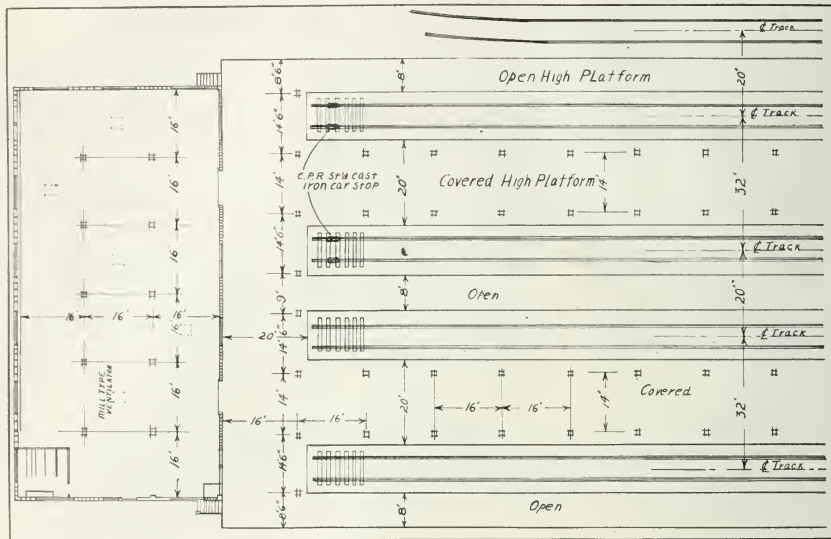

Fig. 2. Car cleaning building and shelters, C.P.R. Glen Yard, Montreal.

Fig. 4. Side view, car cleaning building and shelters, C.P.R. Glen Yard, Montreal.

covered with a $1\frac{1}{2}$ in. layer of mastic. The floor will be graded slightly, sloping from the platform side of the house, to provide for drainage, and a trough at the low side set in the floor and covered with metal grating will connect to the drainage system. The house will be veneered in brick on the outside, and the eared in brick on the inside, and the roof, built up of two layers of $\frac{3}{4}$ in. tongue and groove plank with tar paper between, will have a slope of $\frac{3}{4}$ in. in 12

10 in. material. The house will be equipped with mill type ventilators in the roof. Movable platforms will be installed, and the equipment will include a complete installation of mattress, seat-back, blanket and carpet cleaning machinery. A tool room will be included in the car cleaning house layout, and complete lavatory facilities will be provided. Large windows, as shown by fig. 4, will provide adequate natural lighting. The building will be

other information on which the foregoing article is based.

Canadian Railway Club.—A. J. Felton, of the Alexander Hamilton Institute, Toronto, addressed the club at Montreal, on Feb. 14, on education in its relation to efficiency.

Canadian locomotives during 1920 used 10,332,915 tons of coal, of which all but 4,270 tons was bituminous.

"What is Your Locomotive Policy?"

G. M. Basford, of New York, N.Y., read a paper with the above title, before the Central Railway Club at Buffalo, N. Y., recently. His statements were such as to bring home forcibly to railway mechanical men, indeed, to all railway men, the fact that the locomotive of today is a vastly more efficient machine than that of a few years ago, provided all the economy and power increasing devices applicable to locomotives are utilized.

tions that they never even dreamed about. I am thinking particularly of D. L. Barnes, G. S. Strong, M. N. Forney and H. F. Shaw.

Successors have designed and built a passenger locomotive that will produce at the rate of a cylinder horsepower per hour from 16.5 lb. of water and 2.12 lb. of coal, and that weighs 121 lb. per cylinder h.p. This was done 10 years ago. Lots of locomotives have been built since

ment of the locomotive augments the effect of every other improvement that can be made. Everything done to make a locomotive pull more tons per ton of its own weight and per pound of fuel burned helps everything else you do to improve the efficiency of transportation. These facts are not as prominent in the minds of operating officials and of executives as they should be. Why? The locomotive today at its best is not understood by them as it should be. Why? Locomotives in everyday service may be made to produce at the rate of less than 3 lb. of coal per i.h.p. Why are so few of them doing this? Can they be made to do it? By co-operation, yes.

One of our difficulties is that we are so close to the locomotive as to tend to regard it as we have always done, as a machine that we know all about. We did know all about it as it was in our boyhood, but unless we have kept step with the improvements of recently past years in locomotive matters we are far behind the times. Forney said: "The human mind resents the intrusion of a new idea." This is true. The slow progress of locomotive improvements in the United States proves that he was right. Europe and Canada led us in the introduction of the greatest improvement that the locomotive ever enjoyed. Europe has 14,000 applications of another improvement that is only just starting in this country, and what other country needs these things more than we do? We need to bring our locomotive problem to the front. We need to elevate it to its proper place in railroading. We need to give it the attention it deserves.

What is your policy with respect to locomotive improvements, those factors that collectively give you, according to speeds, from 30 to 80 $\frac{1}{2}$ more power per pound of fuel than you can get from a plain locomotive? What are you doing about these things when you order new

Fig. 1. Showing the power improvement that can be made in the most efficient Pacific type locomotive by application of higher superheat, the feed water heater and the booster.

The potentialities of the steam locomotive, as outlined by him, are much greater than is ordinarily realized. Following is a summary of the paper.

Transportation conditions have changed. Only a comparatively short time ago—a lifetime—a trip from New York to Buffalo took 20 days, while now it takes but a few hours. The steam locomotive is responsible for the difference; the locomotive which can be put into service today is as far ahead of the locomotive of 1835 as the locomotive of that date was ahead of ox teams, but not enough advantage is taken of the fact of it being possible to build such efficient motive power units.

With respect to the locomotive, "policy" means a charted course using all established and safe aids to bring the craft to its logical destination. That destination is "the most tons handled for the least money." After "policy" there must be a plan based upon the fundamental principles of the policy and then a programme to execute the plan.

No matter what else we do ours will be a sorry sort of railroading if we fail to find in the treasurer's office the results of the efforts of those who have spent the past 20 years in showing how to increase locomotive power per pound of metal, and per pound of coal, and who have proved their ability to do it. I say 20 years, but it is more than 30 years since this work began. Some of the men who inaugurated this development builded better than they knew. We cannot thank them now. We can, however, use the results of their life work, that puts into our hands the possibility of building new and rebuilding old locomotives that are competent to meet condi-

tion that cannot do as well. Another example is a magnificent big freight locomotive with 90,000 lb. tractive effort that will produce one cylinder h.p. from 15.4 lb. of water, and, at its best, 2 lb. of coal, and that weighs 88.9 lb. per cylinder h.p. This has been done.

Fig. 2. Showing the percentage of increased power at various speeds, obtained by improvements of the past 19 years which are available for the locomotive of fig. 1, but which have not yet been applied to it.

It is the best record that I know about. Do those to whom they mean most know these facts? Do they make full use of them? These are isolated cases showing possibilities, but current practice is far behind them. Every new locomotive over every railway ought to be designed and built to equal and surpass the records just referred to.

No matter what else is done to increase efficiency and reduce cost in railroading, bear in mind that the improve-

ments, and what are you doing about applying them to old ones?

What is your policy and plan with respect to the design of new locomotives, and who decides their earning ability for their working life of 20 or 30 years?

What is your policy with respect to assignment of locomotive power to meet varying conditions of traffic, seasonal or emergency conditions? If this is not done by those who ought to know most about power matters there must be a

reason for it. How do you know just how many new locomotives to order, and what type and capacity to order? Is there a plan for this that looks ahead to that which is coming and is framed on experience of the past?

How do you know that the latest new locomotives are making good? Do you test them and keep records to show whether your locomotive engineering policy is correct and whether you are making the money from your new engines that you ought to make?

What is your attitude toward locomotive improvements as to application to older locomotives? Are the applications

back into service promptly, and keep it in service continuously until it is time for the next shopping? Do you know that new locomotives can be built with improvements in design that will permit of safely deferring increases in weight of rail and strength of bridges for years to come? Are you aware of the fact that the biggest, most powerful passenger locomotives in the country can be replaced by others that will stress the track and bridges less than the present ones and yet give enough increase in pulling power to reduce double heading, and that improved locomotives will start and pull heavier trains than have ever been put

road coming up to date in its use of these epoch making operating factors? If you consider these as mechanical matters, and if you regard signalling as a safety measure alone, you are missing something. Operating officers, ask signal engineers and mechanical officials to help you operate the road. They are in position to help as they never have been before.

Do you establish a definite plan covering the next three or five years with respect to your locomotive programme? Do you keep in mind the fact that new locomotives will last 20 or 30 years, and that your record of intelligent grasp of railroading is to be read by others after you are gone?

In the matter of water stops, have you thought of the effect on operating cost of the capacity of tender tanks on freight locomotives? Do you realize that by applying new design tender tanks, carrying 15,000 gall. of water, would beyond question save more money in direct operating results on some railways than anything of equal cost that you can do to a freight locomotive on congested track today, with the possible exception of the application of a booster?

Our railways were built for the locomotives of the past. They were, and with the exception of a few outstanding examples, are operated in accordance with the locomotives of the past. But the locomotive has changed faster than the methods of using it. A new, refined, efficient power plant is available to take the place of the one that was merely big and heavy. Those who operate our railways must learn what has happened. For their own sake, the sake of the properties, and of the people they serve, they must take advantage of the locomotive as it may be, not as it is, to solve the greatest problem they ever faced. The locomotive must be viewed from a new angle. We have been deficient in our conception of it, and of its proper place

scheduled after careful complete surveys of the power, and are the improvements applied by programme, systematically? Then do you organize to educate the men in the best use of the modernized locomotives to get the utmost return from the investment? When you apply a locomotive improvement that is good for 25% greater economy, are you sure that you get that economy?

What is your policy with respect to scrapping old power, and also obsolete shop machinery? Is it done systematically to take advantage of improvements as Andrew Carnegie did? Did it pay Carnegie to do it? Do you have or follow an engineering or business policy with respect to your locomotives, as a manufacturer does with respect to his investment in his expensive machinery?

How do you know that the enormous investment in locomotives themselves and in the facilities for repairing them are employed to the best advantage? Do you do as one railway official does, hire a man, a specialist, to organize the use of every locomotive item on which he spends \$100,000 a year or more?

Do you know that the mileage locomotives are making is what it should be and may be? Are you hampering operations by the old time idea that each division is a separate railway? A passenger locomotive made a run of 1,000 continuous miles recently without uncoupling from the train. Regular continuous runs of 400 to 700 miles are being made. Are your locomotives making above the average of 60 miles a day? Herein lies a gold mine.

Are you sure that shops, shop equipment, locomotive terminals and terminal equipment are adequate to get the power

behind any locomotive yet built? I refer to usual main line traffic.

What policy are you following with respect to signalling in relation to locomotive improvements, that permits of

Fig. 3. Showing the increased power a brick arch gives on a 0.5% grade to a 26 x 30 in. mikado locomotive similar to the U.S.R.A. light mikado.

Fig. 4. Showing the increased power a superheater gives on a 0.5% grade to a 26 x 30 in. mikado locomotive similar to the U.S.R.A. light mikado.

more rapid acceleration in starting out of sidings, out of yards, and across cross-overs? The entire question of block signalling, siding locations, and location of water and coal stations, is opened up anew by the ability to accelerate trains faster and to make longer runs for coal and water. Our railways were built for the saturated steam locomotive, without the vitalizing factors of today. Is your

operation of the road and in the transportation of the country.

A locomotive "simple as a grindstone" is a mighty expensive article to operate today, but thousands of them are running that may and should be made efficient by improvements that everybody knows about, and everybody accepts as satisfactory. Why don't we use them to the limit? These improvements have

revolutionized the locomotive art. They will revolutionize locomotive operation. Let us hasten the day when the locomotive will be considered as a real part of the great transportation machine. It is a big part of the transportation machine. Above all other things, every part of a machine must fit each other part. Otherwise a machine is impossible. The locomotive must fit track, tunnels, terminals and other factors, the least change in which means prohibitive cost, where bigness and weight and the increased power that go therewith must give place to improvements and refinement that render

der this improvement available. Another factor is improved conditions of combustion by application of the latest developments of the locomotive firebox as a furnace. This means improved fireboxes, more extended use of firebrick arches and mechanical stokers. A further factor is that weight per cylinder h.p. may be materially reduced by locomotive designers who are given the order to do their best in this direction. Up to this time they have never had a chance to show what they can do. They have much to offer.

Probably you are thinking and saying,

Fig. 5. Showing the increased power a feed water heater gives on a 0.5% grade to a 26 x 30 in. mikado locomotive similar to the U.S.R.A. light mikado.

greater weights unnecessary. It is time to disregard first cost and think of ultimate cost, to forget the limitations of the past and to build anew for the future. It is time to build every new locomotive on a new plan, to build it for high power with efficiency. Nothing that is known to be worth while, and that increases real efficiency, should be omitted from a new locomotive.

An improvement costing \$10,000 to buy, and even as much as that to maintain each year, is a good investment if it nets a saving of \$50,000 a year. You know what it costs. You do not know what it saves. It is good policy to double the first cost, and the cost of maintenance, if thereby locomotives will haul enough more tons, or make enough more miles, to show figures on the right side. This is one way to cut out "red figures." How really absurd it is to live as we do, in "comparative" figures instead of in constructive figures.

Here are some factors, improved cylinder operation, higher superheat and improvements in cut off, such as cut off control. Ask the officials of the Big Four Rd. about their cut off control as a factor in operation and in saving. Are we to wait years before getting the benefit of what they have done? Another factor is increased boiler efficiency, through feed water heating, using waste heat, and by improvements that compel greater boiler power through improved boiler circulation. Again, increased starting power, by means of the booster applied to trailing wheels. Another factor is increased starting power, and higher power at speed, by means of increased weights on drivers rendered possible by reduced dynamic augment. Alloy steel parts and refined design ren-

"Very well, but all these things cost money and it is impossible to finance them." Yes, they do cost money, but the cost of these improvements is now going

Fig. 6. Showing the increased power a booster gives on a 0.5% grade to a 26 x 30 in. mikado locomotive similar to the U.S.R.A. light mikado.

der the cost of operation. Here is a plain case of paying for improvements whether you have them or not. They are being paid for in every turn of the locomotive drivers, and the cost per turn is now far too great considering the enormous investment the locomotives of every railway represents. When three locomotives are required to do the work that can easily be done by two, and when the improvements cost half that of the third locomotive this money question is

answered.

The electrical people are smarter than the steam people, because they are making good use of the prevailing oversight of the possibilities of steam. Is this to continue? Is the country to pay the price of this oversight? Are the electrical propagandists to be allowed to get away with even misrepresentations of the efficiency of the steam locomotive?

Let it no longer be said with truth that there is not a single steam locomotive today on the rails of our country that embodies and represents the best, and all the best locomotive, improvements that are available, and that have proved their ability to reduce the cost of the American railway operation of which we are so proud. If I were a railway man I would put on my locomotives every single improvement I could find that would net a clear 25% on the investment, and there are lots of them that I believe will double that figure. Talking costs, without considering performance, is a most monumental mistake. Latent, potent, completely developed, and successful, but too little understood possibilities for the solution of one of our great problems lie at our very feet. To solve the problem of more tons moved for less money, a policy is called for. Then there is no escape from the necessity for a plan followed by a programme for its execution.

Is the locomotive a necessary evil or is it the real money earner of rail transportation?

The accompanying diagrams, figs. 1 to 6, illustrate the increased power to be obtained by the use of four locomotive improvements. The figures are the results of tests.

Railway Accidents Throughout Canada.
The total number of railway accidents during January, reported to the Board of

Railway Commissioners, was 125, resulting in 14 persons being killed, and 139 being injured. Of those killed, 7 were employees and 7 were others, and of those injured, 34 were passengers, 89 were employees, and 16 were others. Under "others" are included 11 persons injured in 8 highway crossing accidents. In 5 of these accidents, the crossings were unprotected, and in one case each, they were protected by a watchman, a bell, and gates respectively.

Birthdays of Transportation Men in March.

Many happy returns of the day to:—

W. G. Annable, Assistant Passenger Traffic Manager, Ocean Traffic, C.P.R., Montreal, born at Ottawa, March 3, 1875.

John Archibald, Locomotive Foreman, C.P.R., Conitlam, B.C., born at Edinburgh, Scotland, March 13, 1872.

G. M. Baillie, Assistant Superintendent, London Division, Ontario District, C.P.R., Windsor, Ont., born at West St. John, N.B., March 31, 1879.

A. G. Buckworth, General Manager, Pacific Great Eastern Ry., Vancouver, B. C., born at Birmingham, Eng., March 2, 1876.

Allan Cameron, Superintendent, Land Branch, Department of Natural Resources, C.P.R., Calgary, Alta., born near Owen Sound, Ont., March 14, 1864.

H. S. Carmichael, ex Passenger and Freight Manager, Canadian Pacific Ocean Service, London, Eng., born at Glasgow, Scotland, March 7, 1874.

F. G. J. Comeau, District Freight Agent, C.P.R., Halifax, N.S., born at Meteghan River, N.S., March 10, 1859.

W. A. Cooper, Manager, Sleeping, Dining and Parlor Cars and News Service, C.P.R., Montreal, born there, March 22, 1871.

A. E. Cox, General Storekeeper, Western Lines, Canadian National Rys., Winnipeg, born at Huddersfield, Eng., March 12, 1863.

Senator N. Curry, Chairman, Canadian Car & Foundry Co., Montreal, born in King's County, N.S., March 26, 1851.

C. C. Curtis, Manager, Cape Breton Electric Co., Sydney, N.S., born at Battle Creek, Mich., March 27, 1883.

H. G. Dring, European Passenger Manager, Canadian Pacific Ry., London, Eng., born at Easton, Northamptonshire, Eng., March 8, 1881.

Patrick Dube, Secretary - Treasurer, Montreal Tramways Co., Montreal, born there, March 4, 1876.

W. B. Elsworth, Manager, Marine Department, Imperial Oil Ltd., Toronto, born at Bayonne, N.J., March 3, 1869.

M. P. Fennell, Jr., Secretary-Treasurer and Comptroller, Montreal Harbor Commission, Montreal, born there, March 13, 1885.

W. R. Fitzmaurice, Superintendent,

New Glasgow Division, Maritime District, Canadian National Rys., New Glasgow, N.S., born at Bedford, N.S., March 19, 1870.

Hon. G. P. Graham, M.P., Minister of Militia and Defence, and of the Naval Service, Ottawa, Ont., born at Eganville, Ont., March 31, 1859.

H. C. Grout, General Superintendent, Ontario District, C.P.R., Toronto, born at Wausau, Wis., March 14, 1881.

J. Halstead, Division Freight Agent, C.P.R., Winnipeg, born at Bracebridge, Ont., March 2, 1877.

R. M. Hannafor, Assistant Chief Engineer, Montreal Tramways Co., Montreal, born there, March 22, 1865.

C. A. Hayes, Vice President, Traffic, Canadian National Rys., Toronto, born at West Springfield, Mass., March 10, 1865.

H. T. Hazen, acting Chief Engineer, Eastern Lines, Canadian Northern Ry. System, Toronto, born at Truro, N.S., March 14, 1870.

J. I. Hobson, Treasurer, Canada Steamship Lines, Montreal, born at Guelph, Ont., March 30, 1872.

N. J. Holden, President, The Holden Co., Montreal, born at Nobleton, Ont., March 22, 1866.

A. R. Holthby, Master of Bridges and Buildings, Mountain Division, Grand Trunk Pacific Ry., Smithers, B.C., born at Rawdon, Que., March 23, 1859.

Frank Lee, Engineer, Maintenance of Way, Western Lines, C.P.R., Winnipeg, born at Chicago, Ill., March 7, 1873.

J. M. McKay, Superintendent, Saskatchewan Division, Saskatchewan District, C.P.R., Saskatoon, born at Tiverton, Ont., March 13, 1861.

J. B. McLaren, General Auditor, G.T.R., Montreal, born at Perth, Ont., March 5, 1878.

M. Magif, Superintendent of Car Service and Telegraphs, Central Vermont Ry., St. Albans, Vt., born at Planks Point, N.Y., March 24, 1852.

H. H. Melanson, Passenger Traffic Manager, Canadian National - Grand Trunk Pacific Rys. and Grand Trunk Pacific Coast Steamship Co., Toronto, born at Seadoue, N.B., March 9, 1872.

W. T. Moodie, Superintendent, Division 3, Central District, Canadian Na-

tional Rys., Port Arthur, Ont., born at Glasgow, Scotland, March 10, 1882.

L. F. Muncey, Superintendent, Canadian National Rys., Kamloops, B.C., born at Kensington, P.E.I., March 15, 1876.

D. B. Niblock, Special Ticket Auditor, Canadian National Rys., Toronto, born at Point Edward, Ont., March 1, 1875.

Peter Paton, ex Purchasing Agent, Canada Steamship Lines, Ltd., Montreal, now President, Mackenzie, Milne & Co., Ltd., Sarnia, Ont., born at New Lovell, Ont., March 13, 1869.

F. W. Peters, General Superintendent, British Columbia District, C.P.R., Vancouver, born at St. John, N.B., March 25, 1860.

J. W. Pugsley, Secretary, Department of Railways and Canals, Ottawa, Ont., born at Amherst, N.S., March 12, 1861.

E. A. Robert, President, Montreal Tramways Co., Montreal, born at Beauharnois, Que., March 3, 1864.

L. G. Roblin, Master Mechanic, Prairie District, Canadian National Rys., Saskatoon, Sask., born in Prince Edward Island, March 24, 1864.

C. J. Smith, Manager and Secretary, Montreal Warehouse Co., Montreal, born at Hamilton, Ont., March 10, 1862.

G. L. Snelling, Secretary, Treasurer, Ottawa Electric Ry., Ottawa, Ont., born there, March 2, 1880.

W. Y. Soper, Vice President, Ottawa Electric Ry. Co., Ottawa, Ont., born at Oldtown, Me., March 9, 1854.

E. F. L. Sturdee, General Agent, Passenger Department, C.P.R., Seattle, Wash., born at St. John, N.B., March 29, 1876.

G. W. Vaux, General Agent, Passenger Department, Union Pacific Rd., Toronto, born at Montreal, March 21, 1866.

A. Watt, Assistant Master Mechanic, Canadian National-Grand Trunk Pacific Rys., Smithers, B.C., born at St. Louis, Que., March 5, 1874.

A. T. Weldon, Assistant Freight Traffic Manager, Eastern Lines, Canadian National Rys., Montreal, born at Dorchester, N.B., March 6, 1876.

D. O. Wood, General Foreign Freight Agent, Canadian National-Grand Trunk Rys., Montreal, born at Kleinburg, Ont., March 16, 1864.

The Railway Association of Canada's Committees.

Following is a complete list of the Railway Association of Canada's committees as elected at the last annual meeting, except the executive committee, which was elected Nov. 2, 1919, for three years.

Executive Committee.—H. G. Kelley, President, G.T.R.; E. W. Beatty, President, C.P.R.; D. B. Hanna, President, Canadian National Rys.; A. H. Smith, President, New York Central Rd.; J. N. Beckley, President, T.H. & B. Ry.

Operating Committee.—Grant Hall, Vice President, C.P.R.; W. D. Robb, Vice President, G.T.R.; S. J. Hungerford, Vice President, Canadian National Rys.; F. F. Backus, General Manager, T.H. & B. Ry.; J. H. Walsh, General Manager, G.C.R. **Traffic Committee.**—J. E. Dalrymple, Vice President, G.T.R.; W. R. MacInnes, Vice President, C.P.R.; C. A. Hayes, Vice President, Canadian National Rys.; G. C. Martin, General Traffic Manager, T.H. & B. Ry.; Carl Howe, Traffic Manager, Michigan Central Rd.

Financial Committee.—I. G. Ogden, Vice President, C.P.R.; F. Scott, Vice President, G.T.R.; A. J. Mitchell, Vice President, Canadian National Rys.; W. H. Maund, Sec.-Treas., T. & N.O. Ry.; E. B. Barber, Comptroller, A.C. & H.B. Ry.

Legal Committee.—W. C. Scholm, G.C. General Solicitor, G.T.R.; W. H. Curle, G.C. General Solicitor, C.P.R.; Gerard Ruel, General Counsel, Canadian National Rys.; E. D. Cahill, K.C., General Solicitor, T.H. & B. Ry.; F. E. Robson, General Solicitor, M.C.R.

Sub-Committee on Transportation.—A. Price, General Manager, C.P.R.; H. T. Malcolmson, Superintendent, T.H. & B. Ry.; D. C. McBride, Trans. Asst. to Vice Pres., Canadian National Rys.; G. C. Bowker, Gen'l Superintendent, G.T.R.; W. H. Farrell, Gen'l Mgr., Algoma Eastern Ry.; W. A. Griffin, Sup't. Traffic, T. & N.O. Ry.; H. Shearer, General Manager, Michigan Central Rd.

Sub-Committee on Car Service.—A.

Hutton, Gen'l Sup't. Transportation, C. P.R.; C. R. Moore, Gen'l Sup't. Car Service, G.T.R.; J. P. Driscoll, Gen'l Sup't. Car Service, Canadian National Rys.; A. E. Lock, Sup't. Car Service, T.H. & B. Ry.; W. M. Huggill, Sup't. Car Service, A.C. & H.B. Ry.; W. S. Moy, Car Accountant, Quebec Central Ry.; J. S. Gordon, General Manager, Quebec Oriental Ry.; C. A. Stewart, Manager, Temiscouata Ry.

Sub-Committee on Rolling Stock.—J. C. Gardin, Gen'l Sup't. Motive Power, G.T.R.; W. H. Winterwood, Chief Mechanical Engineer, C.P.R.; C. E. Brooks, Mech. Asst. to Vice President, Canadian National Rys.; H. L. Rodgers, Mechanical Engineer, T. & N.O. Ry.; W. T. Kuhn, Sup't. Motive Power, T.H. & B. Ry.; G. M. Robins, Master Mechanic, Quebec Central Ry.; G. E. Parks, Mechanical Engineer, Michigan Central Rd.; G. C. Smart, Mech. Asst. to Vice President, Canadian National Rys.

Sub-Committee on Engineering.—F. L.

C. Bond, Chief Engineer, G.T.R.; J. M. R. Fairbairn, Chief Engineer, C.P.R.; B. Brown, Mech. Asst. to Vice President, Canadian National Rys.; R. S. McCormick, Gen. Supt. & Chief Engineer, A.C. & H.B. Ry.; E. L. Latham, Chief Engineer, T.H. & B. Ry.

Sub-Committee on Wages and Working Conditions.—George Hodge, Asst. to Vice President, C.P.R.; F. P. Brady, Assistant to Executive, Canadian National Rys.; C. P. Needham, Asst. to Gen'l Supt. Motive Power and Car Depts., G. T.R.

Sub-Committee on Claims.—E. Arnold, Freight Claim Agent, G.T.R.; J. M. Eedson, Freight Claim Agent, T.H. & B. Ry.; H. McDonald, Freight Claim Agent, Canadian National Rys.; G. C. Jackson, Auditor of Claims, C.P.R.

Sub-Committee on Free and Reduced Transportation.—J. Manson, Asst. to Vice President, C.P.R.; J. E. Calloway, Asst. to President, G.T.R.; W. A. Tuxford, Chief of Pass Bureau, C.N.R.

Sub-Committee on Perishable Freight.—A. Hutton, Genl. Supt. Transportation, C.P.R.; F. Price, Supt. of Car Service, G.T.R.; G. C. Jackson, Auditor of Claims, C.P.R.; F. J. Watson, Genl. Freight Agent, G.T.R.; R. E. Lamour, Genl. Freight Agent, C.P.R.; E. Arnold, Freight Claim Agent, G.T.R.; H. McDonald, Freight Claim Agent, Canadian National Rys.; J. P. Driscoll, Genl. Supt. Car Service, Canadian National Rys.; A. T. Weldon, Asst. Freight Traffic Manager, Canadian National Rys.

Western Operating Committee.—A. E. Warren, General Manager, Canadian National Rys. and G.T.P.R.; D. C. Coleman, Vice President, C.P.R.; H. H. Brewer, Asst. General Manager, C.N. and G.T.P. Rys.; C. Murphy, General Manager, C.P.R.; C. E. Daffoe, Gen. Supt. Midland Railway of Manitoba, Winnipeg (also representing Great Northern and Northern Pacific Rys.); J. A. Macgregor, Manager, E.D. & B.C. Ry.; A. McCulloch, Gen. Supt. K.V. Ry.; J. Callaghan, Gen. Manager, A. & G.W. Ry.

Western Transportation and Traffic Sub-Committee.—A. E. Stevens, Gen. Supt. C.P.R.; A. Wilcox, Gen. Supt. C.N. and G.T.P. Rys.; C. E. Daffoe, Gen. Supt. Midland Railway of Manitoba (also representing Great Northern and Northern Pacific Rys.); W. M. Kirkpatrick, Asst. Freight Traffic Manager, C.P.R.; W. C. Bowles, General Freight Agent, C.P.R.; W. G. Manders, Asst. Freight Traffic Manager, C.N. and G.T.P. Rys.; A. E. Rosevear, General Freight Agent, C.N. and G.T.P. Rys.; E. D. Cottrell, Supt. Car Service, C.P.R.; E. Crawford, Supt. Car Service, C.N. and G.T.P. Rys.; W. E. Duperow, General Passenger Agent, C.N. and G.T.P. Rys.; Geo. A. Walton, General Passenger Agent, C.P.R.

British Columbia Traffic and Transportation Sub-Committee.—F. W. Peters, Gen. Superintendent, C.P.R.; C. A. Cottrell, Asst. Gen. Supt., C.P.R.; C. S. Maharg, Supt. C.P.R.; W. B. Harris, Car Service Agent, C.P.R.; H. A. Plow, Division Freight Agent, G.T.R.; J. H. Speddie, General Passenger Agent, C.P.R.; C. H. Bowles, Asst. Gen. Pass. Agent, C.P.R.; J. R. Cameron, Asst. General Manager, C.N.R.; N. B. Walton, Gen. Supt. C.N.R. and G.T.P. Rys.; J. M. Horn, Gen. Freight Agent, C.N.R. and G.T.R. Rys.; C. F. Martin, Supt. of Transportation, C.N.R.; G. A. McNicholl, Asst. Gen. Freight Agent, C.N.R.; Osborne Scott, Gen. Pass. Agent, C.N. and G.T.R. Rys.; C. McDougall, Supt. G. S. Ry.; E. A. Dye, General Agent, G.N. Ry.; C.

W. Meldrum, Asst. Gen. Pass. Agent, G.N. Ry.; H. Swinford, General Agent, Northern Pacific Ry.; R. T. Bretz, Asst. Gen. Freight Agent, Northern Pacific Ry.; A. V. Brown, Gen. Supt. Northern Pacific Ry.; A. McCulloch, Gen. Supt., K.V. Ry.; O. E. Fisher, Traffic Manager, K.V. Ry.; H. E. Beasley, Gen. Supt., E. & N. Ry.; A. B. Buckworth, Gen. Manager, P.G.E. Ry. (Associate Member); W. D. Power, Gen. Freight Agent, B.C. Elec. Ry. (Associate Member); W. G. Murrin, Asst. Gen. Manager, B.C. Elec. Ry. (Associate Member).

Western Freight Claim Committee.—A. G. Gilmour, Freight Claim Agent, C. N. and G.T.P. Rys.; D. C. MacDonald, Asst. Gen. Freight Claims Agent, C.P.R.; J. W. Connell, Asst. Freight Claim Agent, C.N. and G.T.P. Rys.; F. Elder, Freight Claim Agent, C.P.R.; T. McKeag, Agent, Midland Railway of Manitoba; J. A. Nelson, Chief Freight Claim Agent, G.N. Ry.; O. E. Fisher, Comptroller-Traffic Manager, K.V. Ry.; J. Callaghan, Gen. Manager, A. and G.W. Ry.; E. S. Smiley, Western Claim Agent, Northern Navigation Co. (Associate Member).

Rails and Car Repairing for Canadian National Railways, Etc.

The following order in council, passed by the former Dominion Government, Dec. 21, 1921, contains further information than Canadian Railway and Marine World has published previously, in reference to orders for steel rails and car repairing:—

The committee of the Privy Council have had before them a report, dated Dec. 19, 1921, from the Minister of Railways and Canals, representing that by order in council, 3,300 of Oct. 1, 1921, was given to the Canadian National Railways, and the Grand Trunk Railway managements, to order, on next year's account, a maximum of 75,000 tons of rails, with necessary accessories, and to arrange for the rebuilding or repair of 2,000 cars at suitable points, at fair and reasonable charges, the expenditure so incurred to be provided for in the supplementary estimates at the next ensuing session of Parliament, and to be included in the railway's accounts for next year. This authority was given with a view to relieving the unemployment situation in Canada during the winter, it being explained that, under normal conditions, it is the practice to place such orders during the early spring months, and to confine rebuilding and repair work, as far as possible, to system shops.

In view of the present abnormal industrial situation, it was considered that the usual practice might well be varied, to the extent of placing, at an early date, next year's orders for rails and accessories, and, in addition to repair work now being done in railway shops, of arranging with the various equipment companies throughout Canada, to participate in the rebuilding and repair of freight equipment. That, by the Exchequer Court's decision of Dec. 8, 1920, authority was given to the Minister of Railways and Canals, as receiver of the Grand Trunk Pacific Ry. System, to borrow from the Dominion Government, or otherwise, \$1,500,000, the money so obtained to be used to defray the cost of overhauling 1,500 box cars, chargeable to capital, and to operating or working expenditure, in accordance with the further direction of the court. Thus the Canadian National Rys. management has furnished an estimate of

the expenditure to be incurred under the above mentioned order in council and Exchequer Court order, the same being, as follows:—

Rails.		
Dominion Iron & Steel Co., 20,000 tons at \$49		\$980,000
Albema Steel Corporation, 20,000 tons at \$50		1,000,000
Accessories. —Fastenings, etc.		\$1,980,000
Repairs to equipment.		175,000
Under contract, 3,000 cars at \$950 each		\$2,850,000
Railway company's shops		475,000
500 cars at \$950 each		3,325,000
		\$5,480,000

Of the above estimated expenditure, the following amounts are required up to Dec. 31, 1921, viz., 15,000 tons of rails at \$49, \$735,000. The Minister recommends, therefore, that, pending the voting of the necessary funds by Parliament at its next session, the money required to Dec. 31, 1921, viz., \$735,000, be provided by a Governor General's special warrant in pursuance of the provisions of the Consolidated Revenue and Audit Act, R.S.C., 1906, sec. 42, sub-sect. (b), the carrying out of the work in question being urgent and immediately required for the public good, as set out in order in council of Oct. 6, 1921, and the Minister of Finance and Receiver General having reported that there is no Parliamentary provision for the same. The committee concur in the foregoing recommendation and submit the same for approval.

Michigan Central Railroad Not Electrifying Canadian Lines.

Some weeks ago a daily press report from London, Ont., stated that a rumor which was current at the opening of the Hydro Electric Power Commission of Ontario's Chippewa and Queenston power plant, that the Michigan Central Rd. would electrify its Canadian lines this year, had been given semi-official confirmation by Vice Chairman Pocock, of the London Railway Commission. In pursuance of its usual policy to investigate reports before giving publicity to them, Canadian Railway and Marine World communicated with the Michigan Central Rd. management in Detroit, and received a reply from General Manager Shearer, in which he said: "We have not considered the electrification of our lines in Canada." Some of our contemporaries were not as careful as we were about this matter, but accepted the statement in the press report as a fact as shown by the following examples:—

A New York paper, which is considered a high authority in the electric field, said: "Michigan Central Rd. is now considering electrifying its lines between Niagara Falls, Ont., and Windsor, head officials having recommended the change."

A Toronto technical paper said: "The Michigan Central Ry. plans to electrify its lines in Canada between Niagara Falls and Windsor."

The above shows how absolutely necessary it is for technical papers not to rely on press reports, or daily newspaper statements, but to ascertain the facts for themselves. Had Canadian Railway and Marine World not done so, but had stated that the M.C.R. was about to electrify its Canadian lines, it would not only have published wrong information, but might have put manufacturers of electrical apparatus, etc., to considerable unnecessary trouble in making enquiries, and probably going to some expense.

Orders By Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have the paper before them, have a complete record of the Board's proceedings. No other paper has done this.

Important traffic orders made by the Board are given in full on another page of this issue. The general order of Jan. 25.—Defining duties of caretaker agent appointed at non-agency stations.

General order 356, Jan. 12.—Amending general order 102, Feb. 17, 1913, re covering caboose platform steps.

32,601. Jan. 11.—Approving Hydro Electric Power Commission of Ontario's plan showing details of rest and guard piers for Michigan Central Rd. bridge over Welland River, Chippewa, Ont.

32,602. Jan. 9.—Permitting, when signals are clear, G.T.R. trains and Kitchener & Waterloo St. Ry. cars to pass over crossing at King St., Kitchener, Ont., without first stopping, speed not to exceed 6 miles an hour.

32,603. Jan. 11.—Authorizing Canadian Creosote Co. to lay tracks between two C.P.R. tracks and one Canadian National Ry. track near Ontario St., Trenton, Ont.

32,604. Jan. 12.—Ordering Great Northern Ry. to install within 90 days, improved type of automatic bell, with wigwag signal, at crossing of Doucette Ave., Burnaby municipality, B.C.

32,605. Jan. 12.—Declaring that the present C.P.R. highway crossing at mile 96.4 Oshawa Subdivision, near Agincourt station, Ont., is protected to Board's satisfaction.

32,606. Jan. 12.—Authorizing Canadian National Ry. to connect Canadian Northern Ontario Ry. with Jacques Cartier Union Ry. in St. Laurent, P.Q.

32,607. Jan. 11.—Approving British Columbia Electric Ry. time table, showing service, effective Jan. 1, 1922, to amounts to Vancouver, Fraser Valley & Southern Ry.

32,608. Jan. 14.—Authorizing G.T.R. to install wigwag signal at crossing of Anzley Ave., Peterborough, Ont.

32,609. Jan. 14.—Extending to June 12 time within which C.P.R. may build spur for Midland Co., Ont., to connect with C.P.R. main line.

32,610. Jan. 16.—Approving plan showing additions to half-interlocking plant at crossing of C.P.R. by Quebec Ry., Light, Heat & Power Co.'s bridge at St. Charles, Que.

32,611 to 32,618. Jan. 14.—Authorizing Canadian Northern Western Ry. to build across highways at 6 points in Alberta.

32,619. Jan. 14.—Dismissing Railway Association of Canada's application for order amending existing paragraph 336 of the General Code, to provide for flag 16 x 36 in., or thereabouts, in lieu of flag 22 x 28 in., in size, rule 99, Uniform Code.

32,620. Jan. 18.—Ordering Canadian National Ry. to build shelter and platform, standard station type F, at St. Genevieve Road, St. Genevieve, Que.

32,621. Jan. 14.—Declaring that for the present, G.T.R. crossing of highway 2 miles west of Stratford, Ont., is protected to Board's satisfaction.

32,622. Jan. 16.—Ordering Canadian National Ry., within 90 days, to install an improved type automatic bell and wigwag signal at the crossing of Smith St. and Elchth Ave., Regina, Sask.

32,623. Jan. 14.—Authorizing C.P.R. to substitute standard wire fencing for board fence from 2,117 ft. west of west abutment of Spences Bridge, crossing Nicola River about a mile west of Merrick, B.C., to point 3,000 ft. west of said abutment.

32,624. Jan. 14.—Relieving C.P.R. from maintaining signalman on Sandhill siding, on crossing of C.P.R. and Canadian National Ry., Peebles, Sask., so long as present character of movements continues.

32,625 to 32,630. Jan. 14.—Approving Bell Telephone Co.'s agreements with Canadian Telephone Co., Compton and Wolfe counties, Que.; Municipal Telephone Systems, Lambton and Kent counties, Ont.; Elmley South Rural Telephone Co., Leeds and Lanark counties, Ont.; and Graham Rural Telephone Co., Lambton and Kent counties, Ont.; Grafton Number Seven Telephone Association, Renfrew county, Ont.; Yamaska Telephone Co., Yamaska county, Que.

32,631. Jan. 15.—Ordering Canadian National Ry., within 90 days, to install automatic bell and wigwag signal at crossing of Smith St. and Dewdney Ave., Regina, Sask.

32,632. Jan. 17.—Ordering C.P.R. to erect standard A-3 station at Chato, Alta., by Oct. 1, 1922, and to have G.T.R. and C.P.R. cars and G.T.R. to operate trains over Teumash St. crossing, Toronto, trains to stop before proceeding over crossing.

32,633. Jan. 21.—Authorizing G.T.R. to operate over crossing of Sarnia St. Ry. at Exmouth and Front Sts., Sarnia, Ont., without first stopping there.

32,635. Jan. 23.—Authorizing C.P.R. to open for traffic portion of its Lanigan Northeastly Branch from mile 0 to 49.34, Sask.; speed of trains to exceed 20 miles an hour.

32,636. Jan. 23.—Authorizing City of Edmonton, Alta., to connect Edmonton Radial Ry. with Canadian National Ry., at 1041 St.

32,637. Jan. 21.—Authorizing Toronto, Hamilton & Buffalo Ry. to use footbridge over its tracks at Sherman Ave., Hamilton, Ont.

32,638. Jan. 17.—Ordering Dominion Atlantic Ry. forthwith to file with the Board a tariff, effective Jan. 18, providing for rate of 15c. per 100 lb. for handling charges of apples and potatoes, in barrels, for export, at Halifax, N.S.

32,639. Jan. 24.—Ordering G.T.R. to maintain speed restriction of 10 miles an hour in effect at crossing of Water St., Burlington, Ont., and that all Hamilton Radial Ry. cars in either direction stop before passing over crossing.

32,640. Jan. 24.—Authorizing Canadian Northern Ry. to build spur for Ontario Public Highways Department in Lot 38, Con. 1, Markham Tp., North Bay, Ont.

32,641. Jan. 26.—Dismissing application of Ottawa residents for order directing G.T.R. to stop trains 58 and 52 at Bank St. yard office to allow passengers to alight.

32,642. Jan. 24.—Rescinding orders 30,897 and 31,615 authorizing G.T.R. to build spur for Warren & Lumsden Railway Co., in part of Lot 18, Con. 1, Mainie Tp., Ont.

32,643. Jan. 17.—Appointing crest of subway under Canadian National Ry. at Water St., Toronto, Ont.

32,644. Jan. 19.—Authorizing Grand River Ry. to take lands with C.P.R. across Bond, Brook and Guelph, and Grantham & Galt, Ont., and to take lands to provide 15 ft. roadway adjacent to its railway.

32,645. Jan. 26.—Authorizing G.T.R. to use overhead bridge at Portage Road, near Stamford, Ont.

32,646. Jan. 24.—Authorizing St. Eastache-sur-le-Lac municipality, Que., to make highway crossing over Canadian National Ry. south of proposed station site opposite Lots 60-68 and 60-75.

32,647. Jan. 26.—Amending order 31,624, Dec. 16, 1921, authorizing Hydro Electric Power Commission of Ontario, inter alia, to build new in-pipe water break between C.P.R. and Guelph Radial Ry., Guelph, Ont.

32,648. Jan. 21.—Approving agreement between Bell Telephone Co. and McKillop, Logan & Co., Ltd., for crossing of C.P.R. by Huron and Perth counties, Ont.

32,649. Jan. 21.—Authorizing Canadian Northern Pacific Ry. to build spur for R. H. Parker, in part of District No. 1, Guelph, Ont.

32,650. Jan. 20.—Declaring that for the present, crossing of Canadian National Ry. about 2 miles west of Hamilton, Ont., is protected to Board's satisfaction.

32,651. Jan. 21.—Authorizing Canadian Northern Ry. to build spur for British Columbia Public Works Department at Tranquille Sanatorium, mileage 79 Kamloops Subdivision.

32,652. Jan. 26.—Approving Hydro Electric Power Commission of Ontario's plan showing high tension power line between Burlington and Queenston, Ont., and reserving Board's rights in respect of electric re-arrangement of tracks in regard to portion of said line west of tower 107, already built.

32,653. Jan. 26.—Declaring that for the present, Toronto, Hamilton & Buffalo Ry. crossing of Governor's Road, 2 miles west of Mineral Springs station, Ont., is protected to Board's satisfaction.

32,654. Jan. 26.—Authorizing Canadian Northern Ry. to build spur for Haight & Dickson Lumber Co., near Galt, Ont.

32,655 to 32,658. Jan. 26.—Authorizing Canadian Northern Pacific Ry. to build across St. Patrick's Rd., near Galt, Ont.

32,659, 32,660. Jan. 26.—Authorizing Canadian Northern Pacific Ry. to build across highways in Sec. 2, Tps. 26 and 28, Tp. 23, Osoyoos Subdivision, Yale District, B.C.

32,661. Jan. 27.—Authorizing G.T.R. to use bridge over Niagara River at Niagara Falls, Ont.

32,662. Jan. 27.—Authorizing British Columbia Public Works Department to build highway crossing over C.P.R. at mile 2.78, at loco Sunnyside Road.

32,663. Jan. 24.—Approving agreement between Telephone Co. and Normandy Telephone Co., Grey county, Ont.

32,664. Jan. 27.—Authorizing Canadian Northern Pacific Ry. to cross highway between Sec. 2, Tps. 26 and 28, Tp. 23, Osoyoos Subdivision, Yale District, B.C.

32,665. Jan. 27.—Extending to June 1 time within which G.T.R. may build spur for Ontario Cement Co., North Oxford Tp., Ont., authorized by order 30,654, Feb. 15, 1921.

32,666. Jan. 25.—Authorizing Canadian Northern Pacific Ry. to cross highways at mile 20 and 15.4, Vernon-Kelowna Branch, in Osoyoos Subdivision, Yale District, B.C.

32,668. Jan. 30.—Authorizing Esquimalt & Nanaimo Ry. to build spur for the Dominion Public Works Department at mile 3.3, Vancouver Island, B.C.

32,669 to 32,670. Jan. 25.—Approving Bell Telephone Co. agreements with Axtel Telephone Co., Grey county, Ont., and Minto Rural Telephone Co., West Grey county, Ont.

32,671. Jan. 30.—Authorizing G.T.R. to build spur for Provincial Paper Mills, Cornwall Tp., Ont.

32,672. Jan. 30.—Authorizing Edmonton, Dunvegan & British Columbia Ry. to build spur for Elizabeth Kelley, Carleton Place, Ont.

32,673. Jan. 30.—Authorizing Canadian Northern Pacific Ry. to cross highway in Block 7, Tp. 20, Osoyoos Division, Yale District, B.C., at mile 14.3, Vernon-Kelowna Branch.

32,674. Jan. 31.—Dismissing Railway Association of Canada's application for order amending general order 54, re facilities for flag stations.

32,675. Jan. 30.—Approving protection by watchman from 7 a.m. to 12 midnight from May 1 to Oct. 1 each year at C.P.R. crossing of Golf North Bay, Ont.

32,676. Jan. 31.—Authorizing Canadian Northern Ontario Ry. to build spur for Mageau Lumber Co., Ont.

32,677. Jan. 31.—Amending order 19,546, June 10, 1913, by providing that the man in charge of interlocking at crossing of Toronto, Hamilton & Buffalo Ry. and Hamilton St. Ry. at Main St. and Gage Ave., Hamilton, Ont., be appointed Hamilton & Buffalo Radial Electric Ry. instead of by T.H. & R.

32,678. Jan. 30.—Extending to May 31, time within which Canadian National Ry. may build station at Morin Heights, Que.

32,679. Feb. 1.—Authorizing C.P.R. to use bridge 27.7, Walkerton Subdivision, Ontario District, Que.

32,680. Feb. 1.—Authorizing Vancouver, Victoria & Eastern Ry. & Navigation Co. (G.N.R.) to build spur from Lion Bl., Vancouver, B.C.

32,681. Feb. 2.—Declaring that Quebec Central Ry. crossing just north of Weedon Jet, Que., is protected to Board's satisfaction.

32,682. Feb. 1.—Authorizing C.P.R. to build its Langdon North Branch, Acme to Empress, across a number of highways in Alberta.

32,683. Dec. 1.—Amending order 18,832, Dec. 9, 1921, authorizing Canadian National Ry. to cross a certain highway, by changing it to read, Sec. 13, Tps. 64 and 66, Range 25, 64, Range 25, instead of Sec. 13, Tps. 64, Range 22, and Sec. 13, Tps. 64, Range 23, Alta.

32,684. Feb. 1.—Authorizing Canadian Northern Western Ry. to cross highways between Secs. 11 and 12, Tps. 58, Range 9, and between Secs. 13 and 35, Tps. 56, Range 7, west 5th meridian, Alta.

32,686. Feb. 2.—Rescinding order 31,415, Aug. 20, 1921, re temporary farm crossing for McKee & Ferguson, in Secs. 11-12, east of Coast Meridian, Westminster District, B.C.

32,687, 32,688. Feb. 1.—Authorizing Canadian Northern Western Ry. to cross highways between Sec. 12, Tps. 57, Range 8, and Sec. 7, Tps. 57, Range 7, and between Secs. 12 and 13, Tps. 57, Range 8, west 5th meridian, Alta.

32,689. Feb. 2.—Certifying that plan, showing connection of Canadian Northern Ry. and Grand Trunk Pacific Ry. at Lindsay Subdivision, should refer to Vegreville Branch instead of Vegreville Subdivision, and amending order 31,922, Dec. 6, 1921, accordingly.

32,690. Feb. 1.—Authorizing G.T.R. to build spur for Canada Grip Nut Co. St. Johns Parish, Que.

32,691. Feb. 4.—Approving Chatham, Wallaceburg & Lake Erie Ry. standard mileage tariff C.R.C. 672.

32,692. Feb. 1.—Authorizing Canadian Northern Ontario Ry. to build spur for Peapack Lumber Co., near Gorrham, Ont.

32,693. Feb. 1.—Declaring that C.P.R. crossing 2 1/2 miles south of Lindsay station, Ont., is protected to Board's satisfaction.

32,694. Feb. 4.—Authorizing Grand Trunk Pacific Ry. to cross highway between Secs. 15, Tps. 24, Range 9, west 2nd meridian, at mile 299, Touchwood Subdivision, in Stanley rural municipality, Ont.

32,695. Feb. 4.—Dismissing Associated Boards of Trade of Vancouver Island, B.C., complaint against the railway charging that C.P.R. companies over mainland coast rates on lumber, carloads, from Vancouver Island points, and complainants' charges for shipping lumber to Vancouver Association and Lake Lorne Co. Vancouver, against arbitraries over coast rates charged on lumber from points on Vancouver Island.

32,696. Feb. 4.—Authorizing G.T.R. to build farm crossing for J. C. Rioux, Warwick, Que.

32,697. Feb. 7.—Authorizing Boston & Maine Rd. to cross highway between Secs. 12 and 13, Tps. 24, Range 9, west 2nd meridian, at mile 299, Touchwood Subdivision, in Stanley rural municipality, Ont.

32,698. Feb. 7.—Approving review of location of Canadian Northern Ry. Dundee Branch through Sec. 11, Tps. 11, Range 6, east principal meridian, Man., mile 18.72 to 19.72.

32,099, Feb. 7.—Authorizing C.P.R. to build spur for Montreal Light, Heat & Power Co., at mile 2.4 South Bank Branch, Montreal Terminals Division, Que.

32,100, Feb. 6.—Authorizing Canadian Northern Ontario Ry. to build spur to Fort's spur for J. Smith Ltd. at mile 34.7 North Bay Subdivision, Ont.

32,101, Feb. 7.—Authorizing Canadian Northern Ry. to cross highway between lines 26 and 35, Tp. 25, Range 15, west principal meridian, Man.

32,102, Feb. 7.—Declaring that second crossing west of Stratford, Ont., over G.T.R. is protected to Board's satisfaction.

32,103, Feb. 6.—Amending plan 31,939, authorizing highway diversions and crossing on Canadian National Ry. Vegreville Subdivision, Man., by changing it to Vegreville Branch instead of Vegreville Subdivision.

32,104, Feb. 6.—Authorizing C.P.R. to rebuild bridge 33.2, Nipigon Subdivision, Ont.

32,105, Feb. 7.—Approving Bell Telephone Co. agreements with Camden Independent Telephone Co., Lennox and Addington county, Ont.; Ravenna Telephone Co., Muskoka Dis-

trict, Ont.; Harvey Municipal Telephone System, Peterborough county, Ont., and Selby Telephone Co., Lennox and Addington and Hastings counties, Ont.

32,106, Feb. 6.—Rescinding order 31,926, May 13, 1921, authorizing C.P.R. to build spur over its tracks on Lot 19, Group 1, Westminster District, B.C.

32,110, Feb. 7.—Ordering Canadian National Ry. to extend waiting room at Youngstown station, Alta., to not less than 20 x 21 ft., and baggage and express room to 21 x 21 ft., with vestibule and platform of not less than 10 x 16 ft., also to have station and platform properly lighted; work to be done by June 30.

32,111, Feb. 7.—Ordering the Douglas Ave., St. John, N.B., be diverted a short distance northeast and carried over St. John Bridge & Railway Company's tracks (C.P.R.), by a reinforced concrete arch.

32,112, Feb. 9.—Rescinding order 31,660, Oct. 11, 1921, approving plans of proposed alterations to full interlocker at crossing of Canadian Northern Ry. by Grand Trunk Pacific Ry., at Dana, Sask.

32,113, Feb. 8.—Authorizing Boston & Maine

Rd. to rebuild bridges 96 and 97 over Tomifobia River, at Tomifobia, Que.

32,114, Feb. 8.—Authorizing Canadian Northern Ry. to build Y at Rorketon, Man.

32,115, Feb. 8.—Authorizing C.P.R. to until further order, remove station agent at Osborne, Man., caretaker agent to be appointed.

32,109, Feb. 6.—Rescinding order 31,926, May within which C.P.R. may build extension to Desjardins Ave. shops spur, for Quebec Liquor Commission, Montreal.

32,117, Feb. 8.—Approving revised location of Canadian National Ry. Prince Albert Northeastern branch, mile 0 to 28.1.

32,118, Feb. 8.—Declaring that C.P.R. crossing at mile 33.5 Peterborough Subdivision, west of Cavan station, is protected to Board's satisfaction.

32,119, Feb. 9.—Authorizing C.P.R. to build connection with Canadian National Ry. in s.e. ¼ Sec. 9, Tp. 29, Range 29, Alta.

32,120, Feb. 8.—Dismissing C.P.R. application to build spur for Eugene F. Phillips Electrical Works, Brockville, Ont., and ordering C.P.R. to use Canadian National Ry. spur there, and ordering C.N.R. to allow C.P.R. to use said spur.

The Minister of Railways' Inspection of Government Railways East of Winnipeg.

During February, the Minister of Railways and Canals, Hon. W. C. Kennedy, went over the Grand Trunk from Montreal to Chicago, Canadian Northern from Toronto to Winnipeg; National Transcontinental from Winnipeg to Quebec; Intercolonial from Levis to Sydney and Halifax, N.S., and St. John, N.B., and part of the Prince Edward Island Ry.

Grand Trunk Ry.—At Montreal on Jan. 30, the Minister had a conference with Sir Joseph Flavelle, Chairman of the Board, G.T.R., and H. G. Kelley, President, and left the following day for Chicago by special train, consisting of the Minister's official car, 104; President Kelley's car, Ottawa; Vice President Robb's car, Ontario; Vice President Dalrymple's car, Canada; and a baggage car. The Minister was accompanied by Major Graham A. Bell, C.M.G., Deputy Minister of Railways and Canals; R. A. C. Henry, Special Engineer, Railways and Canals Department, and a secretary; the G.T.R. party including Sir Joseph Flavelle, H. G. Kelley, W. D. Robb, Vice President, Transportation, Construction and Maintenance; J. E. Dalrymple, Vice President, Traffic; Major F. L. C. Bond, Chief Engineer, lines east of Detroit and St. Clair Rivers; and J. C. Garden, General Superintendent, Motive, Power and Car Department. The general superintendents and some other district officials travelled with the party over their respective jurisdictions, and some division officials travelled similarly within their jurisdictions. Stops were made at a number of the most important points, to look over the company's properties, special attention being paid to the shops at Stratford and London, Ont., Port Huron and Battle Creek, Mich., and Elsdon, Ill. On the return journey, Windsor, Ont., was reached on Feb. 3, when the Minister left the party and remained at home there for the week end.

Canadian Northern and National Transcontinental Rys.—The Minister came to Toronto on Feb. 7, and after a conference with President D. B. Hanna, of the Canadian National Ry., left Don station at 1 p.m. for Winnipeg, by special train, comprising the Minister's car, 104; President Hanna's car, 73; Vice President Ilungerford's car, 51; General Manager Kingsland's car, Kaion, and a baggage car. The Minister was accompanied by Deputy Minister Bell, Special Engineer R. A. C. Henry, and a secretary. The C.N.R. official party included D. B. Hanna, President; C. A. Hayes, Vice President, Traffic; M. H. Macleod, Vice President, Construction; S. J. Ilungerford,

Vice President, Operation and Maintenance; Geo. Stephen, Freight Traffic Manager; C. B. Brown, Engineering Assistant; D. Crombie, Transportation Assistant; W. A. Kingsland, General Manager, Eastern Lines; L. S. Brown, Assistant General Manager, Eastern Lines; H. T. Hazen, acting Chief Engineer, Eastern Lines; T. C. Hudson, General Master Mechanic, Eastern Lines, and W. R. Devish, General Superintendent, Ontario Division. The division superintendents and assistant master mechanics travelled with the party over their respective jurisdictions. Capreol, Ont., was reached at 10 p.m. and the Y.M.C.A. building was looked over. On Feb. 8, Capreol was left at 7.30 a.m. and Hornepayne was reached at 5 p.m., where the locomotive house, new station, etc., were inspected. Port Arthur was reached on Feb. 9 at 6 a.m. where Messrs. Kingsland, Hazen and Devish left the party temporarily. Several Western Lines officials met the party there, including A. E. Warren, General Manager; H. A. Dixon, Chief Engineer; A. Wilcox, General Superintendent, Central District, and A. H. Eager, General Superintendent, Rolling Stock, who travelled in official car 50. A short stop was made at Fort William to look over the terminals and Winnipeg was reached on the evening of Feb. 10. On Feb. 11, the party went over the terminals, and the Fort Rouge and Transcona shops, leaving Winnipeg via National Transcontinental Ry. Messrs. Kingsland, Hazen, and Devish, rejoined the party at Armstrong, Ont., where J. E. Morazain, General Superintendent, Quebec District, met them, and they proceeded to Quebec, arriving there Feb. 13 at 9 a.m. The Quebec terminals and the St. Malo shops were looked over and a luncheon was given by the Board of Trade, after which Mr. Hanna and other C.N.R. officials returned to Toronto.

Intercolonial and Prince Edward Island Rys.—The Minister left Quebec on Feb. 13 at 3.45 p.m., his car being attached at Levis to the Maritime Express. He was accompanied by the Deputy Minister and a secretary and reached Moncton Feb. 14 at 9.55 a.m. After visiting the general offices, he left at 11 a.m., reaching Sackville, N.B., at 12.35 p.m., remaining there till 1.15 p.m., arriving at Tormentine at 2.45 p.m., crossing Northumberland Strait by car ferry s.s. Prince Edward Island, leaving Bord, N.E.I., at 4.10 p.m., and reaching Charlottetown at 7 p.m., where he met members of the Board of Trade, who urged the completion of the standardization of the P.E.I.

Ry., more work in the railway shops at Charlottetown, the building of an additional car ferry steamship, and the reduction of freight rates. On Feb. 15 he left Charlottetown at 5.45 a.m., proceeding via Borden, Tormentine and Sackville, N.B., to Amherst, N.S., and thence to Truro, where he remained from 4.45 p.m. to 5.25 p.m., and reached Halifax, N.S., at 8 p.m. On Feb. 16, he visited the new ocean terminals and other I.R.C. properties, and received a deputation from the Board of Trade, who urged the providing of additional port facilities, and especially a grain elevator with larger capacity than the present one. Leaving Halifax at 5.20 p.m., he reached New Glasgow, N.S., at 10.20 p.m., remaining there till 12.27 a.m., Feb. 17, and proceeding to Sydney, N.S., which he reached at 9 a.m., leaving there again at 11.30 a.m. and proceeding via Truro, N.S., to St. John, N.B., where he arrived on Feb. 18 at 7.45 a.m. He left there at 1.40 p.m., arriving at Moncton at 4.40 p.m., leaving there at 10.05 p.m., arriving Montreal Feb. 19 at 7.40 p.m., leaving there at 9 p.m. and arriving at Ottawa at 11.59 p.m.

Grain Shipments Through Port McNicoll.

Following are particulars of grain shipped through Port McNicoll, Ont., by the C.P.R., from Sept. 1, 1921 to Jan. 31, 1922, and from Sept. 1, 1920 to Jan. 31, 1921, respectively:—

	1920-21	1920-21
Total bushels shipped	29,926,921	11,423,712
Bushels shipped per day	195,533	74,681
Total cars shipped	12,522	7,370
Cars shipped per day	104	48

Hamilton Incline Ry.—The Hamilton, Ont., Board of Control was advised by T. H. Simpson, solicitor, recently, that a company was preparing to build an incline railway to the top of the mountain, at Ottawa St., at an estimated cost of \$400,000. He was asked to state in writing what the company expected in regard to right of way, etc. The Ontario Legislature is being asked to incorporate the Ottawa St. Incline Co. with authorized capital of \$500,000 to build an incline railway from the southerly end of Ottawa St., Hamilton, to the summit of the mountain adjacent thereto in Barton Tp. Lee, Simpson & McCallum, Hamilton, are solicitors for applicants.

The Eastern Canadian Passenger Agents' Association met at the Chateau Frontenac, Quebec, Feb. 7.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Esquimalt & Nanaimo Ry.—Work has been started by the Canadian Bridge Co. on the erection of the falsework, and the laying of a spur line for hauling the steel for the bascule span of the Johnston St. bridge, Victoria, B.C. The putting in of the last portion of the substructure work for the approaches was reported to have been started Feb. 13. This section of the work is done by the city's men under F. M. Preston, City Engineer.

Drum Lammun Mines Railway.—A press report states that it is proposed to build a railway, about one mile long, from the Drum Lammun mines, to the water side at Hartley Bay, B.C., where a shipping wharf will be erected. The drifts are reported to have been driven into the hill side for about 450 ft., and several veins of Copper are reported to have been cut. W. T. Reavley is Superintendent.

Lake Huron & Northern Ry. Co.—The shareholders have been called to meet in Toronto, March 14, to elect directors; to confirm a bylaw for the issue of \$800,000 of 8% cumulative preference stock, and to authorize the directors to complete financing for the further construction of the railway. The company took over the old Bruce Mines & Algoma Ry., about 16 miles, extending from Bruce Mines to Rock Lake, and obtained power from the Ontario Legislature to extend the line from Rock Lake to the National Transcontinental Ry. A land grant of 200,000 acres was voted by the Ontario Legislature in 1913, and some clearing was done in 1914 on a right of way for the extension from Rock Lake. From 1915 the company endeavored to raise money in connection with its land grant, which resulted in some discussion in the Ontario Legislature in April, 1917, the Government advising the questioners that the time in which the company could obtain the land grant would expire within a few months, and would not be extended. It was reported in the United States that the company in 1918 had laid 68 miles of track, but nothing had been done. Nothing has been heard of the extension project since, except that in May, 1919, the Ontario Legislature granted one year extension of time for construction. (June, 1921, pg. 305.)

Montreal Central Terminal Co. is applying to the Dominion Parliament for an extension of time for the construction of its projected terminal station in Montreal, with tunnel or bridge connection with railways on the south shore. This project has been kept before the public for some years. In July, 1921, application was made to the Board of Railway Commissioners for approval of a route map showing location of a tunnel and railways, but owing to opposition by the Canadian National, Canadian Pacific and Grand Trunk Rys., the City of Montreal, and the Montreal Harbor Commissioners the application was refused. (Aug. 1921, pg. 420.)

Montreal, Joliette & Transcontinental Junction Ry. Co. is asking the Dominion Parliament to extend the time within which it may build its projected railway from Montreal northerly through Hochelega, L'Assomption and Montreal counties to Joliette, thence northerly to St. Michel des Saints, Berthier County, and thence to a junction with the National Transcontinental Ry. L. J. Kelvie,

Montreal, is solicitor for the company. (July, 1918, pg. 285.)

The Reberval & Saguenay Ry. Co. is asking the Quebec Legislature for authority to build the following lines of railway to be operated by steam or electricity or both:—From Reberval, on the Quebec & Lake St. John Ry., around Lake St. John to the Peribonka River, thence southeasterly crossing the Saguenay River to the junction of the Quebec & Lake St. John Ry. and the Ha Ha Bay Ry.; a branch from the above line west of the Saguenay River southerly to Bruno on the Quebec & Lake St. John Ry.; the branch lines and sidings authorized by the Revised Statutes of 1909, article 647, par. 22, 20 miles; and all sidings and branches useful for connecting the company's lines with those of other companies, with timber limits, or navigable waters; and a branch from its line in Chicoutimi County to a junction with the Quebec & Saguenay Ry. at La Malbaie, Charlevoix County. (Feb., pg. 76.)

The St. Francis Valley Ry. Co. is asking the Quebec Legislature to extend the time within which it may build its projected railway from the International Boundary near Stanstead, via Magog, Melbourne and Drummondville to Sorel, with a branch from Cherry Valley to Granby. The original incorporation was as the L'Avénir and Melbourne Ry. Co.; surveys were made in 1914 for a section of the line from Drummondville to Melbourn, 30 miles; and in 1919 the Quebec Legislature voted a land grant of 2,000 acres a mile to aid in building a line from Stanstead to St. Frances du Lac, 95 miles, and for a line from near St. Bonaventure on the St. Francis River to Sorel, 25 miles. C. B. Hibbard was associated with the company as Vice President. (April, 1919, pg. 191.)

Timiskaming & Northern Ontario Ry. The T. & N.O. Ry. Commissioners are reported to have made a trip of inspection recently from Cochrane, Ont., along the located right of way of the 70 mile extension to near New Post on the Abitibi River. Lt. Col. L. T. Martin, one of the Commissioners, is reported to have said on returning to Ottawa, Feb. 6, that a large force of men and 200 teams had been got together at Cochrane, and that supplies were being hauled in along the route. We are officially advised that the work of building camps and the getting in of supplies and equipment began Feb. 1, and that grading work was to be started as soon as the snow was off the ground. The concrete structure at the first crossing of the Abitibi River will be started as soon as possible. R. K. Campbell will be Superintendent in charge of construction at Cochrane, and Jas. H. Ward will be accountant for the contractors, Grant, Smith & Co., & Macdonnell Ltd. In giving the list of officers, etc., of the company, in our last issue, we omitted to mention that J. A. Campbell is Managing Director. (Feb., pg. 76.)

The Railway Employes' Club Ltd., 328 St. Catharine St. west, Montreal, has had its permit cancelled by the Quebec Liquor Commission, as a result of a police raid to the club's premises Feb. 14, it being charged that intoxicating liquor had been sold after the authorized hours.

D. C. Coleman on Western Freight Rates.

D. C. Coleman, Vice President, Western Lines, C.P.R., was the principal speaker at the Winnipeg Rotary Club's luncheon on Feb. 8. He is reported to have stated that the whole freight rate question is one of operating costs. When the war was on the Dominion Government insisted upon an increase in railway employes' wages by the adoption of the McAdoo scale, and because of this the Board of Railway Commissioners granted an increase in freight rates. In addition, there was government control of miners' wages, and the price of coal, which next to wages is the greatest item of expense in railway operation. Now that the war is over and living costs, so far as the laboring man are concerned, are going down, there is not the same desire on the part of anyone to assist the railway companies or the mining companies to get their wages bill adjusted. So far as the farmers are concerned, it must be conceded that Western Canada grain growers must enjoy a comparatively low scale of rail transportation to meet competition. Western farmers have always had the lowest rail rates in existence on the commodities they produce. The increase in freight rates since 1914 in Canada was not greater than the increases granted in other grain producing countries; consequently the western farmer is relatively in the same position that he was before the war. Canada will recover more rapidly from the effects of the war than other countries, because its exports were the staples or necessities of life.

The Central Ry. Co. of Canada's liquidation came before the Exchequer Court of Canada, at Ottawa, recently, when the preferred creditors applied for an order authorizing the payment of the balance of their claims. The City Safe Deposit & Agency Co., London, Eng., trustee for the bondholders, asked to have the balance of funds remaining after payment of claims ranking ahead of the bondholders, paid over to it, as trustee for the bondholders, for their benefit. An order was made authorizing the payment of the preferred creditors' claims forthwith, and the motion for an interim payment to the trustee for the bondholders, was enlarged pending the passing of the receiver's accounts. This order was made possible owing to the Supreme Court of Canada's judgment dismissing the appeal of C. N. Armstrong, who claimed \$100,000 for services as Managing Director, etc. The court's registrar decided that not only was Mr. Armstrong not entitled to the amount claimed, but that he ought to repay to the company a sum he received. This decision was upheld by the Exchequer Court and affirmed by the Supreme Court for want of prosecution by the appellant. The Exchequer Court still holds \$22,000 of assets realized from the sale of the steamboat Empress and the Queen's wharf property at Ottawa.

Great Northern Ry. Contract.—Grant Smith & Co., of Spokane, Wash., who are associated with the firm of Grant Smith & Co. & Macdonnell, Ltd., the contractors for the Timiskaming & Northern Ontario Ry. extension, are reported to have given a contract for building 22½ miles of second track on the Great Northern Ry., between Bleustem and Lamona, Wash.

Freight Rate Hearings by Board of Railway Commissioners.

On Feb. 15 the Board of Railway Commissioners began hearing at Ottawa the applications of the maritime provinces and the provinces of Manitoba, Saskatchewan and British Columbia for more favorable freight rates. The maritime provinces interests demand chiefly the restoration of the differentials in force before the granting of the rate increases of 1918 and 1920. These differentials were fully discussed in Canadian Railway and Marine World for May, 1921, pg. 259. Manitoba and Saskatchewan claim that western rates are too high as compared with those prevailing in the east, and seek an equalization, and British Columbia alleges discrimination in that the rates in that province, and rates from and to B.C. points and from prairie province points are too high. The Canadian Pacific and Canadian National Rys. oppose the applications, maintaining that rates are reasonable, and that discrimination does not exist. The Canadian Railway Association was represented by F. H. Chrysler, K.C., Ottawa; the Canadian Pacific Ry. by W. N. Tilley, K.C., Consulting Counsel, E. P. Flintoff, Assistant General Solicitor, W. B. Lanigan, Freight Traffic Manager, and W. M. Kirkpatrick, Assistant Freight Traffic Manager; the Grand Trunk Ry. by W. C. Chisholm, K.C., General Solicitor, and F. J. Watson, General Freight Agent; the Canadian National Rys. by Alistair Fraser, K.C., General Solicitor, C. A. Healey, Vice President, Geo. Stephen, Freight Traffic Manager; New Brunswick by I. C. Rand; Manitoba and Saskatchewan by H. P. Symington and A. McDonald; British Columbia by G. G. McGeer and Prime Minister Oliver; Alberta by A. Chard; Halifax Board of Trade, by R. E. Finn; Winnipeg Board of Trade by Isaac Pitzlago; Montreal Board of Trade by J. K. Smith; Toronto Board of Trade by T. Marshall, Transportation Manager; Calgary Board of Trade by J. H. Hanna; Sault Ste. Marie Board of Trade by T. E. Carmichael; Northern Foundry & Machine Co., Sault Ste. Marie, by W. J. Thompson; Canadian Manufacturers' Association by J. E. Walsh, S. B. Brown and G. P. Ruickick; Canadian Retail Coal Dealers' Association by J. M. Daly and B. M. Casspell, and Dominion Sellers' Association by Secretary C. B. Watts.

In opening the proceedings, Chief Commissioner Carvell stated that the investigation would be made by the Board to determine whether or not certain alleged discrepancies exist in the rates in different parts of Canada. W. N. Tilley, for the C.P.R., stated that so far as the British Columbia application was concerned, he C.P.R. denied that the charges made by it on goods from B.C. to points in B.C., Saskatchewan, Manitoba and Ontario were unjust, that charges on goods going into B.C. were unjust, and that the tolls were discriminatory. To demonstrate this, Mr. Chrysler examined Mr. Lanigan, this examination continuing throughout Feb. 15, and Mr. Lanigan was also the railway's chief witness on Feb. 16 and 17 also. Mr. Lanigan's testimony showed that the C.P.R.'s net income in relation to the value of the property devoted to serving the public, is contrary to the general opinion, extraordinarily moderate. He stated that in 1917, when the total investment in the property was \$814,393,395, the net earnings were \$44,577,336, and fixed charges,

dividends and contribution to pension fund totalled \$32,156,420, leaving a surplus of \$12,420,916. This represented a return on the investment of 5.473% and a contribution to surplus of 1.525%. In 1918, when the total investment was \$829,397,933, the net earnings were \$34,308,411 fixed charges, dividends and contribution to pension fund totalled \$32,104,790, the rate of return was 4.712% and the surplus 27/100 of 1%. In 1919, when the investment was \$28,221,727, net earnings were \$32,933,036, fixed charges, dividends and contribution to pension fund were \$32,088,787, the rate of return on investment was 4.078% and the contribution to surplus 1/10 of 1%. In 1920, the total investment was \$858,464,921, net earnings \$33,153,044, fixed charges, dividends and contribution to pension fund \$32,702,686, the return on investment was 3.862% and the surplus was 5/500 of 1%. In 1921, the investment was \$894,807,714, net earnings \$34,201,740, fixed charges, dividends and contribution to pension fund \$33,502,277, the rate of return on investment was 3.822% and the contribution to surplus 8/100 of 1%. The above figures made it evident that nobody could rightly complain that rate are high because of an unduly large financial return to investors in the C.P.R. enterprise.

Mr. Lanigan presented figures to show that British Columbia is not discriminated against in rates. He showed that operating costs are much higher in B.C., on account of traffic conditions and physical operating conditions. Reducing train loads to the basis of the loading for a 100% locomotive (one of 20,000 lb. tractive power), he showed that such a locomotive hauled, in 1920, a train of 618 tons in Manitoba, 538 tons in Saskatchewan, 471 tons in Alberta, 547 tons in the three prairie provinces, taken as a whole, but 275 only in British Columbia. He then compared the rates as they affect British Columbia with those affecting the State of Washington, and showed that the B.C. rates are lower. He compared rates on fish, paper, rice and sugar, all comparisons showing that the B.C. claim of discrimination has no foundation in fact. He pointed out that the latest reduction by the railways' in the eastbound rate on lumber was made to place Vancouver and other B.C. manufacturers in a position to meet, in the eastern market, the competition of southern pine from the U.S. He filed exhibits dealing with import rates on commodities taken into Vancouver, showing their entire reasonableness, and further showed how the B.C. coast cities get lower rates on many commodities, because of water competition, than would otherwise exist. An interesting part of his testimony dealt with rates on the Pacific & Great Eastern Ry., operated by the B.C. Government. In every case the rates on the P.G.E. are higher than on the C.P.R., which makes it appear strange that the B.C. Government should the looking for rate reductions on the C.P.R. while it continues to charge the people of the province still higher rates on its own railway. G. G. McGeer, representing B.C., attempted to defend this situation by stating that the construction of the P.G.E. is not yet complete, but it was shown that the portion of the line which the B.C. Government is operating is complete.

On Feb. 16 T. E. Carmichael, repre-

senting the Sault Ste. Marie Board of Trade, stated that city's case. He asked that the city be included in schedule A territory, at present limited by Parry Sound and Sudbury. W. J. Thompson, of the Northern Foundry & Machine Co., Sault Ste. Marie, explained why he thinks his business is being discriminated against. He said that it costs him 72½¢ per 100 lb. to ship certain goods to Three Rivers, Que., whereas it costs manufacturers at Welland and Windsor, Ont., but 49¢, while on products consigned to the west, his natural advantage, due to closer location to the market, is spoiled by the rate structure. He said he was not asking for anything he did not feel he was entitled to, to which the Assistant Commissioner replied: "Then you are in exactly the same position as everyone else who applies to this Board. No one applies to us for anything he does not think he is entitled to. That is what makes our work so simple."

After further discussion concerning the Sault Ste. Marie case, Mr. Lanigan's examination was resumed, and he showed that so far as rates on grain are concerned, even grain from Winnipeg takes a rate 2½¢ cheaper to Vancouver than to St. John. He showed that when rates were relatively lower to Vancouver than to the east than they are now, no grain moved via the Pacific, but that when the rates to Vancouver became relatively higher than they were, a fair volume of grain began to move, via Vancouver. He compared prairie distributing rates with the distributing rates from Toronto under schedule A, rates between points in Eastern Canada with rates between points in Western Canada, rates on grain from U.S. points to Duluth with rates from prairie points to Fort William, and class rates from St. John, N.B., to cities in Eastern Canada, and those in effect from Montreal to points of equal distance. All of his comparisons showed that the alleged discriminations are non-existent.

On Feb. 17 Mr. Lanigan's examination was continued, and T. Marshall, Manager, Transportation Department, Toronto Board of Trade, filed a statement showing the railway mileage of the different provinces and the amount of traffic provided by each province. J. M. R. Fairbairn, civil engineer, C.P.R., testified as to operating costs and conditions in the British Columbia territory and the changes made by the construction of the Connaught tunnel.

The hearings were adjourned from Feb. 17 to Feb. 20, and on the latter date G. G. McGeer, for the B.C. Government, asked for an adjournment of the hearing, but the majority of those in attendance were in favor of continuing till all evidence was presented.

On Feb. 20 and 21, Mr. Lanigan's examination was continued, and on the latter day he was cross examined by H. J. Symington, counsel for the Manitoba Government, the effect of water traffic via the great lakes on the all rail rate between Fort William and Montreal figuring prominently in the examination. Mr. Symington argued that the eastbound grain traffic from the western provinces made the greater part of the railways' freight traffic on eastern lines, and said that it had been stated that the eastern lines were carrying the west, but he added that if it were not for the grain traffic, the C.P.R. would be in the same

position as "some other railways we could mention." Mr. Lanigan claimed that the eastern and western lines are not complementary to each other, and that there is no question of one section of the railway "carrying" the other.

On Feb. 21, C. A. Hayes, Vice President, Traffic, Canadian National Rys., was examined by F. H. Chrysler, and stated that the mountain scale of rates in British Columbia did not constitute an injustice, owing to the difficulties and expense of construction, operation and maintenance.

On Feb. 22, D. O. Lewis, formerly Assistant Engineer, Maintenance of Way, Canadian National Rys., Toronto, but now associated with the Engineering Corporation Ltd., Vancouver, gave evidence in support of the British Columbia application. He stated that the grades on the Canadian National through B.C. are less severe than those on U.S. lines to the south, and in order to show that operating costs in B.C. are not as great as commonly thought, he mentioned the poor quality of the water supply on the prairies. C. A. Hayes was examined further on the same day, and stated that the Canadian National Rys. westbound grain traffic this season will be about 7,000,000 bush.

The hearing was then adjourned till March 12, and it is said that G. G. McGeer, counsel for British Columbia, will then examine Mr. Lanigan further.

In addition to pressing their case before the Board of Railway Commissioners, Premier Oliver of British Columbia and the members of the delegation accompanying him appeared before Prime Minister King on Feb. 16. Mr. Oliver representing that British Columbia is being discriminated against in regard to freight rates, and that the present rates constitute a breach of the terms under which British Columbia entered Confederation, and it was argued that the Dominion Government should insist on equitable rates being established. Mr. King promised to give the demands his consideration. An Ottawa press dispatch of Feb. 16 quotes Premier Oliver as stating that if B.C. does not win its case before the Board of Railway Commissioners it will be laid before the Imperial Government, on the ground that the Confederation agreement is being violated, and that he doubted the right of the Board of Railway Commissioners' right to settle the matter, and that he stated his belief that it is wholly a problem for the Dominion Government.

U. S. railway freight traffic during 1921 was less than during 1919, but the volume of traffic handled per employe was greater than in 1919.

The Atlanta Ry., which is being built by the U.S. Government, will not be officially opened until next summer of 1922, in the expectation that President Harding will be able to be present.

International Bridge Sunday and Holiday Traffic.—The United States Supreme Court has reversed a lower court's decision in an action brought by the International Ry. against the U.S. Collector of Customs at Niagara Falls, N.Y. in connection with the inspection of baggage, etc., at the bridge crossing the Niagara River at Niagara Falls. The first decision would have caused the closing of the two bridges across the river on Sundays and holidays, but the U.S. Supreme Court has reversed this.

The Delaware & Hudson Co. has ordered 12,000 tons of steel rails in the U.S.

Self Propelled Cars on Steam Railways.

A recent press report stated that the Michigan Central Rd. intended to place self propelled gasoline cars on one of its Canada Division's branch line, to supplant steam trains. We are officially advised, however, that the announcement was premature, and the fact is that although the management has been looking into the question of using gasoline, or some other type of self propelled cars, on some of its minor branch lines, no decision has been arrived at. The M.C.R. has several short branch lines and connecting lines in Canada on which the introduction of self propelled cars in passenger service would probably be an economical proposition. The chief one is the St. Clair Branch, from St. Clair Jct., 4.23 miles west of St. Thomas, to Court-right, 62.15 miles. Running at right angles to this line are two branches, one from Oil City to Eddy's, 5.18 miles, and one from Petrolia Jct. to Petrolia, 4.88 miles. There are also the lines from Niagara-on-the-Lake to Bridgeburg, 29.55 miles; from Comber to Sea Cliff Park, 15.91 miles; and from Essex to Amherstburg, 16.88 miles.

The storage battery car operating on the Canadian National Rys. Maritime District, full details of which were given in previous issues of Canadian Railway and Marine World, has been running between Bathurst and Campbellton, 62.96 miles, throughout the winter, and has given very satisfactory results. It is normally equipped with four motors, one geared to each axle, but as one of the motors was burned out, by one of the leads coming into contact with the armature coils, it was necessary to temporarily operate the car on three motors. While in this condition, in starting or in slow running, the tractive effort was equal to that from two pairs of wheels instead of four pairs, as when all motors are operative, but at road speed the tractive effort was three quarters of the normal. Notwithstanding the fact that the car was operated on three motors, it has shown great ability in meeting conditions of heavy snowfall and cold weather, and in maintaining schedule time. A recent performance report stated that on Jan. 25, while on the westbound trip, the car struck a severe storm, and encountered drifts 3 ft. deep, and a temperature being between 20 and 30 degrees below zero. The car got through the frozen drifts successfully and reached Campbellton only 30 minutes late, but as 14 minutes of the time lost was due to the car being held up by a meet, only 16 minutes was lost on account of the severe weather conditions. On the return trip, the car was late in leaving but made good time. On Jan. 25 it was blocked at a station en route for 27 minutes by an opposing passenger train, but arrived at its destination on time. Three men are used in the operation of this car, this number being considered desirable, as it is being operated on a heavy traffic main line. Two men would be sufficient on a light traffic branch line. As is natural, current consumption increased during the severe winter weather. While the car was operating between Belleville and Trenton, on the Ontario District, the current consumption ran at 0.75 k.w.h. per car mile, and while operating between Bathurst and Campbellton under summer conditions the current consumption averaged 0.875 k.w.h. per car mile,

the increased consumption being due to heavier grades and more frequent stops. Under unfavorable winter weather conditions, the current consumption has been running at 1.25 k.w.h. per car mile, and on one occasion, when snow was badly drifted on the track, and the temperature was 30 degrees below zero, the current consumption for the trip was 1.34 k.w.h. per car mile.

It was stated in Canadian Railway and Marine World for February that the Canadian National Rys. had ordered another gasoline propelled car from the Ledoux, Jennings Co., Montreal, for the Brockville-Westport run on the Ontario District. We have since been informed that this order has not yet been placed, although designs for the car are being worked out.

The Bad Order Car Situation.

The Railway Association of Canada reported the total number of cars on Canadian lines for the 15 day period ended Jan. 15 as 206,353. The allowance for bad order cars on the A.R.A. basis, which assumes a total of 7% of the cars in bad order, worked out to 14,445, while the actual number of cars in bad order was 18,210, an excess of 3,765 on the 7% basis. This figure represented 8.82% of the cars in actual bad order. Of surplus cars in good order there were 44,928, making a total number not in use of 63,138, or a total of 48,693 idle cars on the basis of 7% of the cars being in bad order.

For the 15 day period ended Feb. 1 the total number of cars on Canadian lines was 203,671. The allowance for bad order cars on the A.R.A. basis of 7% worked out to 14,257, while the actual number of cars in bad order was 19,048, an excess of 4,791 on the A.R.A. basis. The actual number of bad order cars represented a percentage of 9.3. Of surplus cars in good order there were 45,700, making the total number not in use 64,748, or a total of 50,491 idle cars, on the basis of 7% being in bad order.

The percentage of 8.82 of the cars in bad order on Feb. 1 and 9.3 on Jan. 15 compared with 9.12% in bad order on Jan. 1.

The 44,928 surplus cars in good order Jan. 15 and 45,700 on Jan. 15 compared with 45,333 in good order on Jan. 1. These figures show that while the bad order situation improved somewhat toward the middle of January, compared with the beginning of the month, by Feb. 1 the percentage had again increased to more than it was on Jan. 1. Similarly, while the number of surplus cars on Jan. 15 was smaller than on Jan. 1, on Feb. 1 the number had become greater than on Jan. 1.

Freight equipment on Canadian lines is still in a better state of maintenance than on U.S. lines. The American Railway Association, Car Service Division, reported the number of cars in bad order in the U.S. on Jan. 15 as 319,512, or 13.9% of the total, compared with 313,190 or 13.7% on Jan. 1. On Jan. 25 the number of surplus freight cars in good repair and available for service when required, on U.S. lines, was 396,192.

The Denver & Rio Grande Ry. has ordered 20 locomotives.

Railway Wages and Working Conditions in Canada and the United States.

February was not marked by any development of outstanding importance in the railway wage situation in Canada, but there has been no lack of demonstrations of enmity between the international labor organizations having membership among certain railway employes in Canada, and purely Canadian organizations having membership among employes engaged in similar work. There certainly is no great division between the Canadian Brotherhood of Railway Employees and the international organizations embracing railway clerks, freight handlers, express and station employes and men engaged in similar capacities.

M. R. Carr, of St. Louis, Mo., an official of the clerks' international organization, had arranged for a meeting at London, Ont., on Jan. 19, to which all railway employes who would be suitable for inclusion in its membership were invited, but the attendance was extraordinarily small. Undaunted, he called another meeting for Jan. 24, and issued a statement to railway employes generally in which he said: "I assure you that there will be no attempt to coerce anyone into joining this organization, as we are charitable enough to realize that we are dealing with people who are capable of thought and who can be relied upon to use their own best judgment. The meeting is called for one purpose only, and that is to enlighten you as much as is possible on conditions which confront employes at this particular time, and to point out to them the necessity of concerted action, and the best method of securing what we feel is justly due them. Special invitation is extended to lady employees." In the meantime, members of the Canadian Brotherhood of Railway Employees' London branch held a meeting at which they decided to flatly refuse to have anything to do with Mr. Carr's meeting. The determination to stand by the Canadian organization was affirmed, and it was agreed that there was no reason why employes should send their money into the United States to support highly paid officials who, they claim, do nothing for them. W. J. McPherson, representative of a C.B.R.E. Toronto division, who was at the meeting, complimented the London members on their stand, and it is stated that A. R. Mosher, Grand President of the brotherhood, who was in Chicago at the time, was telegraphed to go to London immediately to use his influence to prevent any wavering C.B.R.E. members from deserting to the international camp. We have no exact information as to how many were in attendance at Mr. Carr's second meeting, but are informed that the C.B.R.E. London membership intend to stand solidly behind their Canadian institution and build it up independently of the U.S. one.

The C.B.R.E. general grievance committee for Canadian National lines east of Port Arthur met at Moncton, N.B., Feb. 8, when many matters concerning wages and working conditions were discussed. A. R. Mosher, Grand President, called the delegates' attention to the fact that while the award of the wage arbitration board, which investigated the dispute between the Canadian National Ry. and the Canadian Brotherhood of Railway Employees, had been made months ago, the railways had not put into force the modifications in wage reductions recommended by the arbitrators. While

the C.N.R. management had offered to introduce modifications in the wage reduction independently of the arbitrators' award, particularly on the western lines, the employes' attitude had been that they did not care to discuss changes in the wage scale unless the arbitrators' recommendations were adopted. As a consequence, the original reductions made July 16, 1921, have remained in effect. No information was given out following the Moncton meeting, as to what action the C.B.R.E. proposes to take in this connection. At a public meeting in Moncton city hall on Feb. 8, Mr. Mosher pointed out the supreme importance of a Canadian labor organization being controlled in Canada. After speaking on a variety of subjects, including possibilities in connection with Canadian water power development, the lack of success of labor candidates in the recent Dominion elections, the inadvisability of shipping goods to Europe when there are people lacking goods in Canada, the shortage of houses due to the surprising fact that the owners of timber tracts are not content to operate without a profit, and the proposed separation of the Intercolonial Ry. from the Canadian National system, he stated that he had no quarrel with any of the international labor unions, except those that were "trying to chase the C.B.R.E. off its own grounds." Presumably he was referred to the International Brotherhood of Railroad Stationmen, the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employes, et al.

However, encouragement for Mr. Mosher may be seen in a statement made by Premier Taschereau in the Quebec Legislative Assembly on Feb. 16, when he said that his Government would do everything it possibly could to encourage national unions, but that it had no sympathy for any international union that stepped in and attempted to dictate to Canadian workers. While Mr. Taschereau's remarks were caused primarily by a printers' strike called by the International Typographic Union, they may be taken as expressive of the thought of a large number of people in Canada in connection with national vs. international trade unionism generally. International trade unionism is being challenged in this country now more seriously than in the past, and in the railway industry this is shown by the fact that the C.B.R.E. membership is steadily growing. According to Mr. Mosher, of the 18,000 to 20,000 railway employes capable of being unionized in the field covered by the C.B.R.E., about 12,000 belong to that organization, while the majority of the remainder are as yet unorganized.

It is reported that C.P.R. and Canadian National switchmen employed in and near London, Ont., have decided to withdraw from the Brotherhood of Railroad Trainmen and join the United Switchmen of America.

A Toronto press report of Feb. 15 stated that a new railway union, the United Association of Railway Employes of America, which is not affiliated with the American Federation of Labor, was preparing to invade Canada in a campaign for members. The union was formed among U.S. railway employes as a result of dissatisfaction with the administration of labor affairs recently. It is an industrial rather than a craft union, and the executive has decided to give

complete autonomy to Canadian members. The President is R. C. Greenley, who opposed W. G. Lee for the presidency of the B. of R.T., and the chief organizer for Canada is H. J. Hartie, who created a stir in Canadian railway labor circles by supporting Dr. Sheard in opposition to Jas. Murdock, now Minister of Labor, in the Dominion election campaign in South Toronto.

A Montreal press dispatch of Feb. 13 stated that working conditions and wage scales affecting 140,000 railway employes throughout Canada were under preliminary review by railway officials, and that in some circles, the report was current that re-arrangements in 1922 will have to do largely with adjustments in working conditions rather than in rates of pay. Canadian Railway and Marine World has not been able to get any confirmation of this report from railway officials in Toronto who are in close touch with the wage situation.

United States.—The various U.S. railways have been holding conferences with their employes preliminary to hearings before the Railway Labor Board on the question of a further general reduction of wages. The situation now is that the majority of the class 1 roads have made application to the Board for wage reductions for classes of employes specified by each. Practically all classes of employes are affected. In opposition to the requests made by the railway executives to the Board, many of the labor organizations have applied to the Board for increases in wages of employes represented by them. Included among these are the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employes, the Brotherhood of Railroad Dispatchers' Association, the Order of Railroad Telegraphers, and the various branches of the federated shop crafts making up the A. F. of L. railroad department. While the Board has not indicated how it is going to handle the large number of applications for wage reductions and increases now before it, it seems probable that the only way it can come to any decision, in a reasonable time, is to consolidate the applications and hear them as one case.

As stated in Canadian Railway and Marine World for February, conferences between railway executives and the leaders of the locomotive and train service brotherhoods were arranged by Secretary of Commerce Hoover, with the backing of the U.S. Government, and as a result a meeting of railway executives was held on Jan. 31, at which it was decided that committees representing the railways of the western, southeastern and eastern territories should be formed to meet the representatives of the four locomotive and train service brotherhoods in connection with the determination of future wages and working conditions. The idea is that by these conferences the matter of wage adjustments as between the railways and the locomotive and train service employes could be adjusted without reference to the Labor Board. The decision arrived at by the executives to form these regional committees also provided that if any railway management saw fit to deal with its own employes, independently of the regional committee, it would be entirely free to do so. The eastern territory committee, following the meeting, and on Feb. 8 the officials of some 50 roads in the

eastern territory met in New York and appointed a conference committee which includes in its membership Elisha Lee, Vice President, Eastern Region, Pennsylvania System, and J. G. Walber, Chairman of the Association of Railway Executives' Bureau of Information. The committee immediately notified the locomotive and train service employees' representatives of its desire to meet them in the near future for a discussion of wage matters, and it is probable that conferences will be got under way quickly. The expectation is that agreement will be reached between the managements and the locomotive and train service employees in this manner, but if it is found that agreement is impossible, the disputes will have to be referred to the Labor Board in the usual way.

The Labor Board has, as stated in Canadian Railway and Marine World for February, been working some time on the formation of new rules for clerks, express and station employees, etc., and it has issued decision 630, effective Feb. 1, which contains rules and regulations governing the service of these employees and replacing the national agreement which the clerks secured from the U.S. Railroad Administration. The chief change brought about by the new rules is in connection with the payment of punitive overtime. Time and one half will henceforth be paid after the 9th hour of service instead of after the 8th hour. Generally speaking, the rules requiring punitive payments for various services have been modified considerably in favor of the railways, as for example in connection with clerks being notified to report for duty, and then not used for work during week hours, work for less than a full day, and for time when travelling. The decision also provides that clerks may be worked on split tricks, that is, they may be required to work part of a shift, lay off for some hours, and then work for a sufficient number of hours to make up a day. This rule in particular will be of great benefit to the railways, as it will in many cases enable small stations to be opened which have been closed altogether for the reason that two shifts would have been required to look after the morning and evening business, and it will also permit many services to be operated with one shift of employees instead of two.

The Labor Board's opinion in the decision on the rules governing clerks' employment was by no means unanimous, the three railway members holding that punitive payments for overtime within a 10 hour limit were undesirable. A. O. Wharton, a labor member, filed an opinion to the effect that punitive overtime should begin after the completion of the 8th hour of duty.

On Feb. 13 the Board gave a decision concerning rules and working conditions for signalmen. The signalmen had also been given a national agreement by the U.S. Railroad Administration, shortly before the termination of Federal control, and the rules contained in the Board's recent decision are to replace those of the national agreement. Of the 78 rules in the national agreement, however, more than half are retained in the new schedule of rules, and only 12 were changed, while 16 were left for settlement as between individual railways and their employees. The most important change is that concerning punitive overtime. Time and a half will now be paid after the 10th hour of service instead of after the 8th hour. Employees regularly assigned to service on Sundays and holidays will

be paid straight time for such service. The new rules are also more favorable to the railways in that there will be no payments at time and a half for employees travelling. The national agreement provided for payment of half time to employees while travelling in boarding car trains. The new rules do not provide for such payment.

A coal strike in the U.S. about April 1 does not seem improbable. J. L. Lewis, President of the coal miners' labor organization, sent recently to the directors of the various railway labor brotherhoods an invitation to a meeting to be held at Chicago on Feb. 21. It is thought that his object was to enlist the support of railway labor organizations in case a coal strike materializes. Whether he expects this support to take the form of a sympathetic strike by railway employees, or to be confined to a refusal to handle products in non union shops, is not clear. The railway brotherhoods' leaders accepted the invitation to attend.

Much has been heard of the great wastes in railway operation caused in the U.S. by the operation of the national agreement made when the roads were under Federal control, and applying to shop employees' service. Some interesting correspondence on the effect of this agreement, exchanged between W. H. Chandler, President, U.S. National Industrial Trade League, and T. DeWitt Cuyler, Chairman, Association of Railway Executives, has come to our attention recently. Mr. Chandler wrote Mr. Cuyler, wanting to know about the effect of the national agreement with the shop crafts as put into force by the Railroad Administration. Statements made by W. D. Hines, formerly Director General of Railroads, concerning the operation of this agreement, indicated to Mr. Chandler that there was a great difference between Mr. Hines' estimate of the waste caused thereby, and the estimate of railway officers. In his reply, Mr. Cuyler said: "The most burdensome and injurious interpretations of the provisions of the agreement were never experienced by the Director General of Railroads." Statements given by Railway Board of Adjustment no. 2, all of which increased railway expenses without any service being rendered by the shop employees concerned, and all of which became effective after the termination of Federal control. An example of the agreement's operation, Mr. Cuyler wrote, was the insistence of the shop committee in the Baltimore & Ohio Rd.'s Riverside shops that the following forms of labor be used in the work of renewing staybolts, 1. Pipe fitter and helper to remove injector and other pipes. 2. Machinist and helper to remove injector. 3. Sheet iron worker and helper to remove jacket. 4. Carpenter to remove lagging and running boards. 5. Boiler makers to remove and renew staybolts. 6. Engine restored to operating condition by reverse of first four processes. The shop committee tried first to introduce this method of doing business on the coming in for repairs of locomotive 1610 less than three months before the termination of Federal control, and during 1920 this became the standard practice for the renewal of staybolts on all railways subject to the national agreement.

Mr. Cuyler also called Mr. Chandler's attention to the fact that while the railways were returned to private operation, on March 1, 1920, they had 261,000 employees than in Dec. 1917. Of the total increase in number of employees, 221,576

was accounted for in three of the classes of railway employment covered by the national agreements, a follows: shop crafts, 140,946; clerks, 54,630; and section hands, 26,000. The railways moved the traffic of 1920 with no increase in the number of train service employees, but they were burdened with an increase in shop employees of 140,946, or 47% more than in Dec. 1917. Mr. Cuyler said in conclusion: "While the railways cannot make an exact computation on each and every line of the effect of every rule in the national agreement, and of every interpretation given to that rule by the Director General, or by a railway board of adjustment, it is our belief that between excessive increases in employees covered by these rules, and decreases in the productivity per man, the estimate of their having added \$300,000,000 to the operating expenses of 1920 is conservative."

Chicago press dispatch of Feb. 23 stated that another pay cut, affecting 10,000 railway firemen and oilers, was made on that date by the U.S. Railroad Labor Board, when it promulgated new rules, effective March 1, eliminating punitive overtime until after the 10th hour and setting up a split trick of 8 hours within a period of 12 hours without overtime pay.

Grain in Store at Elevators.

Returns made to the Dominion Bureau of Statistics, Internal Trade Branch, for quantity of grain in store at the different week ended Feb. 10, show that the net elevators throughout Canada had decreased by 3,307,832 bush, made up as follows: wheat 2,449,690 bush, flax 43,097 bush, rye 39,756 bush, while there were increases in oats and barley of 6,568 and 124,718 bush, respectively. In the western country elevators, 36,488,811 bush. were held, classified by provinces as follows: Manitoba, wheat 2,587,308, oats 923,076, barley 839,889, flax 72,542, rye 135,300; Saskatchewan, wheat 13,835,000, oats, 5,048,751, barley 707,759, flax 65,210, rye 360,020; Alberta, wheat 6,204,692, oats 3,906,876, barley 726,809, flax 232,129.

The receipts at western country elevators were 2,288,832 bush., and the shipments were 2,623,300 bush. Interior terminal elevators showed decreases, wheat 34,776 bush., oats 11,384 bush., flax 1,408 bush., and increases, barley 5,105 bush., and rye 1,137 bush.

In public and private terminal elevators at Fort William and Port Arthur, there were increases of barley 98,764 bush., and rye 27,327 bush., and decreases, wheat 15,713 bush., oats 21,867 bush., flax 3,860 bush. Receipts of all grains were 256,287 bush., shipments by ship 135,943 bush., and by rail 161,671 bush.

Winnipeg private terminal elevators showed these decreases, wheat 42,660 bush., flax 6 bush., rye 7 bush., and increases, oats 23,228 bush., barley 3,760 bush.

Eastern public elevators had the following decreases: wheat 887,596 bush., oats, 176,974 bush., barley 9,705 bush., flax 10,000 bush.; increases, rye 8,147 bush. The receipts of wheat were, by rail, 256,971 bush., and the shipments, by ship, 235,000 bush., and by rail 935,554 bush.

There were 4,119,494 bush. of U.S. grain in store at western public elevators, compared with 727,730 bush. at the same period in 1921. U.S. lake ports showed decreases of 1,516,779 bush.

Mainly About Railway People Throughout Canada.

W. R. Baker, C.V.O., formerly Secretary, C.P.R. Co., was a passenger on the C.P.R. s.s. *Empress of Britain*, which sailed from New York, Feb. 21, for a cruise to the West Indies.

Major General J. L. Biggar, C.M.G., Quartermaster General of the Canadian Militia, who died at Montreal, Feb. 18, following a paralytic seizure, was a brother of W. H. Biggar, K.C., Vice President and General Counsel, G.T.R.

W. C. Bowles, Assistant Freight Traffic Manager, Eastern Lines, C.P.R., Montreal, was entertained at dinner by C.P.R. Freight Traffic Department officials and staff at Winnipeg, Jan. 27, on leaving the city, where he had been General Freight Agent, Western Lines.

H. W. Brodie, General Passenger Agent, C.P.R., Vancouver, and Mrs. Brodie, visited eastern Canada recently.

A. B. Calder, who has been appointed Assistant to Chief Commissioner, Colonization and Development Department, C.P.R., Montreal, was born at London, Ont., Aug. 24, 1867, and from 1882 to 1887 was in various capacities on C.P.R. construction west of Winnipeg, Man. He entered C.P.R. service in 1887, since when he has been, to 1889, in Passenger Department, Winnipeg; 1889 to Oct. 1893, Ticket Agent, Tacoma, Wash.; Oct. 1893 to July 1895, Travelling Passenger Agent, Tacoma, Wash.; July 1895 to Dec. 1897, Travelling Passenger Agent, San Francisco, Cal.; Dec. 1897 to Nov. 1904, Travelling Passenger Agent, Tacoma, Wash.; July 1895 to Dec. 1897, Travelling Passenger Agent, San Francisco, Cal.; Dec. 1897 to Nov. 1904, Travelling Passenger Agent, Seattle and Tacoma, Wash.; Nov. 1904 to Nov. 1910, General Agent, Passenger Department, Seattle, Wash.; Nov. 1910 to Sept. 1911, Chicago, Ill.; Sept. 1, 1911, to Dec. 1916, General Agent, Passenger Department, associated with his father in a general ticket agency at Winnipeg; Jan. 1917 to Jan. 1921, Assistant General Passenger Agent, Winnipeg; Jan. 1921 to Feb. 14, 1922, on the executive staff, Montreal.

Mrs. Cochrane, widow of Hon. Frank Cochrane, at one time Minister of Railways and Canals, and Miss Edith Cochrane, are spending the winter at Santa Barbara, California.

Edgar P. Cooney, for the past four years Secretary to Grant Hall, Vice President, C.P.R., has resigned to enter the insurance brokerage business.

Henry Cooke Porter Cresswell, who has been appointed Superintendent, Colonization and Development Department, C.P.R., Montreal, was born at Melbourne, Australia, Nov. 8, 1892, and entered transportation service in 1909, since when he has been, to 1912, clerk, Lancashire & Yorkshire and London & North Western Rys. joint service, Londonderry and Belfast, Ireland; 1912 to 1914, clerk and stenographer, Natural Resources Department, C.P.R., Calgary, Alta.; 1914 to 1916, secretary to Assistant to President, C.P.R., Calgary, Alta., and Montreal; 1916 to 1919, on military duty; 1919 to 1921, secretary to Chief Commissioner, and for a short time acting Superintendent, Colonization and Development Department, C.P.R., Montreal.

Peter Joseph Johnson, whose appointment as Locomotive Foreman, C.P.R., White River, Ont., was announced in a recent issue, was born at Richmond, Que.,

Oct. 19, 1891, and entered railway service in Oct. 1905, since when he has been, to Feb. 1906, call boy, Motive Power Department, G.T.R., Belleville, Ont.; Apr. to May 1906, call boy, Traffic Department, G.T.R., Belleville, Ont.; May to Sept. 1906, car checker, G.T.R., Belleville, Ont.; Sept. 1906 to Apr. 1907, clerk to Locomotive Foreman, C.P.R., White River, Ont.; Apr. 1907 to Apr. 1910, machinist apprentice, C.P.R., Chapleau, Ont.; Apr. 1910 to May 1911, machinist apprentice, Angus Shops, C.P.R., Montreal; May to Dec. 1912, machinist, White River and Schreiber, Ont.; Dec. 12 to Feb. 1918, fitter, C.P.R., at Chapleau, Ont., Angus shops, Montreal, Winnipeg, Sartin, Que., and Glen Yards, Montreal, respectively; Feb. to May 1918, Assistant Foreman, C.P.R., Brownville Jct., Me.; May to Dec. 1918, Locomotive Foreman, C.P.R., McAdam, N.B.; Jan. 1919 to Oct. 1920, fitter, Glen Yards, C.P.R., Montreal; Oct. 1920 to Dec. 1921, Assistant Foreman, C.P.R., Ottawa, Ont.

R. L. Latham, Chief Engineer, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., and Mrs. Latham, were passengers on the C.P.R. s.s. *Empress of Britain*, which sailed from New York, Feb. 21, for a cruise to the West Indies.

Arthur St. Laurent, B.Sc., C.E., heretofore Assistant Deputy Minister of Public Works, has been appointed Chief Engineer, Public Works Department, Ottawa, Ont., vice E. D. Lafleur, deceased. He was born at Rimouski, Que., Nov. 20, 1859, and graduated from l'Ecole Polytechnique, Montreal, in 1884, and for three years was engaged in Temiscouata Ry. location and construction. He entered the Public Works Department's service, Sept. 18, 1888, and to 1898 was Assistant Engineer, Winnipeg. He was afterwards engaged on various works throughout the Dominion, for the Department, and in 1908 was appointed Assistant Deputy Minister.

Lieut.-Col. R. W. Leonard, formerly National Transcontinental Ry. Commissioner, has been presented by the Engineering Institute of Canada with the Leonard gold medal, founded by himself, for the best paper presented before the Institute during the past year.

Andrew Maxwell, engineer and architect, who died at Holland, Man., Feb. 9, aged 76, was engaged in survey work for the Dominion Government, in connection with the C.P.R. in its early days, and was subsequently in Hudson's Bay Co.'s service, and built the first bridge across the Assiniboine River for that company.

William Henry McEwan, who has been appointed Chief Dispatcher, G.T.R., Montreal, was born at Belleville, Ont., Nov. 4, 1873, and entered railway service Apr. 10, 1888, since when he has been, to Oct. 1891, call boy, G.T.R., Brockville, Ont.; Oct. 1891 to June 1900, operator, G.T.R., at various points; June 1900 to Oct. 1906, operator and agent, C.P.R., at various points; Oct. 1906 to July 12, 1908, dispatcher and chief dispatcher, Canadian Northern Ontario Ry., Toronto; July 23, 1908 to Aug. 2, 1918, Dispatcher, C.P.R., at Cranbrook, B.C., Moose Jaw, Sask., Medicine Hat, Alta., and Farnham, Que., consecutively; Aug. 18 to Dec. 18, 1918, dispatcher, G.T.R., Richmond, Que.; Dec. 1918 to Jan. 16, 1922, night chief dispatcher, G.T.R., Montreal.

John A. McGill, who has been appointed General Agent, Passenger Department, C.P.R., Ottawa, Ont., was born at Acton, Ont., Dec. 23, 1880, and entered railway service in Oct. 1896, since when he has been, to Oct. 1897, assistant agent, G.T.R., at Guelph and Acton, Ont.; Feb. 1900 to April 1913, not in railway service; April 1913 to Sept. 1915 to Jan. 1916, City Passenger Agent, C.P.R., Cleveland, Ohio; Jan. to July 1916, Travelling Passenger Agent, C.P.R., Chicago, Ill.; July 1916 to Feb. 1922, City Passenger Agent, C.P.R., Ottawa, Ont.

Capt. Robert McKillop, who has been appointed Superintendent, Bruce Division, Ontario District, C.P.R., Toronto, was born at Perth, Scotland, Dec. 26, 1884, and entered C.P.R. service June 22, 1905, since when he has been, to Apr. 1, 1912, draftsman, in Chief Engineer's office, Montreal; Apr. 1, 1912 to Feb. 8, 1915, Assistant Engineer in charge of Building Department; Feb. 8 to Dec. 13, 1915, Division Engineer, Eastern Division, Montreal; Dec. 13, 1915 to June 12, 1916, Superintendent, District 2, Atlantic Division, Woodstock, N.B.; June 12, 1916 to Feb. 28, 1917, Superintendent, District 3, Eastern Division, now Laurentian Division, Quebec District, Montreal. On Feb. 28, 1917, he was granted leave of absence, to take command of the 2nd Section Skilled Railway Employees, and went overseas Apr. 16, 1917, returning May 22, 1919, demobilized May 22, 1919, and transferred to the general list of officers, the C.P.R. granting him an additional six months leave of absence. From Nov. 1, 1919 to March 1920, he acted as relieving Superintendent, Ontario District, C.P.R., at various points, and from March 1920 to Feb. 15, 1922, Superintendent, London Division, Ontario District, C.P.R., London, Ont.

Lt. Col. R. L. Nelles, ex Local Freight Agent, G.T.R., Toronto, who died there Oct. 27, 1921, left an estate of \$24,055 to his two sons.

Geoffrey Gream Ommanney, whose appointment as Development Engineer, Department of Colonization and Development, C.P.R., Montreal, was announced in our last issue, was born in England, Dec. 9, 1879, and received his technical education at King's College, London, afterwards serving an apprenticeship with Stothert & Pitt, Bath, Eng. From 1900 to 1901 he was engaged on the breakwater at Folkestone; 1901 to 1902, Assistant Engineer, Admiralty harbor works at Dover; 1902 to 1903, Assistant Engineer, Colombo harbor works, Ceylon; 1903 to 1904, Assistant Engineer, Hodbarrow mines, England; 1904 to 1907, Assistant Engineer on harbor works on west coast of Africa and at Singapore; 1907 to 1911, Assistant Engineer in charge of lake steamship terminals, C.P.R., Port McNicoll, Ont.; 1911 to 1912, in charge of C.P.R. exploration and surveys on Vancouver Island; 1912 to 1915, Special Engineer to President, C.P.R., Montreal; 1915 to 1919, on active service in France, ranking from Lieutenant to Major; 1919 to Dec. 1921, Investigation Engineer, Department of Colonization and Development, C.P.R., Montreal.

Capt. D. H. Pearson, formerly Publicity Agent, Canadian Pacific Ocean Services, Ltd., and, since the appointment of the C.P.R., as Traffic Agent, employed by the latter company, has been appointed editor of British Dominions Trade.

W. Tyng Peters, formerly station agent, Canadian National Rys, at Rothsay, N.B., who died there recently, was brother of F. W. Peters, General Superintendent, C.P.R., Vancouver, B.C.

Leonard L. Price, whose appointment as Stores Inspector, Canadian National Rys., Moncton, N.B., was announced in a recent issue, was born at Campbellton, N.B., Sept. 18, 1891. From May 15, 1906 to May 31, 1918, he was employed by Sumner & Co., hardware dealers, and from June 3, 1918 to Sept. 1, 1921, was systems clerk, Canadian National Rys., all at Moncton, N.B.

E. C. Rice, City Passenger Agent, C.P.R., Windsor, Ont., has been granted extended leave of absence, on account of ill health, and has gone to Florida for a holiday.

Richard Richardson, whose appointment as Assistant Secretary and Registrar, Board of Railway Commissioners, Ottawa, Ont., was announced in our last issue, was born in London, Eng., Dec. 30, 1857, and entered the Board's service April 12, 1905, since when he has been, to Nov. 7, 1914, private secretary to Chief Commissioner; Nov. 7, 1914 to Dec. 5, 1921, Assistant Secretary of the Board. On Aug. 7, 1909, under sec. 24 of the Railway Act, he was appointed acting secretary, during the absence of the Secretary from illness or any other cause, and on Dec. 5, 1921 he was appointed Assistant Secretary and Registrar.

Fred M. Rutter, who has been appointed Superintendent, London Division, Ontario District, C.P.R., London, Ont., was born at Toronto, Dec. 26, 1880, and educated at Upper Canada College and the University of Toronto. He entered C.P.R. service Apr. 21, 1902, since when he has been, to Sept. 10, 1902, chairman, Labelle Extension; Sept. 10, 1902 to Apr. 18, 1903, clerk, Operating Department, Woodstock, N.B.; Apr. 18, 1903 to Apr. 7, 1904, rodman, North Bay, Ont.; Apr. 7 to Sept. 19, 1904, transitman, Sudbury, Ont., and Megantic, Que.; Sept. 19, 1904 to Feb. 8, 1906, Resident Engineer on construction, Toronto-Sudbury Line; Feb. 8, 1906 to Mar. 22, 1907, Assistant Engineer, Maintenance of Way, District 3, Eastern Division, Montreal; Mar. 22, 1907 to May 9, 1911, Resident Engineer, Maintenance of Way, Woodstock, N.B.; May 9, 1911 to July 16, 1913, Resident Engineer, Toronto; July 16, 1913 to May 1, 1915, Assistant Division Engineer, Eastern Division, Montreal; May 1, 1915 to Feb. 1, 1916, Assistant Superintendent, District 3, Ontario Division, Toronto; Feb. 1, 1916 to Feb. 15, 1922, Superintendent, District 3, Ontario Division, now Bruce Division, Ontario District, Toronto.

A. L. Sauve, who has been appointed City Passenger and Ticket Agent, C.P.R., Ottawa, Ont., was born at Portage du Fort, Que., Oct. 2, 1888, and entered C.P.R. service, July 6, 1906, since when he has been, to Dec. 11, 1907, stenographer and ticket clerk, Ottawa, Ont.; Dec. 11, 1907 to June 5, 1908, stenographer, General Passenger Department, Montreal; June 5, 1908 to May 1, 1909, ticket agent, s.s. Empress of Britain; May 1 to Dec. 10, 1909, City Ticket Agent, Quebec, Que.; Dec. 10, 1909 to Oct. 4, 1911, chief clerk, City Ticket Office, Ottawa, Ont.; Oct. 4, 1911, to Apr. 14, 1915, City Passenger Agent, Detroit, Mich.; Apr. 14, 1915 to Feb. 1922, City Ticket Agent, Ottawa, Ont.

Lord Shaughnessy, Chairman of the Board, C.P.R. Co., Lady Shaughnessy and

Hon. Marguerite Shaughnessy, sailed from Halifax, N.S., for England, Feb. 2, on the s.s. Montcalm. They expect to be away about three months, and will spend some time in the south of France.

J. Harry Smith, who has been appointed Canadian Press Representative in charge of the Press Bureau, C.P.R., Montreal, was borne at Bristol, Eng., Jan. 27, 1882, and from 1901 to 1912 was reporter and assistant financial editor, Toronto Globe; 1912 to 1919, on Toronto Saturday Night; 1919 to 1921, on Toronto World, and from 1921 to his present appointment, financial editor, Montreal Gazette.

Lord Mount Stephen, first President of the C.P.R. Co., who died in England in Nov. 1921, left an estate in the United Kingdom valued at £1,414,319, on which the death duties will be over £500,000. He left an annuity of £5,000 to Lady Mount Stephen; £10,000 to the Barnardo Homes, £2,000 to the Royal Victoria

John G. Sullivan, C.E.,
President, Engineering Institute of Canada.

Hospital, Montreal, and a few other bequests. The residue of the estate is left to the King Edward Hospital Fund. His will confirms gifts by deed to his niece, Mrs. R. W. Reford, Montreal, with the use for life of property at Rimouski, Que., and to his nephew, Col. F. S. Meighen, director, C.P.R. Co., of books at Brocket Hall.

John G. Sullivan, C.E., who has been elected President of the Engineering Institute of Canada for the current year, was born at Bushnell's Basin, N.Y., Jan. 11, 1863, and graduated C.E. from Cornell University in June, 1888. He entered railway service in July 1888, since when he has been, to Mar., 1889, rodman, Great Northern Ry.; Apr., 1889 to Aug. 1890, rodman, instrument man and assistant engineer, Spokane Falls & Northern Ry.; Aug. 1890 to May 1893, Assistant Engineer, Great Northern Ry. coast lines; July 1893 to Feb. 1894, Assistant Engineer, Alberta Ry. & Coal Co.; July to Oct., 1894, section foreman, Northern Pacific Ry.; Oct. 1894 to Apr. 1895, Lo-

cating Engineer, Butte, Anaconda & Pacific Ry.; Apr. to Dec. 1895, Division Engineer, Kaslo & Slovan Ry.; Dec. 1895 to Feb. 1901, Locating and Reconnaissance Engineer, and Engineer in charge of construction, Columbia & Western Ry.; Feb. 1901 to Sept. 1905, Division Engineer of Construction, Western Lines, C.P.R.; Sept. 1905 to Feb. 1907, Assistant Chief Engineer, Panama Canal; Feb. 1907 to Sept. 15, 1908, Manager of Construction, Eastern Lines, C.P.R., Toronto; Sept. 15, 1908 to Jan. 1, 1911, Assistant Chief Engineer, Eastern Lines, C.P.R., Montreal; Jan. 1 to Oct. 8, 1911, Assistant Chief Engineer, Western Lines, C.P.R., Winnipeg; and from Oct. 1911 to July 1, 1918, Chief Engineer, Western Lines, C.P.R., Winnipeg. He was President of the American Railway Engineering Association for 1917. He resigned from C.P.R. service July 1, 1918, and commenced practice at Winnipeg as a consulting engineer.

J. H. Walsh, General Manager, Quebec Central Ry., Sherbrooke, Que., with Mrs. Walsh and their son, were on the s.s. Empress of Britain's cruise from New York to the West Indies, between Jan. 21 and Feb. 19.

Charles Marshall Walton, whose appointment as Superintendent of Transportation, Eastern Lines, G.T.R., Montreal, was announced in our last issue, was born there, Jan. 24, 1885, and entered G.T.R. service Dec. 1, 1899, since when he has been, to May 1, 1911, clerk, Superintendent's office, Montreal; May 1, 1911 to Nov. 1, 1915, car distributor, Montreal; Nov. 1, 1915 to Nov. 18, 1917, Assistant Trainmaster, Island Pond, Vt.; Nov. 18, 1917 to Feb. 1, 1920, chief clerk to General Superintendent of Transportation and General Superintendent of Car Service, Montreal; Feb. 1 to March 16, 1920, relieving Trainmaster, Montreal; March 16, 1920 to July 19, 1921, Inspector of Terminals, Montreal; July 19, 1921 to Jan. 16, 1922, acting Superintendent of Terminals, Montreal.

F. L. Wanklyn, General Executive Assistant, C.P.R., and Mrs. Wanklyn, were passengers on the C.P.R. s.s. Empress of Britain, which sailed from New York, Feb. 21, on a West Indian cruise.

H. J. Watts, who has been appointed Soliciting Freight Agent, Canadian National Rys., Vancouver, B.C., was born at Winnipeg, June 2, 1896, and entered railway service in Oct. 1913, since when he has been, to June 1914, in Sleeping and Dining Car Department, G.T.R.; June 1914 to Dec. 1915, clerk, General Superintendent's office, Midland Ry. of Manitoba, Winnipeg; Dec. 1915 to Apr. 1917, clerk, Freight Traffic Department, Canadian Northern Ry., Winnipeg; Apr. 1917 to July 1919, overseer, with Royal Air Force; July 1919 to Oct. 1920, secretary to Assistant Freight Traffic Manager, Canadian National Rys., Winnipeg; Oct. 1920 to Jan. 1, 1922, in charge of grain desk, Freight Traffic Department, C.N.R., Winnipeg.

H. K. Wicksteed, B.A.Sc., addressed the Engineering Institute of Canada's Montreal branch, on Feb. 13, on South American railways.

The United Association of Railway Employees of America has been established by a number of U.S. railway employees organizations, which are dissatisfied with present union conditions. The new organization is not affiliated with the American Federation of Labor, and it is reported that organizers are to visit Canada in the interests of the new body.

Canadian Pacific Railway Construction, Betterments, Etc.

St. John, N.B., Crossing.—The Board of Railway Commissioners, passed order 12,111 Feb. 2, ordering that Douglas Ave., St. John, be diverted a short distance to the northeast and carried over the St. John Bridge & Railway Extension Co.'s tracks (C.P.R.) by a reinforced concrete arch. This matter came up for discussion by the St. John City Council Feb. 11. The estimated cost of the work is \$120,000, of which the Board of Railway Commissioners is prepared to recommend that \$15,000 be provided by the Dominion Government out of the amount appropriated for the elimination of level crossings, the C.P.R. to build and maintain a concrete bridge over the railway, and the city to build and maintain the approach, construction costs to be paid 25% by the city, 25% by the Dominion Government, and 50% by the C.P.R. The work is to be started within three months from the date of the order, and to be completed within nine months.

St. John River Bridge.—A press report that tenders had been invited for the removal of the old cantilever bridge at the Reversing Falls, St. John, N.B., recently supplemented by a new structure, is stated to be unfounded.

Peterborough Union Station.—The proposal for the erection of a union station at Peterborough, Ont., has been revived owing to the expressivity of the improvement of the C.P.R. station facilities. It is reported that the C.P.R. management has advised the city authorities that it is willing to join in the erection of a union station, if suitable arrangements can be made, rather than undertake the enlargement or rebuilding of its present station. A site is under consideration for a union station at the diamond where the C.P.R. crosses the G.T.R. Peterborough-Bellefleur line, and it is thought that this plan will be carried through.

Carleton Place Station.—We are officially advised that the new station at Carleton Place, Ont., is a one storey structure, 122 ft. long, 32 ft. wide and 16 ft. high, with a basement 7 ft. high, and having a superficial area of 900 sq. ft., in which the heating plant and coal bins are placed. The hipped roof is of wooden truss construction with copper covering. The doors and frames are of oak, and the cornices of pine. The floor plan provides for a waiting room 28 x 72 ft., with men's and women's lavatories, each 10½ x 13 ft.; and a ticket office 14 x 21 ft. The waiting room has a terrazzo floor with red quarry tile, the walls are wainscoted 11 ft. high with semi-glazed brick, with plaster above and on ceiling, and white oak seats are built in against the outside walls. The lavatory floors are terrazzo with sanitary cove base, and the ticket office has a brick floor. Adjoining is a baggage room 23 x 28 ft., with concrete floor, brick walls and plaster ceiling, and C.P.R. standard sliding doors 7 ft. wide. This room has access to the basement and is heated. The express room is also 23 x 28 ft., and is fitted with three 7 ft. standard doors, but is without access to the basement. The platform on the track side is 18 x 192 ft., the station roof projecting over it for 8 ft.; and a 10 ft. platform extends around the ends and at the rear of the building with the roof projecting 6 ft. over them. Work was started on the structure Sept. 20, 1921, and it was expected to have it completed ready for occupation Feb. 15. M. Sullivan & Sons

were the contractors.

Islington Station.—The new station at Islington, Ont., replacing the one destroyed by fire Jan. 5, has been completed. Wells & Gray, Toronto, were the contractors.

Windsor Freight Shed, etc.—We are officially advised in connection with the enlargement of the local freight yard trackage, and the erection of a new freight shed at Windsor, Ont., that press reports of the remarks by Grant Hall, Vice President, as to the expenditure involved are rather overdrawn. While the general project has received approval, many of the details has yet to be determined. In a general way the work to be undertaken upon the erection of a frame freight shed 40 x 300 ft., with a brick office extension 40 x 60 ft., on Caron Ave., a short distance from Elliott St. The tracks serving the freight shed will have accommodation for 20 cars and, in addition to this, there will be team trackage for 30 cars. It is expected that tenders for building the shed will be called for shortly and that work will be started as soon as weather conditions will permit.

Western Lines Extensions and Betterments.—D. C. Coleman, Vice President, Western Lines, on returning to Winnipeg at the end of January, after being in consultation with other members of the company's executive in Montreal, issued the following statement:—"Commercial conditions as they exist at the moment have imposed on the Canadian Pacific, as on all other business organizations, a policy of caution with respect to embarking on large expenditures on capital account. It has been decided, therefore, to announce a beginning in such works only as are of an urgent character. Consideration of further expenditure, including that for the construction of branch lines, has been postponed until March or April, when it is hoped that the outlook will be more clear and that the indications of a steady revival in railway traffic will be more definitely apparent. The most important work to be undertaken at once is the building of a large ocean pier at Vancouver. This is justified by the constant growth of ocean traffic through Canadian Pacific ports. It will take approximately 18 months to complete the work. The filling and dredging for the site has been completed. The pier will be 800 ft. long, with provision made for further extension later, 328 ft. wide, and will carry 4 railway tracks, to enable freight to be handled expeditiously between ship and cars. It will be equipped with the most modern facilities for handling passengers and freight. With the construction of this pier, following on the reinforcement of the ocean fleet by the great steamships the Empress of Canada and the Empress of Australia, the company is confident that it will hold for Canada for many years the blue ribbon of supremacy of the Pacific. To assist in the prompt movement of traffic, mechanical coaling plants of an improved type will be erected at Eagle River, Ont., LaRivière, Man., Estevan and Swift Current, Sask., and Medicine Hat, Alta. The growth of the fruit traffic on Okanagan Lake justifies the building of an additional ice storage building at Okanagan Landing, B.C., and this will be undertaken at once. Automatic protection signals will be installed at Sidney, Man., and Ruby Creek, B.C.

Water supplies at the following plants will be improved to meet the demands of increased traffic which may be expected, viz., Rathwell, MacGregor, and Wheatlands, Man.; Breckenridge, Hirsch, Fry, Weyburn, Macoun, Elbow, Parkley, Fauna, Outlook and Gull Lake, Sask.; Bow Island and Lundbreck, Alta., and Elko and Creston, B.C. The new office building at Moose Jaw and the important extension to the island coal dock at Fort William will be pressed to conclusion, and a considerable amount of work will be carried on in the replacement and standardization of bridges on the line."

Fort William Island Coal Dock.—We are officially advised that the island coal dock at Fort William, Ont., erected some years ago, provided for a storage ground to take a maximum of about 700,000 tons of soft coal. It has now been decided to increase its capacity by practically duplicating the present storage ground, locating the extension immediately behind and paralleling the present storage ground, and spanning the new storage area with a main trolley bridge, similar to that spanning the present storage. The new bridge will be equipped with a screening plant and box car loader, which will be used in loading cars on tracks back of the new storage, the present storage being equipped to load cars at the front or dock side.

Automatic Signals.—We are officially advised that the signals to be erected at Sidney, Man., and Ruler Creek, B.C., as mentioned in Vice President Coleman's statement given above, will be merely isolated signals for station protection purposes.

Coaling Plants.—We are officially advised that the coaling plants to be erected at Eagle River, Ont., and La Rivière, Man., will each have a capacity of 100 tons, and those to be erected at Swift Current, Sask., and Medicine Hat, Alta., will each have a capacity of 280 tons. They will be of the usual C.P.R. type, with continuous chain and bucket conveyor. The plant at Estevan, Sask., will replace an old trestle chute with one of similar design.

Vancouver Pier.—We are officially advised that the new pier at Vancouver, B.C., will be 800 ft. long by 328 ft. wide, supported on creosoted timbers and piling. The superstructure will consist of two double deck sheds, each 100 ft. by about 750 ft. Between the two sheds will be space for four railway tracks and between the shed and the ship berths there will be space for two railway tracks to facilitate handling shipments direct to and from ships without the same having to pass through the freight sheds. Ample facilities will be provided for passengers, customs and cargo handling, with a full equipment of elevators or other means of connecting the two decks of the freight shed. It is proposed to call for tenders for this structure in the near future and to press work to an early completion. (Feb., pg. 70.)

W. L. Malpother, President, Louisville & Nashville Rd., in testifying recently before the Interstate Commerce Commission, at the general rate hearing, expressed the opinion that railway employees' wages should be more flexible, and in a larger degree determined by the railway managements.

The Pere Marquette Ry. has ordered 500 automobile box cars. They will have wood upper frame and steel underframe, double sheathed, and 40 tons capacity.

The Maritime Provinces' Demands for Local Railway Management.

The agitation in the Maritime Provinces for the separation of the Intercolonial Ry. and other units of the former Canadian Government Rys. System, from the Canadian National Rys. System, culminating in the sending of a delegation to Ottawa to state the case to the Meighen Government, was dealt with fully in Canadian Railway and Marine World for June and July, 1921. Mr. Meighen assured the delegation that their demands would be given thorough consideration, and during the general election campaign he stated that steps would be taken to meet their views by placing the Maritime Province lines of the Canadian National Rys. in a grand division under management centralized in those provinces. The elections having resulted in a clear sweep of Nova Scotia and Prince Edward Island by the Liberals, with New Brunswick divided between the two old parties, the Liberal members from those provinces decided to press the matter on the new Government, and a delegation, consisting of H. J. Logan, of Cumberland, N.S.; E. M. Macdonald, of Pictou, N.S., and Messrs. Leger and Turgeon, of New Brunswick, waited on members of the Government in Ottawa on Feb. 1, being received by Prime Minister King; the Secretary of State, A. T. Copp, and the acting Minister of Railways, G. P. Graham. An Ottawa press report stated that the delegation presented a carefully prepared brief to the Prime Minister, but he has informed Canadian Railway and Marine World that no brief was submitted, the representations made being entirely oral. Canadian Railway and Marine World therefore asked H. J. Logan, M.P., to furnish a statement of the case as presented to the Government, and he has complied as follows:—"I am delighted to see that there is one Toronto paper which is 'desirous to present the Maritime Province's case in regard to the Intercolonial Ry. fairly.' Our case briefly is as follows:—"The Intercolonial Ry. was built as part of the Confederation pact, to give old Canada winter sea-ports and to bridge the distance between the Maritime Provinces and the new market of Canada which was to be substituted for the old market of the New England States. The Maritime people at that time were particularly prosperous. In New Brunswick the trade was \$66 per head, in Nova Scotia \$56, and it was only \$5 in Canada. The winter delegation came from Canada, including Sir John A. Macdonald, George Brown, D'Arcy Magee and other leading statesmen, and promised the Maritime Provinces that they would bridge the distance by building the Intercolonial Ry. Mr. Brown held out a bait by stating that the Maritime Provinces would bring their products to 'our three millions of inhabitants.' Sir John A. Macdonald and all the other statesmen said distinctly that the Intercolonial would never be a commercial success but was a political necessity. Mr. Brown, speaking in Toronto, said that he had formerly been opposed to the building of the Intercolonial, but he said: 'It would be better for us to build half a dozen Intercolonials, rather than that the union of the provinces should not take place.' Sir John A. Macdonald, after referring to it as a political necessity, said it was one of the conditions on which our constitution was adopted. Sir George E. Cartier said in

Montreal that the Intercolonial was being built as the price of securing maritime ports.

"Even the verbal assurances of Canadian statesmen were not accepted by the people of the Maritime Provinces. They insisted that the road should be made a part of the Confederation pact, and it was therefore inserted in the British North America Act, sec. 145, as follows: 'Inasmuch as the provinces of Canada, Nova Scotia and New Brunswick, have joined in a declaration that the construction of the Intercolonial Ry. is essential to the consolidation of the union of British North America, and to the assent thereto of Nova Scotia and New Brunswick and have consequently agreed that provision should be made for its immediate construction by the Government of Canada, therefore, in order to give effect to that agreement, it shall be the duty of the Government and Parliament of Canada to provide for the commencement, within six months after the union, of a railway connecting the River St. Lawrence with the City of Halifax, and for the construction thereof without intermission, and the completion thereof with all practicable speed.'

"After the consummation of Confederation it was found necessary that the money to build the road should be procured by Imperial guarantee. This guarantee was refused unless the road were built as a military one around the northern part of New Brunswick by a route previously surveyed and the direction of the Imperial Government by Major Robinson, a military engineer. As far as we were concerned in the Maritime Provinces, the road was to provide inter-provincial trade, if we should lose at any time the New England trade, so important to us at that time. If the Maritime Provinces people had been told prior to 1867 that rates would be established which would be prohibitive of inter-provincial trade there would never have been any British North America Act, as far as we are concerned.

"For 50 years the road was operated according to the true intent of the Confederation pact and a very valuable trade was created and carried on between the Maritime Provinces and Quebec and Ontario, when suddenly it was linked up with the Canadian Northern System, its management transferred to Toronto, and by order in council the Canadian Northern Ry. directors became its managers. Its rates were increased to such an extent as to prohibit the very purposes of its creation. Take, for instance, coal, one of the big products of Nova Scotia and New Brunswick. Under the old management large quantities of coal were shipped to Quebec and even to Ontario. The Canadian Northern management raised the rate on coal 150%, and as a result not a ton now goes out of the Maritime Provinces to Ontario and Quebec consumers by rail. We contend that the rates on this road cannot be based on commercial considerations. Rates which prevent trade between this part of Canada and old Canada are a distinct violation of pre-Confederation promises. The management of the Intercolonial having been taken away 800 miles west has put the headquarters out of touch with our people. Two-thirds of our difficulties could be overcome if the management was back at Moncton, where it

would be accessible to the people. The matter of rates is absolutely vital to our existence. We are shut out by the highest United States tariff of 30 years from the New England market, and now being shut out from the Canadian market, we have to look forward to the happy future of swapping jackknives with ourselves, while our industries languish and the grass will grow upon our streets.

"We are not asking for charity, but we claim and are in deadly earnest in claiming, that the solemn pledges of Confederation confirmed by Imperial statute shall not be violated. The deepening and extension of the Canadian canal system was also made a part of the Confederation pact, but while the rates on the Intercolonial Ry. have been made excessive, the Ontario canals have been made as free as the ocean. The only satisfactory solution of this problem is that the road be operated from Moncton, which is the center of the Maritime Provinces system, under a management with full knowledge of the purposes for which the road was built, and fully cognizant of the terms of the contract made in 1864 to secure the assent of Nova Scotia and New Brunswick' and answerable and responsible only to the Railways Department at Ottawa."

Premier King promised the delegation every consideration, and stated that the matter would be taken up as soon as the Minister of Railways, Mr. Kennedy, returned from his inspection trip of the National lines, which he was then making.

The Maritime Provinces' demands put both the old and the new Government in a difficult situation. If the Intercolonial is not restored to Maritime management, the Government will doubtless encounter serious trouble from its support in that section of the country; if the demands are acceded to, the feeling among the Progressives and the Conservatives and Liberals from other sections of the country who are favorable to railway consolidation will be directed against the Government. Whether the demands will be acceded to remains to be seen. While it is possible that some arrangement involving the division of the Canadian National Rys. into two or three great operating divisions, with large powers and authority delegated to the management of each, may be brought about, the fact remains that the prospects of Canadian National Rys. operating being maintained free from political interference have not been brightened by these Maritime Provinces' demands.

Grain Inspected at Western Points. Grain in Store at Elevators.

The following shows the number of cars of grain inspected at Winnipeg and other points on the Western Division during Jan. 1922, and for five months ended Jan. 31, 1922 and 1921, as reported to the Dominion Bureau of Statistics, Internal Trade Division:—

	5 mos. to 5 mos. to	Jan. 31 Jan. 31
	1922	1921
Canadian Northern Ry.	4,854	41,126
Canadian Pacific Ry.	5,718	21,142
Grand Trunk Pacific Ry.	1,528	26,679
Great Northern Ry.		15,607
(Duluth)	38	749
Total	12,015	158,074
	137,981	

Canadian National Railways Construction, Betterments, Etc.

Lunenburg, N.S., station was completely destroyed on Feb. 7, with its freight and express contents. The building was an old frame structure, the rebuilding of which has been discussed for some time. Lunenburg is the terminus of the old Nova Scotia Central Ry., which was taken over by the Halifax & South Western Ry.

St. John, N.B., Island yard offices were burned Jan. 31. It is said that a great building will be erected at an early date.

St. John Terminals.—The Deputy Minister of Railways is reported to have advised the St. John, N.B., Board of Trade that the C.N.R. management is considering improvements in the terminals at St. John to further the interests of Canadian trade, into and out of this port.

Western Lines Betterments.—Canadian Railway and Marine World for February gave on pg. 72 information about a number of the larger works and betterments done in 1921 on the Western Lines. We have been further advised that in 1921 there were erected on lines under construction 13 stations and shelters, 10 section houses, 29 loading platforms, 13 stockyards, 7 water tanks, 4 pump houses with necessary auxiliary plant, 1,775 lineal feet of pipe line, 1 pumpman's dwelling, 110 miles of telegraph line, and 230 miles of new fencing. The construction of these new lines involved the handling of 1,400,000 cubic yards of material for embankments, the use of 600,000 cubic yards of ballast, 465,000 f.b.m. culvert timber, 8,000 ft. of culvert pipe, 4,015,000 ft. of timber on 12,216 lineal ft. of bridges, 118,250 lineal feet of piling, and 170,600 tons of iron. On betterments, 844,000 cubic yards of material was used in bridge filling, 35,000 cubic yards of material in bank widening, and 1,200,000 cubic yards of ballast were spread. Yard extensions at Saskatoon, Sask., involved the laying of 9.6 miles of new track, and yard improvements and sidings at other points 41.5 miles of track. The water supply at Melville, Sask., provides for a storage of 250,000,000 gall., and necessitated the laying of 15,600 ft. of pipe. Pipe lines were laid at the following points:—Dana, 20,500 ft.; Maymont, 20,800 ft.; Humboldt, 20,125 ft.; Margo, 4,655 ft.; and Watson, 3,200 ft.; and reservoirs were built at eight other points.

Saskatchewan Branch Lines.—The Saskatchewan Legislative Assembly has passed a resolution unanimously authorizing petitions to the Dominion Government asking appropriations of money at the earliest possible date for the completion of C.N.R. branch lines projected in the province; and for the continuance of construction on branch lines until completed. The preamble stated that a number of branch lines have been projected for many years, that some construction has been done on a number of them, and that it is essential in the interests of the province that they be completed at the earliest possible date. Figures given in Canadian Railway and Marine World for February on pg. 72 showed that 342 miles of branch lines in Saskatchewan had been graded, and 231 miles of track laid thereon. The Saskatchewan Government has also guaranteed the bonds of the Canadian Northern Railway in respect of other lines on which construction has not yet been started.

Riverhurst-Craik Subdivision Connection.—We are officially advised in connection with the Board of Railway Commissioners' recent order authorizing the building of a line across three road allowances on a route from the Grand Trunk Pacific Ry. Riverhurst Subdivision and the C.N.R. Craik Subdivision, that the line will cross sections 34, 17, 20 and sections 3, 10 and 15, 18, 20, all west of the Second Meridian. When this connection is completed portion of the old Qu'Appelle, Long Lake & Saskatchewan Ry., between the G.T.P. Ry. crossing and the north end of Armidore siding, will be abandoned. This will entail the abandonment of the C.N.R. yards at North Regina, and the siding at Armidore. The length of the proposed connecting line is 3.58 miles.

Entwistle-Magnolia Cutoff.—A press report states that a cutoff is to be built from a point on the Grand Trunk Pacific Ry., east of Entwistle, Alta., station, to the Canadian Northern Ry., close to Magnolia, Alta., which will mean the abandonment of the C.N.R. line from Magnolia, for over 10 miles westward. The bridge across the Pembina River, on this section of the line, will, it is said, be removed and re-erected on the Brazeau section, and the C.N.R. section at Evansburg will be moved over to the G.T.P. Ry. line, to enlarge the accommodation at the station there.

Vancouver Island.—We are officially advised in connection with the proposed laying of track on a further 10 miles on the Vancouver Island line, that grading has been completed for several years for a number of miles beyond the point to which it is now proposed to lay track. The only work to be done is to clear up the right of way, and to lay the track. This will be done by C.N.R. forces, and will be gone on with as soon as weather conditions are favorable.

Prince Rupert Coal Bunkers.—We are officially advised in respect to the proposed erection of coal bunkers on the water front at Prince Rupert, B.C., that these facilities are not to be provided by the C.N.R. The question of the lease of a site for the same has not yet been settled. (Feb., pg. 72.)

Prince Rupert Salmon Wharf.—In the paragraph respecting the erection of the salmon wharf and warehouse at Prince Rupert, B.C., in Canadian Railway and Marine World for February on pg. 72, it was stated that the capacity of the warehouse will be 50,000 cases of salmon. As stated in our January issue, on pg. 27, the capacity of the warehouse will be 350,000 cases of salmon, which figures were reproduced in the copy for the February issue, but owing to a typographical error, the figures 50,000 were given instead of 350,000.

Railway Lands Patented.—Letters patent were issued during January, for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Canadian Northern Ry.	44,17
Canadian Pacific Ry.	11,22
Edmonton, Dunvegan & British Columbia Ry.	29,97
Total.	115,36

An English railway is painting its freight cars hand rails white, so that trainmen may see them more easily at night.

Grand Trunk Railway Construction, Betterments, Etc.

Portland, Me., Pier.—The Maine Legislature in 1919 passed an act which was subsequently approved by the people, authorizing an issue of \$1,150,000 of bonds for the construction of a pier at Portland. The Cities of Portland and South Portland subsequently provided a site for the pier, adjacent to the G.T.R. terminus. Plans for a pier 320 x 1,000 ft. were prepared, and approved by the civic, state and U.S. governments, and construction work has been started recently. The G.T.R. will have a track connection with the pier. (Feb., pg. 76.)

Montreal Elevator Enlargement.—The Montreal Warehousing Co., a G.T.R. subsidiary, is inviting tenders for the construction of a 1,000,000 bush storage annex to the G.T.R. elevator at Montreal, together with a car dumping machine for unloading purposes, and a carrier for delivering grain to ocean vessels. The addition will increase the elevator's capacity to 8,000,000 bush. It is expected to have the work completed during the summer.

Guelph Freight Sheds and Trackage.—The G.T.R. has applied to the Board of Railway Commissioners for approval of plans for a new freight shed and additional tracks at Guelph, Ont. A press report says that the plans show that the entire block from Huskisson St. to Gordon St. between Farquhar and Waterloo Sts., will be used for this purpose and that it is proposed to run tracks along Waterloo St. on an elevation. The city council on Jan. 31 authorized its railway committee to oppose the application.

New Hamburg Station.—A press report says that a new station is to be erected at New Hamburg, Ont., at an estimated cost of \$5,000.

Stratford Level Crossing.—Negotiations are in progress between Stratford, Ont., City Council and G.T.R. officials for the elimination of the level crossing between Nile and King Sts. The estimated cost of a bridge is about \$200,000 and that of a subway might be about \$500,000. Several sites were looked over at a conference on Feb. 13.

London District Track Relaying.—It is reported that work will be started early in March on relaying sections of the line east of London, and west of London between Hyde Park and Sarnia, Ont., with 100 lb. rails. It is expected that 100 miles will be relaid during this year.

Railway Rolling Stock Orders and Deliveries.

The C.P.R. received the following rolling stock recently from Canadian Car & Foundry Co.: 5 pit cars, 3 depressed center flat cars, and 15 mail cars.

An Associated Press Dispatch from Novorossisk, Russia, Feb. 7, stated that 394 oil tanks had been received there from Canada, and 304 more were en route. The order was for 500 oil tank cars, and these were shipped from Montreal on the Canadian Government Merchant Marine steamships Canadian Seignior, Canadian Ranger, Canadian Challenger, Canadian Commander and Canadian Miller. It may be taken from the dispatch that four of these steamships had arrived at Novorossisk, with approximately 400 cars, and that the fifth, with the balance of the order for 500, was then en route.

Sumas River Bridge Lift Span.

The Canadian National Rys.' line crosses Sumas River practically at its confluence with the Fraser River 53 miles east of Vancouver, B.C. The crossing is effected by a standard pile trestle bridge 405 ft. long, and having a maximum height from bottom of river to rail level of 38 ft. Back water from the Fraser River creates the high water elevation at the bridge, which is within a few feet of rail level. Sumas River, in its upper reaches, empties into Sumas Lake, while the lower reaches of the river provide an outlet from the lake to Fraser River.

The possibility that, infrequently, boats or dredges might require to pass from the Fraser River through this bridge, on the way to Sumas Lake, prompted the C.N.R., when the bridge was built in 1911, to so arrange the portion between bents 11 and 14 (about 40 ft.) that ties, string-

ally, had to be brought from a divisional point.

During the winter of 1920-1921 it became evident that something in the nature of a movable span, not requiring outside equipment to handle it, must be provided, and with this object in view, a temporary lift span was designed and built. Once the project of draining and reclaiming the Sumas Lake region is accomplished, the need for a movable span at this point will not exist, hence the necessity of adopting an expedient which would at once be effective but comparatively inexpensive. The accompanying plan illustrates how the work was accomplished. The existing movable portion of the deck was turned into a lift span operated by a hand winch, by the application of balance weights and chains and the provision of strong hinges. A

the span to be accurately balanced. The balance weights aggregate about 27,000 lb. on each side. The loose ends of the chains are hung back to the top of the tower, in such a way that, as the span rises and the pull in the chain is reduced, the weight of each balance weight is successively transferred to this back chain, until, when the span is full open, but one balance weight on each side remains acting on the span. In this way the span is overbalanced and underbalanced alternately, the difference between balance weight and chain pull at any point being taken up by the winch. The winch has a double crank, and drives one chain wheel on each side of the tower, the other chain wheel on each side running loose on a fixed shaft. This prevents variation in the link centers affecting the operation of the winch. Universal couplings on the

Sumas River Bridge, Canadian National Railways. Side elevation of lift span, with diagram of lifting chain and balance weights.

ers, bents, etc., could be removed and again replaced with a minimum of difficulty. This arrangement sufficed until 1920, when the Sumas Lake reclamation project, with the prospective passing of large barges and dredges up the Sumas from the Fraser, made an improvement in bridge opening facilities necessary. Accordingly, bents 12 and 13 were removed altogether, and the entire space between bents 11 and 14 was spanned by 6 timber stringers, each 16 in. x 32 in. x 42 ft. long. After this change was made it became only necessary to remove, and later replace, 42 lin. ft. of deck to pass a boat through. This arrangement, of course, having in view the weight of the timber in the deck, each stringer weighing nearly 3 tons, involved the use of equipment for handling it, which, nor-

mal, had to be brought from a divisional point. During the winter of 1920-1921 it became evident that something in the nature of a movable span, not requiring outside equipment to handle it, must be provided, and with this object in view, a temporary lift span was designed and built. Once the project of draining and reclaiming the Sumas Lake region is accomplished, the need for a movable span at this point will not exist, hence the necessity of adopting an expedient which would at once be effective but comparatively inexpensive. The accompanying plan illustrates how the work was accomplished. The existing movable portion of the deck was turned into a lift span operated by a hand winch, by the application of balance weights and chains and the provision of strong hinges. A

shaft connecting the two driving chain wheels allow for any settlement that may occur. The hinges are of ample size, built up of steel castings, plates and angles. The hinge pins rest in slotted holes, the slots being vertical, providing for some free vertical movement of the lift span relative to the fixed deck when traffic is passing. When the span is closed the hinge pin is located in the center of the slot and must fall to the bottom before the load is taken by the hinge when raising. Two large boxes filled with gravel, one on each side of the tower, provide the weight necessary to balance the tower against the pull of the lift span when raising.

The work of installing the towers, machinery, etc., was completed during Aug. 1921, and the structure has proved to

be eminently satisfactory. It provides a clear span of 36 ft., and the operations of raising and lowering the span each occupy 4 minutes, using 4 men. In all probability this record will improve after more extended use.

The problem at this structure was to provide a navigation opening which could be available at short notice, but which would be required only for a compara-

tively short period of time. Hence the necessity for limiting expenditure. The completed structure cost only \$8,160, and was installed without delaying traffic or discarding any portion of the original structure.

Canadian Railway and Marine World is indebted to J. G. Legrand, Bridge Engineer, Canadian National Rys., Western Lines, for the foregoing information.

Traffic Orders by Board of Railway Commissioners.

Rates on Western Grain Milled in Eastern Canada.

General order 357. Feb. 14.—Re application of Canadian National Millers Association and Dominion Millers Association for an order suspending tariffs or supplements to tariffs filed with the Board in pursuance of its general order 354, Jan. 4, 1922, increasing the rates for out of line haul on western grain milled in Eastern Canada. Upon reading the application and what was alleged in support thereof, the Board orders that the tariffs or supplements to tariffs filed by railway companies in accordance with the requirements of general order 354, in so far as such tariffs or supplements to tariffs increase the charge for out of line haul on western grain moving all rail or lake and rail to milling points in Eastern Canada, be suspended from their effective dates, with leave to the railway companies to apply to the Board for an adjustment of rate, if necessary.

Chief Commissioner Carvell gave the following judgment:—During the hearing of all phases of the milling in transit case, since I have been a member of the Board, and from reading all of the evidence and correspondence before that date, the question of the out of line haul on grain for milling purposes was never mentioned, or even thought of, and, therefore, when writing the judgment in the milling in transit case a few weeks ago, it was not my intention to in any way interfere with the existing rates for the out of line haul, and the only time it was mentioned was on page 4, where I used these words: "and, therefore, I find that all grain produced in Canada should be allowed the same stop over privileges for milling purposes, no matter in what part of Canada the milling operation takes place. This, of course, has nothing whatever to do with the out of line haul. In such cases, reasonable rates off the through line should be granted the transportation companies."

My only object in introducing the subject in the judgment was that there should be no misunderstanding as to the fact that the milling in transit fee should in no way interfere with the out of line haul charge and to leave the door open by which the railways could file reasonable rates for the out of line haul on Ontario and Quebec grains, because, as I understand it, heretofore there has been no such thing as an out of line haul on these grains, it was simply a rate in and a rate out. Now that Ontario and Quebec grain is enjoying the milling in transit privilege, it naturally presupposes a new tariff, giving the through rate plus the 1c. stop over charge for milling purposes, and, therefore, without expressing any opinion as to whether the tariff filed for that particular business is fair or not, some tariff must be provided, and I think that portion of the tariffs filed effective Feb. 1, viz., that

applying to Ontario and Quebec grain for milling in transit purposes, should be allowed to remain, with leave reserved to the millers, or any interested party, to apply to the Board for a change. No great injury can be done to any interested by this arrangement, because, in a telegram from the Dominion Millers Association, Feb. 9, it is stated as follows: "No Ontario grain moving, as crop practically all marketed, so statistics asked useless."

It was never my intention, however, that the railway companies should in any way interfere with existing out of line hauls, which, of course, would affect all western grains, and I do not see how such an interpretation could properly have been applied to the words heretofore quoted, and, even if such interpretation could be justified, I do not think the companies would be justified in filing a rate effective on a given date without giving the public an opportunity to investigate. Therefore, in my opinion, so much of the tariffs above referred to as applies to the out of line haul on western grains should be suspended as of Feb. 1, with leave to the transportation companies to apply to the Board for an adjustment of rates, if the same be necessary.

Unloading Charges at Halifax on Apples and Potatoes.

32,038. Jan. 17.—Re application of the Nova Scotia Shippers' Association for an order rescinding order 30,619, dated Feb. 2, 1921, providing for unloading charges at Halifax, on export freight traffic, of 1½c. per 100 lb. on perishable freight and 3c. per 100 lb. on other freight. Upon hearing the application at Moncton, N.B., March 7, 1921, and in Halifax, N.S., Jan. 17, 1922, the Nova Scotia Shippers' Association, the Department of Agriculture, the Canadian National and the Dominion Atlantic Railways being represented, and what was alleged, the Board orders that the Dominion Atlantic Ry. forthwith file with the Board a tariff, effective Jan. 18, 1922, providing for a rate of 1½c. per 100 lb. for handling charges of apples and potatoes, in barrels, for export, at Halifax, N.S.

Chatham, Wallaceburg & Lake Erie Ry. Freight Tariff.

32,091. Feb. 4.—Approving Chatham, Wallaceburg & Lake Erie Ry. Standard Freight Mileage Tariff, C.R.C. 672.

Arbitrary Charges on Lumber from Vancouver Island.

32,095. Re complaint of Associated Boards of Trade of Vancouver Island, B.C., against arbitrary charges made by railways over the mainland coast rates on lumber, in carloads, from Vancouver Island points; and re complaint of British Columbia Lumber & Shingle Manufacturers, Victoria Branch, and the Lake Lumber Co., Vancouver, against arbitrary

charges over coast rates charged on lumber from points on Vancouver Island. Upon hearing the complaints at Victoria, April 11, 1921, the complainants, the Canadian Pacific and the Canadian National Railways being represented, and what was alleged, the Board orders that the complaints be dismissed.

Aerial Transportation Notes.

R. H. Nisbet is reported to have said in speaking at Quebec recently that while the aeroplane is the photographer par excellence in most of the work undertaken in surveys in Canada, it is of little service for survey work with the present mechanical devices at its disposal, and that co-operation with ground surveyors is essential to its success.

Captain Maxwell and a pilot are reported to have completed a round aerial trip carrying mail, from Cochrane to Moose Factory, Ont. Feb. 6. The northward trip was made Feb. 4, the distance being covered in two hours and 10 minutes, and the return trip was made on Feb. 6. On the latter date several stops were made in the vicinity of the Abitibi River to test the machine on different kinds of snow.

A successful test of an experimental helicopter is reported to have been made at Farnborough, Eng., Feb. 9. The machine, which weighed over a ton, and carried a pilot and over 250 lbs. of excess weight, together with a large supply of gasoline, is said to have risen from the ground, to have hovered in the air for some minutes and then landed practically on the spot from which it rose.

A mechanical air pilot is reported to have been given a successful test at London, Eng., recently. The aeroplane is fitted with twin engines, and the piloting device is placed between them. It is said that at the test the plane, carrying 12 persons, ascended to a height of over 1,000 feet, and that the pilot then put his hands in his pockets and let the mechanical device take charge. The test lasted for half an hour, the plane travelling at 80 miles an hour.

Freight and Passenger Traffic Notes.

Prince Edward Island shipped 48,900 bush. of certified seed potatoes during 1921 to the United States.

The C.P.R. recently carried several cars of snow as freight from Lake Louise to Calgary, Alta., recently, for the winter carnival.

The Great Northern Ry. has announced special rates from Idaho, Washington and Oregon, to Vancouver, B.C., for the Rotarians' convention there April 3 and 4.

The Dominion Atlantic Ry. is reported to have moved 105,000 barrels of apples of the 1921 crop to Halifax, N.S., for export, and it is reported that there are still 350,000 barrels in storage for export.

Traffic through the G.T.R. tunnel at Sarnia, Ont., is reported to have increased recently so as to require three additional train crews. It is said that 1,150 cars were hauled through the tunnel in one day recently.

The Canadian Pacific Ry. up to a recent date hauled 2,048 cars of grain containing 4,285,903 bush. to the elevators at West St. John, N.B., against 2,068 cars containing 3,473,545 bush. for the corresponding period of 1920-21.

Canadian Railway AND Marine World

ESTABLISHED 1896

Devoted to Steam and Electric Railway,
Marine, Shipbuilding and Railway, Harbor and
Canal Contractors' Interests.

Official Organ of various Canadian Transporta-
tion Associations.

Published on the first of each month at
70 Bond Street, Toronto, Canada.

ACTON BURROWS, Proprietor and Editor.

AUBREY ACTON BURROWS, Business Manager

Assistant Editors, John Keir, Donald F. Keir and
Edwin Winfield

United States Business Representative,
A. Fenton Walker, 143 Liberty St., New York.

Member of
Associated Business Paper, Audit Bureau of Cir-
culations, Canadian National Newspapers and
Periodicals Association, Canadian Press Association.

Authorized by the Postmaster General for Cana-
da, for transmission as second class matter.

SUBSCRIPTION PRICE, including postage,
Canada, United Kingdom, most other British Posses-
sion (except Australia), and to Mexico, \$2 a
year. Extra postage to United States, 50c. a
year, to other foreign countries, except Mexico,
\$1.50 a year.

SINGLE COPIES, 25 cents each.

The best method of remitting is by express or
post money order. If remittance is made
by cheque, 15 cents should be added to cover cost
of collection, unless cheque is payable at par in
Toronto or Montreal.

ADVERTISING RATES furnished on application.
ADVERTISING COPY must reach the publishers
by the 10th of the month preceding the date of
the issue in which it is to appear.

EDITORIAL NOTES.

Industrial Research.—Robert Hobson, President of the Steel Co. of Canada, who waited on the Dominion Government recently, with other Canadian Manufacturers Association's members, urged the establishment at Ottawa of a bureau for industrial research. There is a great need of such work, which is of the utmost importance to all industries, including the transportation ones, and it is to be hoped that the Government will act on the suggestion.

Drydock for North Vancouver.—It is to be hoped that the Dominion Government's request to the Burrard Drydock Co., not to go on with the construction of the floating drydock at North Van-
couver, for which it obtained a subsidy agreement from the former Government is only of a temporary nature, and that it will be withdrawn at an early date. Vancouver has needed a drydock very badly for many years, and its construction should be gone on with at once, and be pushed to completion as rapidly as possible.

Keep Carried out of the Canadian National Railways.—One of the Trades and Labor Congress of Canada's requests, submitted to the Dominion Government recently, viz., that the order promulgated by President Hanna, of the C.N.R., forbidding employees to become candidates for the Dominion House of Commons, or any of the provincial legislative assemblies, be cancelled, should be promptly and firmly reversed. There has been too much political interference with the management, ever since the lines went under Government ownership, and this should not be intensified by allowing employees to become parliamentary or legislative representatives.

Aids to Navigation.—The Shipping Federation of Canada's President, in his report at its recent annual meeting, which is given fully on pages 157 and 158 of this issue, calls attention to what seems to have been somewhat extraordinary action by the Naval Service Department, in closing its radio telegraph station on the St. Lawrence River and Gulf, without consulting the shipping interests, or even issuing the customary notices to mariners. The strong protests which were made resulted in most of the stations being re-opened, but the one at Cape Ray remains closed, and it seems to be all important that it should be put in operation again this year. Economy may have carried too far when it took the form of abolishing what may now be considered an absolutely necessary aid to navigation. Direction finding stations established by the Department have proved of great value to mariners, and should be increased as rapidly as possible.

Wheat Exports via Vancouver.—The figures given on page 165 of this issue will probably surprise a good many people, especially those east of the Great Lakes who show that the grain shipped at Vancouver from the prairie provinces, principally from Alberta, have risen from 73,419 bush. in the 1916-1917 crop year, to 2,485,611 bush. in 1921-22, including in the latter year up to Jan. 20 only. The table showing destinations of shipments from Vancouver during the current crop year up to Jan. 20, are very interesting. Exports to Japan aggregated 328,073.50 bush.; to the United Kingdom, 176,276.50; and to Holland 110,533.20. The trade via Vancouver will undoubtedly continue to increase. While the Minister of Railways was on an in-

spection trip of the Canadian National Ry., as far west as Winnipeg, recently, a Fort William, Ont., press dispatch credited him with having stated there that eastbound freight rates on grain would be reduced so as to cause grain grown on the western portions of the prairies to be sent out via the head of the Great Lakes. The later Winnipeg press dispatch credited him with denying the Fort William report, and with saying that the question of routing was one for shippers alone, and not one that the Government could undertake to influence, by the development of one port to the detriment of another. It is not at all likely that Mr. Kennedy made the statement attributed to him by the Fort William dispatch.

Harbor Commissions and Politics.—One of the worst remaining features of the political patronage system is the practice of changing various harbor commissions' personnel with each change of Dominion Government. In Montreal, the presidency was vacated a few months ago by W. G. Ross resigning to become a candidate for the House of Commons in the Dominion general election. The Meighen Government did not fill the vacancy, and the King Government, of course, had to do so, but there was no valid reason why the other two commissioners should have had to retire and be replaced by political supporters of the Government. In the case of the Quebec Harbor Commission, the change amounted to an outrage. On returning from the Great War, in which he performed never to be forgotten services, Major General Sir David Watson was appointed President of the Commission by the Borden Government, Senator L'Esperance having resigned, owing to ill health. Surely it would have been a graceful thing for the new Government to have retained Sir David in that position, but as is shown by a memorandum he made shortly before his recent death, and which was found among his papers, it was intimated to him that he should resign, no deference being paid to the great work he performed overseas for Canada and the Empire. In spite of this, Prime Minister King, and the Minister of Marine, Mr. Lapointe, who was no doubt particularly responsible for Sir David's resignation, went to Quebec to attend his funeral. More chivalrous treatment during his lifetime would have been preferable to post-death courtesy.

Error in Numbering Canadian Railway and Marine World's Issues.

After Canadian Railway and Marine World for February had been issued, it was pointed out that its consecutive number should have been given as 288 instead of 287. In tracing the error back, it was found that the April and May 1921 issues were each numbered 278, instead of 278 and 279 respectively, and the error was continued up to the Feb. 1922 issue, which was numbered 287 instead of 288. The numbering has been rectified in the current issue (March), which is the 289th consecutive one. And it "is still going strong."

W. D. Hines, formerly Director General of U.S. Railroads in the U.S., in testifying before the Interstate Commerce Commission recently, stated that in his opinion railways paid too much attention to effecting economies in the road haul, and not enough to effecting of economies in terminal operation.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian National Rys.—A. BROSTEDT, General Traffic Agent for the Orient, has opened his offices in the Glen Line Building, on the Bund, corner Peking Road, Shanghai, China.

J. HAWKINS, heretofore locomotive man, and formerly Assistant Master Mechanic, Rideau, Ont., has been appointed Assistant Master Mechanic, Hornepayne, Ont., vice J. F. Spiegel, resigned on account of ill health.

H. J. WATTS, heretofore in General Freight Department, Winnipeg, has been appointed Soliciting Freight Agent, Vancouver, B.C., vice D. E. Ross, appointed Traffic Representative, Shanghai, China.

EUROPEAN TRAFFIC AGENTS.—The following traffic agents have been appointed for Canadian National-Grand Trunk Rys.

Asia Minor:—Smyrna, T. Bowen Rees & Co.

Belgium:—Antwerp, De Keyser, Thorn-ton & Co.

France:—Paris, Havre, Dunkirk and Boulogne, Hernu, Peron & Co.; Bordeaux, Robt. Vanderuyve and James Moss & Co.; Marseilles, Watson & Parker, and P. A. Young; Tonnay-Charente, Goguet & Williamson.

Germany:—Hamburg, Adolf, Blum & Popper.

Greece:—Patras, W. Morphy & Son; Patras and Piraeus, Panos D. Panaguli.

Holland:—Rotterdam, P. A. Van Es & Co.

Italy:—Naples, Cunard-Anchord Line; Genoa, Lertoro Bros. & Courtman, and Cunard-Anchord Line; Leghorn and Trieste, Cunard-Anchord Line.

Sicily:—Messina, Carrara Bros; Catania, Carbo A. Ali; Palermo, Cunard-Anchord Line.

Spain:—Barcelona, Andres Rosa; Tarragona, Sucessores & Modesto Fenech; Valencia, J. Aguirre Matiol; Denia, Ribes & Co.; Alicante, Juan Guardiola Hijo; Almeria, Antonio Gonzalez Agra; Malaga, Rafael Carbon; Cartagena, P. Miller; San Felix de Guixols, J. Yria & Co.; Gijon, Juliana & Co.; Santander, Doriga & Casuso; Bilbao, San Sebastian, and Passages, A. E. Dawson & Co.

Canadian Pacific Ry.—W. A. ARMSTRONG, heretofore chief rate clerk, District Passenger Agent's office, Toronto, has been appointed City Passenger Agent, Windsor, Ont., vice E. C. Rice, who is on leave of absence owing to illness.

J. ASHCROFT, heretofore Assistant Boiler Foreman, Winnipeg, has been appointed Boiler Foreman, Ogden, Alta., vice T. W. Hind, transferred to Winnipeg.

A. B. CALDER, heretofore of the executive staff, has been transferred to the Colonization and Development Department, as Assistant to the Chief Commissioner. He will also be available for such other duties as may be given him from time to time by the President.

H. C. P. CRESSWELL, heretofore acting Superintendent, has been appointed Superintendent, Colonization and Development Department, vice E. G. White, on extended leave of absence. Office, Montreal.

T. R. FLETT, heretofore Superintendent,

Portage Division, Manitoba District, Winnipeg, has been appointed Superintendent, Cranbrook Division, British Columbia District, vice W. S. Hall, transferred to Portage Division, Manitoba District. Office, Cranbrook, B.C.

H. W. GILLIS, heretofore Assistant Foreign Freight Agent, Montreal, has been appointed Assistant General Freight Agent, Eastern Lines, vice S. C. Hurkett, appointed Assistant Foreign Freight Agent, Office, Montreal.

W. S. HALL, heretofore Superintendent, Cranbrook Division, British Columbia District, Cranbrook, B.C., has been appointed Superintendent, Portage Division, Manitoba District, vice T. R. Flett, transferred to Cranbrook Division, British Columbia District, Office, Winnipeg.

T. W. HIND, heretofore Boiler Foreman, Ogden, Alta., has been appointed Boiler Foreman, Winnipeg, vice J. J. Smith, appointed General Boiler Inspec-

A. B. Calder.
Assistant to Chief Commissioner, Colonization and Development Department, C.P.R.

tor, Eastern Lines.

S. C. HURKETT, heretofore Assistant General Freight Agent, Eastern Lines, Montreal, has been appointed Assistant Foreign Freight Agent there, vice H. W. Gillis, appointed Assistant General Freight Agent, Eastern Lines.

J. A. MCGILL, heretofore City Passenger Agent, Ottawa, Ont., has been appointed General Agent, Passenger Department, Ottawa, Ont.

Capt. R. McKILLOP, heretofore Superintendent, London Division, Ontario District, London, Ont., has been appointed Superintendent, Bruce Division, Ontario District, vice F. M. Rutter, transferred to London Division, Office, Toronto.

F. M. RUTTER, heretofore Superintendent, Bruce Division, Ontario District, Toronto, has been appointed Superintendent, London Division, Ontario District, vice Capt. R. McKillop, transferred to

Bruce Division. Office, London, Ont.

A. L. SAIVIE, heretofore City Ticket Agent, Ottawa, Ont., has been appointed City Passenger and Ticket Agent, there.

J. L. A. SINCLAIR, heretofore locomotive man, West Toronto, has been appointed Assistant Superintendent, Toronto Terminals Division, Ontario District, Office, West Toronto.

J. HARRY SMITH, heretofore financial editor, Montreal Gazette, has been appointed Canadian Press Representative, in charge of the C.P.R. Press Bureau, with office at Montreal. We are officially advised that the work of the Bureau, which was established in 1913, has grown so much that this appointment became necessary and that Mr. Smith will be in full charge of the Bureau. There will be no change at present in the titles of F. W. Fox, Editor, Press Bureau, or M. A. Hargadon, Assistant Editor, Press Bureau, but Mr. Fox is going on a special mission to England, which will entail his absence for probably six months.

J. J. SMITH, heretofore Boiler Foreman, Winnipeg, has been appointed General Boiler Inspector, Eastern Lines, vice J. Gollan, superannuated. Office, Montreal.

A. STEWART, heretofore boiler maker, Ogden, Alta., has been appointed Assistant Boiler Foreman, Winnipeg, vice J. Ashcroft, appointed Boiler Foreman, Ogden, Alta.

Grand Trunk Ry.—W. H. McEWAN, heretofore Night Chief Dispatcher, has been appointed Chief Dispatcher, Districts 4 and 5, and Montreal Terminals, Montreal Division, Montreal, vice O. Masse, whose appointment as Superintendent of Terminals, Montreal, was announced in our last issue.

J. B. REVE, heretofore Night Chief Dispatcher, Richmond, Que., has been appointed Night Chief Dispatcher, Districts 4 and 5, Montreal Division, Eastern Lines, Montreal, vice W. H. McEwan, promoted.

(See also Canadian National Rys.)

Grand Trunk Pacific Ry.—W. P. HINTON, who was Consulting Officer to the Receiver, the Minister of Railways and Canals, at Winnipeg, since July 1920, was relieved of those duties Feb. 28.

New York Central Rd.—G. H. CLARK, formerly Division Freight and Passenger Agent, Ottawa Division, Ottawa, Ont., has been transferred to New York, N.Y., as Division Freight Agent, vice A. McMichael, appointed Coal Freight Agent. The Ottawa Division is now under the jurisdiction of W. H. Northrop, Division Freight and Passenger Agent, Utica, N.Y.

G. C. HAMILTON, heretofore chief clerk, Division Freight and Passenger Agent's office, Ottawa, Ont., has been appointed Travelling Freight and Passenger Agent, Ottawa Division, with headquarters at Ottawa.

Reid Newfoundland Co.—Reports as to R. C. MORGAN, Superintendent, Winnipeg Terminal Division, C.P.R., who was given six months leave of absence to act as Chairman, Management Committee, Reid Newfoundland Co., are very contradictory. The St. John's, Nfld., Daily News of Feb. 14 said: "Mr. Morgan, it is now learned, severed his connection with the Reid Newfoundland Co. some days ago. He has not left the city, but it is understood that he is remaining at the Government's request or direction."

continental and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government and added to the Canadian National Rys.

The column headed "Canadian Northern," includes the lines operated as the Canadian Northern Ry. System, prior to

its acquisition by the Dominion Government.

The column headed "Canadian Pacific, etc.," includes also the Montreal and Atlantic, and Esquimalt & Nanaimo Railways.

The column headed "Grand Trunk" includes its Canadian lines only up to Sep-

tember. The subsequent figures are for all the company's lines. The revenues of these additional lines located in the United States averaged for the first nine months of 1921 less than one third of 1% of the revenue for October. Their inclusion will, therefore, have little effect on the report.

The Railways' Operating Results for November 1921.

The total railway operating revenues for Canadian railways as a whole for Nov. 1921 showed a large decrease from those of Nov. 1920, the drop from \$52,000,000 to \$42,000,000 being a decrease of 19%. Compared with Oct. 1921, the total revenues show decreases of 11%. October being the peak month for freight traffic, this decrease in November gross earnings was to be expected. The reduction in freight earnings from October to November was \$3,272,921, out of a reduction in total gross earnings of \$4,787,197. With all conditions in the industry considered, gross earnings were maintained at a satisfactory level throughout November. Comparing November gross earnings of individual railways, Canadian Government Rys. were 0.5% more than for October; Canadian Northern were 3% less; C.P.R. gross earnings were 15.3% less; Grand Trunk were 10.7% less, and Grand Trunk Pacific were 3.8% greater.

For the railways as a whole, the decrease in operating expenses as between Nov. 1921 and Nov. 1920 was large, and, considered in connection with traffic changes, shows clearly that the costs of railway operation were reduced in great measure within the year. While substantial reductions were shown in maintenance of way and maintenance of equipment accounts, the greatest reduction, proportionately, was in transportation expenses, and this is an indication of a desirable condition, since it shows that maintenance has not been curtailed as compared with 1920. The decrease in the amounts spent in maintenance work as between Nov. 1921 and Nov. 1920 are amply explained by the decreased labor and material costs, and it is evident that as much work was done in maintaining the properties and their equipment as in Nov. 1920, despite the decreased amounts spent. As compared with October, there was a decrease in total operating expenses for all railways, which, while substantial, was scarcely in proportion to the reduction in gross earnings. The operating ratio of 85.09 for the railways as a whole compares well with one of 89.29 for Nov. 1920, but does not compare as favorably with that of Oct. 1921, when it was 79.10.

Compared with Nov. 1920, the number of revenue ton miles of freight handled by the railways as a whole showed a reduction of 12.8%. Freight train miles showed a reduction of 17.4%. These figures indicate that a considerable improvement in operation was made in Nov. 1921, as compared with Nov. 1920, as proportionately more ton miles were handled in proportionately fewer train miles. These figures are borne out by those for loaded and empty freight car miles, revenue freight loading per train mile, and for car loading, while the longer average haul in Nov. 1921 was also an advantage. As compared with October, however, revenue freight ton mileage fell off 14.2% and freight train mileage was reduced only 13.8%, indicating that as

between the two months the freight train mileage was not reduced quite in proportion to the falling off in revenue ton mileage. A less favorable ratio of loaded to total freight cars in each train, combining with fewer cars per train to make a lighter train load, brought this about, overcoming the advantage gained by the average car loading being slightly better in November than in October.

Compared with Nov. 1920, passenger traffic shows a large falling off, despite the greater inducement to travel on account of the lower rates, while passenger train mileage and passenger car mileage were not reduced at all proportionately to the falling off in passenger traffic. As before pointed out by Canadian Railway and Marine World this inability to reduce passenger train mileage, and passenger car mileage, in accordance with reductions in passenger traffic is one of the conditions which goes to largely increase the unit costs of conducting transportation when a slump in traffic occurs. As compared with October, passenger traffic in November again shows a falling off, and this decrease has been evident since the peak month of Aug. 1921. In addition to there being fewer passengers carried in November than in October, the average journey was much shorter, making a large decrease in the total number of passenger miles.

The total amount of the Nov. 1921 pay roll as compared with that of Nov. 1920 shows a large reduction, accounted for not only by the wage reduction taking effect in 1921 and by the reduced traffic, but by the economy being exercised, and by the improvement in operation as concerns the number of freight train miles operated in relation to the ton miles handled. The ratio of the pay roll to operating revenue, 47.5 in Nov. 1921, compared with 52.5 in Nov. 1920, shows an approach to a more normal figure, as does the ratio of the pay roll to operating expenses, 55.9 in Nov. 1921, compared with 58.8 in Nov. 1920.

The decreases which have taken effect in freight and passenger rates since Nov. 1920 are illustrated by a comparison of the average receipts per revenue ton mile and per passenger mile for the respective months. The Canadian Government Rys. show an increase of 7% in revenue ton miles over October, but a decrease of 4% in passenger miles. As stated above, revenues were greater than in October, as were expenses, but both were well below those of Nov. 1920. The decrease in operating expenses from Nov. 1920 was 38%. Maintenance expenses decreased 41%, and transportation expenses 35%, while revenue ton miles decreased 18% and revenue passenger miles 24%. Excluding \$892,971 of back pay included in Nov. 1920, the pay roll for Nov. 1921 shows a decrease of \$894,957.

The Canadian Northern System, with an operating ratio of 93.54, shows a great improvement over Nov. 1920, when it was 107.83. While the revenues were

802 less. Maintenance expenses were reduced \$589,559 less, the expenses were \$2,006,682 less, and transportation expenses 31%. Revenue ton mileage increased 5%, and passenger mileage decreased 14%. The freight and mixed trains showed an average loading 15% heavier, while car loading was 4% heavier than in Nov. 1920. \$847,809 of the difference of \$1,228,377 in the pay rolls is back time included in the 1920 figures.

C.P.R. revenue from freight decreased 20% from Nov. 1920, and from passengers it decreased 32%. Expenses as a whole were reduced 25% and transportation expenses were reduced 31%. Revenue tons of freight per train mile increased 8% and the average car load increased 5%.

The G.T.R. operating ratio was higher than that of Nov. 1920 by 8%, and higher than that of Oct. 1921 by 10%. Freight revenue decreased 20%, and revenue freight ton mileage decreased 10% from Nov. 1920. Passenger mileage decreased 3%, and the average passenger rate decreasing as shown, the passenger revenue was 19% smaller than in Nov. 1920. G.T.R. train loading was heavier in Nov. 1921 than in Nov. 1920, but the average train load ran from 48 to 90 tons lighter than on the Canadian Government, C.P.R. and G.T. Pacific lines, despite the greater density of traffic on the G.T.R. The fact of the G.T.R. not sharing in the heavy western grain movement will no doubt help to account for this.

The G.T. Pacific shows for Nov. 1921 a net operating revenue of \$42,796, against a loss of \$87,775 in Nov. 1920. Passenger traffic decreased but slightly, while revenue freight ton mileage increased 11%.

Any analysis of the trend of Canadian railway operating costs and results during the past year is complicated by the rapidly varying conditions. This applies particularly as to rates for transportation service and also to a wage scales. In any consideration of the results the following changes in rates and wages have to be borne in mind: (1) The increase in wages in the summer of 1920, retroactive to May 1, with various lines making back time payments to their employees as late as Dec. 1920. (2) Increases in rates Sept. 13, 1920: 40% on eastern lines and 35% on western lines on freight; 20% increase in passenger rates, 50% on sleeping and parlor car rates, and 20% on excess baggage rates. (3) On Jan. 1, 1921, the increases in freight rates on eastern and western lines were reduced to 35 and 30% respectively, and passenger rates were reduced till only 10% higher than prior to Sept. 13, 1920. (4) On July 1, 1921, the remaining 10% increase in passenger rates was removed. (5) On July 16, 1921, wages were reduced by about 12%. In addition, effective Dec. 1, 1921, increases in freight rates on eastern and western lines were reduced to 25 and 20% higher than prior to Sept. 13, 1920, respectively, and the sleeping and parlor car rates

were reduced to but 25% higher than prior to Sept. 13, 1920.

While these changes necessarily complicate a study of the developments in the railway industry, it is evident, from the figures published by Canadian Railway and Marine World from month to month, that a great improvement was effected in Canadian railway operation throughout 1921. While, unfortunately, traffic was not as heavy during the greater part of 1921 as could be desired, the fact remains that operating expenses

were reduced steadily in greater ratio than were the gross earnings, with an improvement in operating ratio. This condition gives a favorable indication for the future, and although the additional handicap of the rate reduction of Dec. 1, 1921, remains to be overcome, it seems entirely reasonable to suppose that with the increased traffic incidental to an improvement in business conditions, Canadian railways will be able to still further improve their respective financial positions.

Canadian Railway Club's Annual Dinner.

The Canadian Railway Club held its annual dinner at Montreal, Jan. 28, the President, Arthur Crompton, Valuation Engineer, G.T.R., being chairman.

W. F. Tye, consulting engineer, Montreal, formerly Chief Engineer, C.P.R., replied to the toast of the railways and dealt at some length with the Canadian railway problem. He expressed the opinion that the present Government will initiate the late Sir John A. Macdonald's course and turn the national railways over to a private company in a few years. After this is done, and if the new company exercises the maximum of economy and if the Board of Railway Commissioners would not make rates unduly low, the road would, in the course of time, prove successful. This would take some time to bring about, for the reason that there had been too many mistakes in the past to permit of immediate successful operation. He pointed out that the margin of success of even the most successful railway is very narrow, and that such success cannot be attained under Government operation, as the political atmosphere is not a good one in which to develop railways successfully. Taking into consideration interest at 4% on the cost of the Government controlled roads, their operation for the past three years by the Government resulted in a deficit of \$230,000,000. This condition was due, in his opinion, to a misconception by the Government as to the country's actual railway requirements, and to a misconception by the railway builders as to the character of the railways needed. Successful Governments had given first large sums of money, then lands, and later had guaranteed bonds of practically any railway which asked such assistance, which had led to a debauch of railway construction that had given Canada a railway mileage far in excess of its requirements. Canada, with a population of some 8,500,000, has a greater railway mileage than European countries with populations from five to ten times greater, and also twice as much railway mileage per capita as the United States. He said there was a popular belief that all railways were great money makers. In 1919 the total amount paid out in interest and funded debt, dividends, etc., amounted to only 3% of the total capitalization of Canadian railways. While the C.P.R. had always been held forth as an example in this connection, the fact was that the 10% dividend paid by that company really only represented 5.5% on the money invested in the road, which could not be considered too high for the most progressive railway on the continent, after 40 years of struggling. Notwithstanding the large deficits, and the duplication and triplication of lines, with three transcontinental lines where two

would have a hard struggle to break even, he felt that a way could be found out of the present difficulties, in view of the fact that the C.P.R., originally built through a wilderness producing no traffic, had developed into the most successful railway on the continent. He pointed out that the National Railways, including the Grand Trunk, had earnings of \$9,500 a mile in 1920, which the C.P.R. had not obtained till as late as 1911.

Prof. B. K. Sandwell, of McGill University, in responding to the toast of the guests, spoke against what he termed some fundamental errors of current taxation policy. He described the prevalent practice of taxing the transportation industry as penalizing production at its most sensitive point. Cheap transportation, and that, alone, was responsible for the vast enlargement of the sphere of production of the last two generations, and anything having a tendency to make transportation dearer than it need be, meant a curtailment of competition and a driving out of those competitors who were producing at the best advantage and therefore exerting the most influence for the reduction of prices. He urged his hearers to use their influence in favor of a policy which would throw the burden of taxation as much as possible on consumption rather than on production, and pointed out that in no country in the world is a tax on transportation more detrimental than in Canada, whose producers are probably on an average farther from their markets, at any rate so far as railway distance is concerned, than those of any other country. Lt. Col. Paul Hanson, in replying to the toast of the railway supply men, asked the railway managements to co-operate with them in the rehabilitation of business, by dispensing optimism and orders.

Size of Flags for Train Flagmen.

The Board of Railway Commissioners passed general order 336, April 2, 1921, repealing the Uniform Code for Canadian Railways rule 99, paragraphs 6 and 9, and substituting new paragraphs as follows:

"If recalled before another train arrives, he must, in addition to the two torpedoes, leave a fusee, burning red, at the point he returns from, and, while returning to his train, when snow ploughs or flagmen may be running, curvature, weather, or other conditions governing, a fusee burning red must be placed at such points, and times, as the flagman may find necessary to ensure flag protection. To maintain the proper interval between trains, a fusee burning red must be left by the protected train, at the point from which it moves.

"Flagmen must each be equipped for

day time with a red flag, 22 x 28 in., on a staff, at least 6 torpedoes and 5 red fusees; and for night time, and when weather or other conditions obscure day signals, a red light, a white light, with a supply of matches, at least 6 torpedoes, and 5 red fusees.

The Railway Association of Canada, on behalf of its member railways, applied to the Board last year for a further amendment, judgment on which was given on Jan. 10, 1922, by Assistant Chief Commissioner McLean, Chief Commissioner Carvell, and Commissioner Boyce concurring, as follows:—

On May 17, 1921, the Board heard an application of the Railway Association of Canada, on behalf of the several railway companies, for an order to amend the concluding paragraph of general order 336 so as to provide for a flag 16 x 16 in., or thereabouts, in lieu of a flag 22 x 28 in. The flag in question is one which flagmen are required to be equipped with. The recommendation of the Board's Chief Operating Officer that the flag should be 22 x 28 in. was, in common with other amendments proposed, communicated to the parties on Jan. 28, 1921, for submission of their views in regard thereto. On March 10, 1921, the Board received from the Railway Association of Canada a communication from which the following extract bearing on the question of the size of the flag is quoted:—

"Concerning proposed amendment of rule 99, sec. 9: At the present time the Association has under consideration standardizing the size of the flag used for signalling purposes. It is probable that the size adopted will be 16 x 16 in., as it has been demonstrated that a flag of this size properly serves the purpose for which it is intended, and has the added advantage of being economical, as the material from which it is cut is 36 in. wide. In the circumstances, it is respectfully suggested that the Board may see its way clear to omitting at this time any reference to the size of the flag, or if this is thought necessary, the specification should require a flag 16 x 16 in. or larger."

On consideration and further reports of the Board's Operating Department, general order no. 336, of April 2, 1921, issued, containing a provision regarding the size of the flag, to which exception was taken as set out at the hearing on May 17, 1921. On consideration of the steps leading up to the provision in general order 336 and on consideration of the additional evidence submitted at the hearing on May 17, 1921, which was in effect an application for a rehearing, I am of the opinion that a case for the variation of the order in respect of the size of the flag has not been made out.

Order 32,019 was issued Jan. 14 as follows:—Upon hearing the matter at Ottawa, May 17, 1921, the Railway Association of Canada, the Canadian Pacific, Grand Trunk and the Canadian National Railways, the Michigan Central R., the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen and Engine-men, the Brotherhood of Railroad Trainmen being represented at the hearing, and what was alleged, the Board orders that the application be refused.

The Canadian National Rys. will, it is said, take a complete deck on the British trade ship, which it is proposed to have make a trip round the world. The space will be utilized to exhibit Canada's natural resources and industries.

Canadian Pacific and Canadian National Railways' Earnings and Expenses.

C.P.R. gross earnings for December, 1921, amounting to \$15,756,923, showed a large decrease from those of November, when they were \$18,787,679, and also from those of Dec. 1920, when they were \$20,604,167. The net earnings for the month, \$1,917,781, were \$1,750,220 smaller than in November, and \$304,291 smaller than in Dec. 1920. The gross earnings for December, compared with those of November, and of October, in which month they were \$22,089,624, reflect the falling off in traffic following the heavy grain movement of the two latter months, and also reflect the rate reduction which took effect Dec. 1. The decrease in gross as compared with Dec. 1920, while reflecting some decrease in traffic handled, was caused in greater degree by the large rate reductions which took effect within the year.

Operating expenses for December, \$13,839,142, were \$1,276,736 less than those of November, and \$4,542,953 less than those of Dec. 1920. The decrease in expenses as between December and November may be attributed to the decrease in traffic handled; the decrease in expenses as between Dec. 1921 and Dec. 1920 reflects the lower wages prevailing, the advantages accruing to the railway through decreased commodity prices, and also to the enforcement of a strict economy in operation. The operating ratio for December was 80.77, compared with 80.06 in November and 89.2 in Dec. 1920.

C.P.R. gross earnings for the calendar year 1921 were \$193,021,854, compared with \$216,641,349 in 1920. Operating expenses decreased in greater ratio, being \$158,820,114 in 1921, and \$183,485,304 in 1920, so that the operating ratio was 81.2 in 1921, against 85 in 1920.

The fact of the company's gross earnings being smaller in 1921 than in 1920, while the average rates for the year 1921 as a whole were probably considerably greater than for 1920 as a whole, is not so important as an indication of how large a traffic the C.P.R. can obtain, as it is as a recorder of the serious setback which commerce received in this country, as in all countries, during 1921. In view of the depressed conditions, lower gross earnings were logically to be expected. The important fact is that operating expenses were reduced to a point where better net earnings were secured from the smaller gross earnings, and it is this feature which is particularly gratifying to the C.P.R. management.

There is one feature of the December earnings which is worthy of note, however, viz., that while the operating ratio for Dec. 1921 was so much more favorable than that of Dec. 1920, the net earnings for Dec. 1921 were smaller, which shows that no matter how great economy is effected in handling traffic, the final results are bound to be adversely affected by a reduction in the gross earnings caused by decreased business or inadequate rates, or both. The success of any enterprise is impossible without a proper relationship as between receipts and expenditures, but the success of any enterprise and its ability to pay a return on the capital invested in it is made possible primarily through it having adequate gross earnings, and a mere superficial comparison of the C.P.R. results for Dec. 1921 with those of Dec. 1920, shows plainly that despite the reductions in expenses which have been effected, the reduction in gross earnings, caused prim-

arily by a reduction in rates, has been such as to give a smaller net return.

It is logical, under the prevailing conditions, that C.P.R. earnings and expenses should go a long way in determining the rate levels for Canadian railways as a whole, with the operating losses and fixed charges of the National lines, operating on the same rates, paid out of taxes for the time being. It is quite probable that the 10% reduction in rates which became effective Dec. 1, 1921, was made only after a thorough study of the situation and in full expectation that the new rates, in combination with reduced expenses, would produce net earnings for the C.P.R. as large as those which had been earned in preceding months, and which may be described as no more than adequate. The December returns indicate that it is very doubtful whether these rates will produce as good net earnings. With such rates in effect, it would take but a very small reduction in traffic, over a number of months, with higher expenses in moving each unit of traffic caused by that very reduction in traffic itself, to make the rates thoroughly inadequate. Price changes have long since become less pronounced; the great price decline was over before the rates were decreased, and many commodity prices have lately shown an upward trend, which indicates that the railways can expect little relief from still lower material prices. No wage decreases accompanied the rate reduction. While an optimistic person may see justification in looking forward to an immediate increase in traffic, involving increased gross earnings and reduced unit expenses, in the near enough future to be of immediate assistance to the railways, it nevertheless seems, on examination, and taking into consideration the value of the reduction to industry generally, that the justification for the rate decrease of Dec. 1, 1921, was very doubtful. So far as the results on the C.P.R. are concerned, the ultimate advantage to Canada of having that railway maintained on a basis on which it can put aside sums for the provision of needed future facilities, in addition to paying its dividends, extremely moderate in relation to the value of the property, cannot be over emphasized. So far as the results on the National railways are concerned, it is evident that the operating costs not met by revenue will have to be met by taxation. The less met by taxation the better. If there be such a thing as a county, the man who is supplied with transportation and the benefit of it, should pay for it. The man who receives no benefit from transportation should not be required to help pay for it.

Tables showing the operating revenues and expenses of the Canadian Government Rys., the Canadian Northern Ry. and the Grand Trunk Pacific Ry., by months, and comparisons as between the results for the years 1921 and 1920, are given on another page of this issue, and by referring to them it will be seen that the improvement made by the three chief lines of the Canadian National Rys. system has been nothing short of remarkable. The Canadian Government Rys. reduced the operating loss of \$10,449,877 in 1920 to one of \$5,587,298 in 1921, a decrease of \$4,862,579. Operating results exhibited the same tendency as those of the C.P.R., in that while gross revenues decreased, operating expenses decreased

still more. The Canadian Northern, with an increased gross revenue of \$2,299,567, showed a decrease from 1920 in operating expenses of \$7,561,285, reducing the operating deficit from \$16,438,156 to \$6,577,304. The Grand Trunk Pacific, with an increase in operating revenues of \$2,230,130, and a reduction in operating expenses of \$3,906,868, reduced its operating deficit from \$10,134,485 in 1920 to \$3,997,487 in 1921.

Any one who would say that great progress was not made toward a lessening of Canada's railway burden during 1921 would be disregarding the facts. The improvement effected in the Canadian National system as a whole, whereby the operating deficit was reduced from \$37,022,518 to \$16,162,089, vastly exceeded the expectations of those who exhibit more than a casual interest in railway affairs, and who have some realization of the enormous expense of operation of a system of such great mileage and comparatively light traffic. It is probable that if those who have been so critical of the Canadian National Rys. management since the property was placed under public ownership, had the idea of the manner in which low traffic density increases the unit costs of handling the traffic offered, unfounded criticism would be replaced by expressions of appreciation of high service rendered.

But while great strides have been made, much more remains to be done. The first great objective should be to have the Canadian National Rys. pay their operating expenses for a complete year, and after that, has been accomplished, the next ambition should be to have them pay both their operating expenses and fixed charges for a complete year. It must be realized that the Canadian National Rys.' success depends primarily on the same things as does that of the Canadian Pacific Ry., and it may be said, the success of Canada. Those things are increased population and increased traffic, which will bring decreased unit expenses to the railways and ultimately lower transportation costs to the public. But it must be recognized that the problem of the National railways is made more difficult by the mere fact that they are national railways, and it must be remembered that public ownership of railways has shown itself lamentably deficient on many previous occasions, mainly for the reason that an attempted injection of politics brought disaster. The National railways problem presents, what may be termed a social or political, problem, in addition to the economic problem. If that problem is to be successfully solved, and if public ownership of these railways is to be successful, which the public interest demands, then the people and their elected representatives must guard against the injection of political influences into the operation of the railways. Politics and railroadism will never be parted. Aed by increasing population and traffic, the Canadian National Rys. management is competent to solve the economic problem connected with these railways, but it must be borne in mind that the ability and efficiency of the management will avail the country nothing if the people of the country, and particularly the political leaders, prove incapable of solving what we have termed the social or political problem inseparably connected with the public ownership of these railways.

The Interstate Commerce Commission's General Investigation of Railway Rates.

After the comparison of the testimony of the railway representatives, as summarized in the Canadian Railway and Marine World for February, pp. 71, the Interstate Commerce Commission, in the general investigation of railway rates which it is conducting, began on Jan. 19 to hear the testimony of shippers of basic commodities, beginning with coal. The Vice President of the National Coal Association told the Commission that a great disproportion exists between the market value of coal and the cost of transporting it. He pointed out that a freight charge of from \$150 to \$200 a car on coal worth from \$50 to \$100 a car at the mine makes the coal too expensive for the consumer, and because coal is such a necessary and widely used commodity, he said, this is very bad for industry. He claimed that doubling the rate on a carload of automobiles is of relatively little importance, because the addition of a few dollars to the price of an automobile matters but little to the man who can afford to purchase one, but with the price of coal too high, industry is bound to suffer. Other witnesses blamed the railways for the inability of United States coal to compete in foreign markets with British coal, but the majority of them were willing to admit that wages in the coal mining industry may have a great deal to do with this. Representatives of the iron and steel trade stated that all their costs have been brought down to reasonable levels, except the cost of transportation, and the majority of them expressed the opinion that if freight rates were reduced the railways would obtain a sufficiently increased percentage to make it worth the trouble for them for the reduced rates. One witness pointed out that whereas railway wages have been reduced only about 12%, other wages have been reduced 30%, and that it is time for some action to be taken in connection with wages, to place the railways in a position where they could afford to reduce rates. Restoration of the rates in effect prior to the decision in ex parte 74 was sought by the majority of the iron and steel industry representatives. Representatives of the lumber industry, and of industries supplying building materials generally, all stated that rates are too high.

On Jan. 30 the Commission began hearing the evidence of the public bodies. The first witness, W. H. Chandler, President of the Industrial Traffic League, who also represented the New England Traffic League, considered that if the Commission came to the conclusion that a reduction in rates should be made, it should be a general reduction, and not confined to specific commodities, and he also emphasized that the Commission should come to some decision, and quickly, so as to remove the uncertainty in connection with rates now facing business. He made it clear that his membership is fully aware of the necessity of protecting railway finances. Asked as to passenger fares, he said the consensus of opinion is that they are not as important as freight rates. He said it was evident to anybody that U.S. railways are not being operated efficiently, for the plain and simple reason that they are paying higher wages than are being paid for similar work in other industries, and that if the Commission came to the conclusion that railway wages are too high, it would be an eminently proper thing

for it to announce to the people of the country that such is the case. He has not a very good opinion of the Railway Labor Board. Representatives of various traffic associations, manufacturers' associations and chambers of commerce testified, practically all being unanimous in demanding a reduction in rates, and the majority emphasizing the bad effects of the uncertainty prevailing.

On Jan. 31 W. D. Hines, formerly Director General of Railroads, testified, and advised against a general reduction of rates at this time. He pointed out that the railways had cut into their reserves very deeply in the past few years, and when asked as to what he thought would be the result of a 10% reduction in rates, he replied that the benefit would not go to the country at large, but would go to those highly organized classes of society which are in a position to take advantage of it. He pointed out that the railways as a whole are not earning the return prescribed by the Transportation Act as just and fair, and advised great caution in further reducing their earnings.

On Feb. 3, Herbert Hoover, Secretary of Commerce, expressed in no uncertain terms the public necessity of having railway credit maintained. He pointed out how the U.S. suffered in past times of good business through shortage of railway transportation, and stated that the country had brought that conditions on itself, through its antagonism to railways generally. His study of the matter informed him that a general rate reduction at this time would be a serious mistake, and added that if any reductions could be made they should be on basic commodities. If such reductions could not be obtained without tending to ruin railway credit, consideration should be given to the possibility of increasing rates on other than basic commodities. In his opinion, a determination of permanent rate bases at this time would be impossible, on account of the generally unsettled condition of business which has prevailed over the past few years and still prevails.

T. S. Taylor, Vice President of the Pullman Co., on the same day, objected to the Commission's order in ex parte 74, by which the railway revenues are increased by a surcharge of 50% on sleeping and parlor car charges, for the reason that the Pullman Co.'s earnings have been adversely affected by the order. He believed the railway earnings had been similarly affected. He gave figures showing that the Pullman Co.'s revenues had fallen off by more than \$1,000,000 a month since the taking effect of the order providing for the surcharge.

Many state commissions were represented at the hearing in the early part of February, and Kansas Public Utilities Commission's representative in particular, was insistent in his demand that rates be reduced. The railways, he said, are doing the only industrial undertakings that are making any return on their investment at all, while practically all the farmers in the country are losing money.

On Feb. 10 and 11, F. J. Warne testified on behalf of labor organizations, and stated that it did not matter to him or the organizations he represented whether rates were raised or not. Like the farmer who stood looking at the giraffe and maintained that there was no such animal,

he said he and his clients believe there is no economic law to establish a relation between railway rates and railway wages. The only reason the employees were represented, he said, was because railway executives had said a wage reduction must precede a rate reduction.

Following Mr. Warne, more shippers gave testimony and asked for rate reductions, practically all stating that their business undertakings are in bad condition and that they would be all the reductions in costs which could possibly be obtained. From a perusal of the evidence to date it appears that this condition of individual business undertakings, which has obtained not only in the U.S., but in all other countries, is at the bottom of all the applications for rate reductions which have been made. The desire has been to reduce costs, and as transportation costs are the most convenient to attack, widespread demands for rate reductions, regardless of their justice and regardless of their effect on the revenues of the roads, naturally became the order of the day.

Fast Runs on Michigan Central Railroad.

There is a saying among locomotive men that the Michigan Central R.R.'s Canada Division is no place for a locomotive unless it can run at 100 miles an hour and haul about 8,000 tons. This reputation that the M. C.R. has made for itself in connection with locomotive operation, in so far at least as speed is concerned, would seem to be borne out by a few runs made lately, on the Canada Division. We are officially informed that on Jan. 10, train 15, in charge of conductor D. A. Stinson, and hauled by locomotive 8428, driven by N. Vail, left St. Thomas at 11:33 a.m., 28 minutes late, and arrived at Windsor tunnel station, 110 miles from St. Thomas, at 1:05 p.m., the running time being 92 minutes. This train does not stop between St. Thomas and Windsor.

On Jan. 8, two special trains, being run for the Dodge Bros. Mfg. Co., from Chicago and Detroit to New York, were handled over the Canada Division. The first special, with 11 cars, in charge of conductor D. A. Stinson, and hauled by locomotives 8424 and 8423, driven by G. Folland and Hogan, respectively, left Windsor at 7:17 p.m. and arrived at St. Thomas at 9:03 p.m., where locomotives were changed. The train left St. Thomas at 9:09 p.m., hauled by locomotives 8430 and 8419, driven by L. Arlien and G. Cook, respectively, and running via the Fort Erie Division and the International Bridge, arrived at Buffalo at 11:10 p.m. The total distance of 234 miles was made in a running time of 233 minutes.

The second special train, in charge of conductor Callcutt, and hauled by locomotive 8428, driven by locomotive man Delaney, left Windsor at 7:27 p.m., arrived at St. Thomas 9:15 p.m., where locomotives were changed, left St. Thomas at 9:21 p.m., hauled by locomotive 8400, driven by W. Folland, and arrived at Buffalo at 11:25 p.m., the running time for the 234 miles being 238 minutes.

D. W. Donahue, Superintendent, Canada Division, who furnished the foregoing particulars of runs at Canadian Railway and Marine World's request, says that the runs are not considered unusual,

Locomotive Tests on Michigan Central Railroad.

The Michigan Central Rd. is making service tests with a class K-3 M Pacific type locomotive in heavy fast passenger service on the Canada Division, and it is expected they will be completed by April 16. This locomotive is equipped with the Young valve gear. The road has 40 of these locomotives, which were built by American Locomotive Co. in 1917. The one being tested on the Canada Division is the only one equipped with Young valve gear. The chief dimensions are as follows:—

Total weight of engine	279,000 lb.
Weight on drivers	180,503 lb.
Weight on leading truck	49,000 lb.
Weight on trailing truck	49,500 lb.
Weight of tender, empty	76,593 lb.
Weight of tender, loaded	166,500 lb.
Tractive power	30,000 lb.
Cylinders, diam. and stroke	30" x 36 in.
Firebox length, inside	108½ in.
Firebox width, inside	75¼ in.
Gro. area	56.5 sq. ft.
Flues, diam.	5½ in.
Flues, no.	32
Tubes, diam.	2 in.
Tubes, no.	228
Trucks, length, over sheets	21 ft. 6 in.
Trucks, heating surface	3,531 sq. ft.
Boiler and arch tubes, heating surface	229 sq. ft.
Total heating surface	3,760 sq. ft.
Superheater heating surface	894 sq. ft.
Driving wheels	36 in.
Diam. leading truck wheels	36 in.
Diam. trailing truck wheels	44 in.
Diam. tender truck wheels	36 in.
Wheelbase, driving	14 ft. 6 in.
Wheelbase, en-line	36 ft. 6 in.
Wheelbase, en-line and tender	77 ft. 6 in.
Length over all	111 ft. 6 in.
Valves	14 in. piston
Steam pressure	203 lb.
Tender capacity, coal	14 tons
Tender capacity, water	7,500 gal.

Freight Car Locations on February 1.

The Railway Association of Canada has issued a statement showing the location of freight cars on Feb. 1, based on reports received from the following railways:—Algoma Central & Hudson Bay; Canadian National, including Grand Trunk Pacific; Canadian Pacific; Central Vermont, in Canada; Dominion Atlantic; Edmonton, Dunvegan & British Columbia; Grand Trunk; Kettle Valley; Michigan Central, in Canada; Napierville; Jct. Pere Marquette, in Canada; Quebec Central; Quebec, Montreal & Southern; Timiskaming & Northern Ontario; Temiscouata; Toronto, Hamilton & Buffalo; Wabash in Canada. The following are the figures: Cars owned by reporting railways, 223,008; home cars on Canadian lines, 13,715; home cars on U.S. lines, 35,418; home cars on home roads, 173,875. Canadian owned foreign cars on home lines, 12,173; U.S. owned cars on foreign or home lines, 17,623; total cars on lines, 203,671; per cent. of cars on line to total owned, 91.3; deficiency on line to total owned, 19,337; home cars in bad order, 18,602; foreign cars in bad order, 446; total cars in bad order, 19,048; percentage in bad order, 9.3; privately owned U.S. cars on line, 1,682; privately owned Canadian cars on line, 1,013.

The U.S. Interstate Commerce Commission, in accordance with the terms of the Valuation Act, has now served valuation on 184 railways. As the roads valued to date are small, however, the total mileage involved is but slightly more than 26,000.

St. Louis, Mo., Union Station handled 264 passenger trains in one day recently without a minute's delay.

Telegraph, Telephone and Cable Matters.

The C.P.R. Telegraphs Ontario District officials were entertained to dinner by J. McMillan, Manager of Telegraphs, C.P.R., at Toronto, Feb. 9, after which matters of interest in the Ontario District were discussed.

Felton & Guillaume, Berlin, Germany, are reported to have received a contract from United States interests for making and laying a trans-Atlantic cable between Emden, Germany, and the U.S. The former German owned cable between Emden and the U.S. passed into British hands during the war, the ends on both sides of the Atlantic being diverted to England and Canada respectively, and it forms what is known as the Imperial cable.

The Mackay Companies' report for the calendar year 1921 shows income from investments in other companies of \$4,309,251. Dividends paid were \$4,180,040, operating expenses including income tax, telephone, etc., were \$82,771, leaving a balance of \$46,141 carried to this year's account; cash on hand at the end of 1921, was \$172,210 and the surplus was \$2,093,767. C. H. Mackay, President, stated that all new construction and additions to plant during the year were made from surplus earnings, and the reserves were invested in U.S. French and Canadian Government securities, and certain U.S. municipalities and railway companies. He announced that it had been decided as soon as possible for the Commercial Cable Co. to lay a new cable from New York to France by way of the Azores, 3,898 miles, to take care of the rapidly increasing traffic between the U.S. and Europe, and applications have been made to the U.S., Portuguese and French Governments for permission to make such landings. This cable will supplement the company's present French cable, which is landed at Havre.

Among the Express Companies.

F. J. Reid, in the American Railway Ex. Co.'s office, Vancouver, B.C., received honorable mention for an essay on How to Wrap a Package, in a recent competition.

H. J. Cole, whose death through a fall from a window in the Customs building, Calgary, Alta., was mentioned in our last issue, was stated to have been chief clerk, Dominion Ex. Co., there. We are advised that he was not in Dominion Ex. Co.'s service, but was employed chief clerk in the Customs House express department, and was not at any time employed directly by any of the express companies.

Canadian National Express Co.

An office has been opened at Leyland, Alta.

An agency has been opened at Lake Lenore, Sask.

The office at Prairie Siding, Ont., has been closed, and that place classed as a star point.

Dominion Express Co.

J. H. Lapointe, heretofore in the messenger service, has been appointed exclusive agent at Berthier, Que.

H. L. A. heretofore in Superintendent's office, Montreal, has been appointed exclusive agent at Ste. Agathe, Que.

A. McMahon, formerly agent at Weyburn, Sask., has been transferred to the Winnipeg staff.

Two packages, containing \$1,000 in \$1 and \$2 bills, were reported to have been

stolen from the company's office at the C.P.R. wharf, Victoria, B.C., Feb. 1, while en route to the Bank of Montreal branches at Nelson and Enderby, B.C.

The company has been requested to establish an agency office at Nanaimo, B.C., chiefly to handle shipments of perishable freight direct from the Qualicum Beach district, shippers complaining that they suffer considerable loss by having to ship by a longer route via Victoria. The company has promised to establish such an office if it can be shown that the business offering for transfer at Nanaimo would warrant doing so.

Appeals Against Express Rates Judgment.

On Feb. 2, 1921, the Board of Railway Commissioners for Canada issued general order 327, authorizing express companies to increase their rates by 35% on all traffic, except second class, on which the increase authorized was 25%, excluding articles of food covered by published commodity tariffs, on which an increase of 20% was allowed. The City of Toronto, through its Council, R. Geary, K.C., appealed from this judgment on April 4, 1921, to the Dominion Government, but no action was taken on the appeal by the then Government. Mr. Geary lodged a further appeal, and on Feb. 24 appeared before members of the cabinet in Ottawa and gave his reasons why express rates should be reduced. He claimed that the portion of the express companies' proceeds which accrue to the railways are too large, resulting in an unreasonable profit to the railways. He also claimed, according to a press dispatch, that the Board of Railway Commissioners' judgment, as given in general order 327, assumed that the remuneration for handling express traffic should be at the rate of one and a half times the first class freight rate. This he is reported to have stated, was due to Chief Commissioner Carvell misquoting a judgment of Sir Henry Drayton, former Chief Commissioner, who, Mr. Geary said, had not laid down such a principle.

F. H. Chrysler, K.C., who appeared for the Express Traffic Association, argued that express rates had been fixed by the Board with due consideration for all existing circumstances, and not on any arbitrary assumption, such as on the basis that they should be one and one-half times the first class freight rates. He quoted extracts from the judgment to support his contention, and strongly disputed Mr. Geary's statement that \$400,000, derived from money orders, special income and overseas business was lacking from the Dominion Express Co. income statement which was under review when the case was heard.

After nearly two hours argument before the cabinet, Sir Lomer Gouin, Minister of Justice, suggested that counsel be asked to file written statements of their cases. The suggestion was adopted, and a quick decision was promised by the cabinet.

Another appeal to the Government against the same judgment was scheduled for Feb. 25, when D'Arcy Scott, a former member of the Board of Railway Commissioners, was to appear on behalf of the National Dairy Council to protest against express rates on cream.

That the U.S. Railroad Labor Board has no place in an efficient scheme of railway regulation is a growing feeling in the U.S.

Electric Railway Department

Gasoline Motor Omnibuses, Toronto Transportation Commission.

The Toronto Transportation Commission now has six buses in operation. Four of these, built in New York, were described in Canadian Railway and Marine World for October 1921, and one built in Maidstone, Eng., was described in Canadian Railway and Marine World for Feb. 1922. The last bus to be placed in service was built by Leyland Motors, Ltd., of Leyland, Lancashire, Eng., to designs furnished by the Commission. It differs from the buses described previously, as the stairs leading to the upper deck are at the front instead of the back, in that it can be converted into a single-decker with but little work and in a short time. The chief dimensions are as follows:—

Length overall	25 ft. 4 in.
Width overall	7 ft. 4½ in.
Height overall	12 ft. 5 in.
Length inside body	14 ft. 2 in.
Width inside body	6 ft. 10½ in.
Height inside body	5 ft. 10 in.
Height, ground to first step	13 in.
Distance, 1st to 2nd step	8½ in.
Distance, 2nd to 3rd step	8½ in.
Minimum road clearance	13 in.
Wheel base	16 ft.
Gauge	5 ft. 6 in.
Weight empty	16,000 lb.

The chassis frame is made of special heat treated steel, the members being 8 in. deep, 2½ in. wide, and ¼ in. thick, and securely braced. The main springs, of semi-elliptic type, of silica-manganese steel, are designed to take a superimposed load of 8 tons, and special coil springs are included in the equipment, designed to absorb up to the first three tons of shock.

The engine, designed for heavy commercial work, is 4-cylindrical, of 5½ in. bore by 6½ in. stroke, and develops 65 b.h.p. at 1,000 r.p.m. The aluminum crank casing is supported in the frame by 2 steel tubes, and the main bearings of the crank shaft are independent of the bottom cover and are of gun metal, lined with anti-friction alloy. Large inspection holes, fitted with oil tight covers in the side of the casing, enable the big ends to be examined without removing the large bottom cover. The hard cast iron cylinders are cast in pairs. The water jacket allows for an abundant supply of water around the combustion chamber, valves, and cylinders, and is of such length that the piston rings do not any part of the stroke pass below it. The rings, being thus properly cooled, retain their elasticity. The aluminum pistons are fitted with 3 rings each. The connecting rods are 1 section stampings of carbon steel. The little end is fitted with a gun metal bush, and the big end with a gun metal bearing lined with the best anti-friction alloy. The crank shaft is of nickel chrome steel, and the main journals are of more than the usual length. The flywheel is of cast iron, machined and balanced, and attached to the crank shaft by a flange and bolts. The method of driving the cam shaft, water pump and magneto ensures silent running. A wheel, with teeth of fine pitch cut on the skew, drives a wheel of double the size on the cam shaft, through a jockey wheel. A similar wheel, mounted on a shaft at right angles to the cam and crank shafts, meshes with the wheel on the cam shaft, and forms a drive for the magneto on the right hand side of the engine, and for the pump on the left

side. The composite type valves, with nickel steel stems and cast iron heads, are all on the left side of the engine, and operated by one cam shaft, and the valve springs and push rods are cased in with aluminum covers.

The method of lubrication is notable, it being effected by a gear oil pump in the bottom cover of the engine casing on the near side, and arranged with a vertical spindle driven off the cam shaft by a pair of skew wheels. The pump, which is very accessible, draws the oil from the sump in the bottom cover, through a large strainer, which can easily be cleaned, and delivers it under pressure to the crank shaft bearings, through internal pipes. The internal main oil pipe is supplied with an adjustable relief valve, and a small pressure gauge. The crank shaft journals and short arms of the crank are drilled through their centers, and the

coupling. The distributor for the accumulator ignition is on the outside of the engine, and is driven off the cam shaft by skew gearing.

The radiator is of the gilled tube type. The aluminum top and bottom can be removed, and the whole cleaned out. The water circulating pipes are so large that in the event of the failure of the circulating pump the engine can still be run at reduced power, by natural circulation alone. An aluminum fan is provided, mounted on an adjustable ball bearing spindle, carried off the timing gear casing, the drive being by a belt from a pulley on the crank shaft. The clutch, totally enclosed, is of the ordinary cone pattern, made of aluminum and shod with fabric. A clutch stop is provided to facilitate changing gear, and the whole of the clutch is carefully balanced to prevent undue vibration. There are four

Gasoline Motor Omnibus, Toronto Transportation Commission.

crank is also provided with radial holes at the center of the journals, so as to provide a passage for the oil from the main journal bearings to the crank pin bearings. There is, therefore, a rapid and continuous flow of oil to all the crank shaft bearings, the oil being carried from the main journals and thrown from the crank pins by pump pressure and by centrifugal forces. The oil which works through the outer crank bearings returns to the bottom of the crank case. The end walls of the casing project beyond the end of the bearings and oil retaining washers are fitted to prevent leakage. The spray from the continuous flow of oil flying from the crank pins thoroughly lubricates the cylinders, pistons, cam shaft bearings, cams, valve lifters, etc., so that there is no fear of any part of the engine running short of oil. By this method of lubrication the quantity of oil supplied is constant and does not depend upon keeping a fixed oil level in the crank chamber, as in the splash system.

The engine is equipped with a high tension magneto, the drive being transmitted from the cross shaft by a leather

changes of speed in the forward direction and one reverse, the ratios of the gearing giving forward speeds of 16, 11, 6.7 and 3 m.p.h. at an engine speed of 850 r.p.m. The gears are of nickel chrome steel, specially heat treated, and ball bearings are used throughout.

The rear axle, which is uncommon in Canadian practice, consists of a cast steel casing, containing a double reduction gear, fixed arms to carry the weight, and inner floating shafts to transmit the power. The road wheels, fitted with plain floating gun metal bushes, are mounted, and revolve freely on the arms, which are pressed and riveted into the casing, the combination of which forms the load carrying member of the axle. The nickel chrome steel driving shafts pass through hollow arms of the same material and have secured to their outer ends star or claw couplings, which transmit the drive to the road wheels. There is no load carried on these live shafts, which take the torque only. The power is transmitted from the propeller shaft by bevel gears, to the differential casing. This is carried on a shaft forward of the axle, the

Toronto Railway Co.'s Annual Report and Meeting.

final reduction being through spur gearing. A large inspection cover on the top enables the whole of the gear to be taken out without disturbing the axle. The propeller shaft is encased in a steel tube shrunk and riveted into a sleeve which is bolted to the axle casing. This tube takes the whole of the thrust, or drive, of the rear axle, through the medium of a spherical thrust member. The center of the universal joint at the rear end of the cardan shaft coincides with the center of the spherical thrust member and perfect freedom of action for both springs and axle is obtained. The universal joints are totally enclosed by dust protecting covers, and special provision is made to retain the lubricant. Ball journal and thrust bearings are used throughout the gearing, and the gear wheels are all made of nickel chrome steel, and they are heat treated.

Two double acting brakes are fitted, one on the gear box shaft and one operating on the road wheels. The gear box brake shaft is of liberal dimensions and is actuated by a push pedal. The internal expanding type disc brakes are actuated by a hand lever, and are compensated with each other, so that the pressure on each is equalized.

Left hand steering is employed, the usual worm and segment being used in the steering gear.

The steel, lead coated, gasoline tank, is carried in the forward part of the body, and has 30 gall. capacity.

The bus is fitted with disc type road wheels, running on gun metal floating bushes. Special cushion solid tires are employed, and are doubled on the rear wheels.

The body of the bus is entirely of wood. The accompanying illustration gives an accurate idea of body construction and proportions. As shown, the entrance is at the front, on the right, and access to the upper deck is by inside stairs at the front, the bottom of which is adjacent to the entrance door, and just behind the driver. The large window space ensures adequate natural lighting; artificial lighting is by a 12 volt C.A.V. system, including generator and storage batteries, which lights 6 lamps in the interior of the bus, a platform light and the head lights and tail light. The seats in the interior, arranged transversely, are of rattan, and those on the upper deck, also arranged transversely, are of wood. The total seating capacity is 59, the interior having accommodation for 30 passengers, and the exterior for 29 passengers.

The upper deck railings are secured by angle irons and bolts, and the seats on the upper deck are bolted into place, so that in case it is desired to use the bus as a single decker, all that is necessary is to remove the bolts and take down the seats and belt rails. When this is done, the bus can be operated as a one-man bus, the entrance near the driver being correctly located for this purpose.

As stated above, this is the sixth bus placed in service by the Commission. Two more are to be delivered, one each by the Associated Equipment Co., of England, and the Eastern Canada Motor Co., Hull, Que. In addition to these motor vehicles, the Commission has ordered 4 trackless trolley buses for use in the city, which were described fully in Canadian Railway and Marine World for January.

The Leyland bus is being operated at present on the Mount Pleasant Road run, in the northern part of the city.

Following is the directors' report for the calendar year 1921, presented at the annual meeting in Toronto, Feb. 1, and signed by Sir William Mackenzie, president:

Gross earnings, 8 months to Aug. 31, being 100% of franchise	\$5,130,431.52
Charges for operating, maintenance	4,782,490.44
Net balance from operation	\$ 347,941.08
Deficit carried forward	997,289.47
Other Charges:	\$1,345,240.55
Road interest	\$1,113,624.64
Ontario Government taxes	38,806.54
Payments to city:	\$ 152,515.08
Percentage on earnings \$1,004,893.86	
Pavement charges	65,832.53
General taxes	121,999.08
	1,192,725.47
	\$1,345,240.55

Clean-Up Deal.—The proposed sale to the Hydro Electric Power Commission of Ontario of the company's power and radial railway interests as outlined in the

Canadian Electric Railway Association.

Honorary President, Thomas Ahearn, President, Ottawa Electric Railway.
 Honorary Vice President, George Kidd, General Manager, British Columbia Electric Railway.
 President, G. Gordon Gale, Vice President and General Manager, Hull Electric Co.
 Vice President, Major F. D. Burpee, General Manager, Ottawa Electric Railway.
 Treasurer, A. Gaboury, Superintendent, Montreal Tramways Company.
 Executive Committee, E. P. Coleman, General Manager, Dominion Power & Transmission Co.; H. H. Cousins, General Manager, Toronto Transportation Commission; C. C. Curtis, Manager, Cape Breton Electric Co.; W. S. Hart, Managing Director, Three Rivers Traction Co.; A. D. Bell, C. C. Royce, General Manager, Winnipeg Electric Ry.; R. Mayne-Read, Superintendent, Quebec Ry., Light & Power Co.; J. A. Col, C. C. Royce, General Manager, Toronto Suburban Ry.; and C. L. Wilson, Assistant Manager, Toronto & York Radial Ry.
 Auditor, H. E. Weyman, Manager, Lewis County Railway.
 Secretary, L. E. Moreland, Chief Clerk, Hull Electric Co., Hull, Que.
 Official Organ, Canadian Railway and Marine World, Toronto.

circular letter dated Sept. 22, 1921, to each shareholder, was presented at the shareholders' annual meeting on Sept. 30, 1921, when the directors' recommendation to dispose of the company's interests in the several subsidiary companies was unanimously approved. The lawyers representing the Commission, the city and the company, owing to the vast amount of detail work, which includes the searching of several thousand separate parcels of property covering at least 250 miles of right-of-way of transmission lines and radials running through the various municipalities have not completed their work, and it looks now as if an agreement satisfactory to the parties may be completed within a few weeks, when it will require to be submitted to the trustees for the bondholders in London for ratification. Your directors are doing everything in their power to conclude this matter.

Toronto Railway Arbitration.—The company's franchise expired on Sept. 1, 1921. The arbitration between the city and the company in connection with the taking over of the railway system has been proceeding as rapidly as possible

during the past few months, but it is not yet completed. The large amount of evidence which it has been found necessary to furnish as to the value of the company's properties is occupying a great deal of time, but the presentation of its case is about complete.

The city is asking for one month's adjournment before commencing to put in its evidence. How long it will require in this connection is doubtful, but it looks as if several months must elapse before the arbitrators can make their award. As soon as a decision has been made the shareholders will be notified of the result. The expense of the arbitration and that of the clean-up deal will be very costly to the companies, but this cannot be avoided.

Bonds.—The $4\frac{1}{2}\%$ first mortgage bonds fell due on Aug. 31, 1921. The original issue was for \$4,550,000, which has been reduced by operation of the sinking fund to \$2,274,360. As the amount to be paid to the company by the city under the arbitration proceedings will not be received for some time, payment of these bonds has been delayed, and your directors decided that having regard to current money rates and as a matter of fairness to the bondholders the company will be pay interest at the rate of 6% a year for the time before payment of the bonds.

It can be seen the only business to be transacted at the annual meeting of the company on Feb. 1, will be the adoption of this report and the election of directors for the ensuing year.

Appended to the report were statements from which the following figures were taken: The balance in credit of profit and loss account at Dec. 31, 1920, \$5,161,100.97 has been reduced to \$4,163,801.50.

Statistics for 8 months:—Passengers carried, 135,947,869; transfers, 53,086,895; percentage of charges, etc., to passenger earnings, 93.2, against 84.2 in 1920.

The only change made in the Board at the annual meeting was that J. C. Grace, Secretary-Treasurer, was elected a director to succeed the late Senator F. Nicholls, who was also Vice President. The Board for this year is composed as follows:—Sir William Mackenzie, President; Sir Henry M. Pellatt, Vice President; J. C. Grace, Hugh Mackay, K.C., W. H. Moore, H. H. Pitts, Frank W. Ross, G. H. Smithers and E. R. Wood. They are also T. & Y.R. Co.'s directors.

One-Man Car Operation in the United States.

In connection with proposals before the Massachusetts State Legislature for the prohibition of the operation of one-man cars on electric railways in the state, the Stone & Webster Corporation has completed statistics as to the operation of one and two-man cars on the lines of 13 different companies, as follows:—

	1-man cars	2-man cars
Car miles operated	13,922,896	13,853,967
Passengers carried	95,198,971	98,952,902
No. of accidents	6,852	7,981
Cost of accidents	\$255,140	\$258,340

It is stated that over 5,500 one-man cars are being operated on electric lines in the United States; that they run over 220,000 miles a year and carry a billion passengers.

Electric Railway Employees' Wages, Working Conditions, Etc.

The Dominion Power & Transmission Co., in addition to developing and distributing electricity for power and lighting purposes, owns or controls the Hamilton St. Ry., Hamilton Radial Ry., Hamilton & Dundas Ry., Hamilton, Grimsby & Beamsville Ry., and Brantford & Hamilton Ry. The company recently gave notice of a reduction in wages varying from 13 to 15%, which the men decided not to accept and threatened a strike if the reduction was put in force. The employees belong to five different unions and applications for the appointment of boards of conciliation have been made to the Labor Department by four of them, F. Bancroft, Toronto, being named as the men's representative by three of them, and J. G. O'Donoghue, Toronto, by the fourth. E. N. Compton, of the Labor Department, was in Hamilton, Feb. 13, in consultation with union officers, with a view to having all the unions interested agree on one man to represent them on a board, so that one board could deal with the entire body of men. Four of the unions have international affiliations, and the fifth is a Canadian union.

The Dominion Power & Transmission Co. made an agreement with its interurban lines employees in April 1920, the agreement to run for one year, under which the following rates of wages per hour were fixed for conductors and motormen: First six months, 38c.; second six months, 40c.; second year, 45c.; third year and after, 52c. Following a board of conciliation, the above rates of wages were given Hamilton St. Ry. conductors and motormen in June, 1920, the rate to be retroactive to April 1. These rates of wages have apparently been continued in force until the present time.

It was reported in Hamilton Feb. 21, that negotiations to have one board of conciliation deal with the wages question at issue between the company and its employees had failed, and that two boards would be appointed, one to act between the company and the employees who are members of the international unions, and the other between the company and its employees who are members of the Canadian National Electrical Workers' Union. The company was reported to have advised the Labor Department that it would not appoint a representative to act for it upon the boards of conciliation applied for by the men, and an Ottawa dispatch of Feb. 17 stated that F. H. McGuigan had been appointed by the Minister of Labor to act for the company. F. Bancroft of Toronto will, it is said, represent the international unions members and J. G. O'Donoghue the Canadian union members.

Hull Electric Co.—Following up the majority and minority reports of the members of the recent board of conciliation, the recommendations of which were given in Canadian Railway and Marine World for February, some negotiations have taken place between the company and the men being carried on by correspondence between G. Gordon Gale, Vice President and General Manager of the company, and J. A. Noel, representing the men. The latter wrote Mr. Gale on Feb. 6 that the employees were anxious to make an amicable settlement of the wage question, and Mr. Gale replied as follows:—"You have suggested a rate of 48c. an hour for Dec. 1921, and 46c. an hour for 18 months, to July 1, 1923. This repre-

sents an increase over the rate which became effective on Dec. 1, 1921, and while we also believe very strongly in settling these matters amicably, as indicated by our attitude during the past 10 years, we regret that it is impossible to agree to this suggestion. With the exception of in the City of Montreal you have been paid higher rates than by any other street railway in the Province of Quebec. Practically all of these companies have made reductions or have given notice of cuts in wages. It is quite possible that on July 1, 1922, a further reduction in wages may be found necessary. In order to avoid a reconsideration of this matter within a few months, and with a view of adjusting the whole matter satisfactorily, I am prepared to recommend to our directors the continuation of the rate of 43c. an hour until July 1, 1923. You, of course, know that the company has undertaken to provide a pension fund for its employees, under certain conditions with which you are familiar. To those who have been in the service for a number of years, this provision is of real and considerable value, and I, therefore, strongly urge you to give this matter still further and more serious consideration, in order that our uninterrupted relations may continue."

Mr. Noel replied on Feb. 7 that the rate suggested at the men's mass meeting on Feb. 4 was their final decision and that if the company would not accept it the conciliation board's majority award was the only alternative that would be satisfactory. Mr. Gale then wrote Mr. Noel on Feb. 9 as follows:—"I regret to note that you have not given the employees generally an opportunity to consider the suggestion contained in my letter of Feb. 6. I have had several personal conversations during the past few days with representative employees, and I have been given to understand that the proposal to continue the present rates until July 1923 is not unreasonable. A higher schedule would naturally be more satisfactory, but they appreciate the changed conditions and the necessity for this reduction, and I believe this represents the considered view of quite a number of the men."

Mr. Noel wrote on Feb. 10 that the company's offer of 45c. an hour to July 1, 1922, and 41c. an hour to July 1, 1923, was considered at the mass meeting Feb. 4. The attitude of 96% of the men was in favor of the action taken, and the fact that the face of the majority award the men were favorable to reducing their wages 2c. an hour for 18 months was evidence that they were doing what was fair, and what the company might expect the men to do in return for what the company did for the men in 1919.

London St. Ry.—A London, Ont., press report of Feb. 18 stated that the company's management had been advised that the carmen had refused to accept the reduction of 3c. an hour, of which the company had given notice to go into effect March 1, and that a conference with the management had been asked for. Another report stated that the employees had notified the management that they wished to have the existing agreement cancelled and a new one substituted providing for an increase in wages, with time and a half for Sundays and holidays, and for a week holiday annually on full pay.

Electric Railway Freight and Passenger Rates.

Chatham, Wallaceburg & Lake Erie Ry.'s Standard Freight Mileage Tariff C.R.C. 672, was approved by the Board of Railway Commissioners' order 32,091, Feb. 4, and it became effective on March 1.

Hamilton St. Ry.—Following the defeat on Jan. 2 of the city's bylaw to grant a 5c. fare, there was a conference on Jan. 22 between E. P. Coleman, General Manager, Dominion Power & Transmission Co., and the city council's railway committee, Mr. Coleman advocated the adoption of the service at cost principle and said he would submit a proposition at a later date, but on Feb. 3 it was stated that no proposition would be made by the company. The matter has been discussed at frequent intervals since then, both by the railway committee and the city council. Complaints have been received as to the service from citizens; the committee has had a check made on the service given; a suggestion has been made that the city forego its percentage; another that the 5c. fare be permitted, and another that an arrangement be made to acquire the line. Nothing, however, has come of any of the proposals, and the situation remains practically as it was after the defeat of the bylaw on January 2.

The City Solicitor was reported recently to have drawn up a proposed agreement with the company, which was to be considered by the works committee on Feb. 22. It provides for a straight 5c. fare, during the day, except that fares for children, transfer privileges, and the carrying free of policemen and other civic employees shall remain as at present. The company provides a service not so efficient than during 1921, and is to relay tracks on certain streets as soon as the city is ready to proceed with the paving work.

London St. Ry. Co.—The Ontario Legislature is being asked by the company to vary its agreement with the City of London, so as to enable it to obtain sufficient revenue to keep the railway in a reasonably safe condition and state of repair and to meet the working expenditures and such return on the capital actually invested as shall be deemed reasonable, and to authorize the charging of a fare not exceeding 5c., except for children under 5 years of age in charge of an adult, who shall be carried free; children between 5 and 12 years of age, who shall be charged not exceeding 3c.; and for police constables on duty and other civic employees when on duty to be carried free; and to vary bylaw 916 and any other bylaw of the City Council relating to the matter. The reason for requiring the legislation is stated to be that the revenues derived from the present rate of fare are not sufficient to provide for the increased cost of operation, and that the company is in need of immediate relief, if the railway is to be kept in a reasonably safe condition and the citizens supplied with an efficient street railway service.

Montreal Tramways Co.—Under an agreement between the Montreal Tramways Co. and the Montreal City Council a notarial deed was signed by the latter Feb. 20, by which school children's tickets will be valid on the company's cars on week days from 7.30 a.m. to 6 p.m., instead of from 8 a.m. to 6 p.m. as heretofore.

The Toronto Transportation Commission's Programme for 1922

While no appropriation has yet been made by the Toronto City Council for work to be carried out on the city's street railway under the direction of the Transportation Commission during the remainder of this year, it is probable that approximately \$12,750,000 will be spent by the Commission in a continuation of its thorough rehabilitation of the system. The programme, which is as yet but tentative, will probably include \$6,500,000 for track work, i.e., new track, extensions to existing track, the installation of between 30 and 40 new intersections, and the widening of the devil strip on the double track lines, to the Commission's standard. Generally speaking, the devil strip on the Toronto Ry. Co.'s lines was 3 ft. 10 in., and the Commission has been widening it to 5 ft. 4 in., which gives a clearance of not less than 1 ft. between two of the new cars. The devil strip on the Toronto Civic Ry. lines was originally 5 ft. 4 in.

It is probable that the track will be relaid on Church St. to complete the portion which was not relaid in 1921; on Bloor St., from Lansdowne Ave. to Avenue Road, and from Yonge St. to Church St.; on Dupont St.; on Dovercourt Road, north of College St.; on King St., from Spadina Ave. to Sherbourne St., and on Queen St., from Ossington Ave. to Yonge St. In addition, it is likely that the track will be relaid between the Howard Park car house and the Howard Park loop, on Dufferin St.; from the exhibition loop to Queen St.; and on Wellington St. New track will probably also be laid from Sunnyside to the Humber, and on Carlaw and Pape Aves., from Queen St. to Danforth Ave., while possibly an extension will be made at North Yonge St. As stated above, however, this programme is only tentative as yet, and the details are liable to be greatly varied. It is anticipated that but very little, if any, of the narrow devil strip will remain by the end of this year.

A question concerning which there is a lot of conjecture is the possible linking up of the line on Bloor St. east of Lansdowne Ave. with the former Toronto Civic Ry. line on Bloor St. west of Dundas St. C.P.R. and G.T.R. tracks cross Bloor St. at grade between Lansdowne Ave. and Dundas St. One proposal is that a subway be built under the easterly crossing of the G.T.R., and a hood bridge over the westerly C.P.R. and G.T.R. tracks. No definite decision has been arrived at, and it is evident that the proposition will require a lot of consideration and a hearing before the Board of Railway Commissioners before the cost to be borne by the city and the railways respectively can be determined.

It is expected that out of the moneys provided for work during 1922, about \$3,500,000 will be spent for 250 additional new cars of the same modern type as the Commission began to acquire in 1921. The remainder of the appropriation will probably be used in the provision of car house extensions, shops and shop equipment, loops, car house and yard trackage, and construction equipment.

While labor costs were high during 1921, the Commission kept well within the estimates for the work which it accomplished in the short portion of the construction season which remained after it was placed in charge of the work. The magnitude of the work undertaken

by the Commission in its rehabilitation of the street railway system is not thoroughly appreciated, even by the majority of Toronto citizens. A study of the map given in Canadian Railway and Marine World for Dec. 1921, pg. 657, will show the extent of the street railway lines now operated by the Commission; the relatively compact system operated by the Toronto Ry. Co., and the Toronto Civic Railway lines, which were located principally in the outlying portions of the city, have been linked up to form a system covering a much larger territory. The necessity for the higher fare is at once apparent when there is taken into consideration the fact that the Toronto Ry. Co.'s lines served only a small and compact area of dense traffic, while the new and enlarged system covers areas where the traffic is not nearly so heavy, and cannot logically be expected to be so for some time to come.

The expenditure of the amount mentioned during the remainder of 1922, in addition to the amounts spent for the work completed in 1921, will go a long way toward making Toronto's new street railway system a well rounded and complete one, and one in which the citizens may justly take pride. While the work of rehabilitation has been costly, and will, when completed, have necessitated the expenditure of a large sum, the fact remains that good and efficient transportation within a city is of inestimable advantage, and for that reason the expenditure of the large sums in street railway rehabilitation is more than justified.

Major Burpee's Election as an Ottawa Traction Co.'s Director.

The Ottawa Journal says:—"Major F. D. Burpee, Manager of the Ottawa Electric Ry. Co., has been elected a director of the Ottawa Traction Co. Thus is there recognition of his exceptional ability as a street railway executive. In the position of Manager he has been of very great value to the company he serves. In 1912, when Lt. Col. J. E. Hutscheson left the company, those who knew him wondered where another man would be found to run the street railway as well as he had run it. Mr. Burpee proved to be the man. Two years in war service in France seemed to make him even a better executive. The Ottawa Electric Ry. Co. has him to thank very largely for influencing the vote of the people on the recent plebiscite in favour of the ownership of private ownership. He kept up the service in face of difficulties and cemented the goodwill of the people. He also discussed the problems of the future in a way that was considered fair and reasonable. His career has been one of remarkable development. He started with the O.E.R. as a stenographer. It was as general assistant to the Superintendent, and to the Secretary-Treasurer that he gained the experience which was a necessary complement to his native capacity for the responsibilities of the position of Superintendent. So successful has he been that the Journal hoped before the plebiscite was voted on that should the city take over the street railway he would be retained as a commissioner to assist in running it for the corporation. Not the least of Major Burpee's qualifications for his position is his ability to command and retain the loyal service of those under him."

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies.—

	6 mos. to Dec. 31, 1921	6 mos. to Dec. 31, 1920
Gross	\$940,113	\$897,668
Expenses	653,566	631,786
Net	286,547	265,882

Calgary Municipal Ry.—The receipts for January, according to a press report, were \$78,506, against \$85,112 for Jan. 1921. The report gives the following other figures: Tickets sold, 1,318,156; transfers, 274,573; cash, \$28,217. There were 24,560 car hours done during the month, the passengers per hour being 66.04 over the whole system. Trips per hour were 3.7, and passengers per trip 17.84.

Cape Breton Electric Co.—

	12 mos. to Dec. 31, 1921	12 mos. to Dec. 31, 1920
Gross	\$65,748	\$68,748
Expenses	52,442	51,068
Net	11,306	17,680
Interest	5,576	5,687
Balance	5,730	12,029

Hamilton St. Ry.—Hamilton, Ont., City Treasurer received \$21,732.10, Feb. 16, for the percentage of the company's receipts due the city for the three months ended Dec. 31, 1921. This made the total percentage for 1921 \$87,396.84, against \$90,901.10 for 1920.

Montreal Tramways Co. is reported to have reduced its indebtedness to the city for rentals from \$1,642,923.85, as at Dec. 31, 1921, by the payment on Jan. 29 of \$182,468.71. It was stated that further payments would be made on account during this year.

The Toronto Ry. Co.'s Secretary issued the following notice early in February: "Six months' interest on the company's bonds will be paid on Feb. 28, at the rate of 6% per annum, in accordance with the directors' decision as expressed in the circular issued in Aug. 1921. As the last coupon on these bonds fell due on Aug. 31, 1921, it will be necessary to pay interest by cheque upon presentation of the bonds at the Canadian Bank of Commerce, Toronto, its agency in New York, or at the Bank of Scotland, London, Eng., as called for under the bonds as issued, at the same time endorsing receipt of payment upon the bonds. The arbitration with the City of Toronto to fix the price to be paid for the company's street railway property taken over by the city is actively proceeding before the board of arbitrators, consisting of Hume Cronyn, chairman, Sir Thomas White and Sir Adam Beck. A large part of the company's case has been put in and it is anticipated that all the evidence, including that of the city, should be before the board within the next three months. Pending the receipt of the proceeds of the award, it is necessary for the company to make further indulgence of its bondholders."

Surplus	78,495	76,616

They used to say politeness costs you nothing, but nowadays it costs you your seat in the street car every time.—Goblin.

British Columbia Electric Railway and Dominion Jurisdiction.

The Vancouver, Fraser Valley & Southern Ry. Co. is applying to the Dominion Parliament for an act to amend its act of incorporation, Dominion Statutes 1906, chap. 178, and acts amending the same, so as to declare that any works and undertakings which it is authorized to acquire or lease, when so acquired or leased, be works for the general advantage of Canada; to enable it to extend the works now owned or hereafter acquired beyond the limits of British Columbia into the State of Washington, U.S.A.; to pay for any works or undertakings by shares in the company; to issue preference stock; to increase the amount of stock to be issued; to change its name; to alter its powers relating to the purchase of electric energy; to establish branch offices in London, Eng., and to hold annual meetings of shareholders there; to enable it to collect tolls and rates in respect of any works or undertakings authorized to be acquired or leased by it, pending approval of such tolls and rates by the Board of Railway Commissioners, and for other purposes.

The company's act of incorporation authorized it to build a railway from Vancouver to New Westminster and thence to the International Boundary line at Douglas; and from some point on the Fraser River near New Westminster bridge to Chilliwack, and from south of the Fraser River westerly to Ladner's Landing on the Fraser River in Delta Township. This undertaking was declared to be for the general advantage of Canada, and the company was authorized to develop electric power or energy for the operation of its line and for general distribution in the municipalities served by the line. The company secured extensions of time for the construction of its lines in 1909, and in 1912, and in the latter year it was given authority to enter into agreements with the Vancouver Power Co. and the British Columbia Electric Ry. Co. or either. The latter company had obtained control of the charter, and under it began the construction of an electric railway from New Westminster, on which 12 miles of track were laid to Cloverdale in 1919, and the track was completed to Chilliwack, a further distance of 51.40 miles, in 1910. About the same time the B.C.E. Ry. Co. leased the Vancouver & Lulu Island Ry. from the C.P.R. and electrified it.

In Jan. 1920 the company applied for an act to change its name and to authorize it to take over the British Columbia Electric Ry. lines, as well as its other properties. The object of this proposed amalgamation was to bring the B.C.E. Ry. Co.'s line under the Board of Railway Commissioners' control. The application was not proceeded with, owing to an arrangement having been concluded under which the increase of fares which had been temporarily authorized was to be continued to June, 1922, the various municipalities meanwhile undertaking to negotiate new franchises with the company. After some negotiations, a new contract was tentatively agreed to, May 1921, between the City of Vancouver and the company, which was based on the basis of contracts with the other municipalities. This agreement was given the six months hoist by the City Council at the end of September, and other municipalities refused to fall in with the suggestion that they should adopt a similar one, hence the B.C.E.R. Co.,

through its Dominion subsidiary, the V.F.V. & S. Ry. Co., is applying for such amendments to its charter as well as to its several lines which are outside of Dominion control to be made subject to the Board of Railway Commissioners' jurisdiction as to rates and tolls. Representatives of 27 municipalities within which the B.C.E. Ry. operates met at Vancouver, Feb. 15, and it was decided to oppose the company's application before Parliament. A committee of 12 was appointed to take whatever steps they might consider necessary.

One-Man Cars in Port Arthur.

In connection with the proposed operation of one-man cars on the Port Arthur, Ont., Civic Ry., we are officially advised that the City Public Utilities Commission is awaiting the hearing of its application to the Board of Railway Commissioners to operate such cars across the Canadian National Ry.s. tracks at Inter-city. Pending a decision in this matter, which will have considerable bearing on whether or not one-man car operation will be extended to the entire system, instructions have been issued to fully equip one of the existing cars with safety devices which will include pneumatic door and step control, in order to demonstrate the safety and reliability of the car under one-man operation. An order has been given the Canadian Westinghouse Co., Hamilton, Ont., for the safety devices and the car will be equipped as soon as they are delivered. It is hoped that by the time this is done the Board of Railway Commissioners will have made such a decision as will enable the extension of one-man car operation to the entire system.

Nova Scotia Tramways & Power Co. Will Distribute Government Power.

After negotiations extending over a year, during which time the Halifax City Council started negotiating an agreement with the Nova Scotia Power Commission for the distribution of the power developed at the Government's power plant, an arrangement was completed Feb. 1, between the Nova Scotia Tramways & Power Co. and the Commission, for the distribution of the power. The proposed arrangement between the City Council and the Commission necessitated the construction of a distribution plant, at an estimated cost of \$1,186,000, but difficulties arose and the proposal was not carried through. The power being available, and the N.S.T. & P. Co. being in a position to undertake the immediate distribution of the same, the present agreement has been made.

The contract between the Commission and the company was ratified by the Government Feb. 7. It provides for the reservation by the Commission of electrical power and energy up to a total of 18,000,000 k.w. hours a year at a rate not exceeding 6,000 k.w. and 7,500 kilowatt hours, and such further supplies of power and energy as the Commission may have available after providing for other users, to be delivered on a 24 hour basis at the high tension side of the company's transformers at Halifax power house. The company agrees to pay the cost of the power, at rates to be fixed

annually by the Commission; to install the plant to take care of the new power and to co-operate with the Commission in promoting the increased use of power. The Commission may enter into a contract with the City of Halifax for the supply of power and energy, but not for resale to the public. The price to be charged to the public for the power is to be a fair and reasonable one, and that this will be so, it is arranged that the company shall qualify and elect to its board of directors a Government nominee; that the Nova Scotia Public Utilities Commission shall have power to make a valuation of the plant, shall determine what proportion of surplus earnings shall be devoted to a reduction of rates, and may, on application, fix rates. The contract is to run for 30 years.

The present power development is at St. Margarets Bay, and the receiving station is at Arm Bridge. The Commission proposes to continue the power line from Arm Bridge to the N.S.T. & P. Co.'s Halifax power plant, and has an arrangement with the Canadian National Ry.s. under which the towers will be erected alongside the railway from Armdale.

Uniforms for Toronto Transportation Commission Carmen.

The Toronto Transportation Commission has ordered 2,442 uniforms for its conductors and motormen, at \$23.35 each. The cloth has been manufactured at Hespeler, Ont., and is being made up by Toronto tailors. For the first uniform suit obtained, the employee pays the whole cost, the second suit, the employee pays half the cost and the Commission the other half. Succeeding suits are provided by the Commission.

The Commission has ordered 1,400 uniform overcoats for conductors and motormen. The employee bears the whole cost of the first overcoat obtained, and the Commission bears the cost of succeeding coats issued to him.

For caps, the employee bears the cost of the first one furnished him, half the cost of the second, and the Commission pays for all succeeding ones furnished.

The Commission will also supply its conductors and motormen with uniform shirts at cost price, so that their appearance will be uniform in warm weather when it may be necessary for them to remove their coats.

Change of the Rule of the Road in British Columbia.

In connection with the change in the rule of the road in British Columbia, which went into effect Jan. 1, members of the B.C. Government wrote Geo. Kidd, General Manager, B.C. Electric Ry., as follows:

Hon. John Oliver, Premier:—"The government is highly pleased with the results of the change in the rule of the road so far. That there has been no confusion and no increase in accidents reflects great credit upon the B.C.E. Ry., upon government and municipal officials, and the hearty co-operation of the public."

Hon. J. H. King, Minister of Public Works for B.C., now Dominion Minister of Public Works:—"Permit me to express our great appreciation to you, your staff and the men engaged in operating the cars, on the able assistance and co-operation rendered the department in bringing about the change successfully."

Electric Railway Projects, Construction, Betterments, Etc.

Brantford Municipal Ry.—A press report states that Brantford, Ont., City Council has approved a bylaw providing \$80,000 for street railway extension. (Dec. 1921, pg. 660.)

British Columbia Electric Ry.—The B.C. Minister of Railways has authorized the company to build an industrial spur on Queen's Ave., New Westminster, the New Westminster City Council having previously given its assent.

We are officially advised that the company proposes to build a second track on its Cook St. line, from Rockland Ave. to Pakington St., Vancouver, 0.3 mile. The new track will be laid with 60 lb. rails, A.S.C.V. section. (Feb., pg. 97.)

British Columbia Electric Ry.—We are officially advised that work is proceeding upon the construction of a second track on Cook St., Vancouver, for 1,520 ft. The work is of temporary construction type, and 60 lb. rails will be laid. The construction of this second track will permit an unrestricted service to be given on the Foul Bay-Hillside route by eliminating two turnouts. (Feb., pg. 97.)

Calgary Municipal Ry.—Calgary, Alta., City Commissioners are considering suggestions for the extension of the line serving East Calgary. Two petitions, each suggesting a particular extension, are considered and the street railway department after looking over the situation recommended that the present line on Ninth Ave. be turned southwest for a short distance to Seventeenth St., and then straight south to Twenty-eighth Ave., then west to Sixteenth St., a distance of two blocks, and from there north to Ninth Ave. The cost of the scheme would be \$13,360.66. About 3,400 ft. of track could be salvaged by the changes and there would be an addition of 2,000 ft. necessary. The department recommended that this work be undertaken only out of revenue. The commissioners held the matter over for future consideration.

Superintendent R. A. Brown is reported to be preparing a report for consideration by the city council on the expenditure necessary for the rehabilitation of the street railway. It is reported that about \$24,000 a year for ties, and about \$40,000 a year for sub-base, etc., will be required as a minimum expenditure for the next eight years. (Feb., pg. 97.)

Edmonton Radial Ry.—The Board of Railway Commissioners has authorized the connection of the E.R.R. tracks with the Canadian National Rys. spur track on 104th St., Edmonton, Alta., leading to the power house. The purpose of making the connection is to transport ashes from the power house over the street railway for track repair work.

Kingston, Portsmouth & Cataract Electric Ry. We are officially advised that the company contemplates the reconstruction of 3,800 ft. of track on paved streets in Kingston, Ont., to be relaid with 90 lb. A.S.C.E. rails.

Kitchener & Waterloo Electric Ry.—A press report states that the Kitchener, Ont., Light Commission is inviting tenders for 220 gross tons of steel rails and 1,000 steel ties. The issue of \$63,000 of debentures for the construction of about a mile of double track line on King St. was authorized at the municipal elections Jan. 2. The work was expected to be put in hand at an early date.

London & Port Stanley Ry.—The London Railway Commission is reported to

have authorized the calling of tenders for the construction of an amusement hall in the park at Port Stanley, Ont. The hall will, it is said, be immediately south of the board walk at the west end of the Commission's property, and will be almost directly south of the beach station. It will be octagonal and of similar construction to the cafeteria and other buildings erected by the Commission there. The hall will provide accommodation for dancing, with a gallery for spectators, and underneath the dancing floor provision will be made for other amusements. The preliminary work necessary before building operations are started will be proceeded with at once, as it is hoped to have the building ready for use early in June.

London & Port Stanley Ry.—The London Railway Commission is reported to be negotiating with the G.T.R. management for the old building at the corner of Richmond and Bathurst Sts., London, Ont., to provide station accommodation. The estimated cost of the alterations is \$20,000.

The Commission is also reported to be considering plans for the installation of coal hoisting machinery at Port Stanley, Ont., and to have had plans prepared for building a new amusement hall there. (Oct., 1921, pg. 548.)

The Mount McKay & Kakabeka Falls Ry. Co. is applying to the Ontario Legislature for an act to extend the time for the completion of its authorized lines, and to extend the time during which the lines built may be operated by steam. The company's line extends from Fort William city boundary for about 5 miles westerly, and is used for switching by railways entering Fort William. It was built as an electric railway, the intention being to build from Lot 10, Kakabeka Falls, to the mouth of Mission River, and thence along the shore there to Squaw Bay. In 1916 the Ontario Legislature authorized the company to use steam instead of electricity as motive power, except on the portion on Neebing Ave., for four years. This permission was extended for two years in 1920, and the company now asks for a further extension of the right to use steam. (July, 1920, pg. 386.)

Peterborough Radial Ry.—We are officially advised that the Peterborough City Council recently asked the Hydro Electric Power Commission of Ontario to authorize the construction of an extension of the electric railway in the city, which is operated by the Commission. The request was particularly for an extension across the Otonabee River to the eastward, on Hunter St., with possible extensions from Hunter St. on Rogers St. a total of from 0.50 to 0.75 of a mile. The Commission did not hold out much hope that the extensions could be made at present, but intimated that experiments were about to be made with trackless trolley buses and if they were found successful, such a method might be used on the routes for which extensions were asked.

Saskatoon Municipal Ry.—We are officially advised that a contract has been let to the Whitesale Fuel Co., Saskatoon, Sask., for 5,000 ties for this line.

Winnipeg Electric Ry.—A press report states that the 1922 programme of work includes the laying of tracks across Provencher bridge.

Voting on Niagara, St. Catharines and Toronto Railway Bylaws.

Canadian Railway and Marine World for February gave particulars of the voting in 10 municipalities in the Niagara peninsula on bylaws providing for the buying of the Niagara, St. Catharines & Toronto Ry. from the Dominion Government and its operation for those and some other municipalities by the Hydro Electric Power Commission of Ontario. It was stated that the bylaws had been carried in St. Catharines and Welland Cities, Merriton, Niagara-on-the-Lake and Thorold Towns, Port DeLauch Village, and Louth and Pelham Townships, but that the bylaw was defeated in Humberstone Village. It was also stated that there was some question as to the voting in Pelham Township, as voters of Fonthill Village, part of which was formerly in the township, had voted in the township. We have since been advised that the votes in Pelham Township outside of the portion now included in Fonthill Village were 342 against the bylaw and 211 for it. The Fonthill voters did not vote on the Pelham Township bylaw, the ballots given them being simply as a feeler to get their views as to the submission of a bylaw at a later date, which they declared in favor of by 83 majority.

Bylaws in connection with the proposed acquisition of the N.St.C. & T. Ry. were voted on in Crowlows, Grantham, Humberstone and Thorold Townships on Jan. 30, being carried in one township and defeated in three, as follows:—

	For	Against
Crowland	117	107
Grantham	250	312
Humberstone	80	207
Thorold	139	143

British Columbia Electric Railway One-Man Car Operation.

The B.C. Minister of Railways has authorized the B.C. Electric Ry. to operate one-man cars upon the following lines:—

City of Victoria.—Douglas and Outer Wharf; Oak Bay and Fort; Willows; Uplands; Beacon Hill and Fernwood; Esquimalt; Gorge; Foul Bay and Hillside; Burnside and Mount Tolmie.

City of New Westminster.—Sixth St.-Highland Park; Sapperton-Edmonds.

Greater Vancouver.—Georgia East; Main St. South; Saanichton St.; Nanaimo St.; Sixth Ave.; Dunbar St.; Hastings St.; East extension; Central Oak-Elburne.

The company agrees to comply with the requirements of W. Rae, Government Inspector of Railway Equipment, as to equipment and appliances.

The first of the one-man cars was put in operation in Vancouver prior to Jan. 31, but two men were in charge on it. Beginning Feb. 1 the one-man operated cars were put on the Georgia East and Dunbar St. routes, and additional cars are being put out as they are completed.

English Tramway Fares.—The London, Eng., County Council, towards the end of 1921, reduced the minimum fare on its tramway lines from 1½d. to 1d., and on Jan. 31 it was reported that during the first six weeks of the operation of the new rate, while 166,000 more passengers were carried than before, there was a loss of \$33,000 in revenue.

When a street car sways from side to side, it is not necessarily full.—Goblin.

Trackless Trolley Buses for Hydro Electric Power Commission of Ontario.

Following the ordering by the Toronto Transportation Commission for use in the city's outskirts, of four trackless trolley buses, which were described and illustrated in Canadian Railway and Marine World for January, the Hydro Electric Power Commission of Ontario has ordered four, to be used on its Hydro Radial Railway, Essex Division, from the St. Louis Car Co., St. Louis, Mo. Each bus will accommodate 29 passengers. They will be somewhat similar to those ordered elsewhere by the Toronto Transportation Commission, but will differ chiefly in the height of floor above ground line, in the spring gear, and in the arrangement of the entrance door. The floor will be 3 in. lower than that of the Toronto Transportation Commission buses, the height above ground line to be 30 in. instead of 33. They will be equipped with underslung springs of more than the usual length, and the entrance door at the front of the bus will open inward and swing toward the front. The wheel base will be 16½ ft., length over all 26 ft. and extreme height 9 ft. 1 in. The roof will be of ¾ in. basket-weave, and the sides of 16 gauge aluminum, with 3/16 in. veneer inside. The Toronto Transportation Commission buses sides are to be of plymetal. Westinghouse electrical equipment, practically identical with that furnished for the Toronto Transportation Commission buses, will be installed, and the 2 motors will be of 25 h.p. and of the safety car type. The buses will be similar to those demonstrated in Detroit a short time ago, as described in Canadian Railway and Marine World for December, 1921, and it may safely be said that they are far past the experimental stage. At the time of writing (Feb. 20) all except a few relatively unimportant details of design and construction are settled, and we are informed that the designs will be complete by the end of February, and that delivery of one bus is expected by the end of March.

One or more additional trackless trolley cars may be ordered for the Peterborough Radial Ry., which is operated by the Hydro Electric Power Commission for the Ontario Government, a department from Peterborough, which was ordered by the Commission recently, having been informed that it was hardly likely that any track extensions could be made in that city, but that if trackless trolleys prove satisfactory in Walkerville and Windsor, some might be ordered for Peterborough.

It may be taken for granted that this type of equipment, new in Canadian electric transportation, was ordered by the Transportation Commission and the Hydro Electric Power Commission only after much study had been given to its possible advantages, and it is safe to say that in the near future buses of this type will have established for themselves a definite field of usefulness in urban transportation. They will doubtless be admirably suited as adjuncts to a street railway system, to operate in the outskirts of a city where the population and traffic density are not sufficiently great to make the laying of track and the operation of street cars a paying proposition. The only construction needed in connection with these buses, provided the streets are suitable for their operation, consists of the erection of poles and the stringing

of wires, and with power supplied from the same source as for the street car system, their economy is evident. As a city expands and population grows, with a consequent increase in traffic density, extension of the street railway system to include trolley bus routes will doubtless become economically justified, after which the trolley buses may be placed on new routes further removed from the center of the city, to supply transportation service in the new outskirts until the extension of the street railway system is once more justified.

Stoppage of Electric Railway Service in Levis.

The Quebec Telegraph says:—"The people of the town of Levis and all those having business in that unfortunately situated place at present are much to be pitied. Since the recent snow storm, locomotion of almost every kind has been practically impossible there. Owing to the stoppage of the street railway almost everything is at a standstill. Instead of the main streets being kept clear as formerly by the railway, now that the latter is closed, pedestrians can scarcely manage to wade at all through some of the streets, having often to climb over snow drifts to get out of the narrow roadway so that vehicles can pass them. Like many other communities that have the advantage of electric tramways, the people of Levis never seemed to realize what their road meant to them, and therefore never took the trouble in its struggles or tried to meet its promoters with fairness. Those that might have helped them have failed to do so, though the management of the road had offered to open the tracks to the city and others. Meanwhile some of those that might have aided the undertaking appear to have done their best to tie it up. Much of the whole trouble was caused by the populations of some of the local municipalities being influenced or prejudiced against the railway for selfish purposes. It is too bad that the people of those villages, who are today the victims of irresponsible individuals, could not lay the blame where it belongs and bring the guilty parties to face the indignation of the people. It was rumored on the street and in the houses all last summer that a rich firm wanted to purchase the railway and amalgamate it with the ferry company, when the people would be given a reduced fare. Another rumor, which further misled the people, was to the effect that a group of financiers was going to municipalize the ferry and street railway and probably everybody would then be carried for next to nothing. All these stories were spread with considerable satisfaction and caused enmity against the street railway mortgage owners, who would be glad to be relieved of the ownership, for only the return of the money they have in it. But these irresponsible promoters did not inform the overburdened taxpayers of the respective municipalities that they were going to do all this with an issue of bonds, which would have to be paid for in extra taxes. It's an ill wind which blows nobody good. Next spring and summer the south shore residents may be a wiser but sanner lot than they were last year."

Editor's Note. — The Levis Tramway Co.'s service was closed down on Nov. 20, 1921, owing to the impossibility of arriving at any satisfactory arrangement with the municipalities, since which no local transportation service has been given, except what is furnished by a couple of auto buses belonging to a local garage and run between Levis ferry and Lauzon intermittently. Until recently no move was made by either the company or the public to break the deadlock, but in the middle of February a delegation waited on the Quebec Prime Minister and asked that something be done to secure car operation. We are advised that until satisfactory arrangements can be arrived at between the company and the municipalities, the company cannot raise capital to refinance its heavy fire loss, and that the only service which it will be possible to give in the spring, after the snow has gone, will be what the few cars left after the fire will be able to give.

Canadian Electric Railway Association's Activities.

The Canadian Electric Railway Association's executive committee met at Montreal Jan. 30, those present being G. Gordon Gale, President, in the chair, Major F. D. Burpee, Vice President, A. Gaboury, W. S. Hart, R. M. Reade, C. L. Wilson, and L. E. Moreland, Secretary.

It was reported that member companies had approved unanimously of the new schedule of annual fees, subject to the adoption of an amending bylaw at the next annual meeting.

The President was requested to keep in touch with other associations in regard to the report on the location of power transmission lines, and to attend the conference proposed to consider the matter. A. Gaboury, chairman of committee on traffic regulation and accident prevention, reported progress with local authorities. C. L. Wilson drew attention to a recent municipal regulation in Toronto requiring all vehicles to carry lights at night after July 1, 1922.

The President reported satisfactory progress with the Post Office Department, respecting remuneration for carrying mails, and that companies paid on a lump sum basis are receiving renewal contracts based upon the new mileage rate.

An invitation for the Association's representation at a meeting in Montreal, on Feb. 6, to consider a proposal to form an all-Canadian electrical association, was considered, and it was decided that such an association would not be desirable from the C.E.R.A. standpoint, but that an advisory council might be appointed to encourage co-operation and to avoid overlapping of activities.

Applications for active membership from Brandon Municipal Ry., Brandon, Man.; Cornwall St. Ry., Light & Power Co., Cornwall, Ont.; Lethbridge Municipal Ry., Lethbridge, Alta.; and Port Arthur Civic Ry., Port Arthur, Ont.; and for associate membership from Canadian Brill Co., Preston, Ont., were approved, subject to confirmation of an amending bylaw at the next annual meeting.

R. M. Mayne-Reade, Superintendent, Quebec Ry., Light & Power Co., was appointed chairman of the exhibit committee, and given full charge of arrangements for the exhibit to be held at Quebec, Que., in connection with the annual meeting on June 1 and 2. A. Gaboury,

Detroit United Railway Annual Report and Meeting.

The report for the calendar year 1921 presented at the recent annual meeting in Detroit, Mich., showed the gross income, less operating expenses, as \$4,616,512.94, against \$4,637,181.04 in 1920, Sandwich, Windsor & Amherstburg Ry. results being included to March 31, 1920, only, when it was transferred to the Ontario Hydro Electric Power Commission.

Operating revenues decreased \$5,657,160, or 19.5%, due mainly to the reduction in the rate of fare in Detroit from 6c. cash with free transfers, to 5c. cash and 1c. for transfer, effective June 19, 1921; the reduction in the rate of 2c. a mile to 1½¢ a mile, 25%, on interurban lines, effective Sept. 1, 1921; the business depression and economic conditions obtaining during the entire year and to the competition from jitneys and organized motor bus service. On Jan. 30, 1922, the rate of fare on interurban lines was put back to 2c. a mile, the rate which was in effect prior to Sept. 1, 1921, this action having been approved by the Michigan Public Utilities Commission. The operating expenses decreased \$5,596,384.75, or 22.3%, due in part to the decrease in rates of wages of conductors and motormen for eight months of 1921 and other employees for the entire year; in part to decreased cost of materials and supplies, and in part to rigid economies effected in operation.

The balance sheet includes \$261,933.89 loss on sale of Canadian properties, which is probably the difference between the amount received from the Ontario H.E.P. Commission for the S.W. & A. Ry. and the amount at which the property was carried on the company's books. Payment for these lines was made by the Commission's bonds for \$679,000.

The outstanding events affecting the operation of the properties during 1921 were: The beginning of the operation in February of the lines constructed by the City of Detroit; the defeat of the company's proposed service at cost ordinance by a vote of the people at the April election; the sale by the company to the city of a portion of its day-to-day lines, together with certain cars and equipment, at a price fixed by the arbitrators as approved in the various day-to-day agreements; the offer of the city of \$388,000 for certain portions of the Woodward Ave. and Fort St. lines, on which franchises had expired, and the refusal by the company to accept the offer; the vote of the people at the November election to oust the company from the Woodward Ave. and Fort St. lines where the franchises had expired; agreement with the city for the joint operation of certain lines, part of which are owned by the company and part by the city, with the inauguration of exchange system of universal transfers between the company and the city; negotiations between the company and the city for the lease or sale of the major portion of the company's property in the Detroit one fare zone to the city, no mutually acceptable basis having as yet been arrived at.

The Mayor of Detroit, who attended the annual meeting, is reported to have stated there that the company must agree to sell its lines to the city within a month, or face the consequences. The Board of Street Railway Commissioners advised the company as follows:—"If, at your stockholders' meeting, Feb. 7, you do not authorize the sale of your property to the city, on terms satisfactory to the

city, or empower your directors or a commission to arrange the sale subject to ratification by your stockholders at a special meeting called promptly for that purpose, the Commission are of the opinion that any further negotiations would be of no avail and each side should then proceed according to its legal rights."

Prior to the recent annual meeting, Montreal shareholders had only one representative on the directorate, A. J. Ferguson, but the meeting elected seven Montrealers, H. Blouin, P. A. Blouin, J. O. DeMarais, J. E. Gill, A. A. Gingras, L. A. Gosselin, and C. Lalandeau, while the minority shareholders elected four directors, A. F. Edwards and J. C. Hutchins, Detroit; A. J. Ferguson, Montreal; and E. W. Moore, Cleveland, Ohio.

A Detroit press dispatch of Feb. 27 stated that the company had agreed to accept the city authorities' offer of \$19,850,000 for its lines of some 300 miles in the city, \$2,770,000 to be paid down and

Major F. D. Burpee,
Manager and Director, Ottawa Traction Company.

the remainder in annual instalments of \$500,000, the question of confirming the city authorities' action to be voted on by the citizens on April 15, and that whatever the result the company will continue to operate its interurban lines.

Mainly About Electric Railway People.

Sir Adam Beck, Chairman, Hydro Electric Power Commission of Ontario, and Miss Beck, left Toronto at the middle of February to spend some three weeks in North Carolina. Shortly after his arrival at Asheville, Sir Adam was attacked with bronchitis, and was seriously threatened with pneumonia, but on Feb. 24 he was reported as considerably improved.

Major F. D. Burpee, Manager, Ottawa Electric Ry., Ottawa, Ont., and Vice President, Canadian Electric Railway Asso-

ciation, who has been elected a director of Ottawa Traction Co., was born at Ottawa, Apr. 25, 1876, and commenced railway work in 1891 on District 4, Eastern Division, C.P.R., Ottawa, and transferred to Ottawa Electric Ry. service in 1893, since when he has been, to 1896, stenographer; 1896 to 1898, cashier and paymaster; 1898 to Aug. 1912, accountant, during which time he also acted as assistant to the Secretary-Treasurer, and to the Superintendent. In Aug. 1912, on the resignation of Lt. Col. J. E. Hutcheson, to become General Manager, Montreal Tramways Co., he was appointed Superintendent. He enlisted in the 207th Battalion, C.E.F., in Feb. 1916, assisted in recruiting the battalion, and sailed for England as second in command in May 1917, with the rank of Captain, where the battalion was eventually broken up. He then transferred to the Canadian Railway Troops, reverted to the rank of lieutenant and went to France July 7, 1917, and was engaged at points all over the British front, becoming Captain and then Major. He returned to Canada early in 1919, and resumed his duties as Superintendent, Ottawa Electric Ry., in March 1919, and in 1920 was appointed Manager.

J. W. Horne, who died at Vancouver, B.C., Feb. 22, aged 82, is stated in a press report to have been one of the organizers of the company which built the first electric railway there and to have been its President and Managing Director for a number of years.

C. H. Ivey, barrister, London, Ont., and Vice President, London St. Ry. Co., died at Naples, Italy, Jan. 27, of paralysis.

George Kidd, General Manager, British Columbia Electric Ry., left Vancouver, Jan. 23, for London, Eng., to attend the annual meeting. He was accompanied by Mrs. Kidd.

A. W. McLimont, Vice President and General Manager, Winnipeg Electric Ry., returned to his office, Feb. 6, after having recovered from an attack of influenza.

W. R. McKee, Superintendent of Rolling Stock, Toronto Transportation Commission, has been elected First Vice President of the Engineer's Club, Toronto.

J. J. Wright, formerly Manager, Toronto Electric Light Co., who is said to have built Canada's first electric railway, which was a stub line between Strachan Ave. and the eastern entrance to the Toronto Exhibition grounds, died at Newcastle, Ont., Jan. 31.

Electric Railway Notes.

The New Brunswick Power Co. has, as stated in Canadian Railway and Marine World for February, been negotiating with car manufacturers in Europe for new cars for its electric railway in St. John, but up to the date of our latest advice, had not come to a conclusion. We are informed that about 10 cars will be ordered if a satisfactory price can be obtained.

A fare box was stolen from a British Columbia Electric Ry. car near Rodwell Road, South Vancouver, recently, but the thief made nothing of a haul, as the run had been a light one, only six tickets having been taken in.

The Vancouver, B.C., Electric Club passed a resolution recently congratulating and commending the B.C. Electric Ry. management for the efficient manner in which the change of the rule of the

road was put into effect.

Edmonton, Alta., City Council is reported to have fixed the salary of the Superintendent of the Edmonton Radial Ry. for 1922 at \$3,000, the same as in 1921.

Ottawa, Ont., City Council, on Feb. 7, authorized City Commissioners of Works & Materials to ascertain as to the best street railway expert to assist the city in drafting a new franchise for the Ottawa Electric Ry. Co. Ten thousand dollars was appropriated in this connection.

—The Hamilton, Grimsby & Beamsville Electric Ry. filed with the Ontario Railway and Municipal Board recently a new time table, in accordance with the Board's judgment as given in Canadian Railway and Marine World for February. The new table cuts off five minutes in the time of all westbound cars. It was approved by the Board, Feb. 1.

The Montreal Tramway Employees Union and the Montreal Trades and Labor Council have not been in full agreement for some time past, and the difference culminated at the election of the council's officers Feb. 2, to which meeting the council refused to admit more than 25 representatives from the union. The

union delegates then withdrew, and it is reported the union has decided to conduct its affairs independently of the Trades and Labor Council.

The Toronto Transportation Commission has ordered 8 motor dump cars from Differential Steel Car Co., Findlay, Ohio.

The Toronto Transportation Commission has received an additional 4 cars from Canadian Brill Co., Preston, Ont., making 12 in all, out of an order of 50. These were not ready for service when received, it being necessary to make certain alterations and adjustments before placing them on their routes.

The Montreal Tramway Co. was sued in the Quebec Superior Court recently by J. E. Lefebvre, clerk, 25 years of age, to recover damages of \$31,891.75 for the loss of his right arm in a street car accident, Dec. 5, 1920. One of the company's cars jumped the track at night at the corner of Maplewood and Decelles Aves., and the plaintiff received injuries to his right arm, which necessitated its amputation. Mr. Justice Bruneau said the only question before the court was the amount of damages, and on proof put in regarding plaintiff's capacity and ability, decided that \$12,000 would be reasonable compensation.

British Columbia Electric Ry. Co.'s Annual Report and Meeting.

The following 24th annual report for the year ended June 30, 1921, was presented at the annual meeting in London, Eng., recently:—

The following charges have been made against revenue account:—

Provision for depreciation, sinking fund and renewals	\$149,712 4 9
Provision for corporation office tax	29,000 0 0
	\$178,712 4 9

The net revenue from all sources, after making the above deductions amounts to

to	£421,277 1 11
To which is added	
balance brought	
forward from	
1919-1920	12,645 18 3

Deduct, interest on debentures and debenture stock for June 30, 1921, \$132,231 4s.; dividend paid on 5% cumulative perpetual preference stock for year ended June 30, \$72,000; interim dividend on preferred ordinary stock for the year to June, 1921, at 3½%, free of income tax (and income tax thereon), \$66,098 7s. 2d.; interim dividend on deferred ordinary stock for the year to June 30, 1921, at 3½%, free of income tax (and income tax thereon), \$66,098 7s. 2d.

	\$336,427 19 1
--	----------------

Leaving available for further distribution

\$97,495 1 1

From this the directors have decided to recommend the payment of a final dividend on preferred ordinary stock at \$1 3s. 8d. per annum, free of income tax, making, with the dividend of \$3 10s. 8d. paid Aug. 18, 1921, \$5 13s. 8d.; free of income tax for the year (and income tax thereon), \$22,347 10s. 10d.; to recommend the payment of a final dividend on deferred ordinary stock at the rate of \$2 14s. 2d. per annum, free of income tax, making, with the dividend of \$3 10s. 8d. paid Aug. 18, 1921, \$5 14s. 2d.; free of income tax for the year (and income tax thereon), \$51,147 10s. 10d.

	\$73,495 1 8
--	--------------

Leaving, to carry forward to next account

\$23,999 19 5

Having regard to the general depression in trade and industry which has been prevalent throughout the world and

from which Canada has not been immune, the results of the year are satisfactory.

Owing to the high cost of living, the company had to concede demands for increased wages in Oct. 1920, but since that time there has been a substantial fall in the cost of living and an adjustment of wages in a downward direction is being made. On the other hand, taxation continues to increase. The following statement shows the amount paid for the year 1921, as compared with 1919:—

	1919	1921
Dominion Government income tax	\$67,081	\$138,000
B.C. Government revenue and property and land tax	69,550	97,085
Municipal taxation	153,555	212,850
	\$290,136	\$448,935

The above figures include taxes paid by or assessed against the Western Power Co. of Canada during these years. In addition there is a sales tax, the cost of which runs up to 3% of the value of goods purchased and it is estimated that the cost of this tax to the company is not less than \$25,000.

In the balance sheet, amongst the investments in subsidiary companies, there is an item of \$611,608 15s. 1d. representing investment in the Western Power Co. of Canada. This includes \$5,758,100 or 98.43% of the entire preferred and ordinary share capital of that company. The acquisition of that company has enabled our company to effect substantial economies in administration, and to increase the efficiency of the service to the public.

In last year's report it was stated that a provision had been incorporated in the Dominion Act of July 1, 1920, for the retention of your company's railways under the Dominion Board of Railway Commissioners for one year from the passing of the act, viz., until July 1, 1921, and that the question as to what authority would regulate rates and fares then, was undecided and was engaging the directors' attention. In the absence of any other body charged with the duty of regulating rates and fares, your directors came to the conclusion that it was desir-

able to make application to the Dominion Government for your company's undertakings to be placed under the control of the Board of Railway Commissioners permanently, and gave notice accordingly. The notice was withdrawn in deference to the wishes of the mayor and council of Vancouver, who stated that it would be preferable from their point of view if the company could make some direct agreement with reference to fares and rates with the various local municipal authorities concerned. Negotiations were then opened, with this object in view, and to cover the interval, an agreement was entered into with the local municipal authorities which conferred upon the company the right to continue charging the 6c. fare until July 1, 1922, in consideration of the company withdrawing its application to the Dominion Parliament to have its undertaking placed under the control of the Board of Railway Commissioners. The negotiations proceeded satisfactorily and an equitable agreement for a revision of the company's franchises was arrived at with the Vancouver City Council, but certain local opposition developed, with the result that the agreement drawn up was not adopted. Your directors are giving consideration as to the best steps to be taken to preserve the company's interests when the present agreement for the regulation of fares expires on July 1, 1922.

Notwithstanding the depression which has existed for some time past, the indications from traffic returns and from light and power department results are that the earnings of the company will be maintained during the year to July, 1922. The demand for light, power and gas is expected to be brisk in consequence of the large amount of building going on in various districts. While there has been a falling off in the consumption of some power customers, particularly in the lumber industry, this appears to be only temporary, and with renewal of the demand for lumber by the prairie markets, the mills may soon be expected to resume operation. There have been many valuable power customers added during the year.

The directors desire to record their very great appreciation of the valuable services rendered by the management and staff during the past year. During the year one of the directors, T. Blundell Brown, visited B.C. and spent some months in going thoroughly into the company's affairs. R. M. Horne-Payne and Sir Ernest Harvey attended the 24th annual general meeting, and Sir Frank Barnard, who retires in accordance with the articles of association, offer themselves for re-election.

The Quebec Ry., Light & Power Co. has bought 10 electric car bodies in New York, and is fitting them to trucks in its own shops, after which they will be placed in operation as cars of the p.a.y.e. type. Following are the chief details:—

Weight, car complete	36,000 lb.
Length over body	28 ft.
Length over vestibules	40 ft.
Width over all	70 ft. 10 in.
Material	Wood
Roof	Monitor
Under frame	Wood
Cables	Quebec Ry.
Air brakes	Westinghouse S.M.E.
Control	Simple and K.S. C2
Fenders	H.B. Hightails
Motors	Four 101 H2
Gear	14-65-9 in. face
Seating material	Rattan
Heaters	Consolidated Car Heating Co.
Hand brakes	Peacock
Sand boxes	Brill dump
Headlights	Crouse-Hinds

Marine Department

General Shipbuilding Matters Throughout Canada.

Dredge and Tug Repairs.—The Public Works Department, Ottawa, received tenders to Feb. 14 for repairs, renewals, etc., required to dredge 110, dredge 116, or tug Witherbee, which are now in the Champlain drydock, Levis, Que.

G. F. Askew, Vancouver, B.C., as mentioned in our last issue, building a stern wheel steamboat for the Hudson's Bay Co. She will be assembled at Vancouver and shipped in knock down shape to McMurray, Alta., where she will be reassembled for service on the Athabasca River, Athabasca Lake, and Slave River, between McMurray on the south, and Fort Fitzgerald on the north. Her dimensions will be—length 146 ft.; beam 36 ft.; depth of hull 6 ft.; cargo capacity 200 tons; draft, light, about 18 in.; draft, loaded, about 36 in.; speed, loaded, in smooth water, about 13 knots. The machinery will consist of non-condensing stern wheel type of engine, supplied with steam by a locomotive type boiler, all built by Polson Iron Works, Toronto, and which is now lying at McMurray, ready for installation. She will be fitted with electric light, steam steering gear and steam capstan, and will have accommodation for about 58 persons on the saloon and texas decks. The hull is expected to be at McMurray about March 1, and it is intended to have the boat, which will be named Athabasca River, ready for operation on the opening of navigation in May.

Canadian National Ry., Grand Trunk Pacific Drydock, Prince Rupert, B.C. Since the commencement of operation of this property by the C.N.R., in Nov. 1921, the yard has been fairly busy, chiefly with repairs to fishing ships, a large number of which make their headquarters at Prince Rupert. A large number of these are quite small, but among the larger ones, was included the U.S. fishing ship Pioneer, which was driven on the rocks during a heavy gale recently. The West Coast Towing & Salvage Co.'s steam tug Masset was docked and her propeller changed. Other work covered the docking and repair of the Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince Albert, after grounding at Lockport, Queen Charlotte Islands.

The Manager has secured an order from the British Columbia Public Works Department for a steel ferry, for operation on Francois Lake, about 250 miles inland along the Grand Trunk Pacific Ry. It will be fabricated and assembled at the plant, knocked down, and shipped by rail to Francois Lake, where it will be completed by the plant's staff. The contract includes the construction of a wooden cradle, which will be built on marine ways, and installed by the Public Works Department.

J. H. Pillsbury is Manager; A. E. Litter, Superintendent Engineer, and H. White, accountant.

Canadian Vickers Ltd., Montreal, is repairing six steamships for the George Hall Coal Co. of Canada.

Collingwood Shipbuilding Co., Collingwood, Ont., has received an order from National Sand & Materials Co., Welland, Ont., of which David Dick, Jr., is President, for a special type steamship for securing and carrying sand and gravel.

The ship will be 258 ft. overall, 43 ft. beam, 20 ft. deep, and will have a dead-weight carrying capacity of approximately 3,000 tons. It will have a single screw and will be complete with all necessary auxiliary machinery, including refrigerating plant, electric light plant, special windlass, winches, etc. The main propelling engine will be triple expansion surface condensing, cylinders 19, 32 and 56 x 36 in. stroke, taking steam from 2 boilers 14 ft. 7 in. in diameter by 10 ft. 8 in. long, 180 lb. working pressure, natural draft, indicated h.p. 1,400. The machinery and boilers will be placed aft. The hold will be divided into two large hoppers, each 60 ft. long, and which will carry approximately 2,000 cu. yd. of sand and gravel. Between the hoppers will

large clamshell buckets. These will remove the material from the hold and discharge into a special hopper amidships, the material falling on to an elevator arrangement which will pass it up to a conveyor which will discharge it on the dock. The space between the main hoppers at the ship's side will be divided into several compartments and there will be a trimming tank and fore peak tank forward. There will be a dry tank under the boilers and water ballast tank under the engine room. The ship will be built under the British Corporation for the Survey and Registry of Shipping rules, will be classed B.S. and will embody all the latest improvements for a ship to suck and carry sand and gravel. The ship will work in rivers and lakes, and will be specially built to supply material for very large contracts. It will be the first of the kind to be built in Canada. Delivery is expected to be made about the middle of the summer.

Collingwood Shipbuilding Co., Kingston, Ont., is repairing the Keystone Transports' s.s. Keybell, which was damaged during a storm at Kingston, Ont., Dec. 17, 1921. The work consists of removing, repairing and replacing 40 plates. It is expected that this will be completed during March.

Fletcher Ship Repairing Co., Levis, Que., is operating the shipbuilding and repairing plant at Hadow, near Levis, Que., run formerly by the National Shipbuilding Co., which has a marine boiler plant at Goderich, Ont. The plant was originally organized by Hutchison & Dussault, who carried out a number of repair contracts on different types of ships. One of the most interesting operations done there was the conversion of the Dominion Government dredge Galveston into a freight steamship, for sale to the French Government, which was fully described and illustrated in Canadian Railway and Marine World for Jan. 1919. The Fletcher Ship Repairing Co. obtained a lease of the plant for seven years, in 1921, and has executed several small contracts on Dominion Government steamships. The company was incorporated with an authorized capital of \$500,000, and head office at Montreal, the directors being W. F. Fletcher, of Hall Engineering Co., Montreal, President; W. J. Bishop, President, William J. Bishop Ltd., contractors, Montreal, Vice President; A. W. Thwing, Secretary-Treasurer, William J. Bishop Ltd., Secretary-Treasurer; W. H. Baker, formerly with Davie Shipbuilding & Repair Co., Levis, Que., and C. A. Chauvenet, K.C., Quebec, Que.

Fraser Brace Shipyards Ltd., Montreal, has received an order from George Hall Coal Co. of Canada, for 4 Welland Canal size bulk freight steamships, of approximately 3,500 gross tons displacement. They will be built at the shipbuilding yards at Three Rivers, Que., operated formerly by the National Shipbuilding Corporation, Three Rivers Shipyards Ltd. Division, now in bankruptcy. It is expected that they will be ready for operation about September.

Halifax Shipyards Ltd., Halifax, N.S., did the following repair work recently: U.S. Shipping Board's s.s. Brant County,

Dominion Marine Association.

Honorary President, A. A. Wright, President, Tidewater Shipbuilders, and Vice President and Managing Director, Davie Shipbuilding & Repairing Co., Montreal.

President, T. R. Enderby, Operating Manager, Canada Steamships Lines, Montreal.

First Vice President, Hon. L. C. Webster, President, Webster Steamship Co., Montreal.

Second Vice President, G. J. Madden, George Hall Coal Co. of Canada, Ogdenburg, N.Y.

Executive Committee, The President, First and Second Vice Presidents, and W. E. Burke, Canada Steamship Lines, Montreal; Yves Dupre, Sincennes-McNaughton Line, Montreal; M. J. J. Canada Steamship Lines, Toronto; A. E. Mathews, Mathews Steamship Co., Toronto; W. J. McCormack, Atlantic Central Steamship Co., Sault Ste. Marie, Ont.; Col. G. P. Murphy, C.M.E., Ottawa Transportation Co., Ottawa, Ont.; E. W. Oliver, Niagara, St. Catharines & Toronto Navigation Co., Toronto; W. H. Smith, Ontario Car Ferry Co., Montreal; J. F. Sowards, Kingston, Ont.; J. F. M. Stewart, Point Anne Quarry Ltd., Toronto; John Waller, Keystone Transports, Montreal; Honorary members, L. L. Henderson and A. A. Wright, Montreal.

Counsel, Francis King, K.C., Kingston, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

be a space 10 ft. long which will contain the hoisting and trawling machinery. The pump room will be built forward of the forward hopper to accommodate two 8 in. centrifugal pumps, direct connected to compound condensing engines having cylinders 13 and 26 x 14 in. stroke. The 18 in. suction from each of these pumps will be direct connected to the shell 5 ft. above the keel and a special feature of the ship will be the recessing of the shell plating, accommodating guides, down which the outboard suction pipe flange will slide. These suction pipes will be portable and will be removed when the cargo has been loaded. The pumps will discharge the material on to troughs running over the top of the hopper, and the excess water will be discharged through specially designed spillways at the end of each hopper. The captain and crew will be accommodated forward, and the deckhouse aft will contain the dining saloon, messroom, galley, engineers, etc. A special unloading device will be erected on A frames and run the full length of the hopper to accommodate

bottom damage through stranding in the St. Lawrence near Quebec; Canadian Government Merchant Marine steamships Canadian Spinner, scraping and painting, and Canadian Hunter, scraping and painting, and drawing old propeller and placing a new one; Canada Steamship Lines' s.s. Mapledawn, slight damage to hull, sustained while at pier at St. John, N.B.

W. R. Menchions & Co., Vancouver, B. C., is building a steel motorship for the Powell River Pulp & Paper Co. Her dimensions are,—length 132 ft., beam 19½ ft., draft, about 8 ft. She will be equipped with two masts, and power will be supplied by a powerful semi-Diesel engine. The hull is practically completed, and work is proceeding on the superstructure. This is the first large ship to be built at this yard.

Midland Shipbuilding Co., Midland, Ont., has the following repair work: Great Lakes Transportation Co. steamships, Glenbrae, removing and replacing 4 plates on port bow; Glenisla, retubing 2 boilers; Glenlivet, hull repairs to bow and stern, removing and replacing 7 plates, and repairing port hawse pipe; Glenlyon, stern damage, port side aft, removing and replacing 3 plates, new steel fore-castle deck and crew's quarters, and repairs to heating and plumbing; Glenmavis, general overhauling after overseas service, renewing steam and water lines, general repairs to crew's quarters and cabins, retubing boilers where found necessary, hull damage in no. 1 hold through grounding in Welland Canal, removing 5 broken plates and replacing by new ones, removing and replacing 6 plates on port bow and 7 plates on starboard bow; Glenstriven, removing and replacing 2 plates, one on port bow and one on starboard bow, and retubing two boilers; Glen Transportation Co.'s s.s. Glenafton, canal damage, removing and replacing 3 plates on port bow; Glen Steamships Ltd. steamships Glenarn, Glenfarn and Glendawn, new electric installations throughout, rearrangement of cabins, new ice machines, new double smoke stacks, 2 mooring winches, and general overhauling of each ship after ocean service; Canada Steamship Lines' s.s. E. B. Osler, removing and replacing 3 plates on port bow.

Three Rivers Shipyards Ltd., Three Rivers, Que.—The City of Three Rivers is appealing against a Superior Court judgment, by which it was ordered to pay \$88,000 balance of debentures unsold, and \$2,640 for interest coupons unpaid on Sept. 1, 1920, under its guarantee of \$100,000 of debentures issued by Three Rivers Shipyards Ltd., and underwritten by the City of Three Rivers. The case came before the Appeal Court at Quebec, Que., Feb. 4, and judgment was reserved. (See also Fraser Brace Shipyards Ltd.)

Vancouver Shipyards Ltd., Vancouver, B.C., has done the following repairs recently: Coast Steamship Co.'s s.s. Celtic, repairs to guard; s.s. Westham, repairs to rudder, etc.; s.s. Clinton, deck repairs; s.s. Forager, general repairs; Beaver Towboat Co.'s s.s. B.C. Boy, general repairs.

Victoria (B.C.) Shipowners Ltd., Victoria, B.C.—Capt. M. D. Harbord, President, is reported to have waited on members of the Dominion Government at Ottawa, during February, to point out that the Government's attitude will be towards the shareholders of the company, which is bankrupt. The previous Government, to alleviate unemployment in Victoria,

following on the close of the war, and to assist in the civil re-establishment of returned soldiers, granted special aid towards the construction of four wooden barkentines by the company, which were to be built at the Gholberg shipyard, Victoria. Before the first of these was completed, the company was in financial difficulties, and under the terms of the loan, the Government was compelled to take over the ships, as they were. The first one, named Simon F. Talmie, was subsequently finished, and handed over to Canadian Government Merchant Marine for operation. Tenders were invited for the completion of the second one, towards the end of 1921, but we were officially advised Feb. 14, that the Marine Department had arrived at no decision on the matter. Ever since the Government has acted on its lien against the ships, finished or unfinished, the company has claimed that it has been placed in an anomalous position, as it has lost the whole of its assets, and the shareholders claim that the Government should release their assistance, and not only release their creditors, but also from any liability they may be under in respect of shares held, or subscribed for.

Victoria Machinery Depot Co., Victoria, B.C.—The repairing of the C.P.R. barge no. 8, which grounded in the Portler Pass in Dec. 1921, was expected to be completed at the end of February, or early in March. She was found to be pretty badly damaged, necessitating the entire renewal of 30 shell plates, several to be taken out and faired, and others were faired in place. A few bulkheads were renewed, and indentations on the deck straightened out. The Canadian Government Merchant Marine s.s. Canadian Winner received a general overhaul, and afterwards loaded a general cargo at Vancouver, sailing for Yokohama and Shanghai at the end of January. A general overhaul was also given the C.P.R. tug Nitinat, during February.

Vulcan Iron Works, Vancouver, B.C., did the following repair work recently: C.P.R. s.s. Empress of Asia, repairs to boiler, and electric welding; C.P.R. s.s. Empress of Japan, repairs to boiler and electric welding; B.C. Cannings Co.'s steam tug Edith, new funnel.

F. M. Yorke & Son, Vancouver, have built a new barge for the transfer of loaded cars from the north shore of Burrard Inlet to Vancouver. The barge has accommodation for 6 loaded railway cars, and has a deadweight capacity of 380 tons. She is 160 ft. long, 34 ft. broad, and has a depth of hold of 8½ ft.

Steamship The Iroquois.—A. B. Mackay, formerly of Hamilton, Ont., and now of the Isle of Wight, Eng., who spent several months in Canada recently, is reported to have bought the s.s. The Iroquois, formerly owned by Canada Steamship Lines, and sold by that company during the war and transferred to the British register under the name Colorado. She was built at Toronto in 1902 for the St. Lawrence & Chicago Steam Navigation Co., and was originally named Tadenac. She is screw driven by engine of 79 h.p., and has the following dimensions,—length 260 ft., breadth 43.2 ft., depth 25.2 ft.; tonnage, 2,355 gross, 1,452 net.

The name of the s.s. Celestial Empire, owned formerly by Canadian Fishing Co., Vancouver, and bought by the Hecate Straits Towing Co., Vancouver, has been changed to Cape Scott.

Glen Steamships Limited.

Glen Steamships Ltd. has been incorporated under the Dominion Companies Act, with \$1,000,000 authorized capital and office at Midland, Ont., to carry on the business of transportation of merchandise, grain, coal and passengers by land and water; towing, wrecking and salvaging in all its branches, in waters within, and bordering on, the Dominion, and to and from Canadian and foreign ports; to own and operate ships of all kinds, wharves, piers, docks, shipbuilding yards, and general transportation facilities. The incorporators are:—Jas. Playfair, President and General Manager, Great Lakes Transportation Co.; D. L. White, D. S. Pratt, J. W. Benson, and F. W. Grant, Midland, Ont.

The chief object of the incorporation of the company is doubtless to take over and operate the six steamships bought from the French Government by Mr. Playfair and his associates, which were owned originally by the Great Lakes & St. Lawrence Transportation Co., Chicago, Ill., and were sold, with another four owned by the same company, to the French Government during the war. The six steamships bought by the Playfair interests were originally named George

Howe, John Crear, built at Chicago, Ill.; H. G. Dalton, built at West Superior, Wis.; J. S. Kee, Robert Wallace, built at Buffalo, N.Y.; and S. N. Parent, built at Detroit, Mich., all in 1903, and on being acquired by the French Government were renamed Cabourg, Fouras, Courcelles, Parame, Tregestral and Veulettes, respectively. They all have steel hulls, built on the channel system, with steel tank tops where no ceilings are fitted, 3 watertight and 2 non watertight bulkheads each, steel beam houses, electric light plants and steam pump walls. They are equipped with triple expansion engines and Scotch boilers, with the exception of the Courcelles which has water tube boilers.

The names now given the steamships are Glenarn, Glendawn, Glenfarn, Gleneyrie, Glenarnoch and Glendochart. The first three named are at Midland undergoing overhaul and repair by Midland Shipbuilding Co., the next two are at St. John's Nfld., and the last one is at Londonderry, Ireland, and will be brought out in the spring. Of the remaining four of the Great Lakes and St. Lawrence Transportation Co.'s fleet, one named John Sharples, built at West Superior, Wis., in 1903, was wrecked in the Great Lakes in 1912, sold to Reid and Baker, Sarnia, Ont., renamed Cicca and later sold to the Glen Transportation Co., of which James Playfair is president; another named Albert M. Marshall was sold to the French Government during the war, renamed Brig-nogan, and has since been sold to George Hall Coal Co. of Canada, Montreal, and transferred to the Canadian register under the same name; the remaining two steamships which were sold to the French Government, named A. D. Davidson and John Lambert, were sunk by the enemy during the war.

Monmouth Steamship Co. Ltd. has been incorporated under the Dominion Companies Act, with \$100,000 authorized capital, and office at Toronto, to own and operate ships, drydocks, shipping terminals and other transportation facilities, and to carry on a general navigation business.

Shipping Federation of Canada's Annual Report and Meeting.

At the Shipping Federation of Canada's annual meeting in Montreal, Feb. 8, the President, R. W. Reford, presented a report for the calendar year 1921, as follows:—

Navigation opened with the arrival of the Canadian Government icebreaker Lady Grey on March 29, and officially closed on Dec. 14, with the departure of the s.s. George W. Clyde for Chicago with a cargo of sugar. The first ocean arrival was the Canard freighter Venusia, from London on April 21, and the last ocean departure was the s.s. George R. Crowe on Dec. 8.

The total number of arrivals was 964 ships, representing 2,891,956 registered tons. Of this total 807, with a registered tonnage of 2,598,494, were trans-Atlantic, and 157, of 293,462 registered tons, were from the Maritime Provinces and Newfoundland. These figures show an increase of 301 ships of 860,227 registered tons over 1920.

The outstanding feature of the season's trade was the exceptionally large quantities of grain exported from the port, the total amount of which was 126,289,338 bush, as per manifests, of which 60,920,043 were carried in regular service steamships, and 65,369,295 bush in tramp ships.

Exports of produce compared favorably with the previous season, butter, flour and meal showing an increase, while cheese and eggs decreased slightly. Comparative figures are as follows:—

	1921	1920
Cheese, boxes	1,444,779	1,497,548
Eggs, cases	214,203	271,773
Butter, boxes	70,369	10,357
Flour, sacks	3,326,806	2,493,336
Meal, sacks	392,267	429,575

Package trade, however, slumped seriously, and had it not been for the large export of grain, ships would have fared very badly for export cargoes.

Passenger traffic both eastbound and westbound through the ports of Montreal and Quebec showed a falling off compared with the previous year, as follows:—

Westbound—		
First class	4,426	
Second class	40,174	
Third class	72,381	116,981
Eastbound—		
First class	3,514	
Second class	25,256	
Third class	38,536	67,306
Total.		184,287

World Shipping Conditions.—During the year the shipping industry experienced a period of depression which has rarely, if ever, been equalled, resultant upon the serious slump in trade and commerce which has affected the entire civilized world. The more immediate cause for the lull in overseas commerce is that countries impoverished by the war have been unable to purchase commodities at the high prices demanded by producers, and the unfavorable state of exchange has resulted in further demoralizing conditions. Yet while the trade of the world has shrunk to smaller dimensions than before the war, the world's aggregate shipping, which in 1914 stood at 49,000,000 tons, today stands at 62,000,000, so that owners necessarily have considerable difficulty in securing remunerative employment for this tonnage. They are face to face with the dilemma that owing to this scarcity of cargoes it is impossible to operate steamships except at a loss; while on the other hand, if ships

are tied up they deteriorate quicker than if kept in service. Forced sales by auction, not only of single ships, but of whole fleets, have been seen of late, and it is feared that this drastic weeding out process is likely to continue for some months to come. Almost without exception, every round voyage of a large ship today shows a loss of between \$3,000 and \$4,000, and with many of them heavily mortgaged the outlook is not reassuring. Present freights would be profitable if working costs were on a pre-war basis; but these costs are still in the neighborhood of 100% higher than before the war. Shipowners are in the unfortunate position that they cannot create cargoes, but must simply wait for a trade revival before the position can alter materially. In the meantime, all that can be done is to husband our resources and operate ships still more economically. Gloomy as the prospect seems to be, there is hope that ere long the tide will turn in the direction of prosperity, and this may best be expedited by co-operation of employers and employees.

The Hague Rules, 1921, were adopted by the International Law Association in Sept. 1921, and represent a serious effort on the part of all concerned to come to some common agreement on the much debated question of exceptions in bills of lading. The International Shipping Conference held in London in Nov. 1921, adopted the following resolution: "That this conference, representative of the shipping industry in every part of the world, which has had before it the Hague Rules, 1921, recently adopted by the International Law Association for submission to the various interests concerned in bills of lading, is of the opinion that the interests of trade and commerce are best served by full freedom of contract, unfettered by state control. But that in view of the almost unanimous desire manifested by merchants, bankers and underwriters for adoption of the Hague Rules this conference is prepared to recommend them for voluntary international application, and if and so far as may be necessary for adoption by international convention between the maritime countries, Italy and Japan, reserving the right to raise questions on the rule which prohibits the shipowner fixing a limit of liability below £100 per package."

Canada has the Canadian War Carriage of Goods Act, and it would be in the interest of all concerned to amend this in favor of the International Rules.

Labor conditions at Canadian ports throughout the year were very satisfactory. At Montreal, longshoremen, shipbuilders and checkers accepted reductions in wages of about 17% while for winter season 1921-22 at St. John and Halifax, reductions amounting to 21% and 16% respectively were effected. It is pleasing to report that throughout these negotiations the most friendly spirit prevailed, and doubtless it was through this good feeling that the reductions were accepted without that bitterness which too often is the outcome of such negotiations. There was a plentiful supply of dock labor, notwithstanding the increased number of steamships coming to the port, chiefly owing to the fact that steamships loaded full cargoes of grain.

Sick Mariners' Dues.—The act passed by the Dominion Government increasing

the dues under the Sick Mariners Act from 1½ to 2c. a ton, came into operation on Jan. 1, 1921. This tax is an unjust imposition, discriminating against the Provinces of Quebec, New Brunswick, Nova Scotia, Prince Edward Island and British Columbia, inasmuch as the tax is not collected on ships trading to ports in Ontario. There is apparently no necessity for the Government increasing the tax, as the official Government returns show that there is now a surplus of \$294,996.08 in this fund, and the only two countries in the world levying such a tax are Turkey and Peru. I trust that our new Government will take this matter into consideration and reduce the tax to its previous figure of 1½c. a ton, or better still, abolish it in its entirety and leave shipowners to care for their own sick sailors, as they are now required to do under the Shipping Acts.

International Shipping Conference.—The Chamber of Shipping of the United Kingdom convened the International Shipping Conference which was held in London on Nov. 23, 24 and 25, 1921, for the discussion of matters pertaining to the shipping industry throughout the world. Among the subjects then discussed were the Hague Rules, life saving appliances, carriage of deck loads, load line, and subdivision of passenger ships. The conference was attended by representatives of the shipping industry all over the globe, and Canadian interests were represented by Lt. Col. W. I. Gear. Such conferences should tend to bring about more uniformity and co-operation between the respective maritime countries.

The International Joint Commission was occupied during the past year in the collection of further evidence for and against proposed waterways and power scheme on the St. Lawrence River west of Montreal. A report was presented by the engineering board, consisting of representatives of Canada and the United States, favoring this scheme, at a cost of \$252,000,000, to be borne by the United States and Canada. Arthur Surveyer, a noted hydraulic engineer, who has had wide experience with the St. Lawrence waterway, and also with the Chicago Drainage Canal, was engaged to make a study of the scheme as put forward by the engineering board. His report was unfavorable, and a strongly-worded petition was filed with the International Joint Commission against the adoption of this scheme, as being likely to seriously jeopardize the water levels of the St. Lawrence below Montreal. With the proposed power development which is now planned in conjunction with the navigation scheme, no one can foretell what will be the reaction on the levels of the St. Lawrence below this point. The St. Lawrence waterway is Canada's priceless heritage, and everything possible should be done to protect and maintain our water levels at any cost. H. L. Cooper, hydraulic engineer, New York, stated in evidence before the International Joint Commission, that in his opinion the scheme for deepening the St. Lawrence was fraught with such serious engineering problems that he would be in favor of spending \$500,000 for further investigation. Furthermore, Canada, with its war debt still but slightly diminished, is in no position today to even contemplate the expenditure of hundreds of millions

on a scheme of this nature, the commercial value of which has not been demonstrated, and the cost alone must bar the Dominion from becoming involved in this gigantic undertaking. When the time comes for Canada to undertake work of such magnitude, consideration should be given to the Georgian Bay Canal scheme, which has the advantage of being entirely within Canadian territory; while, in addition, the power development derived therefrom would be entirely controlled by Canada and would be quite immune from international control. The Great Lakes-St. Lawrence deep waterway proposal, in my opinion, is one not primarily of navigation but of power development.

Chicago Drainage Canal.—Judge Landis, in the U.S. Supreme Court, issued a permanent injunction recently limiting Chicago from taking more water from Lake Michigan than that fixed by permit from the Secretary of War, which now brings to a close a chapter in a most celebrated case, involving, on the one hand, the City of Chicago, and the navigation interests of the St. Lawrence and Great Lakes, on the other. The suit was brought about to decide whether the State of Illinois, through its power to safeguard the health of its people, could use such methods as would injure the navigable international waters of the Great Lakes and the St. Lawrence, of which the federal authorities are guardians. The result of this diversion of water has been seriously felt by the shipping interests trading to the St. Lawrence, and it has been proved that the levels of our river have subsided 9.5 in. at low water stage as a result of the illegal action of the Sanitary District of Chicago. Since this canal was constructed in 1889, the art of sewage disposal has advanced rapidly, and there is undoubtedly further improvements ahead of us, and Chicago should not have much difficulty in the future of protecting the health and property of her citizens without diverting such a large quantity of water from Lake Michigan.

Aids to Navigation.—The Naval Service Department, without consulting shipping interests, and without issuing the customary notice to mariners, closed down the radio stations at Point Amour, Pointe Riche, Cape Ray, Heath Point, Pictou and Three Rivers. That action produced consternation in shipping circles, which was followed up by strong protests. As a result of these representations, the Light House Board recommended the re-opening of the stations at Pointe Riche, Point Amour, Heath Point and Three Rivers, but refused to re-open the important station at Cape Ray. Further representations were made without success. Cape Ray is regarded as an important station, being extremely valuable to ships fitted with d.f. apparatus. It is to be hoped that the Government will see its way to re-open this station next season.

Additional direction finder stations are being urged all along the St. Lawrence coast line. Funds have been voted for the erection of one at Belle Isle, but owing to the curtailment of public expenditure, it is very difficult to induce the Government to supply money for the erection of additional stations. The two stations erected by the Government at Chebucto Head and at Camp (Halifax harbor) are giving excellent results, and masters are very enthusiastic over the service received from these stations, claiming it is better than any they get

from stations on the United States and United Kingdom seaboard. The station at Halifax has been particularly commented on by shipmasters, as this aid to navigation makes it one of the safest and easiest ports to approach in the world, it being possible to come right up the mouth of the harbor under the foggiest conditions with absolute certainty of pilotage.

Pilotage conditions on the St. Lawrence. especially in the Montreal district, are, unhappily, still unsatisfactory, due to the pooling arrangement which prevails. Furthermore, two cases of refusal on the part of pilots to take out their ships when called for occurred during the past season, and as a result of representations an investigation was held, and one of the pilots was reprimanded for his conduct. The feeling of those concerned is that the Government should relinquish its control of pilotage on the St. Lawrence, and permit shipowners to engage men in whom they have the utmost confidence. This system was adopted by the Government in British Columbia with very good results, and there is no reason why it should not work equally well on the St. Lawrence. It is felt that a system under which every man depended upon his efficiency for employment would work much more satisfactorily, not alone for owners, but also for pilots.

Canada's Immigration Policy.—Canada will, in the course of the next few years be requiring thousands of immigrants to settle on her land; but by her present policy she is closing the door in their faces. There are many emigrants of good type who are going to Australia simply because of the stringent regulations which make them feel that they are not wanted here. What this country wants at the present time is a broad and constructive policy for looking after immigrants, and I hope that the Government will adopt such a policy as will tend to attract the desirable class of immigrants that is being repelled today along with the unfit.

Federation tonnage (liner and tramp) amounts to 1,043,313 gross tons, compared with 929,307 for 1920 season. Regular line tonnage showed a slight decrease, 662,072 compared with 684,408 for year previous. Tramp tonnage, however, showed a considerable increase, the total for 1921 being 381,241, compared with 244,899 for 1920. Canadian registered tonnage entered was 135,740 tons, compared with 128,642 tons for 1920. The tonnage entered for 1920 and 1921 was as follows:—

	1921	1920
Regular liners	662,072	684,408
Tramp tonnage	381,241	244,899
	1,043,313	929,307

Officers, Etc.—The following officers and members of committees were elected for this year:—Executive Council, R. W. Reford, President; J. R. Binning, Treasurer; E. W. Foulds, Asst. Treasurer; D. W. Campbell or A. E. Cook, A. E. Irving, T. R. Eakin, A. Mackenzie, F. A. Curry, R. B. Teakle, Sub-committees:—Bill of Lading, W. I. Gear, F. A. Curry, J. R. Binning, Harbor Equipment, W. I. Gear, F. A. Curry. Manager and Secretary, Thos. Robb.

B.C. Tide Tables.—The Naval Service Department's Tidal and Current Survey, Ottawa, has issued an abridge edition of the tide tables for Vancouver and Sand Heads, B.C., and slack water for First Narrows and Active Pass, with tidal differences for the Strait of Georgia.

The End of the s.s. Pelican.

The Hudson's Bay Co.'s composite screw sloop Pelican has been retired! Her career ended, the veteran supply ship that was once a British man o' war and companion ship to the famous Concor, has been broken up at St. John's, Nfld. She was built in H. M. Dockyard, Devonport, Eng., and launched in April 1877. Whilst in the Royal Navy she had a displacement of 1,130 tons and engines of 800 h.p. She carried 6 guns and had a complement of about 140 officers and men. From 1878 to 1881 and from 1884 to 1888 she served on the Pacific station and from 1890 to 1898 on the North American and West Indies station. She also served in the White and Black Seas expeditions.

The Pelican was bought by the H.B. Co. in 1900 and sailed far northern seas for years. She carried food and trap-pings in. She bore out precious cargoes of Arctic fur. Countless times the ice-floes tried to crush her. The sturdy teakwood hull beat off lashing waves of many Atlantic storms. For twenty "out-fits" she challenged the hazards of navigation to Hudson Bay, but skippered by H.B.C. men, she met no greater disaster than the occasional loss of a propeller and minor breakages from heavy ice. Her bones were not fated to lie shattered on the coast of Labrador and she came steaming home after a last voyage in 1920 to be stripped and dismantled and sold for salvage. An inglorious ending for such a ship even if it were an "honorable discharge!"

Until 1909 she was commanded by Capt. Alexander Gray of the H.B.C. transport service, with the exception of one year which he spent on the Discovery. From 1909 to 1914 the Pelican was under Capt. A. C. Smith. During the great war the Pelican, with Capt. Borrass and other skippers, was engaged in munitions transport from Canadian and French ports to Archangel, Russia. She ran the gauntlet of enemy submarines on many occasions and an entry in her log dated Aug. 26, 1918 speaks of a warm engagement with one of the subsea craft.

After arriving at St. John's, Nfld., on Sept. 28, 1920, it was found that she was so seriously damaged that the cost of repairing and reconditioning her would exceed her value, so it was decided to break her up and replace her by the s.s. Baychino.—From The Beaver, published by the Hudson's Bay Co.

War Memorials and Medals for Merchant Marine.—The King has sanctioned a memorial, consisting of a plaque and scroll, for the next of kin of those of the merchant marine who lost their lives through enemy action while serving on British ships, and of the crews of neutral or allied ships under the control of the Admiralty, or the Ministry of Shipping, who served on such ships between Aug. 4, 1914, and Nov. 11, 1918. War medals for the mercantile marine are ready for distribution, and those who have already received the ribbons and the authority to wear them, should apply to the officer from whom they received the ribbons, or direct to the Marine Department, Ottawa, enclosing the authority.

A London, Eng., press cablegram of Feb. 15, stated that the first steamship which will load grain at Montreal for Great Britain this year had been chartered on the Baltic Exchange at four shillings a quarter.

Canadian Pacific Railway's Ocean Steamship Services.

The company is being asked by a representative from Haiti to inaugurate a direct steamship service between Canada and Port au Prince, Haiti. The island imports are said to average about \$20,000,000, and the exports about \$15,000,000 a year.

Capt. Pearson, master of the s.s. West Ivan, which arrived at Vancouver, B.C., recently, was master of the sailing ship W. B. Flint, which carried the first trans-Pacific cargo from Yokohama, Japan, for the C.P.R., July 26, 1886. At that time, the C.P.R. Pacific terminus and port was Port Moody, B.C.

The service inaugurated in Dec. 1921, between St. John, N.B., Boston, Mass., Havana, Cuba, and Kingston, Jamaica, with the s.s. Sicilian, has increased to such an extent that it has become necessary to place an additional steamship on the route. The s.s. Montezuma, therefore, sailed from St. John, Feb. 25, with a general cargo, consisting chiefly of potatoes, fish, flour and newsprint.

A fortnightly trans-Pacific service will be operated during this year, with the steamships Empress of Russia, Empress of Asia, Empress of Canada and Empress of Australia. This will replace the former monthly service. The schedule is so arranged that connection can be made with the trans-Atlantic steamships Empress of Scotland and Empress of France, to Southampton, Cherbourg and Hamburg.

Capt. G. S. Webster, R.D., R.N.R., who commands the s.s. Montcalm, was born Sept. 3, 1867, entered Elder Dempster & Co.'s service, March 21, 1892, and changed to C.P.R. service in April 1903, when the Beaver Line steamships were taken over from Elder Dempster & Co., at that time being master of the s.s. Lake Michigan.

Since then, he has commanded the C.P.R. steamships Montrose, Lake Champlain, Lake Manitoba, Empress of Britain, and, during the war, Metagama and Melita.

The record for the run across the Pacific Ocean, between Yokohama, Japan, and the quarantine station at William Head, is held by the C.P.R. s.s. Empress of Russia, which has crossed in 8 days 16 h. 31 min., and this is followed by the Empress of Asia, her time being 8 days 21 h. 4 min. The recent claim of the U.S. Shipping Board's Pine Tree State to the record therefore goes by the board, her time being given as 9 days 11 h., between the points named.

The s.s. Empress of France has been chartered by F. C. Clarke, New York, for a round-the-world cruise in 1923, starting from New York, Jan. 23, and taking 113 days on the trip. A stop will be made at Colon, thence through the Panama Canal, to "Treasure Island," San Francisco, Honolulu, Yokohama and Kobe, thence through the Japanese inland sea to Nagasaki, Shanghai, Hong Kong, and down to Manila, Batavia, Tanjong Priok, Singapore, Rangoon, Calcutta, Colombo, Bombay, Suez, Port Said, Naples, Gibraltar, Havre, Southampton and thence to New York.

The itinerary of the Mediterranean cruise of s.s. Empress of France, which sailed from New York, Feb. 4, includes Sardinia, Canary Islands, Funchal, Madeira, Lisbon, Madrid, Toulon, Cordova, Cadiz, Seville, Granada and Gibraltar, Spain; Tangier, Morocco; Algiers; Genoa,

Venice, Florence, Rome, Spezia, Pisa, Naples and Pompeii, Italy; Athens, Greece; Constantinople, Turkey; Caffa; with a trip to Jerusalem and back; Alexandria, with 10 days in Egypt, Monaco and Monte Carlo; Havre, France, with an optional trip of 12 days in Paris and London, and returning to New York from Liverpool.

The company will open its St. Lawrence service this year with the sailing of the s.s. Empress of Scotland, on the new route from Quebec to Hamburg, via Cherbourg and Southampton. The s.s. Empress of France, which will also be on this route, will sail from Quebec, May 16, and these ships will form the trans-Atlantic link between Oriental and European ports, via Canada. The s.s. Empress of Britain, which will also make Quebec her Canadian port during the St. Lawrence season, will be on the Liverpool route, sailing from Quebec, May 26. After return to New York from the present Mediterranean cruise, she will sail direct to Liverpool, March 23.

The C.P.R., in conjunction with La Cie. Francaise du Tourisme, is organizing a personally conducted pilgrimage in connection with the International Eucharistic Congress at Rome, May 25, with optional trips to Oberammergau and the battlefields of the Great War. The s.s. Montreal will sail from Montreal, May 2, arriving at Naples May 17. The tour will include visits to Rome, Assisi, Perugia, Florence, Venice, Milan, Genoa, Nice, Marseilles, Arles, Nîmes, Toulouse, Lourdes, Bordeaux, Nantes, Tours, Blois, and Paris, where 6 days will be spent. Optional trips from European ports to Canada will be arranged by way of the different services of the company from Havre, Antwerp, Southampton, Liverpool and Glasgow.

The company's Montreal season will open this year with the sailing of the s.s. Scandinavian, May 4, for Southampton and Antwerp, followed by the s.s. Montcalm, on the Liverpool route, May 5. With the exception of the sailing of the s.s. Minnedosa, from Montreal, May 12, the service between Montreal and Liverpool will be given throughout the season by the steamships Montcalm, Montrose and Montclare, the three new ships of the one-clip type. The service between Montreal and Glasgow will open with the sailing of the Metagama, May 6, and the Tunisian and Corsican will also be engaged on the route. The service between Montreal, Southampton and Antwerp will be given by the steamships Melita, Minnedosa and Scandinavian. The steamships Batsford, Bothwell, Dunbridge, Mottisfont, Montezuma and Sicilian, which are on the freight service from St. John to London and Hamburg, to Liverpool and Avonmouth, to London, and to Boston, will also be engaged on the route. The service of Montreal during the St. Lawrence season, with the exception of the s.s. Sicilian, which will continue to sail from St. John, N.B., to Boston, Havana and Kingston.

The s.s. Empress of Scotland, formerly the German s.s. Kaiserin Auguste Victoria, arrived at Halifax, N.S., Jan. 29, on her maiden trip, after having been thoroughly overhauled, altered and refitted. She experienced some little difficulty in getting alongside pier 2, owing to being light, and to the strong wind blowing, and cut into the reinforced con-

crete of the pier for a depth of about 15 ft. No other damage was sustained. She took on a large quantity of stores and sailed the following day for New York, to take up a charter to F. C. Clarke, for a cruise in the Mediterranean. On Feb. 2, while at her dock at New York, an auxiliary oil burner, on board, backfired, scorching Engineer-Admiral G. W. Roome, the company's Chief Superintending Engineer; R. C. Hughes, chief engineer; E. Redmond, third engineer of the ship, and 5 engineers employed by the Todd Engineering Co., New York. No damage was done to the power plant. She sailed from New York, for the Mediterranean, Feb. 4, and was followed, Feb. 11, on a similar cruise, by the s.s. Empress of France. Both ships will return to Quebec in the spring, and will be placed in regular service between Quebec and Hamburg, calling at Cherbourg, and Southampton, the first sailing on this route taking place from Quebec May 16.

Canadian Notices to Mariners.

The Marine Department has issued the following:—

1. Jan. 13.—1, British Columbia, Vancouver Island, Quatsino Sound, Bergh Cove, Leeson Rock, character of buoy to be changed. 2, British Columbia, Vancouver Island, Quatsino Sound, south arm, Buckholz Rock, buoy to be established. 3, United States, Juan de Fuca Strait, Cape Flattery, pilot ship withdrawn.

2. Jan. 19.—4, Nova Scotia, southwest coast, off Blonde Rock, buoy established. 5, Nova Scotia, south and east coasts, Brazil Rock, Louisburg, and Sydney, submarine bell buoys to be discontinued.

3. Jan. 26.—6, British Columbia, Strait of Georgia, Fraser River entrance, Fraser mouth outer range, change in character of lights. 7, United States, west coast, Strait of Juan de Fuca, current survey.

4. Jan. 1.—8, Ontario, Lake Ontario, west end, Oakville, light to be re-established. 9, Ontario, Lake Huron, north channel, Campbell Rock and Bernard Rock, color of buoys to be changed. 10, Ontario, Lake Huron, north channel, Cape Robert, fog horn to be established.

5. Feb. 2.—11, New Brunswick, Gulf of St. Lawrence, Miramichi Bay, position of Portage Island front range light to be changed. 12, Quebec, Saguenay River, Riviere du Moulin, upper range lights to be established. 13, Quebec, St. Lawrence River, between Quebec and Montreal, Gently new front range light-house.

Kirkwood Line, Limited, has been incorporated under the Dominion Companies Act, with authorized capital of \$250,000 and office in Montreal, to carry on the business of the transportation of passengers, mail, freight of all kinds upon land and water; towing, wrecking and salvage; storage and warehousing; to own and operate ships, shipbuilding yards, docks, wharves, telegraph and telephone lines, tramways on lands owned by the company, and all manner of allied businesses. The provisional directors are: J. G. Macdonald, A. R. W. Himsoll, M. T. Burke, E. H. Reilly, J. Mulcair, Miss F. Walsh, F. A. Bussiere, H. K. Kavanagh, Montreal.

Dominion Marine Association's Annual Meeting.

The Dominion Marine Association's annual meeting was held in Montreal Feb. 1, the President, A. A. Wright, in the chair.

The executive committee's report for 1921, prepared by the Counsel, Francis King, K.C., and approved by the committee, was presented in printed book form, consisting with appendices of 28 pages, illustrated with portraits of the officers and with a number of marine views. It dealt exhaustively with the following subjects:—Steamboat inspection fees; hospital dues; sick and distressed mariners; bill to place ships under Board of Railway Commissioners' jurisdiction; Trades and Labor Congress recommendations for amendment of Canada Shipping Act; public harbor regulations; Wheat Board; immigration; the Harter Act and the Canadian Water Carriage of Goods Act; Ontario Corporation Tax Act; reciprocal arrangements with United States for inspection of steamships; radio-telegraphy; grain bill of lading; grain through Canadian terminals; St. Lawrence River development, deep waterway and power; canals in New York State and rights of Canadian ships; canal tolls; Chicago and Saginaw canal; wing dam at Isle aux Vaches in Cedar Rapids; Detroit River bridge; water for drinking and culinary purposes; aids to navigation; dock, harbor, channel and canal improvements; Dominion Wreck Commissioner; shipping casualties; icebreaking; inland waters; loadlines; steamboat inspection; payment of United States Customs officer for overtime; shipping register at Toronto; Queen's University, school for marine engineers; general business; membership; tonnage. Under the heading last mentioned it was stated that the steam tonnage enrolled in 1921 was 155,530 net registered tons, against 155,340 in 1920, and the barge or sailing tonnage was 32,173, against 33,920 in 1920, a total of 187,703 tons against 189,260 tons in 1920. The report was adopted unanimously, and the meeting expressed its satisfaction at the way in which it had been prepared.

It was resolved to make a determined effort to secure revision of grain elevating and shovelling charges, which are now disproportionately heavy upon the carrier, and T. R. Enderby was appointed chairman of a committee to be named by him to take such action as may be considered necessary.

It was decided to leave the appointment of a committee on aids to navigation to the executive committee, with the recommendation that it consist of a small number of members from the Association, with whom would be associated a number of men of practical experience in navigation.

Executive Committee.—The following were elected members of the executive committee for one year:—W. E. Burke, Canada Steamship Lines, Montreal; Yvon Dupre, Sincennes-McNaughton Line, Montreal; T. R. Enderby, Canada Steamship Lines, Montreal; M. J. Hancy, Canada Steamship Line, Toronto; A. E. Mathews, Mathews Steamship Co., Toronto; W. J. McCormack, Algoma Central Steamship Co., Sault Ste. Marie; Col. G. P. Murphy, C.M.G., Ottawa Transportation Co., Ottawa; E. W. Oliver, Niagara, St. Catharines & Toronto Navigation Co., Toronto; W. H. Smith, Ontario Car Ferry Co., Montreal; J. F. Sowards, Kingston; J. F. M. Stewart, Point Anne

Quarries Ltd., Toronto; John Waller, Keystone Transports, Montreal; Hon. L. C. Webster, Webster Steamship Co., Montreal; honorary members, L. L. Henderson and A. A. Wright, Montreal.

Officers.—The executive committee elected the following officers:—Honorary President, A. A. Wright, Montreal; President, T. R. Enderby, Montreal; First Vice President, Hon. L. C. Webster, Montreal; Second Vice President, G. J. Madden, Ogdensburg, N.Y.

Aids to Navigation.—The executive committee appointed the following as a committee on aids to navigation:—T. R. Enderby, G. J. Madden and John Waller.

Shipping of Swedish Goods to Canada.

London, Eng., cablegram, Feb. 2.—The favored nation provision in the Canadian tariff has been invoked by Swedish shippers against an attempt by Germany to capture the ocean trade in Swedish exports to the Dominion. An inquiry was recently addressed to the Canadian authorities in London by Swedish shipping firms, which have been trading to the Canadian Pacific coast, via the Panama Canal. They stated that German shippers were cutting rates to secure Swedish exports destined for Canada, and were carrying these to British Columbia ports via Hamburg. They asked whether they might not, under the clause in the trade treaty made by Canada with France, which allowed the benefits of the intermediate tariffs to favored nations, put a stop to this practice by requiring all Swedish goods to be carried direct to Canada under the intermediate schedule. The answer from Canada was in the affirmative, and it is said that steps have been taken to recover the ground lost by the Swedish shipping men to the Hamburg shippers. The first shipment of Canadian apples to Norway arrived recently in good condition.—Copyright to Montreal Gazette.

Northern Navigation Co.'s Services.

A recent Sarnia, Ont., press dispatch stated that Northern Navigation Co. officials have announced plans being under way for an expenditure of \$90,000 at the Point Edward freight sheds and docks, to take care of additional freight, approximately 150,000 tons, which the company has contracted for this year. We are officially advised that the U.S. coasting laws permit foreign ships to carry freight between U.S. ports, providing part of the haul is over a Canadian rail line in Canada. Prior to 1916, the G.T.R. had a U.S. steamship line, operating between Port Huron, Mich., and Duluth, Minn., carrying freight, originating in the western states, for eastern U.S. destinations, and also carrying freight originating in eastern U.S. for western U.S. destinations. This line was discontinued in 1916, and the new law in effect will permit the Northern Navigation Co. steamships to participate in this traffic, which they could not do formerly, and it is expected that its ships will carry 150,000 tons more during the ensuing navigation season than during the last one, which will be made up entirely of this U.S. traffic.

Another recent Sarnia press report stated that the Northern Navigation Co. would start a ferry service between Sarnia and Port Huron shortly with the steamboat Louis Philippe, which was brought from the St. Lawrence for the purpose. The facts are that the Louis Philippe, which is owned by Canada Steamship Lines, of which the Northern Navigation Co. is a subsidiary, was sent to Sarnia last autumn, when it was expected that she would be purchased by the International Ferry Co., which had been incorporated to operate a ferry between Sarnia and Port Huron. The sale, however, did not take place, as it is stated that the company failed to organize, only two subscribers for stock having been secured. So far as we can ascertain, the Northern Navigation Co. has not considered the operation of a ferry service between the points named, and apparently the suggestion was inspired locally.

Panama Canal Traffic.

The traffic through the Panama Canal during 1921 showed a rapid expansion of trade between North American Pacific ports and North American Atlantic ports and Europe. Several new steamship lines commenced in this business during the year, and the traffic showed monthly increases, lumber furnishing the bulk of the trade. The lumber shipments through the canal during 1920 were 205,172 tons, while in 1921, they were 448,087 tons. Of this latter amount, 57,429 tons originated in Canadian ports. The destinations of these shipments were: U.S. Atlantic ports, 346,249 tons; Great Britain, 60,448 tons; European ports, 11,895 tons, with lesser amounts to Canadian, West Indian and Mexican ports. The heaviest lumber shipments took place in the first half of the year, a noticeable decline occurring in the latter half. It is stated that the lumber shipments were handicapped, to some extent, by inadequate facilities for handling lumber at Atlantic ports, but that this has been remedied.

Seamen's Wages.

A new wage scale, effective from Feb. 6 to June 30, has been put into force on the U.S. Shipping Board's ships, involving reduction of approximately 15% for officers and engineers, and from 15 to 25% for seamen and unlicensed mariners.

The dispute between ship owners and seamen in Great Britain, regarding a proposed reduction in wages, has been settled by the National Maritime Board. It was proposed that wages be reduced £3 a month, with proportionate reductions for officers. The new agreement provides for a monthly reduction of £2 for seamen, firemen and stewards on ocean going ships, with reductions ranging from 10% for senior officers to 25% for junior officers. These reductions will be made in two instalments, on March 1 and May 1. A settlement on similar terms was made in regard to coasting lines, effective March 1.

Quebec Harbor Commission.—The Commissioner, Major General Sir David Watson, President since deceased, 15, General A. Tremblay and A. Gravel, having resigned, owing to the change in the Dominion Government, W. G. Power, lumber merchant, has been appointed President, Brig. General Tremblay has been re-appointed, and Jules Gauvin has been appointed as the other commissioner.

Agreement with Royal Mail Steam Packet Co. for Service to the West Indies.

The Governor General, on Feb. 10, approved a report of the Privy Council Committee, submitting a report from the Minister of Trade and Commerce, dated Feb. 1, and recommending its adoption, as follows:

Pursuant to article 10, and subsequent articles of the Canada-West Indies Agreement, 1920, the Trade and Commerce Department called for tenders on Sept. 20, 1921, for a mail, passenger and freight steam service between Canada, the British West Indies, and British Guiana, to be received up to Jan. 31, 1922, at noon, when only one tender had been received, viz., from the present contractors for the Canada-West Indies service, the Royal Mail Steam Packet Co. of London, Eng.

The Canada-West Indies Agreement contemplates the establishment of a weekly service. The R.M.S.P. Co., however, points out that there is not sufficient trade on this route to keep a weekly service up, and that such a service would have to be run at a heavy loss. It therefore proposes to put on a fortnightly service, the itinerary to be left to the Canadian Government. As it would be necessary to build four new ships, the contract would be required to coincide with the life of the ships, viz., 20 years, in view of the ships being built for this special service, and consequently being unsuitable for transferring to other trades if the contract terminated at the end of five or 10 years.

The present contract contains the provision that the freight and passenger rates are to be subject to the Minister of Trade and Commerce's approval, which prevents the contractors in good times from obtaining the advantage of current high market rates which in ordinary circumstances, without any contract, would allow a low market rate to be obtained. The contractor protests against the competition of Canadian Government ships, which are now running on the West Indies service, although it is admitted that there is sufficient southbound traffic for both lines, yet the northbound cargo, which consists principally of sugar and molasses, is limited in quantity, and there is not sufficient for both lines, in consequence of which the subsidized line alleges that it suffers a serious loss on northbound traffic. The Royal Mail Steam Packet Co. states that it could not afford to run the proposed new service for a fixed subsidy while the Canadian Government Merchant Marine steamships were at the same time running in competition with the subsidized ships. The R.M.S.P. Co. offer, therefore, to provide a fortnightly service with new steamships of the size and type contemplated by the Canada-West Indies Agreement, on condition that the Canadian Government guarantee a minimum return of 7½% per annum on the capital value of the ships provided to maintain the service. If the revenue from the freight and passenger money were sufficient to provide a return of 7½% after paying all operating costs, including depreciation, insurance, etc., then the Canadian Government would not be required to pay anything, but if the revenue fell short of an amount sufficient to provide the aforesaid 7½% return on capital, then the Canadian Government would be called upon, under a guarantee, to make up the difference. This guarantee would be required to run for 20 years, being the actual life of the ships constructed un-

der it. The R.M.S.P. Co. would be prepared to register a Canadian company to own the ships, the shares of the company to be held by the R.M.S.P. Co., thus enabling ships to sail under the Canadian flag, and be managed from Canada. The R.M.S.P. Co. would be willing to allow the Canadian Government to take a substantial interest in such company if it so desired, together with representation on the board of management. The above offer is for a fortnightly service, but if it were found that the volume of trade between Canada and the British West Indies in future years would require a weekly service, additional ships could be constructed under a similar guarantee.

The R.M.S.P. Co. states that if the above proposal is not agreeable to the Canadian Government, it is willing to continue running the present service for the subsidy at present paid, amounting to \$340,666.66, subject to the condition that it be at liberty to withdraw his heavy expenditure for repairs, which would not be justified by their probable life. The company think that they might be expected to run for another couple of years, but would not like to bind itself for a specific period. It therefore makes this alternative proposal in case the Government requires time to consider the matter, as the present contract expires on March 31, 1922. In view of the probable heavy cost of the proposed new service, the Minister does not consider that it is practicable at present to accept the R.M.S.P. Co.'s offer to build four new ships and operate them under a guarantee of 7½% net return on the capital investment. No other offers have been received to perform this service. The Canadian Government Merchant Marine management stated that it is not its intention to tender for this service, as it has no steamships which would comply with the requirements as to passenger accommodation, nor cold storage, should the latter be necessary. The Minister, therefore, recommends that authority be granted for the conclusion of a contract with the R.M.S.P. Co. for the purpose of carrying on the service as performed at present, and on the same terms and conditions as contained in the present contract, which expired on Oct. 31, 1920, and which has been continued by order in council until March 31, 1922, subject to the addition of a clause to the effect that if one or more of the steamships now performing the service should have to be withdrawn by the contractor by reason of inefficiency, or other cause, then the contractor should be called upon to use its best endeavor to replace such ship or ships by other suitable ships; together with such other modification as the Minister may deem necessary.

In view of the fact that such an extension of the present service would not comply with the Canada-West Indies Agreement, it would not, of course, be possible to call upon the West Indian Colonies to carry out the provisions of

article 13, providing for the contribution by the West Indian Islands to the subsidy of various sums, amounting in all to \$27,000. The committee, concurring in the above, advise that the Governor General may be pleased to forward a copy of this minute to the Secretary of State for the Colonies, with the request that the West Indian Islands, which are parties to the agreement, may be notified of the sense thereof.

Editorial Note.—The contract between the Government and the R.M.S.P. Co., which was dated Sept. 16, 1919, to date from Nov. 1, 1919 to Oct. 31, 1921, and which was continued by order in council, as stated above, provided for a service commencing from St. John, N.B., sailing thence to Halifax, N.S., and thence to Georgetown, British Guiana, every 14 days, calling at the following islands: Bermuda, St. Kitts, Antigua, Montserrat, Dominica, St. Lucia, St. Vincent, Grenada, Barbadoes and Trinidad, and returning from Georgetown to St. John, calling at all the islands mentioned in reversed order, the itinerary being subject to any change agreed on between the Minister and the contractor. The speed required was 11 knots. The subsidy was based on payments of \$13,102.56 for each complete round voyage, payable on the last day of each month, Canadian trade commissioners and mails were to be carried free. The ships employed were the *Chignecto*, *Chaleur*, *Caracquet* and *Chaudiere*, their gross tonnages ranging from 4,019 to 4,889.

The new contract provides for a renewal of the previous contract for two years from March 31, 1922, to March 31, 1924.

C.P.R. Upper Lakes Steamships.

A Port Arthur, Ont., paper stated on Jan. 30 that ex Mayor H. Murphy, of Fort William, who had been in Montreal, had informed it that M. McDuff, Manager, C.P.R. Great Lakes Service, had told him that the company intended to build another large passenger and freight steamship for the upper lakes, and that the giving of an order to the Port Arthur Shipbuilding Co. was being considered. Canadian Railway and Marine World has made enquiries in regard to this, and is informed that Mr. Murphy denies making the statement attributed to him, and states that he did not give such information to the Port Arthur paper. The probability is that the C.P.R. management has been approached by the Port Arthur Shipbuilding Co. and other shipbuilders, with a view of securing an order, but no official information is available at the time of writing. Mr. Duff was in Port Arthur recently, while on a western trip, but we understand he did not see any of the Port Arthur Shipbuilding Co.'s officials, and that he denies the conversation which the Port Arthur paper credited him with having had with Mr. Murphy.

The C.P.R. Great Lakes fleet now consists of five steamships, viz., the *Alberta*, built at Whitehead, Scotland, in 1883, and rebuilt at Collingwood, Ont., in 1911; the *Athabasca*, built at Kelvinhaugh, Scotland, in 1883, and rebuilt at Collingwood in 1910; the *Manitoba*, built at Owen Sound, Ont., in 1889; the *Assiniboia*, built at Govan, Scotland, in 1907, and the *Keewatin*, built at Govan in 1907.

Uncertainty as to British Columbia Drydocks and Pier Construction.

As mentioned in Canadian Railway and Marine World for February, a Victoria, B.C., press dispatch of Jan. 23 stated that the Dominion Government contemplated the suspension, or cancellation, of the Burrard Drydock Co.'s contract for the construction of a floating drydock at North Vancouver, and also the suspension of further work on the additional Government drydock at Esquimalt, and the Ballantyne Pier at Vancouver.

On Jan. 24, Clarence Wallace, Secretary, Burrard Drydock Co., was reported by a Vancouver paper to have said: "We have received advice from the Government at Ottawa to discontinue work for the present on the drydock. We simply take it to mean that the Government is about to check up the contracts which have been let, with a view to sorting out, so to speak, the essential from the non-essential undertakings. Of course, our contract with the Government is affected only in so far as the subsidy is affected. I don't think there is the least chance of work on the drydock being discontinued. If there is one undertaking that is essential, it is this dock. It goes without saying that if the port is to go ahead hundreds of thousands of dollars and also port prestige must not be lost to Vancouver. We had planned to have the first section completed in about 14 weeks. The holding up of work does not apply only to drydock contracts, but to the various other public works throughout the Dominion, as I understand it. How long it will take to make the check we cannot tell. We are anxious to proceed with the work and get the dock ready to handle ships."

Representations on the matter have been made to the Government by the Vancouver Merchant's Exchange, which points out that the shipping community regards the drydock as a necessity for the port, and that its absence would cause the loss of several thousand dollars in repair jobs. Hon. J. H. King, who was Minister of Public Works in the British Columbia Government before leaving Vancouver recently for Ottawa, is to be sworn in as Dominion Minister of Public Works, received a deputation from the Vancouver Board of Trade, and discussed the drydocks and other contracts. In connection with the North Vancouver drydock he is reported to have said: "If the work is to be proceeded with, the kind of dock best suited to the needs of the city for some years to come should be constructed. I have found some division of opinion as to this, but the whole matter will be carefully considered before a decision is reached."

The B.C. Manufacturers Association has sent to Ottawa a protest against suspension of work on the drydock emphasizing its absolute importance to the Pacific Coast shipping interests and pointing out that not only are ships now compelled to go to another port for repairs, but also that many ships remain away from Vancouver on account of the absence of a dry dock. It also stated that the Dominion Government has between 15 and 18 of its own ships sailing out of the port, and that on that account it should proceed with the work.

The Vancouver World, in commenting on the matter, said: "Should he construction of the North Vancouver drydock and the Ballantyne pier be held up

by Ottawa, one of the unfortunate reactions would be the adverse influence this step would have on the western flow of grain. Alberta has not only started to ship wheat to Vancouver, but is showing almost as much interest in local port development as is the city itself. The westward stream of grain has become an actuality, not a possibility, and if the opportunity is to be realized of making this a second Winnipeg as a wheat port, not only additional dockage and wharfage and a drydock are urgently required, but elevators and other facilities must be provided for this trade. It is a time for expansion, not repression, as far as the port of Vancouver is concerned."

In regard to the additional Government drydock at Esquimalt, on the construction of which the general contractors, P. Lyall & Sons Construction Co., were at work since March 1921, Senator Bostock, who acted as Minister of Public Works pending the appointment of J. H. King, was reported on Feb. 23 as saying that there would be no suspension or cancellation of the contract pending the taking over of the Department's duties by Mr. King. Considerable work has already been done by the sub-contractors, viz., Pacific Construction Co., dredging and excavating and Yarwood Ltd., cofferdams for landing stage. A Victoria paper says that about \$1,000,000 has already been expended.

With regard to the Ballantyne pier, which is being built by the Vancouver Harbor Commissioners, W. G. Harvie, Secretary of the Commission, is reported to have stated that no work had been received from Ottawa as to halting the work, and no instructions along this line were expected. He said that in another year the pier will be practically completed, cylinders have been sunk nearly half way to the end of the pier and the superstructure is being built on the cylinders. Contract 1 for the dredging and filling of the site, amounting to approximately \$513,121.50, was awarded to Grant & Macdonald, Vancouver, early in the summer of 1920, and an order in council of Sept. 29, 1920, authorized the commissioners to let the contract for building the superstructure, and this was awarded to the Northern Construction Co. and J. W. Stewart for approximately \$4,500,000. We were advised Feb. 10 that the excavation had been completed, about 30% of the cylinders placed, and approximately 10% of the floor trusses were in place. At the present rate of progress, it is not expected that the work will be completed until Aug. 1923, and there is no doubt that the pier will be required before it is completed, as within the last month there was a greater number of ships in port than there were available berths for, as many as three ships having to lie at anchor in the stream.

Vancouver Pilots Ltd. has been incorporated under the British Columbia Companies Act, with \$10,000 authorized capital, and office at Vancouver, to carry on a pilotage service in B.C. coastal waters, and to engage in other business incidental thereto.

The Detroit & Windsor Ferry Co. announce that a new ferry steamship will be placed in operation between Detroit and Windsor, in June, with accommodation for about 4,000 passengers.

Montreal Harbor Commission Appointments, Etc.

Following on the resignations of the commissioners, W. G. Ross, President, who resigned to become a candidate in the general election in Dec. 1921, Brig.-Gen. A. E. Labelle, and Farquhar Robertson, as mentioned in a previous issue, a new Commission has been appointed by the Dominion Government, consisting of Dr. W. L. McDougall, President; Milton L. Hersey, M.Sc., L.L.D., and Emilien Daoust. The President was sworn in, Jan. 16, and the others, Feb. 7, by the Secretary, M. P. Fennell Jr.

Dr. W. L. McDougall was born at Glenora, Ont., in 1882, is a graduate in medicine from Queen's University, and practised at Cobalt, Ont., for some time before taking post graduate courses in British and European universities and hospitals. On his return to Canada he became interested in mining, and eventually settled in Montreal, as President, Ogdensburg Coal & Towing Co., operating a river of ships on the St. Lawrence River, and Great Lakes. He is also, became President, Century Coal Co., Sterling Bond Co., and a director of Canada Steamship Lines, Dominion Steel Corporation, British Empire Steel Corporation, Hollinger Mines Ltd., etc.

Milton Lewis Hersey, M.Sc., L.L.D., was born at Montreal, Aug. 22, 1869, and educated in the public and high schools and McGill University there, and Queen's University, Kingston, Ont. He is head of Milton Hersey & Co., analytical and metallurgical chemists, and was, for some years, a lecturer in science at McGill University, to which he gave \$10,000 in 1909, for the maintenance of a metallurgical department. He also gave \$10,000 to endow a fellowship in the Kingston School of Mining, Chemistry Department. He was appointed City Analyst and head of the Government Assay Laboratory, Montreal, in 1901, and superintended on the city's water supply in 1904. In 1908 he founded a research fellowship in metallurgical engineering at McGill University, and in the following year was elected Chairman of the Canadian section of the Society of Chemical Industries. He is a member of the International Society for Testing Materials, and at different periods has made metallurgical tests for the C. P.R.

Emilien Daoust was born at Montreal in 1865, and has been in the printing and publishing business there for about 40 years.

The Commissioners have made the following appointments:—

F. W. Cowie, B.A.Sc., heretofore Chief Engineer, has been appointed Consulting Engineer, vice Sir John Kennedy, deceased.

M. P. Fennell Jr., heretofore Secretary-Treasurer and Comptroller, has been appointed General Manager.

T. W. Harvie, heretofore Assistant Chief Engineer, has been appointed Chief Engineer, vice F. W. Cowie, appointed Consulting Engineer.

Paul Leclaire, B.Sc., heretofore Engineer in charge of buildings, bridges, etc., has been appointed Assistant Chief Engineer, vice T. W. Harvie, appointed Chief Engineer.

Capt. J. F. Symons, R.N.R., heretofore Deputy Harbor Master, has been appointed Harbor Master, to succeed Capt. T. Bourassa, who will retire on April 1.

Wreck Commissioners' Enquiries and Judgments.

Enquiries have been held and judgments given in connection with the following casualties:—

Stranding of Schooner Frederick H.
Held at St. John, N.B., Jan. 18, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capts. A. J. Mulcahy and A. L. McLean, as nautical assessors, into the stranding of the schooner Frederick H., on the Negro-point breakwater, St. John harbor, while in charge of a pilot. The master, F. G. Hawx, stated that he was busy talking with the master of the tug boat James Gregory astern, and the pilot, A. Cline, was at the wheel. He noticed that the ship was being steered dangerously near to land, and gave the order to heave up the wheel and let go the spanker sheets, causing the ship to sheer off, but not sufficiently, and she grounded while under full sail, except topsails, making about 5 knots on an ebb tide. After the stranding, the pilot admitted that it was his fault alone. The ship floated off at the next flood tide, somewhat damaged. The master held that though he was master and part owner, when a pilot was on board, the latter was the only one responsible, hence he left the navigation of the ship entirely to the pilot. The pilot admitted that the casualty was caused by his inattention, and indifference bordering on carelessness. There was a discrepancy in the evidence of the master and the pilot as to the light on the breakwater, but the master's view that the light was not burning was corroborated by the Marine Department agent, who stated that the light was out, and was relighted later in the day.

The court stated that the whole evidence indicated a misconception on the master's part, as to his responsibilities, when he claimed that the pilot, on boarding, became absolute. There was no inference of wilfulness or culpable neglect, but merely a wrong reasoning of his duties and responsibilities. Regarding the pilot, the situation differed. He took the wheel, and by so doing, placed himself at a disadvantage in viewing the situation ahead in full, the sails on his lee preventing him from seeing the end of the breakwater, and lack of attention caused by familiarity with the territory caused him to neglect ordinary care and watchfulness. It could not be thought that after a long and practically successful career, he could be guilty of wilfulness with intent. Neither the master nor the pilot showed proof of ability for quick thinking and judgment. The court therefore found the master, and the pilot, equally at fault for the casualty. As the master has to face the expense of repair, there being no insurance, he was severely reprimanded and cautioned to be more careful in future. In view of the court's remarks as to his duties and responsibilities when a pilot is with him. The court did not deal with the pilot's license, but taking into consideration his long career, ordered him to pay the costs of the investigation, \$215, and warned him that if anything further should be brought against him, and proved, his license would be dealt with. The court also submitted for the Marine Department's consideration, that since the passage has been used, and is used, as a dumping ground, and according to a notice issued to mariners, Aug. 10, 1921, is becoming dangerous to navigate, and

practically indicates that it is officially closed, the maintenance of the light on the breakwater does not serve any other purpose than to misguide those whose habit it has been to use the passage.

Accident to s.s. Canadian Importer.
Held during Nov. and Dec. 1921, before Capt. J. D. Macpherson, Wreck Commissioner for British Columbia, assisted by J. T. Edmond and Capt. A. P. W. Williamson, as nautical assessors, into the cause of the damage sustained by Canadian Government Merchant Marine s.s. Canadian Importer, between Aug. 1 and Sept. 13, 1921, while in the North Pacific Ocean, through taking water in the engine room and other parts of the ship, while on a voyage from Vancouver, B.C., to Auckland, New Zealand. The judgment was as follows:—The court having heard the evidence, can come to no other conclusion, inasmuch as the evidence of those connected with the ship is concerned, than that it was of such an unsatisfactory and evasive nature as to be utterly unreliable. It was perfectly obvious that the evidence was given reluctantly, with an unconcerned indifference that almost amounted to defiance, but clearly with the studied object of suppressing and concealing the real cause which led to the ultimate disaster. The court, therefore, under these conditions, has no other alternative but to form its own conclusions, which are to the effect that when the ship left Vancouver, via Nanaimo, for her voyage to New Zealand, she was absolutely staunch and seaworthy in every respect, well loaded and in good trim, and that no water found its way into the ship from any source whatever, until the colossal blunder was made of pumping out no. 2 ballast tank, of 430 tons capacity, in a lumber-loaded ship already tender, and with a comparatively high deck load. It arrives at this conclusion, because there can be no possible question that if the ship, as asserted, was taking water to such an extent that her pumps were unable to keep it under control, it was the imperative duty of her master to at once shape a course for the nearest port and immediately send out wireless messages to that effect. From the entries in the deck log book, it appears that over 48 hours were allowed to elapse before the above first named evolution was performed, and over 46 hours before a wireless message was sent, by which time the main engines had been stopped for nearly 6 hrs, the ship then having a list of 32 deg., and with a considerable quantity of water in her, and practically helpless.

The foregoing, and the established fact that on the Canadian Importer's return to Victoria a most exhaustive survey of her hull, tanks, etc., by inspectors and experts of great repute failed to disclose any structural defects whatever by which water could enter the interior of the ship, compels the court that the ship was in a staunch on her return (as far as her hull was concerned) as on her departure, and that the initial cause of the whole disaster must be attributed to the emptying of no. 2 tank. During the period of 9 hrs. the inevitable, under the then conditions and circumstances, naturally happened: loose water was in the bottom of the ship, with the result that she gradually increased her list and, by so doing, submerged the main deck scuppers under her bridge deck, through which the water

would freely flow and collect, eventually lap over the trimming hatches into the bunkers. When the tank eventually was emptied, the ship was practically on her beam ends, and her starboard rail fore and after submerged, with the result that an enormous volume of water found its way through the after doors of her bridge deck, and thence through her coal pockets into the stokehold and engine room, with such rapidity that not only were the fires put out, but the men on duty in these places were forced to leave with considerable haste, or undoubtedly their lives would have been endangered. Providentially, however, at the same time, owing to the excessive list which the ship had attained, no. 2 tank was gradually refilling itself through the starboard air pipe, then obviously well submerged, with the result that the ship ultimately almost righted herself, without any seeming effort on the part of her crew. The ship remained in this waterlogged and helpless condition for several days, hourly taking more water, due to the fact that water was finding its way into the ship through apertures that were necessarily in the ship's side, but manifestly never intended, under normal conditions, to be submerged. After considerable search the ship was eventually located by the C.G.M.M. ships Canadian Observer and Canadian Winner, and the Pacific Salvage Co.'s s.s. Algernon, and from the first and last named ships she received a 6 in. and 10 in. gasoline pump respectively, which, after being fitted, connected, and started, either one of them soon proved itself capable of reducing the water in the ship to any extent required, thus proving beyond doubt that there could be no serious defect in the hull.

In view of the foregoing the court severely reprimands the master, Carl R. Bissett, and the chief engineer, F.C. Brown, who, in the opinion of the court, are both equally responsible for the most witless act of pumping out no. 2 ballast tank in a lumber-loaded ship with already a decided list, and this with a full knowledge of the fact that no. 1 tank of 128 tons capacity, was already empty, for even were it possible to accept the slightest excuse for pumping out no. 2, most assuredly no. 1 tank should have been filled before so doing. By neglecting the most elementary precaution, the ship was deprived of all her water ballast, more than half her length, which fact leaves little room for doubt or speculation as to what really happened. The court further has no hesitation in saying that had there been sufficient evidence to justify it so doing, the certificates of both master and chief engineer would have been severely dealt with, and strongly recommends that, at any time, if further trustworthy evidence be procurable that the whole case should be re-heard. This recommendation is made, not only because of the unsatisfactory nature of the evidence already heard, but also in view of several facts which, individually, might be of little moment, but collectively appear to be significant. In conclusion, in the court's opinion, too much credit cannot be given to that excellent organization, the Pacific Salvage Co., for there can be little doubt that, but for the timely arrival of its s.s. Algernon on the scene, with her efficient equipment and gear and her capable and expert crew in the same, the Canadian Importer, hourly taking more water, without any means of reducing same, and

thus rapidly losing her reserve buoyancy, would have foundered in a very short time, in which event little probably would have ever been known as to the real cause of her loss.

The court also submitted to the Marine Department, an annex to its report, consisting of 16 typewritten pages, with criticisms of the evidence. It stated that the only written documents relating to the case produced in court, were the mate's deck log book, in ink; the scrap deck log book, in pencil, and the engineer's log book, in ink. Requests were made for the sounding and tank books, but the court was informed that these had been destroyed, the first, intentionally, by the first mate, as being of no value, and the second by water which flooded the engine room. As the tank book is kept for the sole purpose of a record between the master and chief engineer, of the various movements in connection with the tanks, and is attested to, or ought to be, by these officials, and forwarded at the conclusion of each voyage to the head office, the court felt it difficult to understand why it should have been in the engine room at all, its proper place being, either in the master's cabin, or the chief engineer's cabin. The chief engineer's log book, though leaving much to be desired, was infinitely superior to the deck log book, which was characterized as a positive disgrace to all concerned. The court stated that nothing could be more clearly demonstrated than that the whole trouble arose from the pumping out of no. 2 tank. In criticizing the verbal evidence, the court stated that "one of the most singular features in the investigation was the generous support that the master was given by the company's officials for his action in pumping out no. 2 ballast tank." Such loyalty, it continued, is unusual, and in most cases highly commendable, but in this particular instance it was a permissible basis of such knowledge of the crude and childish method by which the conclusion was arrived at that prompted the stupid and irrational order being given." The evidence given was to the effect that the pumps were unable to keep the water under control, as the strums in no. 2 starboard bilge were choked. If this was the case, the court felt that it reflected little credit on engineering staff, and that a ship should be allowed to go to sea in such a state, and even under the existing conditions, it speaks little of the energy and resource shown by the chief engineer, that, when he found the water rapidly gaining, he did not at once take other measures which were at his disposal, to deal with the situation. There was, however, little doubt that the strums were not choked, as the cargo had been carried in no. 2 hold of such a nature as would tend to choke the bilges, and the evidence of Pacific Salvage Co.'s officials, was, that on the return to Victoria, no difficulty was experienced in draining this same bilge with the ship's own pumps. When the ship listed, it was concluded that no. 2 tank was leaking, but this was absurd, and the method adopted in arriving at such a conclusion can only be described as childish. On the presumption that the sounding pipe in the tank was choked, though it had been used twice before on that day, a 1 in. nut was attached to a piece of string and dropped through the port air pipe, the ship having at that time a 17 deg. list to starboard. As the nut came up dry, at naturally it would with such a list and about

9 ft. of horizontal pipe, it was claimed that this was proof that the tank was leaking, and it was decided to pump it out. This nearly led to the loss of the ship, the only thing that saved her being that the tank refilled itself through the starboard pipe, and the lumber on the starboard side of the deck acted as a freeboard where it was most needed at the moment. The theory that a cracked drain pipe caused the entry of water, was dismissed as ridiculous.

Grounding of S.S. Brant County.

Held at St. John, N.B., Feb. 16, into grounding of the Norwegian s.s. Brant County, near buoy 111 at the entrance to the West Traverse, east of the Island of Orleans, in the River St. Lawrence, Dec. 1, 1921, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. A. J. Malcahy, port warden, St. John, N.B., and Capt. John Hall, of the s.s. Scandinavian, as nautical assessors. The master testified that being a stranger in these waters, as well as his officers, he was approached by pilot H. Lachane at Quebec, and asked if he objected to two pilots being retained, and being under the impression that two were necessary he agreed, but while Lachane was ostensibly the pilot engaged, C. Pouliot was the pilot giving orders from the time the ship left Quebec until she grounded. This was denied by both pilots, Lachane stating that he was alone responsible, but that Pouliot stood on the fore part of the bridge, especially when the ship entered the Traverse, from which position he transmitted to the master and officers, orders given by Lachane. The master again stated that he did not hear Lachane giving any orders. The ship was navigated safely into the eastern passage leading to the north channel, with the Francois lights in line astern. The uppermost light of Cap Brule was seen, and some alteration of the course made to the south, the ship put stand-by then half speed, slow, and full speed astern, with the order to let go the anchor, the ship grounding, and in doing so, ran over her anchor, causing damage to plates on the port side. There was a conflict of evidence as to the position where the ship grounded, the master stating that she touched after the western passage had been entered on the southern bank, and the pilots stating the casualty occurred at buoy 111, the court accepting the pilots' theory as to the position. The pilots stated that some delay occurred on the forecastle head in carrying out the order to let go the anchor, but the court differed with them, for the reason that the windlass had been in readiness shortly after leaving Quebec, when the anchor was lowered from the hawse pipe and the gear adjusted so as to let go, but the pilot ordered the anchor to be lowered with 10 fathoms of chain, an alteration of the gear from compressor to steam was performed and an order to let go immediately followed, necessitating again the alteration in the windlass gear to the first arrangement, hence the apparent delay. The order to let go was given when it was perceived that the lower light at Cap Brule was not visible. Had this been known when the upper light appeared there was no doubt that the ship would have been brought safely to an anchor, to await daylight.

The court found that the master and second officer of the Brant County were free from any blame for the grounding and also exonerated pilot H. Lachane, the cause of the casualty being solely the

non operation of the range light at Cap Brule. The court felt it to be its duty to point out that the meaning and intent of a notice to pilots that a second pilot may be taken by the master or owner to steer the ship was not observed. The last paragraph of the notice reads as follows: "A pilot who has accepted such arrangement with a master or owner of a ship, to act as wheelman, must act in that capacity only." In this instance pilot Pouliot did not at any time the wheel, but acted in a very different capacity, maintaining a position of vantage on the bridge, and giving orders which were stated to have been transmitted by Lachane to him.

Capsizing of Dredge 15.

Held at Halifax, N.S., Feb. 1, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. Neil Hall and T. R. Coffin, as nautical assessors, into the capsizing of the Public Works Department's dredge 15 on Sept. 1, 1921, near Portuguese Cove, at the entrance to Halifax harbor, while in tow of the tug F. W. Roebing. The court in its summary of the evidence, stated that the report submitted by Spurgeon Naugler to his principals, and read in court by the Public Works Department's District Engineer, C. E. W. Dodwell, was exaggerated and without foundation, the evidence being completely demolished by Capt. T. Ormiston, who was in charge of the tug, and H. Beck, a laborer, who was in a motor boat. The court exonerated the master of the tug F. W. Roebing from all blame for the damage incurred, the allegations of negligence not being substantiated. The court also advised that in all cases of floating property being transferred from any point to another for any distance, a competent man should be in charge, with specific instructions, or else the operation should be left entirely in the hands of the towing company.

New Market for Alberta Coal.—It was stated in Canadian Railway and Marine World recently that a new market for Alberta coal would be opened up, if negotiations under way between the Alberta Government and the Vancouver Harbor Commissioners resulted successfully, that the Commissioners were considering the construction of an extensive dock for storing coal from Alberta mines, for handling in steamships, for export purposes, and that a similar scheme was proposed for Prince Rupert, B.C., to serve the northern coast. We were advised recently that negotiations with the Vancouver Harbor Commissioners had not been completed, but that plans for the desired facilities had been prepared for approval. We were also advised that the Alberta Government had arranged with the Canadian National Ry. for a lease of a site for bunkering and wharfage at Prince Rupert.

The Naming of Ships.—A U.S. marine paper comments on the names selected for the United States Shipping Board's ships, and pleads for names that will be easy of remembrance and enable their ready identification in certain services. Names of the Cunard and White Star Lines' ships are cited as examples, when stated, "When Mr. Russell, the Citizen of Butte, Montana, returns home after a trip to Europe he can expand his chest a few inches more when he says he travelled on the Aquitania or the Olympic, whereas if he said he came home on the Blue Hen State, his listeners would not know whether he travelled on a cattle ship or a freighter."

Icebreaking Steamship for St. Lawrence River.

We are officially advised that the contract given to Canadian Vickers Ltd., Montreal, by the last Dominion Government, and signed by the Minister of Marine, on Dec. 14, 1921, for an icebreaking steamship for St. Lawrence River service, at a cost of \$1,580,000, for delivery next autumn, has been cancelled by the present Government.

The Government has authorized the purchase of the icebreaking steamship which was under construction for the St. Lawrence River service, by Canadian Vickers Ltd., at the outbreak of the Great War. The contract for this ship, which was named J. D. Hazen, after the then Minister of Marine, was given Canadian Vickers Ltd. early in 1914, the contract price being \$998,593, and delivery was required by the autumn of 1915. A considerable amount of work was done on the hull during 1914, but when war broke out in Aug. 1914, it was found necessary to suspend all outside work, in order to deal with more pressing work that was then at hand. After the armistice had been somewhat relieved, construction on the icebreaker was resumed, and she was launched May 15, 1916, the christening being performed by Lady Borden, wife of the then Prime Minister. Shortly afterwards, on the British Government's representations, it was decided to sell the ship to the Russian Imperial Government at the contract price, as a friendly act between allies, though prices had risen considerably, and a large profit might have been made on the transaction. She left Montreal early in 1917, in charge of Capt. J. L. Read, who is now in command of the Canadian National Rys. car ferry steamship Prince Edward Island, running between Prince Edward Island and New Brunswick, and arrived safely in the White Sea, where she was renamed Mikula Seljaninovich, and placed in service there in conjunction with the icebreaking steamship Minto, which had previously been sold to Russia, by the Dominion Government, and which was also taken to the White Sea by Capt. Read, who was, at that time, appointed in charge of all Russian icebreakers operating there. The Russian revolution followed shortly after, and the movements of these ships were lost sight of for some time. Towards the close of the war, it was announced that the J. D. Hazen was at Cherbourg, France, where she has remained since.

When the question of the provision of an icebreaking steamship for the St. Lawrence arose, recently, it was announced that an offer had been made to the Dominion Government, of the J. D. Hazen, for \$25,000, approximately \$427,500, and certain reports to the Government, stated that she had experienced some hard service, and had been sunk twice, during the war, and that there would have to be a considerable expenditure for repairs and overhaul. It was therefore decided, in view of this, and of the unemployment situation, upon the special representations had been made by the Mayor of Montreal to order a new ship. The Marine Department estimates for 1919-20 contained an appropriation of \$2,000,000 for the provision of an icebreaker, and during 1920, tenders were invited for its construction. At that time shipbuilding prices were practically at their peak, and it was reported that the lowest tender received, viz., from Wallace Shipyards Ltd., North Vancouver,

B.C., was approximately \$2,200,000. As this was in excess of the amount in the estimates, it was decided not to proceed at that time. Tenders were again invited during 1921, and that of Canadian Vickers Ltd. was accepted, and the order placed as mentioned above. On the change of Government, as the result of the general election in Dec. 1921, several contracts awarded by the last Government during its last few weeks of office, were suspended pending investigation by the new Government, and the one for a new icebreaker, awarded to Canadian Vickers Ltd., has been cancelled, and the purchase of the J. D. Hazen authorized.

It is stated that an examination of the ship has been made by Lloyd's, on behalf of the Government, and that she has been reported as only needing an expenditure of about \$14,000 to put her in first class condition, and that she is worth \$305,000.

Canal Statistics for 1921.

The Dominion Bureau of Statistics, Transportation Branch, has issued a preliminary report on canal statistics for the calendar year 1921.—The freight traffic on Canadian canals increased 672,182 tons during 1921, compared with 1920, due to increases on the Welland of 800,894 tons, on the St. Lawrence of 666,103, and on the St. Andrews of 456. These increases were due almost entirely to large increases in shipments of grain, and lesser increases in shipments of pig iron, iron and steel, petroleum and oil and sugar. The traffic on the Welland and St. Lawrence was the heaviest in their histories, except for 1913 and 1914. There was a decrease on the Canadian Sault Ste. Marie Canal of 480,226 tons due to decrease of 730,568 tons of iron ore, 100,388 of soft coal, and 42,410 of pulpwood and lesser minor decreases, although grain shipments were considerably heavier. There was also a decrease of 30,555,288 tons of freight through the U.S. locks, due almost entirely to the slump in iron ore shipments, which decreased from 55,784,496 tons to 22,457,888 tons. The Chambly Canal showed a decrease of 145,042 tons, the largest decreases being pulpwood 83,760 and sawn lumber 44,111. The Ottawa Canal showed a decrease of 61,560 tons, with a decrease of 56,560 in lumber. The Murray Canal showed a decrease of 82,052 tons in crushed stone and a total decrease of 90,955. The other canals showed small decreases. The first and last passages through the canals were as follows:—

	First passage	Last passage
Sault Ste. Marie		
Canadian	April 9	Dec. 16
United States	April 7	Dec. 26
Welland	April 15	Dec. 18
St. Lawrence	April 18	Dec. 11
Chambly	April 15	Dec. 24
Ottawa	April 19	Nov. 24
Rideau	May 1	Nov. 29
Trent	April 5	Nov. 25
Murray	April 18	Dec. 5
St. Peters	April 18	Dec. 31
St. Andrews	May 29	Oct. 31

Coal Harbor Wharf & Trading Co. Ltd. has been incorporated under the British Columbia Companies Act, with \$10,000 authorized capital, and office at Vancouver, B.C., to own and operate ships, wharves and other transportation facilities, and to carry on a general navigation and trading business.

Wheat Shipments Through Vancouver Elevator.

The Board of Grain Commissioners has given Canadian Railway and Marine World the following information as to wheat shipments through the Dominion Government grain elevator at Vancouver, B.C.

Receipts of net bushels of wheat in crop years:—	
1916-17	73,419,000
1917-18	492,304,300
1918-19	503,053,100
1919-20	45,020,200
1920-21	681,243,300
1921-22 (Sept. 1 to Jan. 20)	2,485,611,000
Shipments of net bushels of wheat, in crop years:—	
1916-17	71,424,000
1917-18	375,619,100
1918-19	348,976,300
1919-20	31,660,400
1920-21	694,705,100
1921-22 (Sept. 1 to Jan. 20)	1,886,535,200
Destinations of wheat shipments from Vancouver, crop year 1920-21, in bushels:—	
To United Kingdom	261,333,200
To France	204,995,500
To U.S.A. seaboard points	98,468,300
To Vancouver, Victoria and other B.C. seaboard points	123,984,300
To other points in western division	6,015,000
Total	694,705,100

Shipments of wheat by ocean steamships, 1921-22, in bushels:—

Oct. 22, E. D. Kingsley, 6,666,400, Japan.	
Oct. 25, Barrymore, 6,629,200, Japan.	
Nov. 16-19, Architect, 76,276,500, Liverpool.	
Nov. 16, Eldridge (sacked), 33,133,000, Japan.	
Nov. 19, Siberian Prince, 33,133,200, Japan.	
Nov. 23, to freight sheds in sacks, 33,083,200, Japan.	
Nov. 30, to freight sheds in sacks, 16,558,200, Japan.	
Dec. 3, Robert Dollar, 16,560,000, Japan.	
Dec. 7, Santa Rosalia, 80,000,000, United Kingdom.	
Dec. 9-16, sacks for Canadian Freighters, 99,433,200, Japan.	
Dec. 10-13, City of Naples, 110,533,200, Holland.	
Dec. 19, Mimisatan, 20,000,000, London.	
Dec. 22, West Jessop, 33,177,000, Japan.	
Jan. 3, Canadian Winner, 49,700,000, Japan.	

Particulars of shipments Jan. 3 to 20 not yet available.

Additional Elevator Capacity at Montreal.—The Montreal Warehousing Co. is going to add a 1,000,000 bush. storage annex to its elevator B, at Windmill Point, which will increase the elevator's storage capacity to 3,000,000 bush. It will also install a car dumping machine for unloading cars, to replace the present method of unloading by air shovels. A second car pier is to be built for delivering grain into ocean steamships. It is expected that the car dumping machine and additional loading facilities will be in operation at the reopening of navigation, thus increasing the means of unloading cars and loading grain into steamships. The additional storage capacity is expected to be ready a month or two after, and in plenty of time for handling next season's grain crop.

Belgium Congo Corporation Ltd. has been incorporated under the Ontario Companies Act with \$1,000,000 authorized capital and office at Toronto, to carry on a general land and emigration business, and in connection therewith to own and operate ships for the transportation of mails, passengers, general merchandise, etc. The incorporators are, J. Cowan, O. D. Kester, R. E. Cliphams, R. McGrath and R. A. James.

Canadian Government Merchant Marine, Operation, Etc.

Operating Results for 1921.—A statement was given to press representatives in Ottawa on Feb. 20 showing the results of the C.G.M.M. operations for 1921 to have been as follows: General expenditure, \$11,816,292; overhead and wharf expenses, \$861,300; total expenditure, \$12,677,592; gross revenue, \$10,919,248; loss on operations, \$1,761,344. A press correspondent, in transmitting these figures, put the total investment in the 63 ships at over \$70,000,000, but took \$65,000,000 as representing those complete and in full operation during 1921, and figured interest at $5\frac{1}{2}\%$ \$3,575,000, and depreciation at 5% \$3,250,000, a total of \$6,825,000, which added to the loss on operations, \$1,761,344, makes a total of \$8,586,344.

Particulars of the different services show the following results: Australia etc. 9 voyages, profit \$201,130; India etc. 3 voyages, profit \$31,648; United Kingdom, 44 voyages, loss \$202,112; South America, 6 voyages, loss \$169,203; Europe, 15 voyages, loss \$185,000; British Columbia, California, loss \$81,778; passenger service to West Indies, including freight ships and combined freight and passenger service, loss \$241,945.

Officers of Steamships.—The following appointments of masters and chief engineers have been made, in addition to those mentioned in previous issues:—Canadian Rover, chief engineer, F. C. Brown; Canadian Seigneur, Capt. B. S. Potts, vice Capt. J. E. Faulkner; Sheba, Capt. J. Lintlop, vice Capt. W. G. Tudor.

Siberian Service.—The s.s. Canadian Winner was reported to have left Kobe, Japan, for Vladivostok, Siberia, during December. The ship will be the first British steamship to enter that port since the breaking off of trade relations about two years ago. After leaving Vladivostok, she will call at San Francisco, en route to Vancouver. It is stated that she took on a considerable amount of freight at Vladivostok for San Francisco.

Mediterranean Service.—London, Eng., cablegram, Feb. 17.—Although the Canadian Government Merchant Marine has laid several ships up, rather than run them at a loss, strenuous efforts are being made to secure trade for those still operating. It has been decided to put on a monthly service to the Mediterranean, despite severe competition from the United States Shipping Board, whose recent rate cuts have been met by a lowering of the rate to Montreal to the same level as the tariffs from Mediterranean ports to New York. E. G. Laing has been sent as special representative with headquarters at Naples. Offices have been opened in Paris, Antwerp, Rotterdam, and Hamburg.—Copyright Montreal Gazette.

Canadian Railway and Marine World is officially advised that a Mediterranean service is still only under consideration.

Damage Suit for Employee's Death.—Relatives of Richard Hayes, a member of the crew of the s.s. Canadian Settler, are suing Capt. J. A. Ridley, the ship's master, and Canadian Settler Ltd., for \$3,000 for his death, alleging negligence on the master's part. It appears that the man was second steward on the ship's voyage to England, Nov. 8, 1921, and was in apparent good health up to

Dec. 24, when he became ill and was given some medicine by the chief steward, which it is claimed contained a high percentage of drugs, after which he became unconscious and died.

Halifax, N.S., Sailings.

For Australia and New Zealand.—Canadian Pioneer, March 22; Canadian Planter, April 22.

For Barbados, Trinidad and Demerara. Canadian Coaster, March 10; Canadian Beaver, March 24; Canadian Logger, April 7; Canadian Harvester, April 21.

For Nassau, Kingston and Belize.—Canadian Forester, March 8; Canadian Fisher, March 29; Canadian Forester, April 19.

For Newfoundland.—Canadian Sapper, March 8, and each 12 days thereafter.

St. John, N.B., Sailings.

For Liverpool.—Canadian Commander, March 14; Canadian Volunteer, March 28; Canadian Leader, April 11.

For London.—Canadian Raider, March 14; Canadian Rancher, March 28; Canadian Trapper, April 11.

For Glasgow.—Canadian Commander, March 14; Canadian Otter, March 28; Canadian Aviator, April 12.

For Cardiff and Swansea.—Canadian Squatter, March 21; Canadian Runner, April 19.

Vancouver Sailings.

For Australia and New Zealand.—Canadian Transporter, March 20, Auckland, Sydney, Melbourne, Adelaide; Canadian Britisher, April 25, Auckland, Sydney.

Indian Service.—Canadian Importer, May 22, Calcutta, Bombay.

Marine Operations, etc.

Atlantic and Pacific Oceans.

The officers and crew of the Ulster Steamship Co.'s (Head Line) s.s. Melmore Head, were entertained to dinner by the Union Club, St. John, N.B., Feb. 3, in recognition of their heroic conduct in rescuing the crew of the Norwegian s.s. Mod, which sank in midocean, Jan. 23.

The Swedish s.s. Thyra arrived at Halifax, N.S., Feb. 9, in tow of the C.G.S. Lady Laurier, having lost her rudder about 200 miles southwest of Cape Race, Jan. 29, since when she had been helpless, three other steamships having abandoned attempts to get a tow line aboard her.

The Anchor-Donaldson Line's s.s. Athena, for the Glasgow and Montreal service, was launched at Glasgow, Scotland, Jan. 28. She is 540 ft. long, with 66 ft. beam, and has cabin capacity for 520 passengers, and third class accommodation for 1,200. It is expected that she will be ready to make her maiden sailing from Glasgow, June 9, arriving at Montreal, June 23.

The White Star-Dominion Line announces the inauguration of a steamship service from Portland, Me., and Halifax, N.S., to Southampton and Bremen, and on the reopening of St. Lawrence navigation from Montreal to Quebec. The first sailing, with the s.s. Vedie, 10,000 gross tons, is scheduled from Portland, Apr. 22 and Halifax Apr. 23. The s.s. Rimowski will also be used in the service.

The White Star-Dominion Line's St. Lawrence service between Montreal and Liverpool, will be performed this year with four steamships, Canopic, Megantic, Canada and Regina, and a weekly schedule will be maintained. The Canopic has, hitherto, been operated in the company's

service between New York and Mediterranean ports, and the Regina is a new ship, the other two having been on the route previously. The season will open with the sailing of the Canopic from Liverpool, May 13, and from Montreal, May 27.

Maritime Provinces and Newfoundland.

The steam tug Clayton, owned in St. John, N.B., was damaged there, Feb. 6, by fire which started in the boiler room. The deck house was completely destroyed and is to be rebuilt.

The St. John, N.B., ferry service revenue for January was \$2,547.78 from passengers and \$849.30 from teams, compared with \$3,610.95 for passengers and \$809.02 for teams in Jan. 1921.

St. John Drydock & Shipbuilding Co. stopped work on the construction of the drydock at Courtenay Bay, St. John, N.B., in the latter part of January, and it was stated that it might be resumed on or about March 1.

During 1921, according to a press report, 11,644,635 ft. of lumber, valued at \$383,603, was shipped from Parrsboro, N.S., to United Kingdom and U.S. ports, and in addition about \$60,000 worth was shipped to St. John, N.B.

Canada Steamship Lines' s.s. Manoa, which was operated between Montreal and St. John's, Nfld., in 1921, is having her passenger accommodation increased in Europe, and it is expected that she will be ready to resume her service between those points about the middle of May.

The Bras d'Or Steamboat Co., North Sydney, N.S., is reported to have bought a steamboat to replace the s.s. Marion on the Bras d'Or Lake service. The new boat is stated to be a side wheeler, larger and with greater freight accommodation than the Marion, and will probably be ready for service on the lakes at the reopening of navigation.

The Marine Department has given notice that the submarine bell buoy about 600 ft. northwest of Brazil Rock gas and whistle buoy, the submarine bell buoy about 500 ft. northwest of Louisburg gas and whistle buoy, and the submarine bell buoy about 600 ft. southwest of Flat Point gas and whistle buoy, at the entrance to Sydney harbor, will be discontinued without further notice.

St. John, N.B., City Council received provisional estimates recently for repairs, extensions, fixed charges and general expenses for the harbor. They show a proposed expenditure of \$255,226.41, less wharf bond interest and revisions in wages \$38,880, or \$216,426.41 net expenditure. The estimated revenue, based on that for 1921, is \$164,000, leaving an estimated deficit of \$52,426.41, to which is added \$1,432.99 for collection charges, making a total estimated deficit of \$53,859.40.

The Halifax Dredging Co.'s steam tug Shannon grounded on Pennant Point, Sambro Ledges, at the entrance to Halifax harbor, at the end of January, and became a total loss, the crew of eight escaping in a small boat. She was returning to port after having assisted in floating the schooner J. Duffy, which went ashore at La Have. She was built at Pictou, N.S., in 1886, and was screw driven by engine of 29 h.p. Her dimensions were,—length 76.9 ft., breadth 17.5 ft., depth 8 ft.; tonnage, 75 gross, 51 net.

The Dominion Government s.s. W. H.

Lee, engaged in lighthouse and buoy service, was destroyed by fire at the south end terminals, Halifax, N.S., Jan. 30. As she had a large quantity of oil on board, which it was impossible to save, she was towed to Point Pleasant breakwater, where she burned out and sank. She was built in the U.S. in 1889 and rebuilt there in 1894. Her dimensions were,—length 128.9 ft., breadth 30 ft., depth 11 ft.; tonnage 317 gross, 190 net. She was screw driven by engine of 61 h.p. The war was used as a patrol boat during the war.

Province of Quebec.

The Dominion Public Works Department will receive tenders to March 7 for the operation of a ferry across the Ottawa River between La Pâsse, Westmeath Township, Ont., and Fort Coulonge, Mansfield Tp., Que.

Canada Steamship Lines is reported to have decided to build a freight shed extending from the wharf to Dalhousie St., Quebec, and to remove the old wooden building. By doing this, its freight shed area will be increased by approximately 6,000 sq. ft. and exit and entrances for freight will be provided on Dalhousie St.

The Prescott & Ogdensburg Ferry Co.'s s.s. Ferdinand ran aground in the St. Lawrence River, near Ogdensburg, N.Y., towards the end of January, during a dense fog. The passengers were transferred to another ship safely, and the Ferdinand released herself the following day, and returned to Prescott for examination.

The two lake steamships ordered by Ontario Paper Co., Thorold, one of which is being built by Swan, Hunter & Wigham Richardson, Wallsend-on-Tyne, Eng., and one by the North of Ireland Shipbuilding Co., Londonderry, Ireland, as mentioned in our last issue, are expected to be ready for delivery in May and June respectively.

The Fort Erie Ferry Co., which operates under an agreement with the Dominion Government, has been refused permission by the Government to increase its fares over the amounts authorized by the agreement. It is stated that the company desires to increase the foot passenger fare by 100%, and the rates on automobiles by from 10% to 20%.

The U.S. Lake Survey reports the levels of the Great Lakes for January, in feet above mean sea level, as follows:—Superior 601.62, Michigan and Huron 579.32,

for the work in the nature of unemployment relief, had been exceeded by the contractors by about \$700,000. The appropriations for certain work on the existing Welland Canal had also been exceeded, but he is reported to have promised to bring forward the matter of building certain bridges there, in order to help the unemployment situation, before the reopening of navigation.

Capt. D. W. Whiteley, master of Keystone Transports' s.s. Keywest, was charged at Picton, Ont., Feb. 17, with criminal negligence in connection with the sinking of the schooner Oliver Mowatt, and the loss of three lives, near Main Duck Islands, Lake Ontario, Sept. 1, 1921. He pleaded guilty and was sentenced to 21 days imprisonment. A similar charge was made against C. F. Gildman, second officer, who was to be tried at a later date in February. The result of the Wreck Commissioner's enquiry into the disaster, which was held at Montreal, in Oct. 1921, found that the master of the s.s. Keywest was in default and suspended his certificate for a year from Sept. 16. The second officer, C. F. Gildman, was also found in default, but as he does not hold a certificate, the Wreck Commissioner reprimanded him severely.

Canadian Pacific Railway, British Columbia Coast Service, s.s. Princess Louise.

Montreal City Council invited tenders recently for the ferry service to St. Helen's Island, for a five year term, the contracts to have all game and refreshment privileges on the island. An hourly service from 8 a.m. to 8 p.m. on week days and a half-hourly service on Sundays and holidays is to be given, and the contractor is to hold an insurance policy for \$20,000 to cover possible accidents to passengers, and to deposit \$5,000 as a bond against damage to buildings, etc.

Ontario and the Great Lakes.

The Mayor of Port Arthur announced Feb. 14, that the Minister of Public Works had telegraphed that work would commence in the near future, on the construction, of an additional 150 ft. to the Bare Point breakwater, to relieve local unemployment.

The Kingston Navigation Co.'s s.s. St. Lawrence will undergo a certain amount of overhauling and repairing before the opening of navigation, but the work will not be extensive, as it is possible the company may not operate her this year, unless there is considerable improvement in the outlook.

St. Clair 573.93, Erie 571.51, Ontario 244.73. Compared with the average January levels for the past 10 years, Superior was 0.52 ft. below, Michigan and Huron 0.70 ft. below, Erie 0.21 ft. below, and Ontario 0.76 ft. below.

The s.s. Island Belle, owned by W. W. Holmes, Redwood, N.Y., and operated by Alexandria Bay Steamboat Co., Alexandria Bay, N.Y., has been sold to the Grand Island Excursion Co., Buffalo, N. Y., for service on the Niagara River. She was built at Alexandria Bay, N.Y., in 1879, and rebuilt in 1895. Her dimensions are,—length 100 ft. 5 in., breadth 20½ ft., depth 6 ft.; tonnage, 141 gross, 116 net. Her hull is of oak and she is equipped with a fore and aft compound engine, with cylinders 12 and 25 in. diam. by 18 in. stroke, supplied with steam by a marine type boiler 11½ ft. long by 6 ft. diam., at 150 lb.

Major Graham A. Bell, C.M.G., Deputy Minister of Railways and Canals, while visiting St. Catharines, Feb. 7, was reported to have stated that additional work on the sections of the Welland Ship Canal, under contract, could not be proceeded with until after Parliament had met, as the appropriations already made

The Toronto harbor master's report for 1921 shows that 3,030 steamships, 602 tugs and 316 barges used the harbor during the year, compared with 3,096 steamships, 886 tugs and 482 barges for 1920. The total tonnage of ships entering the harbor in 1921 was 4,973,682, compared with 5,453,919 in 1920. The coal brought to Toronto by ships during 1921 was 78,761 tons, against 155,839 for 1920, and the total merchandise imported was 203,779 tons, and exported 44,584, against 342,826 imported and 51,630 exported in 1920.

Ships of various types wintering at the port number 60, with a total tonnage of 22,980 gross. During the year, 466 ft. of the concrete superstructure of the east pier was rebuilt, and the life chains at the western channel were removed, repaired and replaced. Work on the construction of the island breakwater was continued and 1,250 ft. of mattress work, 60 ft. wide, was completed.

Manitoba, Saskatchewan, Alberta and Northwest Territories.

The Alberta & Great Waterways Ry. will, it is stated, build a boat landing, independent of the other landings al-

ready cleared for river steamboats at Waterways, Alta. The new landing will be for boats used locally between McMurray and Waterways.

British Columbia and Pacific Coast.

The Pacific Steamship Co.'s (Admiral Line) s.s. Silver State, which docked at Victoria, B.C., Feb. 4, was the first large passenger steamship to use the Ogden Point pier.

The Crescent Shipping Co.'s s.s. Leebro, which has been under charter to the Marine Department, for some time, for lighthouse and buoy service on the coast, has returned to the freight trade, and sailed from Nanaimo recently with a cargo, for Seattle, Wash.

The wireless telegraph operator on the C.P.R. s.s. Princess Adelaide, running between Vancouver and Victoria, recently picked up a remarkably clear wireless tele-

phone conversation taking place with a station in New York where tests were being carried out.

The Robert Dollar Steamship Co.'s s.s. Bessie Dollar was reported Feb. 12 to be returning to Vancouver, having suffered considerable damage in a heavy storm on the Pacific Ocean. The master was reported to have been badly injured, and the steward killed, owing to the falling of the main mast.

Vancouver's shipping record for 1921 has the following entries: ships engaged in coastwise trade 11,485, gross tons 7,257,382; net tons 4,217,169; against 11,489 ships, 7,397,472 gross tons, 4,441,316 net tons, for 1920; ships engaged in deep sea trade 389, gross tons 2,659,366, net tons 1,678,874; against 336 ships, 1,884,042 gross tons, 1,163,699 net tons, for 1920.

The Pacific Great Eastern Ry. has arranged for the use of the Vancouver Dredging & Salvage Co.'s steam tug

Digges, to replace the s.s. Clinton, which was sunk by collision with the C.P.R. s.s. Princess Royal in January. The Clinton carried insurance for \$25,000, and the barge P.G.E. no. 1, which she was towing, was also insured for \$25,000. The Clinton is considered a total loss, but the barge only received comparatively slight damage, and was taken to Wallace Shipbuilding & Drydock Co.'s plant for overhaul and repairs.

The C.P.R. s.s. Princess Louise, completed recently at North Vancouver for the company's British Columbia Coast Service, an illustration of which appears on this page, was placed in service between Victoria and Vancouver, Jan. 25. It is expected that she will be put in the Alaska service, for which she was specially designed, about June 9, in conjunction with the s.s. Princess Alice, making calls at Alert Bay, Prince Rupert, Ketchikan, Wrangell, Juneau and Skagway. Full details of this ship have appeared in previous issues.

Mainly about Marine People.

Capt. J. N. Bales, port warden, Montreal, died, Jan. 28, from pneumonia, aged 67. He was born at Liverpool, Eng., and served at sea for about 30 years, finally with Elder, Dempster & Co. He was appointed deputy port warden at Montreal in 1900, and was appointed port warden during the war, on the death of Capt. A. Reid.

Mrs. Cockburn, widow of A. P. Cockburn, founder, and for some time President, Muskoka & Georgian Bay Navigation Co., which afterwards became the Muskoka Lakes Navigation & Hotel Co., died in Toronto Jan. 20, aged 78.

George L. Courtney, who has been appointed Contracting Freight Agent, Pacific Steamship Co. (Admiral Line), Vancouver, B.C., reporting to A. B. Graham, General Agent there, was born at Chatham, Ont., Oct. 7, 1868, and entered transportation service in 1884, since when he has been, to 1886, clerk, G.T.R., Chatham, Ont.; 1887 to 1889, clerk, G.T.R., Hamilton, Ont.; 1889 to 1890, clerk, C.P.R., Vancouver, B.C.; 1890 to 1896, Traffic and Passenger Agent and Contracting Freight Agent, C.P.R., Victoria, B.C.; 1896 to 1900, Agent, C.P.R., Victoria, B.C.; 1900 to 1906, Traffic Manager, Esquimalt & Nanaimo Ry., Victoria, B.C.; 1906 to 1908, District Freight and Passenger Agent, C.P.R., and Esquimalt & Nanaimo Ry., Victoria, B.C.; 1908 to 1915, in private business; 1916 to June, 1918, Agent, Canadian Pacific Ocean Services, Ltd., Hong Kong, China; Oct. 1918 to 1920, General Manager, Pacific Great Eastern Ry., Vancouver, B.C.

M. McD. Duff, Manager, Great Lakes Steamship Service, C.P.R., visited various Great Lakes ports and Winnipeg, on a business trip during February.

Tom Ranger Enderby, who has been elected President, Dominion Marine Association, was born at Leicester, Eng., Oct. 16, 1885. He entered transportation service in Aug. 1909, since when he has been, to Aug. 1916, Assistant Purchasing Agent, British Columbia Electric Ry., and Vancouver Power Co., Vancouver, B.C.; Sept. 1916 to Sept. 1918, Secretary-Treasurer, Canada West Coast Navigation Co., Vancouver, B.C., and General Manager, Cameron-Genoa Mills Shipbuilders Ltd., Victoria, B.C.; Sept. 1918 to Sept. 1919, Secretary-Treasurer, Montreal Transportation Co., Montreal;

Sept. 1919 to May 1920, Managing Director, Montreal Transportation Co. In May 1920 he was appointed Operating Manager, Canada Steamship Lines, which position he still holds.

Michael P. Fennell Jr., who has been appointed General Manager, Montreal Harbor Commissioners, was born at Montreal, March 13, 1885, and entered transportation service in 1902, after completing a course at McGill University. He was, from Jan. to Sept. 1902, secretary to Master Mechanic, G.T.R., Montreal; Sept. 1902 to Apr. 1903, secretary to Freight Traffic Manager, G.T.R., Montreal; Apr. 1903 to Jan. 1907, secretary and accountant, Engineering Department, Montreal Harbor Commission; Jan. 1907 to June 1909, Assistant to President; June 1909 to Sept. 24, 1917, Assistant Secretary-Treasurer. On Sept. 24, 1917, he was appointed Secretary-Treasurer and Comptroller. He was elected Secretary of the American Association of Port Authorities, at its inception, and has recently resigned, but is acting until his successor is appointed.

T. W. Harvie, who has been appointed Chief Engineer, Montreal Harbor Commissioners, was born at Old Monkland, Scotland, Aug. 5, 1877, and educated at private schools and the Royal Technical College, Glasgow. He served in the engineering and land surveying apprenticeship with Kyle, Dennison & Frew, Glasgow, and was later Assistant Resident Engineer, Caledonian Ry. He subsequently served as an engineer with the Clyde Navigation Trust, and was Resident Engineer on harbor works at Marklands, Shieldhall, etc., on the Clyde, and at Yorkhill docks. He was appointed Assistant Engineer, Montreal Harbor Commissioners, in May 1910, and for three years acted as Resident Engineer on the construction of the Victoria pier and market basin, the shore wharves and the upper section of the high level railway, later becoming Assistant Chief Engineer. He is a member of the Corporation of Professional Engineers of Quebec, and of the American Association of Port Authorities, and associate member of the Institute of Civil Engineers, of England, and the Engineering Institute of Canada.

Paul Leclaire, who has been appointed Assistant Chief Engineer, Montreal Harbor Commissioners, was born at Montreal in 1881. He graduated as a civil

engineer, with the degree of B.Sc., from the Laval Polytechnic in 1901, and in 1911 was appointed engineer in charge of buildings, bridges and water supply, Montreal Harbor Commissioners, prior to which he had been engaged in engineering work in Pittsburgh, Pa., and with the Dominion Bridge Co., Montreal.

Hugh C. MacLean, President, Muskoka Lakes Navigation & Hotel Co., left Toronto Feb. 2, to spend several weeks in Bermuda.

J. A. Speers, heretofore Manager, Lake Shippers Clearance Association, Port William, Ont., has been appointed General Manager at Winnipeg, succeeding F. W. Young, deceased.

Capt. J. F. Symons, R.N.R., who has been appointed Harbor Master, Montreal, was appointed Deputy Harbor Master there, in 1912, and on the outbreak of war in Aug. 1914, he volunteered for active service in the Royal Navy, and served on several of the larger ships before being transferred to the destroyers with the rank of Lieutenant Commander. On the conclusion of the war, he resumed his position as Deputy Harbor Master.

Major Gen. Sir David Watson, K.C.M.G., the recently retired President of the Quebec Harbor Commissioners, died at Quebec, Feb. 18, after a paralytic seizure at the Garrison Club, there, Feb. 16. He was born in Quebec, Que., in 1871, took up newspaper work in 1891, and subsequently became Managing Director of the Quebec Chronicle. Immediately on the outbreak of war in Aug. 1914, he took command of the Second Battalion at Valcartier Camp, and sailed for England a few weeks later. He had a very brilliant war record and was made a K.C.M.G., and also a Commander of the French Legion of Honor, and received a Croix de Guerre of France, and also of Belgium, together with the Belgian Order of Leopold. He was appointed President, Quebec Harbor Commissioners in 1919.

A. A. Wright, Honorary President, Dominion Marine Association, Mrs. Wright, and their son and daughter, left Toronto, Feb. 8, and sailed from New York Feb. 11, on the C.P.R. Empress of France, for the Mediterranean. They will spend some time on the European continent, and expect to return to Toronto in June.

Canadian Railway and Marine World

April, 1922

Automatic Box Car Unloading in Grain Elevators.

By C. D. Howe.

The transportation of grain from its point of origin on the farm to its destination at a milling point, or, in the case of export grain, in the hold of an ocean freighter at a seaboard port, is one of the great problems of all grain exporting countries. Many millions of dollars are invested in grain elevators for storing and handling grain in transit, while the railways have tremendous investments in rolling stock and terminal facilities for handling this vast traffic. On the North American continent practically all grain is moved by the railways. It is ordinarily moved in wagons or trucks to a near by country elevator, where it is loaded into a standard box

car. The manually operated power shovel, shown in the accompanying fig. 1. This device consists of a wooden shovel, to which it attached a cable, connected to a drum on a power driven revolving shaft. The operator carries the shovel over the grain to the end of the car and sets the shovel into the grain, after which the drum engages with the shaft by means of a clutch, and draws the shovel to the car door, where the drum is released by an automatic trip, and the cable freed, so that the operator can again set the shovel in the grain at the end of the car. These shovels are usually operated in pairs, and require two, and sometimes three, operators per car.

struction of at least one of the timber work houses, and therefore it was decided to build a single fireproof work house of reinforced concrete construction to do the work of both timber work houses, and to have an unloading, shipping, cleaning, and handling capacity at least as great as the combined capacities of the two timber work houses. The restrictions imposed by the site made it impossible to provide trackage adequate to serve an installation of car shovel pits. The large staff required to operate the many car shovel pits necessary for proper unloading capacity also presented a labor problem that would severely handicap the operation of the elevator in busy seasons. Without the in-

Fig. 1. Unloading box car by power shovel method.

Fig. 2. Unloading box car on automatic dumper by gravity method.

car and moved to a terminal elevator, where the box car is unloaded and the grain placed in storage until it is ordered forward to its further destination. Much export grain moves to the seaboard by a combined rail and water route, which makes necessary its handling through several grain elevators.

The large volume of grain to be handled has demanded the greatest economy of operation in grain elevators. Manual labor has gradually been eliminated, and now plays but a small part in grain handling methods. The modern grain elevator handles grain at a cost per ton considerably lower than the cost of handling any other commodity. The unloading of grain from box cars has, however, not until recently improved with other handling methods, and is still largely the only process in grain handling where manual labor is considerably used. The methods now in use are those of 20 years ago, and only within the last two years have steps been taken to substitute a mechanical device for hand labor in unloading grain from box cars. Practically all grain elevators receiving grain from box cars are equipped with

This old method of unloading box cars also involves the removal of the temporary wooden grain door by means of an axe and bars, involving considerable hand labor and loss of time, as well as destruction to the grain door. The men engaged in shoveling cars and opening grain doors are constantly enveloped in a cloud of dust, and are called upon for very heavy physical exertion. Their work is seasonal and intermittent, depending on the business handled at various seasons. As a result, only the poorest class of labor can be obtained for car shoveling, and practically all labor trouble in a grain elevator centers around the shovellers.

The automatic box car unloader to be described in this article was developed for use in the reconstruction of the Canadian National Rys. elevator at Port Arthur, Ont., which is the largest grain handling plant in the world, having a storage capacity of over 8,500,000 bush. of grain. The plant consisted formerly of three fireproof tile storage annexes and two large capacity timber work houses. The deterioration of the timber structures made necessary the recon-

struction of more efficient methods of unloading, the use of a single work house seemed to be impracticable. The unloading device adopted consists of a tilting platform, with auxiliary automatic mechanism for opening the grain door and introducing deflecting baffles into the car, so that, as the car is tipped endwise, the grain content is discharged by gravity out of the side door into the elevator receiving hopper. The introduction of this device into a grain elevator eliminates the inefficient process of car shoveling from the otherwise highly efficient methods of handling grain in bulk. All necessity for manual labor in the grain handling processes is removed, and the employees of an elevator thus equipped are operators, not laborers.

The field for a box car dumper for grain has long been recognized, and patents covering many of the basic features of a box car dumper were taken out 20 years ago. The patentees were, however, unfamiliar with the requirements of grain handling processes and were apparently unable to develop a complete apparatus that would meet the exacting requirements of the grain trade,

with a result that the devices covered by the early patents were never placed in operation. Following are the requirements of a successful box car unloader for grain:—1. It must not damage the railway rolling stock, no matter how defective the condition of such rolling stock on arrival at the elevator. 2. It must be designed to handle all types of box cars that may be received at the elevator. 3. It must remove all grain from the car to the elevator pit without loss of grain and without hand labor. 4. It should have means for removing the grain door quickly and without damaging same. 5. It must be made practically fool proof in operation, and safe and reliable under all conditions of operation. 6. It must have speed and economy of operation such as will more quickly and without damaging same. 5. It must be made practically fool proof in operation. 6. It must have speed and economy of operation such as will more than justify its first cost. 7. It must be

Following is a detailed description of the box car unloader apparatus installed at the C.N.R. Port Arthur elevator. Figs. 2, 3 and 4 show respectively an operating perspective, side elevation, and end chine. The bridge consists of two built up plate girders braced rigidly together. The lower part of the girders is formed into a circular tread, which rest on steel tracks, supported on a heavy concrete foundation. Lugs on the tracks mesh with slots in the girders, to ensure proper alignment at all times, and a roller at each end of the bridge operates in a steel guide set in the concrete structure of the unloader foundation as a further aid to keeping the bridge in alignment. The tipping machinery consists of a 75 h.p. motor, connected, through a worm gear and differential, to run at each end of a bridge, by means of which the bridge can be rocked to an angle of 45 degrees in either direction. End locks are provided for locking the four corners of the bridge platform to the foundation. These

justing the door opening mechanism to all varying heights of car floor. The operation of the door opener forces in the grain door, without injuring it, and by a continuous motion carries the grain door inward and upward to the roof of the car, where it remains during the unloading operation. As the door opener is withdrawn, the grain door is dropped on the car floor, and is not manually handled at any stage of the unloading operation. Two deflecting baffles are provided, one at each side of the car door, each operated by a motor connected to a drum shaft with a worm transmission gear. These baffles can be placed across the full width of car, at a 45 degree angle, at the will of the operator, and are used for deflecting the grain out through the side door of the car. The steel baffles are connected by steel cables to the drums mentioned above, and are guided by upper and lower guide castings. In order to provide for the variation in heights of car floors, the forward

Fig. 3. Side elevation of automatic box car unloading apparatus for grain.

served by trackage that will permit rapid handling of cars to and from the unloader, without interruption to the unloading process, over long periods. Recent developments in automatic box car unloading apparatus for grain have for the most part been along the lines of a combined end tilt and side tilt to the cars. The unloader herein described has been developed for end tilt only, for the following reasons: 1. The side tilt causes strains in the rolling stock, for which it is not designed, and is a source of damage to box car equipment. 2. The advantages to be gained from a side tilt do not compensate for the very considerable additional construction cost necessary to effect the side tilt. 3. The clearance required for apparatus having a side tilt makes necessary an unduly wide track spacing and consequent expensive construction for housing facilities and trackage.

locks consist of a heavy pin, which slides into a cast iron shoe set in the foundation, the pins being all operated simultaneously by one 5 h.p. motor, with screw and link mechanism. Bumpers for centering the car on the bridge platform and holding the car in position during the tipping operation are of the collapsible type, and consist of heavy steel castings, hinged and supported on a cross-head in a guideway, and operated by large diameter screws driven from one motor located near the center of the bridge. These bumpers hold the car in position by clamping it over the draw bars. The door opener consists of two steel levers cast into gate segments. The operation is effected by a motor connected by a worm transmission to a countershaft, having a steel pinion at each end. These pinions are geared into the rack segments of the arms before mentioned. Automatic means are provided for ad-

end of the baffle is raised by means of a large nut supported in a casting under the baffle guideway. As the baffle moves into the car, it is lowered until it rests on the car floor, fitting tightly to the car floor and to the far side wall of the car. Deflecting plates are arranged under the car door, to ensure all grain being carried well to the center of the receiving hopper. Flexible deflectors are arranged to prevent any leakage of grain along the side of the car. Steel gratings are provided to protect the fixed hopper and to cover all open spaces around the unloaders. The fixed receiving hopper is part of the grain elevator structure. It is important that this hopper has a capacity of 2,000 bush. of grain, in order that the dumping operation may not be delayed while it is being cleared. The end travel of the car door, incidental to the rocking motion of the unloader, ensures an even distribution of grain in the re-

ceiving hopper, and makes it possible to obtain necessary capacity with a comparatively shallow hopper. The operator's cab is directly opposite the car door, and is provided with glass windows, so that he has an unobstructed view into the car at all times during the dumping operation. The electrical control board is in convenient position before the operator and all operations of the unloader are under his direct control. Particular attention has been paid to features bearing on the safety of operation of the unloader apparatus. The rocking cradle is designed so as to be in a stable equilibrium in all positions and under all conditions of loading of grain inside the car. Therefore, should a breakage occur in the tipping mechanism, the bridge will immediately come to a horizontal position without damage. All motors are equipped with solenoid brakes, and transmission is by self locking worm gears, so that no motion can take place unless actuated by electric current. Limit switches are provided on all important motions, and the operations are electrically interlocked so that they cannot be carried out in improper sequence. The apparatus is practically fool proof and incapable of being damaged by improper operation.

The successful operation of automatic car unloaders depends largely upon the facilities provided in the grain elevator for rapid disposal of the grain as it is unloaded, and also upon the trackage serving the unloaders. The installation at the C.N.R. elevator at Port Arthur, illustrated by figs. 5 and 6, is an example of an elevator properly equipped to operate with automatic unloaders. The elevator is located near the outer end of its site, so that through trackage could not be used. The unloading shed was therefore placed at the shore end of the work house, and the loaded car tracks and empty car tracks arranged side by side. At this elevator each yard track is long enough to hold 30 cars. The spring switch at the dumper is open to the empty track, and the track is graded so that empty cars run off the dumper and clear themselves by gravity on the hump yard principle. Loaded cars are pulled to the dumper by means of an endless cable haulage, which controls the entire yard. Specially designed cable grips are used for attaching the car to the moving cable. The layout permits loaded cars to be set into the elevator yard and empty cars to be moved without interruption of the unloading process.

The trackage layout at any elevator is more or less determined by the site and its location in relation to the feeder trackage. The ideal layout to serve an unloader is through trackage, where loaded cars are set in at one side of the unloading shed, and empty cars taken away at the other side. The objection to the layout before described is the distance necessary to move a loaded car from the yard to the unloader, amounting to about 110 ft. Where stub end trackage is unavoidable the layout shown is, however, as satisfactory as can be obtained.

A hand unloading pit equipped with power shovels is provided back of each of the four unloaders, to be used for unloading bulkhead cars or extremely bad order cars. The location of these pits permits the slow unloading to be carried on without interruption of rapid unloading on the dumpers. The stub track back of no. 4 dumper is extended

alongside the work house, to serve as a loading out track to cars. While the business handled by this elevator is principally receiving grain from box cars and loading out to lake steamships, during the season of closed navigation a maximum loading out capacity to cars of 100 cars a day is required. This is provided by 5 car loading spouts having Sandmeyer ends, serving the loading out track before mentioned. For the loading out process, the use of the corresponding loaded car track and empty car track is reversed. Grain from the receiving hopper at the unloader is delivered by multiple valves to a conveyor

veyor belt, transfer belt, and to a Mayo spout serving a number of work house bins. This rapid system of distribution not only permits economy of operation, but is necessary to permit distribution of the grain as rapidly as it is delivered from the car unloaders.

The elevator's cleaning capacity is adequate to serve its receiving capacity. Grain is shipped to steamships on five lofter legs, with a total average capacity of 75,000 bush, an hour. The elevator is of reinforced concrete construction throughout, except the storage annexes, which are of tile construction. The elevator is electrically driven, with a separ-

Fig. 1. End elevation of automatic unloader apparatus for box cars with grain.

belt, and lofter leg, discharging to a 2,000 bush. capacity garner over the receiving scale. Conveyor belts and lofter legs, serving the unloaders, have a capacity of 20,000 bush. of grain an hour. The scales are specially designed for rapid weighing, the 2,000 bush. capacity scale hopper having a 28 in. diameter outlet valve at the bottom. Distribution of grain from the scale is controlled by a turnhead, operated from the scale floor. Separate spouts are provided direct from each scale turnhead to a shipping bin, car loading spout, storage con-

ate motor for each machine. Its vacuum cleaning system is as complete as can be devised, and unusual precautions are taken to prevent dust explosions.

The time of the various separate operations involved in unloading a box car of wheat are shown in proper sequence as follows:—

	Seconds
Raising end bumpers and centering car on platform	40
Drawing end pins	10
Breaking in and raising car door (10% of grain content discharged into elevator pit)	15
Tipping cradle 20 deg. to left without baffle (35% grain content discharged into pit)	20

Insert right baffle and tip cradle 45 deg. to right (95% of grain content discharged into pit) 40
 Withdraw right baffle, insert left baffle, and tip cradle 45 deg. to left (100% grain content discharged into pit) 60
 Withdraw left baffle and level car 10
 Withdraw door breaker 12
 Insert end pins 10
 Drop end bumpers and inspect interior of car 30
 Complete operation, 237 seconds, or approximately 4 minutes.

Removing empty car from the unloader platform, and spotting a loaded car on same, with the layout at the C.N.R. elevator, consumes about three minutes, and results of actual operation show that where wheat only is being unloaded, and no delays occur in distributing the grain inside the elevator, cars can be unloaded at the rate of one car per unloader every seven minutes, or at the rate of better than eight cars per unloader per hour. The unloading operation detailed above is, however, somewhat slower for a car of oats, which usually requires at least one extra tipping of the cradle. Over a long period, unloading is bound to be slowed down by delays incidental to the

loading; two laborers, to move loaded cars on and empty cars off unloader platform; total per unloader 4 men. The operating staff for an unloading shed equipped with 20 hand pits with power shovels averages during rush periods as follows: 25 shovelers, 10 laborers breaking car doors, 5 laborers shunting cars. The average per pit is therefore 2 men. As one unloader will do the work of 6 hand pits, the saving in labor is represented by 4 men for the unloader as against 12 for the equivalent hand pits, or a direct saving of 8 men per unloader. The actual money saved is in the same direct proportion, as at the elevator herein described former shovelers were put on as operators on the unloaders. Assuming that the actual unloading staff at an elevator is equivalent to the maximum staff employed for 200 days a year, which is approximately in line with actual conditions, the direct saving in labor amounts to 1,600 working days per unloader. With labor averaging \$5 a day this amounts to \$8,000 a

As regards cost of initial installation of the unloader, as against an equivalent number of hand pits with power shovels, there is under ordinary conditions but little difference. Installation of unloaders, instead of hand pits, however, will permit in many cases the use of a less expensive property development for the trackage layout. Needless to say, the problem of initial cost differs widely, depending on local conditions maintaining at different elevator sites. Whether or not the unloaders can be installed to advantage in existing elevators is a question requiring separate study for each individual elevator. The general statement can, however, be made that unloaders can be installed to advantage in most existing grain elevators. The writer believes that automatic unloaders represent an important innovation in the business of handling grain in bulk. Their installation permits large saving in labor costs of unloading grain from box cars, increased unloading capacity, greater efficiency in elevator operation, and better

TERMINAL ELEVATOR CANADIAN NATIONAL RAILWAYS PORT ARTHUR, ONT.

TOTAL STORAGE CAPACITY: 40,000 BUSHELS
 MAXIMUM DUMPING CAPACITY: 75 CAR BOXES PER HOUR
 MAXIMUM RECEIVING CAPACITY: 100 CARS PER HOUR

Fig. 5. Plan of Canadian National Rys. elevator at Port Arthur, Ont., showing layout of box car grain unloaders and haulage system.

distribution of grain inside the elevator. Results at the C.N.R. elevator indicate that for a 10-hour day, with normal delays for distribution, about 250 cars can be unloaded on 4 unloaders, or at an average rate somewhat better than 6 cars per unloader per hour. In a large grain elevator equipped with multiple pits having a pair of power shovels at each pit, it is not practicable to unload more than one car per pit per hour, as an average for a 10-hour day, and unloading records for the larger elevators indicate that this rate is practically never attained. For purpose of comparison we will therefore assume average rates of unloading by automatic dumper 6 cars an hour, and by hand pit with power shovels one car per pit per hour. The operating staff for one unloader is made up as follows: One operator, in operator's cab operating both unloader and car haulage; one attendant, at car door, to oversee dumping operation and inspect car after un-

loading; two laborers, to move loaded cars on and empty cars off unloader platform; total per unloader 4 men. The operating staff for an unloading shed equipped with 20 hand pits with power shovels averages during rush periods as follows: 25 shovelers, 10 laborers breaking car doors, 5 laborers shunting cars. The average per pit is therefore 2 men. As one unloader will do the work of 6 hand pits, the saving in labor is represented by 4 men for the unloader as against 12 for the equivalent hand pits, or a direct saving of 8 men per unloader. The actual money saved is in the same direct proportion, as at the elevator herein described former shovelers were put on as operators on the unloaders. Assuming that the actual unloading staff at an elevator is equivalent to the maximum staff employed for 200 days a year, which is approximately in line with actual conditions, the direct saving in labor amounts to 1,600 working days per unloader. With labor averaging \$5 a day this amounts to \$8,000 a

year per unloader. In addition to the direct saving above shown, the unloaders permit a considerable indirect saving. The labor turnover is much smaller with the unloaders, due to better working conditions. The smaller staff required greatly lessens the danger of tying up operations by strikes. Maintenance costs are less for the unloaders than for the equivalent number of power shovels. The door breaker on the unloader does not damage the grain door in removing it, whereas by the hand method of breaking grain doors the door is practically destroyed.

Regarding power costs for one unloader as against 6 power shovels, the peak load for the unloader is about 75 h.p. as against about 6 h.p. for the 6 power shovels. The average power load is, however, less for the unloader than for the power shovels. Under most power contracts the power costs would be less for the unloader than for the shovels.

working conditions for elevator labor. Their use is fully approved by local government weighing and inspection staffs.

Fig. 6, mentioned, in the foregoing article, appears on pg. 173.

The C.N.R. elevator herein referred to was designed and built by C. D. Howe & Co., consulting engineers, Port Arthur, Ont., which firm in collaboration with the Dominion Bridge Co. also designed the automatic unloader installation. The unloaders were manufactured by the Dominion Bridge Co.

The Pere Marquette Rd. in 1921 earned enough to pay a full 15% accumulation on the 5% preferred stock, after the regular 5% prior preference preferred, and had left over an equivalent of about \$2.98 a share for the common. On the year's requirements alone, or allowing for 5% on the preferred, the common would have earned about \$5.73.

Birthdays of Transportation Men in April.

Many happy returns of the day to:—
F. G. Adams, Assistant General Freight Agent, Canadian National-Grand Trunk Pacific Rys., Winnipeg, born at St. John's, Nfld., April 6, 1878.

W. H. Ardrey, ex Comptroller, G.T.R., and Grand Trunk Pacific Ry., Montreal, born at London, Eng., April 24, 1858.

Jas. Black, Freight Claim Agent, C. P. R., Vancouver, B.C., born near Seaford, Ont., April 19, 1858.

C. G. Bowker, General Superintendent, Ontario Lines, G.T.R., Toronto, born at Medford, N. J., April 21, 1871.

G. C. Briggs, Architect, Western Lines Canadian National Rys., Winnipeg, born

at Island Pond, Vt., April 21, 1868.

G. E. Cowie, General Freight Agent, United Kingdom Traffic, Canadian National Rys., London, Eng., born at Iowa City, Iowa, April 30, 1883.

J. P. Doherty, Export Freight Agent, Canadian Government Merchant Marine Ltd., Montreal, born at Portland, Me., April 8, 1889.

W. A. Duff, Engineer of Standards, Canadian National-Grand Trunk Pacific Rys., Toronto, born at Hamilton, Ont., April 20, 1877.

A. Gaboury, Superintendent, Montreal Tramways Co., Montreal, born there, April 6, 1875.

Canadian National-Grand Trunk Rys., Ottawa, Ont., born at Montreal, April 14, 1870.

J. H. Johnston, formerly Stores Department, G.T.R., Montreal, now at Barrie, Ont., born at Uxbridge, Ont., April 22, 1866.

Capt. A. H. Kendall, M.C., Master Mechanic, Quebec District, C.P.R., Montreal, born at Aspataria, Cumberland, Eng., April 4, 1878.

A. A. Larocque, President, Sincennes-McNaughton Line Ltd., Montreal, born at Henryville, Que., April 30, 1865.

G. W. Lee, Chairman, Timiskaming & Northern Ontario Ry. Commission, North

Fig. 6. Unloader platform, showing baffle, door breaker apparatus and operator's cab. See page 171.

at Cockermouth, Eng., April 23, 1886.

Major F. D. Burpee, Manager and Director, Ottawa Electric Ry., and Vice President, Canadian Electric Railway Association, Ottawa, Ont., born there April 25, 1876.

J. R. Caswell, Division Engineer, Sudbury Division, Ontario District, Sudbury, Ont., born at Coldwater, Ont., April 13, 1892.

G. Cobb, Superintendent, Western Division, Reid Newfoundland Co., Bishop's Falls, Nfld., born at Coupar Angus, Scotland, April 21, 1885.

A. V. Collina, Travelling Auditor, Canadian Steamship Lines Ltd., Toronto, born

Lieut.-Col. F. A. Gascoigne, D.S.O., Secretary-Treasurer, Canadian Pacific Steamships Ltd., Montreal, born at Gosport, Iants, Eng., April 2, 1866.

J. Murray Gibbon, General Publicity Agent, C.P.R., Montreal, born at Ude-wella, Ceylon, April 12, 1875.

V. A. Harshaw, Manager, Fredericton & Grand Lake Coal & Ry. Co., and New Brunswick Coal & Ry., Fredericton, N.B., born at Mono, Ont., April 26, 1865.

L. M. Hatfield, Assistant Marine Superintendent, Canadian Government Merchant Marine Ltd., Montreal, born at Yarmouth, N.S., April 4, 1880.

E. J. Hilliard, Division Freight Agent,

Bay, Ont., born at Renfrew, Ont., April 15, 1871.

W. E. McGill, Assistant Superintendent, Smiths Falls Division, Quebec District, C.P.R., Smiths Falls, Ont., born at Toronto, April 5, 1884.

J. A. Macgregor, Manager, Edmonton, Dunvegan & British Columbia Ry., Edmonton, Alta., born at Dufftown, Scotland, April 5, 1873.

G. P. MacLaren, Engineer, Maintenance of Way, Eastern Lines, Canadian Northern Ry., Toronto, born at London, Ont., April 4, 1878.

B. R. Marsales, District Freight Agent, Canadian National-Grand Trunk Pacific

Rys., Saskatoon, Sask., born at Guelph, Ont., April 13, 1887.

Paul J. Myler, President, Canadian Westinghouse Co. Ltd., Hamilton, Ont., born at Pittsburgh, Pa., April 24, 1869.

J. H. Norton, Assistant General Freight Agent, Eastern Lines, Canadian National Rys., Moncton, N.B., born at Shaftesbury, Eng., April 21, 1884.

T. R. Percy, General Agent, Canadian Pacific Steamships Ltd., Yokohama, Japan, born in Ireland, April 21, 1888.

G. D. Perry, Vice President and General Manager, Canadian National Telegraphs, Toronto, born at Whitby, Ont., April 19, 1858.

S. J. L. Potter, Local Treasurer, Eastern Lines, Canadian National Rys., Toronto, born at Burlington, Devonshire, Eng., April 5, 1887.

R. A. Payne, Superintendent of Motive Power and Car Department, Western Lines, C.P.R., Winnipeg, born at Toronto, April 10, 1874.

R. E. Richmond, Assistant Ticket Agent, Canadian National-Grand Trunk Rys., Toronto, born at Uxbridge, Ont., April 5, 1888.

Lieut. R. S. Richardson, Superintendent, Canadian National Rys., Fort William, Ont., born at Napanee, Ont., April 9, 1865.

E. W. Smith, Superintendent, Dining and Parlor Car Service, G.T.R., Toronto, born at North Bridge, Mass., April 21, 1869.

J. J. Sullivan, Roadmaster, C.P.R., Lauder, Man., born at Fishers, N.Y.,

Depressed Center Flat Cars, Canadian Pacific Railway.

The C.P.R. has added three depressed center flat cars to its equipment recently. Their principal dimensions are as follows:—

Length over striking castings	43 ft.
Length over end sills	42 ft. 3 in.
Length of depressed platform portion	18 ft. 6 in.
Width over stake pockets	9 ft. 11½ in.
Width over side sill web	9 ft.
Height, top of rail to top of floor plate at ends	3 ft. 5½ in.
Height, top of rail to top of floor plate at center	2 ft. 4 in.
Tare weight	55,000 lb.
Capacity in accordance with latest A.R.A. recommendations	155,000 lb.

The underframing includes two center sills, running from end to end of car, and depressed between the trucks, consisting of ¾ in. plate, with top and bottom angles, with ¾ in. bottom cover plate extending to within 2 ft. 5½ in. of center of bolster, and additional ½ in. cover plate at center. There are two side sills, continuous from end sill to end sill, consisting of ¾ in. plate, with top and bottom angles, and ¾ in. bottom cover plate extending to within 5 ft. of bolster, with additional cover plate, ¾ in., at center. The bolsters are built up of ¾ in. diaphragms, with ¾ in. top and bottom cover plates, and having in addition 3½ x 5½ in. reinforcing angles. The cross bearers are built up of ¾ in. web plates, with reinforcing angles at top and bottom. The cars are equipped with angle floor stiffeners, and the car floors are of ¾ in. steel plates. The end sills are 12 in. channels.

of this design, and during the Great War very similar cars were used as gun mounts for large calibre artillery.

The cars were built by Canadian Car & Foundry Co., and the first load to be hauled by one of them, no. 309,920, in revenue freight service, consisted of a 5,000 k.v.a. transformer, consigned by the Canadian General Electric Co., from Peterborough, Ont., to the Hydro Electric Power Commission of Ontario, at London, Ont. The weight of the lading was 50 tons, and the extreme height of the transformer from the top of rail was 19 ft.

Requirements for Establishment of Railway Stations.

The Board of Railway Commissioners passed order 9,100, Jan. 6, 1910, providing in paragraph 4 as follows:—"That at all stations, or shipping places, upon the said railway, from or to which the total freight and passenger earnings of the company for the last fiscal year, or where the average earnings for the last three fiscal years, amount to not less than \$15,000, of which \$2,000 shall represent inward traffic, the said railway companies shall forthwith construct and equip suitable and proper stations, not to be below the standard of plans and specifications attached, no. 2, and shall likewise forthwith appoint and continue a permanent agent at such point or points."

The Railway Association of Canada applied to the Board last year, to amend

Depressed Center Flat Car, Canadian Pacific Railway.

April 29, 1866.

G. M. Thomas, Commercial Agent, Canadian National-Grand Trunk Rys., Windsor, Ont., born at Dundas, Ont., April 21, 1876.

C. H. Towle, Assistant Superintendent, Smiths Falls Division, Quebec District, C.P.R., Smiths Falls, Ont., born at Enfield, Me., April 13, 1878.

W. H. Winterrowd, Chief Mechanical Engineer, C.P.R., Montreal, born at Hope, Ind., April 2, 1884.

W. Woolatt, Vice President and General Manager, Essex Terminal Rys., Walkerville, Ont., born at Weedon, Hertfordshire, Eng., April 2, 1855.

The American Railway Association, Mechanical Division's annual meeting will be held at Atlantic City, N.J., June 14 to 21. The reports of committees investigating car matters will be received and discussed on June 14 to 16, and reports of committees investigating locomotive matters will be received and discussed on June 19 to 21. The American Railway Association, Purchases and Stores Division, will hold its annual meeting at Atlantic City on June 19 to 21.

The 4-wheel trucks have Vulcan cast steel side frames and bolsters, and are equipped with A.R.A. class F 6-coil truck springs. Other truck details include A.R.A. axles, 6 x 11 in. journals, McCord pinless lid journal boxes, 33 in. solid rolled steel wheels, and A.R.A. standard no. 3 brake beams, with Creco 4-point support.

The cars are equipped with Westinghouse KD-8-12 air brake equipment, Cardwell friction draft gear, A.R.A. class D couplers, forged steel coupler yokes, Stucki slide bearings, Imperial uncoupling device and Western angle cock holders.

These cars were designed for the transportation of heavy machinery which cannot be loaded on the ordinary type of flat car on account of the load projecting above the clearance limit for bridges, tunnels, etc. While they are the first of this type to be built for Canadian railways, so far as can be ascertained by Canadian Railway and Marine World, similar cars of this design have been in use for several years in the United States by the General Electric Co., which had several of them built for the transportation of electrical machinery. In addition, several U.S. railways have cars

the order, by substituting \$25,000 for \$15,000 as the average annual earnings for three fiscal years, and to substitute \$4,000 for \$2,000 of inward traffic. The application was heard at Winnipeg April 25, 1921, and the Board passed order 32,074 Jan. 31, dismissing the application.

The U.S. Interstate Commerce Commission has recently ordered that U.S. railways east of the Hudson River be allowed 15% more of the revenue derived from joint class rates, except in cases where the present divisions of the New England lines are greater than the division going to the line west of the Hudson, in which case they are to be increased by 15% of the division now going to the line outside of New England. This decision was given as the result of a long standing application of the New England roads for a better share of the earnings from through traffic moving under joint rates.

Freight Car Repair Bills.—The American Railway Association, Mechanical Division, has issued a table of weights of common materials to be used in preparing and checking bills for freight car repairs.

Combination Mail and Baggage Cars, Canadian Pacific Railway.

The Canadian Pacific Ry. has had built recently 15 combination mail and baggage cars, an illustration of one of which is given herewith. They have the following dimensions:—

Length over end posts	79 ft. 1 in.
Length over buffers	82 ft. 10 1/2 in.
Distance between truck centers	57 ft. 6 in.
Length inside mail compartment	60 ft. 0 1/4 in.
Length inside baggage compartment	18 ft. 1 1/4 in.
Clear width inside	9 ft. 0 1/4 in.
Height, top of rail to top of floor	4 ft. 5 3/16 in.
Height, top of rail to top of roof	14 ft. 1 1/2 in.
Weight, empty, with full equipment	160,600 lb.

The underframing includes built-up fish belly center sills, 5/16 in. web plates, 9/16 in. cover plates, and top and bottom reinforcing angles. Truck details include Commonwealth cast steel truck frame, truck center bolster and truck cross bolster, A.R.A. axles with 5 1/2 x 10 in. journals, and steel tired wheels 36 1/2 in. diam. with cast steel centers. The cars are equipped with Westinghouse air brake equipment, schedule L.N. 1812,

Panama Locomotives on G.T.R. Western Lines.

Canadian Railway and Marine World received a letter from Toronto recently as follows:—"The G.T.R. lines shows in its Detroit Division time table, 12 Panama locomotives nos. 1100 to 1111. Have you at any time described this class of locomotive in your valuable paper?"

We have not described these locomotives specifically. We are informed by B. J. Parr, Superintendent, Motive Power and Car Departments, G.T.R., Western Lines, Battle Creek, Mich., that they were built in 1906 by Brooks Locomotive Works, Dunkirk, N.Y., and are what is commonly known as 2-6-0, or mogul type. They were built for the United States Government, and used in the construction of the Panama Canal, hence their name. When the canal was complete, a number of the locomotives were shipped back to the U.S., being purchased by second hand machinery companies. Twelve of them were bought by the Grand Trunk Rail-

road for a year or more, notice must be given at the close of the session to the C.P.R. and to the Dean of the Faculty of Applied Science of the University, in order that the scholarship may be open to other applicants. In order to establish prior claim to the next available scholarship, notice of the student's intended return must be given to the company and to the Dean, not later than Jan. 1, preceding the opening of the session in which such scholarship will be available. Applications for certificates entitling eligible persons to enter the competition should be addressed to C. H. Buel, Staff Registrar and Secretary, Pension Department, Montreal. Copies of the calendar containing the conditions of admission and announcement of courses may be obtained upon application to the Registrar, McGill University. Certificate holders should apply, not later than May 10, 1922, to the Registrar of the University, for admission to the examination, and such application must be accompanied by the company's certificate of their eligibility."

Combination Mail and Baggage Car, Canadian Pacific Railway.

and Westinghouse schedule K signal equipment. Clasp brakes are applied, with Simplex forged brake beams and American Diamond S brake shoes. Hand brakes also are included in the equipment. McCord journal boxes with steel inserts are applied. Spring gear includes 40 in. 6-leaf semi-elliptic springs, and triple coil equalizer springs 1 1/16 in., 1 1/2 in. and 1 1/16 in., and Fowler upper buffer spring. The cars are each equipped with the Coleman patent truck locking device, the Holco improved type centering device, and Stucki side bearings.

The car bodies are of all steel exterior finish, and of all steel interior finish with the exception of the letter cases. Roofs are of the turtle back type, all steel, with exhaust honeycomb type ventilators. Insulation is of 3-ply Salomander. The cars are equipped with Acme type no. 2 diaphragms, Miner friction draft gear, class A-5-P, and Miner friction class B-10 buffers. The couplers, which are of the passenger type, are each equipped with the American Railway Association's standard type D head.

The sorting table and pouch racks are of the most modern type. Each car is equipped with a bunk, fire extinguishers, galvanized steel cooler and all the necessary accessories. The Vapor Car Heating Co.'s heating system is used. The cars were built by the Canadian Car & Foundry Co., Montreal.

way for its western lines, and are being used in switch and way freight service.

Canadian Pacific Railway University Scholarships.

Grant Hall, Vice President, C.P.R., has issued the following circular:—"Two free scholarships, covering four years' tuition in architecture, chemical, civil, mechanical or electrical engineering at McGill University, are hereby offered, subject to competitive examination to apprentices and other employees enrolled on the company's permanent staff and under 21 years of age, and to minor sons of employees. The competitive examination, which will be the regular entrance matriculation examination provided for in the University's annual calendar, will be held at the University, Montreal, and at other centers throughout Canada, in June, 1922. The candidates making the highest average and complying with the requirements of admission will be awarded the scholarships and have the option of taking any of the above courses. Scholarships will be renewed from year to year, to cover a period not exceeding four years, if, at the close of each session, the holder thereof is entitled, under the rules, to full standing in the next higher year. In case a scholarship holder finds it necessary to interrupt his course

E. W. Beatty, President, C.P.R., wrote Sir Robert Falconer, President, Toronto University, recently, as follows: "I am glad to be able to advise you that at the last meeting of our Board authority was granted to provide three scholarships of \$500 each annually to Toronto University for the purpose of inducing graduates of universities in Western Canada to pursue their postgraduate studies at Toronto University, with a view not only to keeping these graduates in Canada but also that they may become better acquainted with conditions in the east, and so tend to promote Canadian unity upon their subsequent return to the west. I am strongly of the view that the movement is one which will obviously be of benefit, not only to the students, but also to the communities in which they afterwards live, and that these circumstances warrant the granting of the scholarships."

Canadian Northern Ry. Land Grant Bonds.—Notice has been given in London, Eng., of the Canadian Northern Ry. Co.'s intention to redeem the entire issue of the 1st mortgage 4 1/2% land grant bonds, outstanding April 18, at par, with accrued interest. These bonds are dated Feb. 15, 1909, and are secured by a trust deed to the Empire Trust Company, and the National Trust Company. They will cease to bear interest after April 18.

C.P.R. Cantilever Bridge at St. John, N. B.

The C.P.R.'s new bridge over the St. John River at St. John, N.B., parallels the original cantilever bridge, which was opened for traffic on Oct. 1, 1885. The original bridge was part of the undertaking of the St. John Bridge & Railway Extension Co., which was formed to connect the Intercolonial Ry. at St. John

Track diversion totalling approximately half a mile was required to accommodate the new bridge location.

The new bridge consists of the cantilever portion, and the approach thereto from the west, or Fairville, side, the total length between abutments being 1,265 ft. The approach contains 8 spans of

2,000 tons, and in the river spans of the approach 330 tons. The two main, or river, piers, are spaced at 450 ft. centers and are founded on the rock which projects below low water level from the river banks, and forms shelves on which satisfactory foundation was obtained. These piers are built of concrete, faced with granite from base up to high water elevation, and finish about 43 ft. over the surface of slack water. All four piers of the cantilever bridge have rock foundations, and of the approach, two are founded on rock, the remainder on hard pan.

The accompanying illustrations show generally the design used for the cantilever, the essential differences between the new bridge and the original one being the horizontal top chord and parabolic curves for the bottom chords of the anchor and cantilever arms in the new one, while the older one has its bottom chord horizontal throughout, and its inclined top chord finishes in the lofty towers shown. Both suspended spans have parallel top and bottom chords.

The superstructure of the new bridge was commenced in April 1920 and completed in Dec. 1920. The steelwork was erected between June and Oct. 1921. The bridge was opened for traffic on Nov. 24, 1921.

The work was done under the general supervision of J. M. R. Fairbairn, D.Sc., Chief Engineer, C.P.R., P. B. Motley being the company's Engineer of Bridges, and C. F. Draper, Resident Engineer on the work. The contractors for the substructure were the Foundation Co. and for the steel work the Dominion Bridge Co.

A preliminary description of the new bridge, with plan and progress illustrations, was published in Canadian Railway and Marine World for March 1921.

Hamilton Incline Ry. — The Ontario Legislature has under consideration a bill to incorporate the Ottawa St. Incline Ry. Co., to build an incline railway from

View from northwest, showing portions of old C.P.R. bridge, and of highway bridge, in background.

with the St. John & Maine Ry. at Fairville, the length of railway authorized being 1.75 miles. This bridge and railway were bought by the C.P.R. and incorporated in its system in 1905.

The new cantilever bridge is on the north side of the original bridge and is 30 ft. distant, center to center. These two bridges form, with the highway bridge, built by the Province of New Brunswick in 1915, a cluster of three

deck plate girder type, each span 70 ft. out to out of steel. The cantilever is made up of 2 anchor arms of 125 ft. each, 2 cantilever arms of 150 ft. each, and a suspended span 150 ft. long, the total distance between centers of anchorages being 700 ft. The anchorages are formed of heavy steel members of I section, with enlarged bases and grillages at the anchor bases, both bases and columns throughout their length being embedded

bridges, which span the St. John River at the narrowest portion of the gorge, and close to the reversing falls. The highway bridge consists of a flat span-drel-braced arch 565 ft. between centers of hinges, the rise being one ninth of the span. The spans of the river openings of the original and new cantilever bridges are 477 ft. and 450 ft. respectively, the vertical clearance being increased in the new structure by 2 ft. 7 in. for the length of the suspended span.

in concrete. The anchorage at the east end required excavation in solid rock, and a concrete pier was built for the west anchorage, which forms the dividing point between the cantilever bridge and the girder spans, supporting the ends of both, and was designed with two pre-moulded shafts, into which the steel anchors were entered, and later sealed up with concrete. The approximate weight of the steelwork in the cantilever portion of the structure is

the southerly end of Ottawa St., Hamilton, to the brow or summit of the escarpment in Barton Tp., and to appropriate lands for the line, terminals, yards and buildings. The authorized capital is fixed at \$500,000, and money may be borrowed on such securities as the directors decide. The provisional directors named are: T. H. Simpson, R. H. Baxter, F. H. McCallum, Hamilton; J. R. Simpson, Toronto; W. B. C. Bradley, New York.

Orders By Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a complete record of the Board's proceedings. No other paper has done this.

Important traffic orders made by the Board are given in full on another page.

General order 357, Feb. 14. Suspending tariffs or supplements filed by railways in accordance with requirements of general order 164 re out of line haul on western grain to milling points in eastern Canada. This order and the judgment were given fully on another page.

General order 358, Feb. 22. Ordering railways operating in Manitoba, Saskatchewan, Alberta and British Columbia to serve notices of applications in respect of highway crossings outside of incorporated cities and towns, on various provincial ministers. This order is given fully on another page.

General order 359, Mar. 2. Rescinding general order 355, Jan. 5, defining caretaker agents' duties.

General order 360, Mar. 6. Requiring railway companies, not later than March 16, to amend their tariffs to provide for allowance, at points east of Port William, of 50c. per car door of not less than 21 sq. ft., when furnished by shippers in bulk. This order is given fully on another page.

32,121, Feb. 10.—Authorizing G.T.R. to alter bridge carrying light rail tracks across Yonice St., near Merton St., Toronto.

32,122, Feb. 10.—Authorizing Canadian Northern Quebec Ry. to build spur for Jobin & Gosselin, a Pierre Farish, Que.

32,123, Feb. 10. Approving agreement between Bell Telephone Co. and St. Angele de Laval Rural Telephone Co., Nicole County, Que.

32,124, Feb. 10. Relieving Campbellford, Lake Ontario & Western Ry. (C.P.R.) and G.T.R. from maintaining signalman on Summit St., C.P.R., at mile 76.1 Whitty, Ont., so long as present character of movements continues.

32,125, Feb. 10. Approving plan showing Vancouver Harbor Commission's track authorized under no. 30,430, and proposed changes on Port and Alexander Sts., Vancouver, B.C.

32,126, Feb. 10. Authorizing Ontario Electric Power Commission of Ontario to erect 110,000 volt tower transmission lines across G.T.R. property at Grimsby, Ont.

32,127, Feb. 17. Dismissing application of residents at Farham, Ont., for better C.P.R. station accommodation, an agent in charge and siding of 8 cars long.

32,128, Feb. 17.—Authorizing Canadian National Ry. to build spur for Hayward Lumber Co., Edmonton, Alta.

32,129, Feb. 8.—Approving plan of bell, light, and telegraph signal at Toronto, Hamilton & Buffalo Ry. crossing at River Road, Buffalo, B.C.

32,130, Ont., and declaring that for the present such crossing is protected to Board's satisfaction.

32,131, Feb. 16.—Dismissing Bell Telephone Co.'s application for approval of tariffs of rates filed showing increases for exchange service.

32,131, Feb. 16.—Authorizing G.T.R. to divert Osborne St., Renbora, Ont.

32,132, Feb. 22.—Authorizing Winnipeg Electric Ry. to operate one-man cars over Canadian National Ry. on Pembina Highway.

32,134, Feb. 18. Authorizing C.P.R. to build crossing at line between Lots 19 and 11, Con. 6, Aubrey Tp., Ont.

32,135, Feb. 21.—Authorizing Canadian National Ry. to build trestle span at Sumas River bridge, mile 78.8, Mann Summit, B.C.

32,136, Feb. 21.—Authorizing Canadian National Ry. to open traffic portion of line near St. Boniface, Que. mile 92.6.

32,137, Feb. 18. Rescinding order 25,725, June 8, 1921, authorizing G.T.R. to build siding south-east of its station at Chalmers, B.C.

32,138, Feb. 22.—Authorizing Canadian National Ry. and C.P.R., when signals are clear, to operate over crossing at York St., 36, Range 18, west 2nd meridian, Sask., with first stop.

32,139, Feb. 7.—Amending order 31,430, Aug. 23, 1921, authorizing Hydro Electric Power Commission of Ontario to build two tracks over Windsor & Lake Shore Railway, single track crossing at intersection of Aylmer Ave. and Wyandotte St., Windsor, Ont., by providing that cost be borne by E. & L.S.R. Ry. instead of by H.E.P.C. of Ontario.

32,140, Feb. 16.—Authorizing Winnipeg Electric Ry. to operate one-man cars over C.P.R. on Sutherland Ave.

32,141, Feb. 21.—Authorizing Canadian Northern Pacific Ry. to build highway at mile 26 in Sec. 11, Tp. 23, Osoyoos Division, B.C.

32,142, Feb. 17. Amending order 31,410, Aug. 20, 1921, authorizing Dominion Atlantic Ry. to provide suitable station at Port Arthur, Ont., providing that D.A.R. build a platform there 250 ft. long, by June 30, 1922.

32,143, Feb. 30. Amending order 32,924, Jan. 14, by providing that home signals and derails

be set clear for Canadian National Ry. instead of C.P.R. at crossing of these two lines at Peebles, Sask.

32,144, Feb. 23.—Amending order 28,533, July 9, 1919, authorizing Canadian Northern Ry. to cross and divert highway in n.w. 1/4, Sec. 19, Tp. 23, Con. 6, Osoyoos Division, B.C., by providing that existing road allowance between Sec. 19 and 24, Tp. 9, west 3rd meridian, be closed

32,145, Feb. 23.—Ordering that in addition to watchman at crossing of George St., Toronto, by G.T.R., C.P.R. and Canadian National Ry., the G.T.R. appoint a second watchman to protect crossing between 6.30 a.m. and 6.30 p.m. daily.

32,146, Feb. 20. Authorizing Canadian National Ry. to build spur for Marshall Sons & Co., Saskatoon, Sask.

32,147, Feb. 24. Authorizing G.T.R. to install double automatic bell, with warning signals, in lieu of watchman, at crossing of Stave Bank Road, near Port Credit, Ont.

32,148, Feb. 24. Relieving Canadian National Ry., so long as present character of movements exists, from maintaining signalman on Sundays at C.P.R. at mile 46.9, Port McNicoll Subdivision, Ont.

32,149, Feb. 24.—Rescinding order 17,142, July 2, 1921, of G.T.R. authorizing K. & N. Knibb & Son on Lot 3, Con. 3, Lachar Tp., Ont.

32,150, Feb. 24. Authorizing G.T.R. to use bridge 12 across Beauharnois Canal, milepost 45.8, District 30, Ottawa Division, Ont.

32,151, Feb. 24. Authorizing Canadian Northern Public Works Department to build highway across C.P.R. immediately west of Eagle River bridge at Taft, B.C.

32,152, Feb. 25.—Authorizing C.P.R. to build spur for Ontario Rock Co., in east half of Lot 7, Con. 6, Belmont Tp., Ont.

32,153, Feb. 24. Approving Canadian Northern Ry. revised location through Tps. 16 and 17, Range 7, east of principal meridian, Man., mile 35.5, 39.94, C.P.R. at mile 46.9, Port McNicoll Subdivision, Ont.

32,154, Feb. 23.—Authorizing Halifax & Southwestern Ry. (Canadian National Ry.) to build spur for Walter & Neel, at mile 22, Canada, N.S.

32,155, Feb. 23.—Authorizing Canadian National Ry. to build siding at Berkeley, mile 10, mile 31 Rideau Subdivision, Ont.

32,156, Feb. 24. Extending to June 1, time when C.P.R. will operate over London St. Ry. complete spur for Imperial Oil Ltd., at Oyen, Alta., authorized by order 31,545.

32,157, Feb. 24. Authorizing Windsor, Essex & Lake Shore Rapid Ry. to erect trolley wires at intersection of Aylmer Ave. and Wyandotte St., Windsor, Ont.

32,158, Feb. 24. Authorizing C.P.R. to rebuild bridge 46.4 over Jack Pine River, Nipigon Subdivision, C.P.R. at mile 22, Ontario, Can.

32,159, Feb. 27.—Amending order 32,130, dismissing Bell Telephone Co.'s application for increase of rates, by providing that for the present of the parties who appeared at the hearing.

32,160, Feb. 27.—Approving agreement between Bell Telephone Co. and Morristown Municipal Telephone System, Perth and Waterloo Counties, Ont.

32,161, Feb. 27. Authorizing G.T.R. to use overhead bridge at mile 127.98, 15, miles east of Komoka, Ont.

32,162, Feb. 27. Approving agreement between Bell Telephone Co. and Union Telephone Co., Wellington County, Ont.

32,163, Feb. 27.—Authorizing G.T.R. when signals are clear, to operate over London St. Ry. crossing at Richmond St., London, Ont.

32,164, Feb. 27. Authorizing G.T.R. to use bridge 46.4 over Jack Pine River, Nipigon Subdivision, C.P.R. at mile 22, Ontario, Can.

32,165, Feb. 27. Declaring that for the present the crossing of Victoria St., Alliston, Ont., at C.P.R., is protected to Board's satisfaction.

32,166, Feb. 27.—Authorizing G.T.R., when signals are clear, to operate over London St. Ry. crossing at Victoria St., London, Ont.

32,167, Feb. 27. Authorizing Dominion Atlantic Ry. to install automatic bell and warning signal, in lieu of gates and watchman, at crossing of Victoria St., Windsor, Ont.

32,168, Feb. 28.—Authorizing Esquimalt & Nanaimo Ry. to build spur for Empire Lumber Co., at C.P.R. at Esquimalt Bay Subdivision, Vancouver Island, B.C.

32,169, Feb. 23. Amending order 31,921, Dec. 1, 1921, relating to Pacific Ry. crossing to build ditch on north side of track in section 6, Tp. 13, Range 19, west 3rd meridian, Sask., by changing the township number to 13.

32,170, Feb. 23.—Amending order 8,861, Nov. 16, 1912, to provide that crossing of C.P.R. by Grand Trunk Pacific Ry. at Weyburn, Sask., be continued to terminal.

32,171, Mar. 1.—Authorizing North American Collieries, Ltd., to build two entries under Canadian National Ry. crossing at Ross River, Ont., and 30, Tp. 63, Range 7, west 5th meridian, Alta.

32,172, Mar. 1.—Dismissing complaint of Nelson, B.C., rural municipality against increase of

tariffs by British Columbia Telephone Co.

32,173, Feb. 27. Approving agreement between Bell Telephone Co. and Aspley Telephone Co., Peterborough, Ont.

32,174, Mar. 2. Amending order 31,461, Sept. 1, 1921, re appointment of caretaker agent at Amos, Ont., by providing that for the present the appointment be a caretaker there.

32,175, Mar. 1. Authorizing G.T.R. and Toronto Suburban Ry. to operate over crossing at Davenport Road, York Tp., Ont.

32,176, Mar. 2. Declaring that for the present, the crossing of Central Ry. crossing near St. Hendrie Station, Que., is protected to Board's satisfaction.

32,177, Mar. 2.—Authorizing Canadian National Ry. to connect with Grand Trunk Pacific Ry. near Barlow, Alta.

32,178, Mar. 1. Approving agreement between Bell Telephone Co. and Korah Central Telephone Co., Algoma District, Ont.

32,179, Mar. 2. Authorizing Charleswood Municipality, Man., to extend Nite St. across Canadian National Ry. in Lots 3 and 1, Headingley Parish, Man.

32,180, Mar. 2.—Authorizing use of bridge carrying Weston Road over C.P.R. at mile 1.4 MacTier Subdivision, Ont., by providing that from Toronto, in lot 24, Con. 3, from the bay, York Tp., Ont.

32,181, Mar. 3. Declaring that for the present the crossing of 5th Ave., Mount Dennis, Ont., by G.T.R. is protected to Board's satisfaction.

32,182, Mar. 3.—Ordering that gates at the crossing of Logan Ave., Toronto, by G.T.R. be equipped with fringe.

32,183, Mar. 3. Dismissing application of residents of territory tributary to Muscow, Sask., for order authorizing a private crossing over Canadian National Ry. from the elevator to the post office.

32,184, Mar. 3. Authorizing Canadian National Ry. to cross and divert highway between Sec. 11 and 12, Tp. 23, Range 17, west 3rd meridian, Sask.

32,185, Mar. 2. Ordering Canadian National Ry. to erect standard A1 station building at Telkwa, B.C., by Nov. 1.

32,186, Mar. 2. Approving agreement between Victoria Electric Ry. & Navigation Co., to make highway crossing at Seventh St., Keremeos, B.C.

32,187, Mar. 6.—Ordering G.T.R. to build head bridge at milepost 4.1, Hamilton Division, carrying St. Paul St., St. Catharines, Ont., over its tracks, by June 1.

32,188, Mar. 6.—Ordering Canadian National and to maintain telephone service installed between Crooked River and Pesasse.

32,189, Mar. 6.—Ordering Lethbridge Rural Irrigation District, Alta., to build syphon across C.P.R. at mile 35, Tp. 3, Range 22, west 8th meridian, Alta.

32,190, Mar. 6.—Declaring that for the present first crossing of C.P.R. west of Dille station, Sask., is protected to Board's satisfaction.

32,191, to 32,193, Mar. 6.—Authorizing St. Clement's rural municipality, Man., to make 3 highway crossings over Canadian National Ry. between miles 19 and 20, at miles 23 and 26, Victoria Beach Branch, Man.

32,194, Mar. 6.—Approving agreement between Bell Telephone Co. and East Middlesex Telephone Co., of Middlesex, Oxford and Perth Counties, Ont.

32,195, Mar. 6. Re general order 234, May 22, 1918, respecting mailing in transit arrangements to Association of Port Arthur, Port William, and Armstrong, Ont. This order is given fully on another page.

32,196, Mar. 6.—Suspending pending hearing and decision, Algoma Central and Hudson Bay Ry. tariff C.R.C. 585, showing increases to rate of 10c. per mile over Grand Trunk Pacific Co.'s tariff to the C.P.R. at Sault Ste. Marie to 2c. per 100 lb.

32,197, Mar. 6.—Approving agreement between Bell Telephone Co. and Masdonate Ip. Ont.

32,198, Mar. 8.—Authorizing Toronto Tp., Ont., to make crossing at Lynchmere Ave. and Dickson Road, over Canadian Northern Ontario Ry. and Toronto Ry. from west of Ontario, Port and Armstrong, Ont. This order is given fully on another page.

32,199, Mar. 8.—Suspending pending hearing and decision, Algoma Central and Hudson Bay Ry. tariff C.R.C. 585, showing increases to rate of 10c. per mile over Grand Trunk Pacific Co.'s tariff to the C.P.R. at Sault Ste. Marie to 2c. per 100 lb.

32,200, Mar. 8.—Dismissing G.T.R. application to build spur across Waterloo and Huron Sts. and Guelph Radial Ry. to proposed new terminal at Guelph, Ont.

32,201, Mar. 8.—Authorizing G.T.R. and Ottawa Electric Ry. when signals are clear to operate over crossing at Ross River, Ont., and 30, Tp. 63, Range 7, west 5th meridian, Alta.

32,202, Mar. 19.—Authorizing Grand Trunk Pacific Ry. to make road diversion between Secs. 15 and 16, Tp. 28, Range 18, west 2nd meridian, Sask.

32,205 Mar. 10.—Authorizing Canadian Northern Pacific Ry. to cross highway at mile 2.5 Vernon-Kelowna Branch. In Sec. 22, Twp. 9, Greyson Division of Yale District, Ont., and to keep back cars occupying siding on each side of crossing at least 100 ft. from street line; coal shed on south side to be moved so that no car spotted there will not be closer than 100 ft. to work to be done in spring this year, when shed is to be removed.

32,205 Mar. 10.—Authorizing City of Hamilton, Ont., to extend storm overflow sewer across road, Hamilton & Rafters, Ry. near intersection of Simcoe and Wellington. Ont., and to keep work of Foxwarren, Man., over C.P.R. is protected to Board's satisfaction.

32,207 Mar. 13.—Approving change of location of portion of spur for Imperial Munitions Board to enable it to serve the Sidley & Connel & Paper Co., and authorizing Esquimaux & Nanaimo Ry. to build spur therefrom for Shell Co. of California, at mile 0.6, Victoria Subdivision, on B.C. Government property.

32,209 Mar. 13.—Dismissing application of St. Lawrence d'Alain, manager of the C.P.R., to order directing Maine Central Ry. to build station and express office and build permanent station there, and crossing M.C.R. to avoid crossing about 340 ft. long there.

32,209 Mar. 13.—Approving location and details of new C.P.R. station at St. Cyr, Que.

32,210 Mar. 13.—Extending to Mar. 31, time within which C.P.R. may build spur for Donald E. Bain Co., Calgary, Alta., authorized under Order 31,357, Aug. 27, 1921.

32,211, 32,212 Mar. 9. Approving Bell Telephone Co. agreements, with Urban & Rural Telephone Co., Kent & Lambton and Sidley & Connel, Ont., and Dunwich and Dutton Telephone Co., Elgin and Middlesex Counties, Ont.

32,213 Mar. 10.—Relieving C.P.R. and Canadian National Ry. from maintaining signalmen between midnight and 8 a.m. daily at crossing Sec. 17, Tp. 30, Range 14, Rouville, Que., to order directing C.P.R. to build station and express office and build permanent station there, and crossing M.C.R. to avoid crossing about 340 ft. long there.

32,215 Mar. 11.—Authorizing C.P.R. to take lands in Kitchener, Ont., for sidings, authorized by Order 31,444, Nov. 23, 1921.

32,216 Mar. 13.—Extending to Aug. 24, time within which Esquimaux & Nanaimo Ry. may build spur for Wells Lumber Co., Vancouver Island, authorized under Order 30,924, Mar. 21, 1921.

32,217 Mar. 14.—Dismissing New York Car Wheel Co.'s complaint against rates charged by G.T.R. on pig iron from Collingwood, Ont., to Black Rock, N.Y.

32,218 Mar. 13.—Rescinding order 31,613, Oct. 4, 1921, rescinding orders 31,613, Jan. 10, 1922, and 18,221, Dec. 4, 1912, authorizing building of sidings for Kirkfield Portland Cement Co., in Lots 2 and 3, Con. 3, Bexley Tp., Ont.

St. John Ambulance Association Work on Canadian Railways.

The St. John Ambulance Association Canadian branch held its annual meeting at Ottawa, March 10, when the following railway officials were elected among the officers:—Honorary Vice Presidents, D. B. Hanna, President Canadian National Ry.s; G. W. Lee, Chairman Timiskaming and Northern Ontario Ry. Commission; Sir Augustus Nanton, President Winnipeg Electric Ry.; Sir Henry Pellatt, director Toronto Ry. Co.; Lord Shaughnessy, Chairman Board of Directors, C.P.R. Vice Presidents:—Col. J. A. Hutcheson, C.B.E., M.D., G.T.R.; members of the general council:—D. C. Coleman, Vice President C.P.R. Western Lines; Brig.-General Sir John Gibson, Dominion Power and Transmission Co.; Grant Hall, Vice President, C.P.R.; C. A. Hayes, Vice President Traffic Canadian National Ry.; Howard G. Kiley, President, G.T.R.; M. H. McLeod, Vice President, Canadian National Ry.s; A. D. MacTavie, Vice President, Eastern Lines, C.P.R. Mr. MacTavie was also elected a member of the general executive committee.

The trophies won in the different competitions were presented to the winning teams by the Governor General, Lord Byng. The Montizambert trophy for the Canadian championship was won by No. 2 team, G.T.R. shops, Stratford, Ont.,

which also won the Wallace Nesbitt railway trophy, the team from the G.T.R. station at Stratford coming second in the latter competition. The trophies offered by Lord Shaughnessy for police teams were won by the C.P.R. Angus shops team for the fourth successive year, in the eastern group, and by the C.P.R. Winnipeg police team in the western group.

The championship trophies were received on behalf of the G.T.R. team by W. D. Robb, Vice President, Transportation, Operation and Maintenance; Colonel Hutcheson, Chief Medical Officer, and J. C. Garden, General Superintendent, Motive Power and Car Department. The members of the team received gold medallions. W. D. Robb, after receiving the trophies, stated that the G.T.R. maintained a general organizer and three qualified instructors for the classes. About 500 employees are receiving instruction in the classes. To promote efficiency among their own employees there are competitions open for the following trophies:—The Chamberlain silver shield, for the G.T.R. system championship; the Dr. J. Alexander Hutcheson shield for competition among the Montreal teams; the Dr. Deacon trophy, for competition among the Stratford teams, and the Stratford divisional officers' trophy for competition among teams that have never won a competition.

The 12th annual report of the C.P.R. center of the Association, prepared by S. A. Gidlow, General Secretary, showed that during the year ended Sept. 30, 1921, First Aid instruction was given to 1,522 of the company's employees, making altogether 17,709 who had received instruction. During the year 435 qualifying certificates were awarded, and 383 employees took higher examinations. Forty-six classes were organized during the year, including six at Angus shops, Montreal. The other classes were organized at different centers along the line.

The following challenge cups were open for competition:—Johnson, Angus Shops District; Downie, New Brunswick District; Gutelius, Quebec District; Osborne, Ontario District; Scully, Algoma District; Grant Hall, Manitoba District; Taylor, Saskatchewan District; Price, Alberta District; Busted, British Columbia District.

Settlement of Dispute Over Queen St. High Level Bridge Construction at Toronto.

The City of Toronto's application for authority to construct a high level bridge over the Don improvement and the C.P.R., the G.T.R., and the Canadian Northern Ontario Ry. tracks at Queen St. East, came before the Board of Railway Commissioners at Toronto on July 3, 1919, Chief Commissioner Mabee presiding. The Board passed order 7813, Aug. 23, 1919, providing that the city be authorized to build the bridge, and that it submit detailed plans to the Board by Sept. 15, 1919, and have the bridge ready for traffic by July 1, 1920, the costs be apportioned as follows:—City of Toronto, 15%; Toronto Ry., 15%; C.P.R., 35%; Canadian Northern Ontario Ry., 25%; and G.T.R., 10%. It also provided for maintenance charges, 10% to each of the steam railways, and the balance, 10%, to the City of Toronto. The Toronto Ry. applied to the Board for authority to appeal to the Supreme Court

of Canada, which was refused by order 8139, Sept. 22, 1919.

The Board order 11169, July 15, 1910, extended the time for completion of the work to July 1, 1911. Order 15219, Oct. 31, 1911, authorized the operation of trains under the bridge, as built at that time. Order 24347, Oct. 22, 1915, provided that the C.P.R., C.N.R., and G.T.R., should pay their portion of the cost of the work, upon receipt of monthly certified progress estimates. Order 24437, Nov. 16, 1915, rescinded order 24347, and provided that each of the steam railways and the Toronto Ry. should pay their portions of total expenditure to that date, and afterwards, on monthly progress estimates till the completion of the work. Order 26796, Dec. 5, 1917, provided that interim payments be made as follows:—C.P.R., \$115,000; G.T.R., \$30,000; C.N. O.R., \$135,000, and Toronto Ry., \$80,000.

On Sept. 16, 1920, the city applied to the Board for an order that all the railway companies concerned be made to pay to the city their respective shares of amounts expended by the city to Aug. 1, 1920. The railways contended that properly certified accounts had not been rendered and a joint audit of the city's statement of costs to Aug. 1920 was attempted by the Toronto Ry., C.P.R., C.N. O.R., and the G.T.R. There was great difficulty in arriving at and agreeing upon the correct total cost, and a good many questions cropped up which could not be settled without reference to an engineer. There was a good deal of controversy over the city's account for paving, which was not done until 1914 and 1915, and over the adjustment of land and property damages, some of which were partly attributable to the Wilton Ave. bridge, and the city was still in possession of considerable property bought outright, to lessen damages due to building the bridge. There were also outstanding damage claims, which for various reasons had not been settled. The city did not press for a hearing before the Board while the railways were attempting to come to an agreement. Little progress was made and finally on May 27, 1921, the matter came before the Board in Toronto for the purpose of fixing a final date for the completion of the audit by the various railways of the city's final settlement of cost. Meantime, Lt. Col. Blair Ripley, C.B.E., D.S.O., District Engineer C.P.R. at Toronto, had been appointed to represent all the steam railways, and to negotiate a settlement with the city, and on this being made known to the Board, no order was issued. Lt. Col. Ripley carried on negotiations in an endeavor to reach a settlement and we are advised, that a final settlement has been agreed upon, and the city will take over properties acquired in the handling by it of land and consequential damages, and will assume responsibility in outstanding damages for a fixed amount. The approximate total amount involved is said to be in the neighborhood of \$1,000,000. We also understand that the Toronto Ry. has accepted the figures as the basis of its settlement with the city and that the whole issue has been closed out.

The Brotherhood of Railway Trainmen will hold its convention in Toronto, beginning May 9, which it is expected will be attended by nearly 1,000 delegates. The principal speaker will probably be Hon. James M. Macpherson, Minister of Labor, formerly the Brotherhood's Canadian Vice President.

Freight Rate Hearings by Board of Railway Commissioners.

The Board of Railway Commissioners' hearings in connection with applications for freight rate equalization throughout Canada which were adjourned on Feb. 22, as stated in Canadian Railway and Marine World for March, were resumed on March 13, when G. G. McGeer, representing the British Columbia Government, examined D. O. Lewis, formerly Assistant Engineer, Maintenance of Way, Canadian National Ry., Toronto, but now with the Engineering Corporation, Ltd., Vancouver, who disputed evidence given by W. B. Lanigan, Freight Traffic Manager, C.P.R., and statements and exhibits filed by the C.P.R. and Canadian National Ry. He presented figures dealing with traffic density and operating costs in British Columbia, with the intention of proving that the comparison of railway operating costs as between the prairie and mountain divisions, as introduced by Mr. Lanigan, were fallacious. He claimed that the proper way to arrive at a determination of British Columbia operating costs is to compare them with those on New Brunswick and Quebec divisions where, he claimed, costs are higher. The main purpose of his testimony was to show that higher freight rates in British Columbia are not to be excused on the ground of higher operating costs. Mr. Lanigan was examined further by Mr. McGeer on this date. On March 14 Mr. Lewis was cross examined by F. P. Flintoft, Assistant General Solicitor, C.P.R. in connection with the figures he had given concerning operating costs and traffic density. The cross examination was directed to show that the average cost of operation in British Columbia is much higher than on the prairie sections. Mr. Lewis was further examined by H. J. Symington, K.C., representing Manitoba, and I. Pitblado, K.C., representing the Winnipeg Board of Trade, whose prairie province interests being directly opposed to British Columbia's application for more favorable rates into the prairie markets.

On March 15, 16, 17 and 20 Mr. Symington argued that the west is carrying a disproportionate burden of railway operating cost, and declared that the freight rates on grain are more than that traffic can bear, and that the agricultural industry as a whole is paying more than its fair share. He submitted that neither the Board nor the people of Western Canada have any control of railway wages, which is a matter between the railways and their employees. The Board, he maintained should cut the rates, and when that was done, the railways could cut the wages. "If the rates are reduced, he is reported to have stated, "we do not care where the money will come from to the C.P.R. to compensate it for that. It does not concern us."

Mr. Symington, like Woodrow Wilson at the Peace Conference, had 14 points, which he submitted. 1. Considering the classes of business that move, the distance it moves and the volumes moving, rates are higher in the west than in the east. 2. Operating revenues on the business that moves are higher in the west than in the east. 3. Net earnings in the west from producing and marketing revenues are higher than in the east. 4. Net earnings per ton mile in the west far exceed net earnings per ton mile in the east. 5. Percentage of profit to gross is much higher in the west than in the east. 6. The grain traffic is the most profitable

traffic, and is too profitable to the railways compared with other business, in that it is bearing an unfair share of railway operating cost. 8. Net results should be brought into line by a reduction of western rates. 9. Such reductions should be applied to the traffic which produced too great remuneration to the railways, viz., grain traffic. 10. These reductions should be applied to other basic commodities, as cattle, lumber, coal, and the instruments of production, such as agricultural implements. 11. These reductions should next be applied upon the heavy commodities covered by classes 5 to 10, inclusive. 12. Such reductions applied in this way would be equitable and just, and eliminating questions of state competition in U.S. rail competition. 13. Such rate reductions will encourage production and give a purchasing power to the consumer, thus stimulating traffic and so assisting the railways' financial position. 14. The rates on grain are unjust and unreasonable, in that they give too great a return to the railways and destroy the industry, i.e., they are higher than the traffic can bear.

Mr. McGeer, in supporting British Columbia's application, said the cost of operation is no justification for the high rates charged in B.C., and claimed that operating costs there are less than in other provinces with which it is logical to make comparisons, and in which the rates are lower. He stated that the railways have no business to carry traffic at a loss in some parts of the country, and make up for it by charging unusually high rates in other parts, but was informed by the Chief Commissioner that in some cases railways are compelled to carry traffic at a loss, or very near a loss, an example being the winter export grain traffic to Atlantic ports in competition with U.S. carriers. Mr. McGeer entered into an examination of originating tonages, and claimed that in view of the large volume which originates in B.C., the province is being discriminated against by the present rates. He contended that, according to the intent of the agreement entered into between B.C. and the Dominion when the province entered Confederation, the C.P.R. was built as a national project to link B.C. with the rest of Canada. The C.P.R. route, he claimed, has maintained and should have been determined after careful consideration of national and public interests, rather than of private and railway interests. He said the company chose the Kicking Horse Pass as its routes to the coast, instead of the Yellow Head Pass, and the latter, he argued had been clearly shown, especially by the experience of the Canadian Northern construction, to be the less costly route, although longer. The C.P.R., he argued, chose the shorter route to get to the coast as quickly as possible, with its eye on the development of oriental trade, and he claimed that the C.P.R. had paid, and was still paying, more attention to the development of trans-Pacific traffic than to B.C.'s interests, which, according to the Confederation agreement, were to be uppermost.

Isaac Pitblado, K.C., for the Winnipeg Board of Trade, spoke on March 22 and 23 against British Columbia's application. He stated that Winnipeg mercantile interests were opposed to doing away with the mountain scale of freight rates,

as it would give the Pacific coast wholesalers and manufacturers the same rates as obtain on the prairies, and thus tend to unduly restrict the markets of the prairie province, wholesalers and jobbers. He maintained that B.C. has great natural advantages in its coastal trading opportunities, which should be satisfactory to it; and that it was not justified in seeking more favorable rates into the prairie markets. He also argued against the B.C. application on the ground of operating costs, and gave figures showing that in 1921 it cost \$10,720 a mile of line in Manitoba to move 8,084,000 gross tons, while in British Columbia it cost \$9,977 a mile of line to move 2,539,000 gross tons, which means that it nearly the same operating cost, over three times the amount of traffic was handled in Manitoba. In concluding, he thoroughly explained the disadvantages under which the Winnipeg, Regina, Calgary and Edmonton distributing houses would operate if the mountain rates were reduced.

On March 24 the Board heard the Maritime Provinces' application for a restoration of the arbitration to points west of Montreal, as in effect before the percentage rate cases took effect throughout the country. The application was presented by I. Rand, K.C., representing the New Brunswick Government, and it was opposed by J. K. Smith, Manager Montreal Board of Trade Transportation Bureau, who contended that the restoration of the arbitraries would give the Maritime Province interests a considerable advantage over Montreal manufacturers and merchants.

Argument by railway counsel began on March 27. F. H. Chrysler, K.C., representing the Railway Association of Canada, opposed the various applications for rate equalizations, and strongly emphasized the railways' need for adequate revenues. He took strong exception to Mr. McGeer's statement that British Columbia was persuaded that the principle of rate making in effect was unsound, and that unless the C.P.R. saw fit to place the rates on what B.C. considered a proper basis, the people of the province would take such action as seemed advisable. Mr. Chrysler said: "I strongly resent any suggestion that the C.P.R. has been or is operating in B.C. amid such feelings on the part of its people. I strongly resent the suggestion that there might even be a revolution out there if we do not do what they want us to do. The people on the coast do not talk that way, and my learned friend is not truly reflecting their views."

In connection with a discussion of C.P.R. returns, Chief Commissioner Carvell is reported to have said: "Gentlemen, you can take it from me, the railway will either have to earn its dividend or the Government will have to take over the road." In further discussion of C.P.R. returns, W. B. Lanigan, Freight Traffic Manager, is reported to have said: "Why shouldn't we prosper after years of hard struggle? There was a day when employees' salaries were not even paid. Now the road is getting on, by efficiency and industry. We are not running this road like some municipalities out west are running their finances."

On March 29, H. J. Symington, K.C., replied on behalf of Manitoba to the railway counsel, G. G. McGeer on behalf

of British Columbia, and J. K. Smith for the Montreal Board of Trade, and on March 30 Attorney General Finns of Nova Scotia, spoke for the Maritime Provinces, which terminated the hearings.

It is not probable that a decision of the Board will be possible in the very near future, and the matter is further complicated by the fact that the Crowns agreement will automatically go into effect again on July 7, unless legislation to contrary is passed by Parliament in the meantime. Details concerning this agreement, by which the C.P.R. contracted to give reduced rates on specified commodities in western territory, in return for aid in railway construction, were given in Canadian Railway and Marine World for February, pg. 63. By the Railway Act, sec. 225, sub-sec. 5, the C.P.R. was relieved of its obligation till July 7, 1922. If the agreement could be brought back into force again, a large reduction in rates on basic commodities would result. Freight rates have received a great deal of attention in Parliament during this session, and the Progressive members, particularly, are insistent in their demands that the Crows-

certain reductions in rates on basic commodities, will be submitted to the Government in the near future. The Crowns agreement is undoubtedly the most important consideration in regard to

freight rates, and whatever action is taken in connection with the rate structure throughout the country must depend primarily on what is done in connection with that agreement.

Railway Rolling Stock Orders and Deliveries.

The C.P.R., between Feb. 12 and March 14, received one steel sleeping car from its Angus shops, Montreal, the frame of which was built by National Steel Car Corporation.

Canadian National Rys., box cars are under repair by Canadian Car and Foundry Co. at its various plants as follows:—Amherst, N.S., 194 cars; Montreal, 255 cars; Fort William, Ont., 270 cars.

The C.P.R. has ordered 8 compartment car frames and 50 express refrigerator cars from Canadian Car and Foundry Co., and has also ordered a self propelling pile driver.

Montreal Locomotive Works has received an order from John B. Smith and Son, for a 4-wheel switching locomotive. Following are the chief details:—

of them were shipped from Montreal to Cape Town, in Oct. 1921. The remaining 10 have been completed and are awaiting the reopening of St. Lawrence navigation, at Montreal. An illustration of one of them is given on this page. Following are the chief details:—

Gauge	3½ ft.
Cylinder, type	Piston valve
Cylinder, diam. and stroke	22 x 26 in.
Tractive power	42,500 lb.
Factor of adhesion	3.52
Wheel base, driving	12 ft. 4 in.
Wheel base, rigid	8 ft. 6 in.
Wheel base, total	30 ft. 8 in.
Wheel base, total engine and tender	58 ft. 9½ in.
Weight on drivers	19,000 lb.
Weight on trailer	20,000 lb.
Weight on engine truck	32,500 lb.
Weight in working order	201,500 lb.
Weight, engine and tender	316,000 lb.
Boiler, type	Straight top Belpaire
Boiler, diam. inside first ring	67½ in.

South African Railways' Type 4-8-2 Locomotive.

nest agreement go into effect.

The Governor General's speech, at the opening of the session, contained the following paragraph: "The decline of prices in farm products in 1921, as compared with the prices of previous years, has seriously affected agriculture in many parts of the Dominion. The ill effects of this inevitable deflation have been emphasized by restricted markets, and the absence of any corresponding reduction in the cost of production. While improved methods of culture, grading and storage of farm crops in some parts, and greater diversification in others, would materially better conditions, it is apparent that adequate markets and marketing facilities and reduced transportation and production costs lie at the root of the problem. Recognizing such to be the case, my advisers have lost no time in seeking to gain more favorable conditions of sale and marketing for the products of the farm. Communications have been opened with the authorities of other countries looking to an extension of trade and a widening of Canadian markets, and conferences have been arranged between the railway authorities with respect to the reduction of rates upon basic commodities." Canadian Railway and Marine World is in a position to state that such conferences have been and still are taking place between the principal railways' presidents and chief freight traffic officials and that it is probable that the results of their work, which will most likely propose

Gauge	Standard
Weight, total	65,000 lb.
Wheel base	64 ft.
Cylinders, diam. and stroke	13 x 20 in.
Driving wheels, diam.	36 in.
Driving journals	5½ x 8 in.
Boiler, type	Straight top
Boiler pressure	180 lb.
Boiler, diam. first ring	41½ in.
Firebox, length and width	11 x 17 1/16 in.
Tubes, no. and diam.	100—2 in.
Heating surface, tubes	524 sq. ft.
Heating surface, firebox	53 sq. ft.
Heating surface, total	577 sq. ft.
Grate area	12 sq. ft.
Tractive power	14,400 lb.
Factor of adhesion	4.5
Tank, type	Saddle
Capacity, water	1,600 gall.
Capacity, coal	1,400 lb.

Montreal Locomotive Works is building a 4-wheel switching locomotive for St. Lawrence Brick Co. Following are the chief particulars:—

Gauge	3 ft.
Weight, total	28,800 lb.
Wheel base	14 ft.
Cylinders, diam. and stroke	9 x 14 in.
Driving wheels	27 in.
Driving journals	4½ x 6 in.
Boiler, type	Straight top
Boiler pressure	175 lb.
Firebox, length and width	30½ x 26 in.
Tubes, no. and diam.	48—2 in.
Heating surface, tubes	191 sq. ft.
Heating surface, firebox	26.5 sq. ft.
Heating surface, total	217.5 sq. ft.
Grate area	5.5 sq. ft.
Tractive power	3,250 lb.
Factor of adhesion	4.6
Tank, type	Saddle
Capacity, water	600 U. S. gall.
Capacity, coal	475 lb.

The South African Rys., last year, ordered 13 locomotives, type 4—8—2, from Montreal Locomotive Works. Three

Boiler pressure	190 lb.
Firebox, type	Copper, Belpaire
Firebox, length and width	79½ x 65½ in.
Firebox crown, thickness	9 1/16 in.
Firebox tubes, thickness	1 9/16 in.
Firebox, water space, front, sides and back	4, 3½, 3½ in.
Firebox, depth top of grate to center of lowest tube	18 3/16 in.
Crown staying	Radial
Tubes, no. and diam.	139—2½ in.
Flues, no. and diam.	24—5½ in.
Tubes and flues, thickness	11 and 9 B.W.C.
Tubes, length and spacing	19 ft. 1½ in., 7½ in.
Heating surface, tubes	1,555 sq. ft.
Heating surface, flues	667 sq. ft.
Heating surface, firebox	138 sq. ft.
Heating surface, total	2,350 sq. ft.
Superheater surface	558 sq. ft.
Grate area	36 sq. ft.
Wheels, driving, diam., outside	48 in.
Wheels, material	Cast steel
Wheels, engine truck	Steel tired 25½ in.
Wheels, trailing	Steel tired, 33 in.
Wheels, tender	Steel tired 33½ in.
Axles, driving	Main 9 x 10; others 8½ x 10 in.
Axles, engine truck journals	5½ x 8½ in.
Axles, trailing truck journals	6 x 12½ in.
Axles, tender truck journals	5½ x 10½ in.
Driving boxes	Bronze
Brakes	Steam and vacuum
Engine truck	S.A.R. standard 4-wheel engine
Trailing truck	2 wheel radial
Grate, type	Rocking with dump
Tender frame	Channel
Tank, type	Water bottom
Capacity, water	4,050 imp. gall.
Capacity, coal	9.2 long tons
Valves, types	11 in. piston

The G.T.R.'s Highland Inn, Algonquin Park, Ont., closed on March 15, after the winter season, and will be opened again from June 15 to Sept. 30.

The C.P.R. has given 300 bags of Canadian flour to the Save the Children Russian Relief Fund.

Steam Railway Operating Revenues, Expenses and Other Statistics for Calendar Year 1921.

The following comparative table for the calendar years 1921 and 1920 has been arranged in Canadian Railway and Marine world's office, from information supplied the Dominion Bureau of Statistics:

Transportation Branch.

The figures in the column headed "All railways," include all steam railways with an annual operating revenue of \$500,000 and over, except the St. Law-

rence and Adirondack Ky., which is not able to give the 1920 figures, and is therefore being omitted from 1921 reports, as its inclusion would not show a true comparison. The 1921 figures have

ever, will be available for comparative purposes for 1922.

[illegible]

continental and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government and added to the Canadian National Rys.

The column headed "Canadian Northern," includes the lines operated as the Canadian Northern Ry. System, prior to

its acquisition by the Dominion Government.

The column headed "Canadian Pacific, etc.," includes also the Montreal and Atlantic, and Esquimalt & Nanaimo Railways.

The column headed "Grand Trunk" includes its Canadian lines only up to Sep-

tember. The subsequent figures are for all the company's lines. The revenues of these additional lines located in the United States averaged for the first nine months of 1921 less than one third of 1% of the revenue for October. Their inclusion will, therefore, have little effect on the report.

The Railway Operating Revenues, Expenses and Statistics for 1921.

A study of the table on the preceding page will at once show that, despite higher average rates for transportation of both freight and passengers, the industrial depression which existed throughout 1921 had the effect of limiting traffic sufficiently to greatly contract gross earnings. There was a large reduction in gross operating revenue from both freight and passenger traffic. While the average receipt per revenue ton mile of freight handled was 1.202c. in 1921, compared with 1.075c. in 1920, the higher rate was more than offset by the reduction in the tonnage handled, and while the average rate per passenger mile was 3.056c. in 1921, compared with 2.930c. in 1920, the earnings were much smaller in 1921 on account of the falling off in travel. Fortunately, however, the decrease in gross earnings was accompanied, for the railways as a whole, by a correspondingly greater decrease in operating expenses, caused by the wage reduction effective July 16, the lowered material prices, and by the exercise of strict economy in all operations. This decrease in operating expenses materially lowered the operating ratio and increased the net operating revenue.

The Canadian Government Rys.' freight traffic decreased 21%, and passenger traffic 17%, from 1920, and the total revenues decreased 8%. Transportation expenses were reduced 14%, and maintenance expenses 8%, and the operating deficit was reduced from \$10,449,876 to \$5,587,928. Taking into consideration all the circumstances, the result of the year's operations on the C. G. Rys. give rise to encouragement and to the expectation that when the great handicap, low traffic density, is overcome, the lines will show much better results. The low rates which prevailed are also to be taken into consideration. The average freight receipt per ton mile of 1.077c. and also the average receipt per passenger mile of 2.930c. are considerably lower than on the other roads with the exception of the Grand Trunk Pacific, and show the large proportion of low class freight from which a pioneer carrier must derive its revenues.

The Canadian Northern System shows a reduction of the operating loss of \$16,440,476 in 1920, to \$6,574,236 in 1921, and of the operating ratio from 125.25 to 109.75. While much remains to be done in increasing the average train load handled on the system, it is probable that the average train was as heavy as advisable, or possible, with the traffic conditions prevailing, and the increase in the trainload kept pace with the increase in the freight traffic handled, an increase which was notable in view of the prevailing traffic conditions. The C.N.R. freight revenues did not show the increases that would naturally be expected in view of the increased traffic and the substantial percentage increases in freight rates in effect, and this can be explained only by the fact that the great bulk of C.N.R. freight traffic was made up of low grade and low rate commodities.

On the C.P.R. the increase in rates was not sufficient to offset the decreases of 20% in passenger traffic, and 23% in freight traffic, so that total revenues decreased 11%. Maintenance of way and maintenance of equipment, were reduced 11 and 20% respectively, and transportation expenses per revenue train mile showed practically no change. The C.P.R. results for the year are commented on elsewhere in this issue.

Grand Trunk freight traffic decreased 19% and passenger traffic 4%. The increased rates, however, offset these somewhat, so that revenues decreased only 6%. Maintenance of way expense increased 7%, maintenance of equipment decreased 15%, and total expenses decreased 6%, making but slight improvement in net operating revenue and operating ratio.

The Grand Trunk Pacific's outstanding feature of the year's operations was the increase in freight traffic of over 41%. While this was due in part to an operating arrangement with the Canadian Northern, it is reasonable to suppose that it did not mean the diversion of a great deal of traffic from the latter, the freight traffic of which also showed an increase. G.T.P. revenues increased 15%, and this, with the reduction in expenses of 16%, reduced the operating loss by over \$6,000,000. Transportation expenses increased 19%, a very reasonable increase in view of the greater business handled, maintenance of way expense was reduced 38% and maintenance of equipment 30%. The average trainload showed an appreciable increase, accompanying the increased traffic density as shown.

For the railway industry generally, the 1921 results show a substantial improvement over those of 1920, and for that reason they must be regarded as encouraging. However, the outlook is not so bright. The industry must be a large improvement in the position of Canadian railways as a whole before they can be on a sound financial basis. While it may be confidently expected that there will be further reductions in operating expenses, it must be realized that demands for freight rate reductions are insistent, and the indications are that any reduction in operating expenses which may take place will be absorbed by freight rate reductions. Permanent improvement in the Canadian railway situation must come from permanently increased traffic, which will bring with it the opportunity of operating more freight ton miles, and passenger miles, without the necessity of materially increasing the freight train miles and passenger train miles. As we have pointed out previously, the railway business is pre-eminently one of increasing and decreasing returns, and it is a fact that additional traffic, within the limit of the capacity of the railways, may be handled at additional costs which are small in proportion to the additional revenue earned, because of that additional traffic. Conversely, when traffic

falls off, while valiant efforts may be made to cut expenses in proportion, it is a difficult task, as many services must be performed whether they are patronized to 100% capacity, or to 50% capacity. The 1921 figures give a case in point. While passenger miles decreased from 3,470,337,324 to 2,909,816,034, passenger train mileage decreased only from 46,456,497 to 44,108,716. The decreased traffic is reflected all through the figures, by decreased freight train and freight car loading, and in tonnage and passengers carried per freight train mile and per passenger train mile respectively. Increased traffic is the crying need of Canadian railways, and it is the only thing which will bring the train miles, the revenue ton miles and the passenger miles into the proper relationship.

The Bad Order Car Situation.

The Railway Association of Canada reported the total number of freight cars on Canadian lines for the 15 days ended Feb. 15 as 202,312. The allowance for bad order cars, on the A.R.A. basis, which assumes a total of 7% of the cars in bad order, worked out to 14,162, while the actual number of bad order cars was 20,011, an excess of 5,849 on the 7% basis. The figure of 20,011 represents a percentage of bad order cars of 9.8. Of surplus cars in good order there were 40,330, making a total number not in use of 64,341, or a total of 40,179 idle cars on the basis of 7% of the cars being in bad order.

For the 15 days ended March 1, the total number of cars on Canadian lines was 203,629. The allowance for bad order cars on the A.R.A. basis worked out to 14,254, while the actual number of cars in bad order was 20,373, an excess of 6,119 on the 7% basis. The figure of 20,373 represents 10% of the cars in bad order. Of surplus cars in good order there were 36,301, making the total number not in use 56,674, or a total of 42,420 on the basis of 7% of the cars being in bad order.

On comparing the figures given above with those of preceding periods, it is evident that the bad order situation is showing no improvement. For the 15 days ended Feb. 1, the percentage of cars in bad order was 9.3; for the 15 days ended Jan. 15 it was 8.82, and for the period ending Jan. 1 it was 9.12. In comparison with the situation in the U.S., however, the conditions in connection with bad order cars on Canadian lines are much superior. American Railway Association Car Service Division statistics shows there were 332,614 freight cars in bad order on Feb. 1 out of a total of 2,282,136 cars in line, or 14.5%. On Feb. 23, there were 437,678 freight cars idle in the U.S. because of lack of traffic, compared with 449,819 on Feb. 15. Of these, 264,814 were in good repair, while the others represented bad order cars in excess of seven per cent. of the total number.

Railway Association of Canada Circulars.

The Railway Association of Canada has issued the following circulars:—

Selling Shipments from Cars on Public Delivery Tracks.—A certain class of dealers in vegetables make it a practice to auction or sell their shipments from cars on public delivery tracks. This is a most undesirable practice, and adds to delay to equipment and congestion of team tracks and roadways.

In accordance with the operating committee's instructions member railways are requested to direct their agents not to permit the improper use of railway premises in this manner.

Bylaws Prohibiting Whistling and Bell Ringing.—It has become a common practice for Municipalities to adopt bylaws prohibiting the sounding of whistles and ringing of bells within certain limits. Compliance with such regulations increases the hazard of train operation, and in some cases interferes considerably with locomotive and train movements. Attention is called to the fact that operating rules in respect to necessary locomotive whistle and bell signals may be carried out notwithstanding municipal bylaws to the contrary, except in the case of whistling and bell ringing as highway crossing signals where bylaws prohibiting such signals have been adopted by the municipality and approved by the Board of Railway Commissioners under the Railway Act, sec. 308. In the circumstances it is recommended that member lines disregard bylaws of this character until approved by the Board of Railway Commissioners.

Giving Highway Crossing Warnings.—The steadily mounting list of accidents at level crossings has focussed the attention of those who have to do with the operation of trains upon the warning signals used as protection against such occurrences. The increasing use of the automobile adds to the hazard at level crossings, and this demands that locomotive men shall exercise greater care and good judgment in giving highway crossing warnings as prescribed by general operating rule 14 (L). In normal conditions, when the signal is given clearly, and of sufficient duration, it gives effective warning. The long blasts of the whistle should be maintained for three seconds, and the short blasts for one second each. There are situations, however, which, in addition to strict compliance with the letter of the rule, require that locomotive men shall use discretion as to the giving of additional warnings, such as in the case of slowly moving trains, adverse high winds, and where it is probable that opposing trains will pass one another at or near the crossing. It is requested that member railways issue instructions to locomotive men in accordance with the foregoing.

Methyl Alcohol Labelling.—The Inland Revenue Act, sec. 266, sub-sec. 2, reads as follows:—"Every person who uses methyl alcohol, or spirits, containing methyl alcohol in any form, in any pharmaceutical, medicinal or other preparation, intended for external use, shall affix to the vessel containing the said preparation, a label bearing the words 'Methyl Hydrate—Poison,' in black letters, not less than one-fourth of an inch in height, indicating the presence of methyl alcohol therein; and every person violating the provisions of this subsection shall incur a penalty not less than \$50 and not exceeding \$200." Un-

der this sub-section, it is pointed out, the railways are obliged to see that vessels containing methyl alcohol, or spirits containing methyl alcohol in any form used in their operations, are properly labelled in accordance with the regulations. It is recommended that member railways issue necessary instructions to the departments concerned.

Grain Door Handling Regulations.—Effective as of Jan. 1, 1922, the following regulations shall govern the handling of grain doors used in connection with interline shipments of grain between points on Canadian railways, and the distribution of expense in connection therewith: 1. Grain door expense shall be pro-rated between participating road haul carriers on a revenue basis. 2. Charge of \$1.50 shall be made for each door furnished, the number of doors not to exceed 6 per car. This charge is subject to revision semi-annually. 3. Statement, with bill covering grain doors furnished, shall be rendered by originating

Self Propelled Cars on Steam Railways.

The Manitoba Power Co., which is allied with the Winnipeg Electric Ry. Co., has imported from the United States a gasoline motor passenger car for use on the Winnipeg River Ry. between Lac Du Bonnet and Great Falls, Man., where it is building a 170,000 h.p. hydro-electric plant. A standard gauge track of 14 miles was built by the Winnipeg River Ry. Co., some years ago, from Lac Du Bonnet, the terminus of a C.P.R. branch, of 21.5 miles from Molton, 38.1 miles east of Winnipeg on the main transcontinental line. The management feels that it will be able not to only affect a considerable saving in the cost of transportation between Lac Du Bonnet and Great Falls, but will also make the service between those points much more frequent and efficient than it was when operated by steam trains.

The car, which is illustrated herewith, is gasoline operated, by a 25 h.p. engine. The body, built on a standard chassis, is

Gasoline Motor Passenger Car, Winnipeg River Railway.

carriers to all interested carriers monthly, and be presented within three months after close of period in which service is performed. 4. Grain doors shall be returned by destination carriers to originating carriers, when possible. For reclamation and free return movement to nearest junction point with originating carrier, destination carrier shall be allowed 50c. for each door. 5. Roads performing only destination switching service against which no charge is to be made for use of doors, shall be allowed 20c. door, when returned to delivering road haul carriers. This does not prohibit the making of special arrangements between road haul carriers and switching lines.

Illegal Liquor Selling.—Leo Rosenberg, news agent on a Canadian National Rys. express train, was fined \$300 by the Port Arthur, Ont., Police Magistrate, March 6, for selling intoxicating liquor to an Indian.

of wooden construction, and the interior, from the lower part of the windows, is lined with sheet iron. The body is 21 ft. 8 in. long, 7 ft. 10 in. wide, and 9 ft. 11 in. high from top of rail to top of car. The lower part is painted in maroon, with black trim and stripe. Seats are arranged transversely. Space is provided in the front for carrying packages and express matter, and an arrangement has been made for the removal of one of the side panels to provide a larger opening for loading and unloading packages too bulky to go through the door. The car is lighted by electricity and heated by exhaust from the engine. The interior is finished in white enamel. It is provided with regulation lamps on both front and rear for operation on steam railway lines. The rear wheels are artillery type, with steel tires, the front wheels being of rolled steel.

This car is operating at a cost of 25c. a car mile, and doing work which for-

merly required a steam engine and a combination express and passenger car with a regular train crew, at a cost of \$12.5 a mile. Its operation up to date has been perfectly satisfactory and is meeting all the conditions of the service.

The Greater Winnipeg Water District

The Railways' Operating Results for December, 1921.

For Dec. 1921 Canadian railways as a whole had a total operating revenue of \$37,076,979, compared with \$47,103,013 in Dec. 1920. Operating expenses were \$33,767,845, compared with \$46,420,205 in Dec. 1920, and the operating ratio was 91.07 in Dec. 1921, compared with 98.55 in Dec. 1920. The ton mileage of revenue freight decreased from 3,054,973,892 in Dec. 1920, to 2,545,408,476 in Dec. 1921, and passenger miles for the railways as a whole decreased from 251,855,455 in Dec. 1920, to 217,357,733 in Dec. 1921. The pay roll for Dec. 1920 was \$27,894,832, and in Dec. 1921 it was \$17,888,953, but as back pay included in the Dec. 1920 pay roll was \$4,828,356, the net decrease for the month was about 10%.

The Canadian Government Rys., with an operating ratio for Dec. 1921 of 108.50, compared with 152.16 for Dec. 1920, showed considerable improvement. Freight traffic decreased 7%, but passenger traffic increased 10%. Transportation expenses decreased 51%, and maintenance expenses decreased 40%. An improvement in operating efficiency is also apparent; car loading per ton, increased by 3.6 tons a car, and the average train loading was increased by 148.9 tons.

The Canadian Northern System had an operating ratio of 106.92 for Dec. 1921, a great improvement over Dec. 1920, when it was 127.05, but a decided falling off from Oct. and Nov. 1921. While freight traffic was 32% greater than in Dec. 1920, lower freight rates, and an apparent carriage of a greater proportion of low class freight, caused a decrease in freight revenue of 3%. However, transportation expenses showed a satisfactory decrease, and a better train and car loading was evident. In Dec. 1920 the average car loading was but 26.9 tons, and in Dec. 1921 it was 31.8 tons; in Dec. 1920 the average train loading was but 303.7 revenue tons, and in Dec. 1921 it was 368.8 revenue tons. The average operating revenue per train mile was \$3.72 in Dec. 1921, compared with \$3.34 in Dec. 1920, despite the lower rates prevailing.

Canadian Pacific operating revenues were 24% lower in Dec. 1921 than in Dec. 1920, due to large decreases in freight and passenger traffic, but with a reduction of \$785,058 in maintenance of way expense, \$866,049 in maintenance of equipment expense, and \$3,225,963 in transportation expenses, the operating ratio was reduced from 82.85 in Dec. 1920 to 80.16 in Dec. 1921. Car loading fell off, being 32.9 tons in Dec. 1920 and 29.6 tons in Dec. 1921, and train loading also fell off, the average number of tons of revenue freight per train mile in Dec. 1920 being 585.8, and in Dec. 1921, 553.8.

Grand Trunk freight traffic was about 30% smaller than in Dec. 1920, but passenger traffic was about the same. The falling off in freight traffic, combined with reductions in freight and passenger rates, decreased operating revenues from \$7,860,295 in Dec. 1920 to \$5,668,-

Commission is reported to have authorized the purchase of a gasoline driven car with capacity for 42 passengers, from the Service Motor Truck Co., Wabash, Ind., for \$22,300, delivered in St. Boniface, for operation over the Commission's railway.

995 in Dec. 1921, but operating expenses were reduced in greater proportion. Maintenance of way, maintenance of equipment and transportation expenses all showed large decreases, the total operating expense for Dec. 1921 being \$47,244, compared with \$7,633,878 in Dec. 1920. This reduced the operating ratio from 97.12 in Dec. 1920 to 85.15 in Dec. 1921. Freight train and freight car loading both fell off; the average car load in Dec. 1920 was 29 tons and in Dec. 1921 but 23.7 tons; the average revenue trainload in Dec. 1920 was 452.5 tons and in Dec. 1921 but 396.1 tons.

Although Grand Trunk Pacific freight traffic increased from 159,220,515 revenue ton miles in Dec. 1920 to 163,976,762 revenue ton miles in Dec. 1921, the average freight rate fell from 1.103c. per revenue ton mile in Dec. 1920 to 0.926c. in Dec. 1921, which decreased freight traffic revenue from \$1,757,183 in Dec. 1920 to \$1,518,536 in Dec. 1921. Passenger traffic also fell off, and this, coupled with a decrease in the average rate per passenger mile, from 3.46c. in Dec. 1920 to 3.307c. in Dec. 1921, caused an appreciable decrease in passenger revenue. Maintenance of way expenses were slightly greater than in Dec. 1920, and maintenance of equipment and transportation expenses were slightly less. Total operating expenses were \$2,051,943 in Dec. 1921, compared with \$2,095,559 in Dec. 1920. This, combined with the decrease in operating revenues, increased the operating ratio from 102.05 in Dec. 1920 to 114.10 in Dec. 1921. Improvements took place in car loading and train loading; the average carload in Dec. 1920 was 28.4 tons and in Dec. 1921 it was 30.3 tons. In Dec. 1920 the average number of revenue tons of freight per freight train mile was 441.4 and in Dec. 1921 it increased to 480.1. Notwithstanding this increase in operating efficiency, however, the effect of the lower rates was not overcome, resulting in the more unfavorable operating ratio noted.

Interstate Commerce Commission's General Rate Investigation.

Details of the general rate investigation instituted by the U. S. Interstate Commerce Commission were given in Canadian Railway and Marine World for March, p. 143, covering proceedings up to the middle of February. On Feb. 16, S. Davies Warfield, President, National Association of Owners of Railroad Securities, and other officers of that Association, testified. They asked the Commission to give approval to a plan for the pooling of the U.S. railways' freight equipment and claimed that the savings by the plan would be large. Shippers of fruits and vegetables, all of whom sought lower rates, were given an opportunity to present their views, and they were followed by shippers of milk, cream, and dairy products, and livestock and packing house products. On Feb. 23

and 24 oil and petroleum shippers claimed that the present rates are unduly restricting their markets. The hearing of evidence was concluded on March 4, after which there was a short adjournment, and argument by railway counsel before the full Commission was begun March 8. The counsel argued that a reduction in rates at this time would be ill advised, and that any reduction in the return to the railways as prescribed by the Transportation Act would be unwise. It was pointed out that the carriers are now before the Labor Board in an effort to have wages reduced to a reasonable level, and that it would be unreasonable to expect railways to reduce their rates until wages are decreased. The opinion expressed by many shippers that rate reductions would make for increased traffic was greatly doubted by the railway counsel. Generally, it was pointed out that the present rates and costs are not such as to afford the railways a fair return, which would make any rate reductions unreasonable and unjust to investors in railway enterprises, and it was also argued that any rate reductions which could be made would be of no benefit to producer or consumer, but the saving would be absorbed by the various middlemen handling the commodities affected.

Counsel for shippers and traffic associations, etc., based their claims for reduced rates on the statement that present rates are holding up business, and that reduced rates would mean greater traffic and, ultimately, greater net revenue for the railways. On March 11 and 13, rebuttal argument for the railways was heard. P. Thom, representing the Association of Railway Executives, advising the shippers who want their rates reduced to go to the Labor Board. He stated the railway's case plainly, and said that to ask the railways to reduce their rates before wages and other expenses are reduced is unreasonable. The arguments were concluded on March 13, and the case closed as far as evidence and argument are concerned. No intimation has been given as to when the Commission will announce its decision.

Reduced Rates on Live Stock Feed to Eastern Provinces.

Owing to representations made by the Prince Edward Island Commissioner of Agriculture as to serious shortage of feed for live stock, the Canadian National Rys. have made the same rate reductions on hay, corn oats and grain screenings to P.E.I. Ry. points as were made recently to afford relief to areas in eastern Nova Scotia in a similar position. Similar action has been taken with reference to reduced rates on the same commodities to New Brunswick areas where corresponding crop shortages prevailed.

Thus giving relief to the Maritime Provinces, is along the same lines as that taken about Dec. 1, 1921, in affording relief to the agricultural industry in certain sections of Quebec. The freight is consigned to the Commissioner or Deputy Minister of Agriculture in each province, and on his order, on his orders, to the farmers or their associations. These reduced rates have been authorized as a temporary measure only, the tariffs expiring April 30.

Freight traffic in the U.S. declined 23% in 1921 from that of 1920.

Railway Development, Projected Lines, Surveys, Construction Betterments, Etc.

Alberta.—An Edmonton press dispatch of March 23 says the Alberta Legislature has passed bills providing \$1,000,000 for extending Alberta's northern railways 39.5 miles at \$514,416 for maintenance and betterments.

Alberta and Great Waterways Ry.—When the Alberta Government took over this railway from J. D. McArthur, the Legislature authorized the expenditure of \$2,100,000 for its completion. Up to the end of 1921, the Government had spent on this work, \$2,323,000, according to a report presented to the Legislature recently by the Minister of Railways. During 1921, 272,000 new ties were used in repair work, and about 50,000 on the new line at Deep Creek, and in new sidings; 203,000 cubic yards of ballast were spread; a new bridge was built over the Christmas River; three permanent water supplies were installed; 95 miles of ditching completed; a mechanical coaling plant was erected at Lac La Biche, in addition to the building of section and bunk houses, temporary stations, grain and stock loading facilities, and other work. (Feb., pp. 76.) See also under "Alberta."

Bottrel, Alta.—A press report states that the Dogspound local U.F.A., contemplates the construction of a railway. J. T. Boucher, Bottrel, Alta., is named as Secretary of the Railway Commission. The Dogspound district lies alongside the Dogspound Creek, which runs into the Little Red Deer River, the nearest railway point being Cochrane, 23 miles out of Calgary on the C.P.R. main transcontinental line.

Canada Central Ry.—The Alberta Minister of Railways' reports for 1921, presented to the Legislature recently, shows that \$107,584.84 was spent in betterments during the year. In addition \$321,811.16 was advanced on account of the building of the 25 mile extension from Peace River. Of this extension 26.5 miles was completed, except ballasting. The amount authorized to be expended on the extension was \$600,000, and it was estimated that \$550,000 of work had been done to Dec. 31, 1921. (Feb. pp. 76.) See also under "Alberta."

Dominion Atlantic Ry.—The Board of Railway Commissioners has amended its order of Aug. 26, 1921, directing the company to provide suitable accommodation at Roundhill, N.S., by ordering that a platform 250 ft. long be built there by June 30. (Jan., pp. 32.)

Edmonton, Dunvegan & British Columbia Ry.—The Alberta Minister of Railways' report for 1921 stated that \$1,187,751.73 was expended during the year on betterments between Edmonton and Grande Prairie. The work included putting in 263,000 new ties; the distribution of 258,000 cubic yards of ballast; the putting in of 179 wooden and corrugated iron culverts; work on bridges and trestles; the provision of temporary water supplies at three points; the provision of portable stations at Chisholm and Giroux; the removal of the locomotive house from Spirit River to Grande Prairie; the provision of grain loading platforms at five points and stockyards at two points; the provision of a track connecting the line with the C.P.R. in Edmonton, together with general work on fencing, ditching, repairing buildings, and telegraph line. The result of the work on the line had been to reducing

the schedule time of the passenger trains from 39½ hours to 26 h. 50 min. Of the \$1,500,000 voted for the work, there was expended \$1,475,000, which includes the betterment expenditure on the Central Canada Ry. (Dec., 1921, pp. 646.) See also under "Alberta."

Esquimalt and Nanaimo Ry.—Tenders for the construction of the superstructure of the bridge to be built by the City of Victoria, at Johnston St., were opened March 4, and it is reported that the prices offered were about \$50,000 in excess of the estimated cost of the work, which the superstructure of the bridge outside the bascule span, which is in course of erection by Canadian Bridge Co. It is said that no tender will be accepted at present, but that the Canadian Bridge Co. will fabricate the steel, and that this will be erected under the direction of the City Engineer. (Mar., pp. 124.)

Kettle Valley Ry.—Track is reported to have been laid on the piece of line from Penticton to the head of Skaha or Dog Lake, about two miles. Grading on the line from the southern end of the lake, near Okanagan Falls to the demonstration farm at Oliver, is reported to be well in hand, and it is expected to have this part of the work completed by June 1. Ties for the extension are reported to be on hand, and rails are being delivered. Connection between the two pieces of line will be maintained by a tug and a car barge. The tug York is reported to have been put in repair ready for the work, and the barge is expected to be ready at an early date. (Feb., pp. 76.)

Lacombe and North Western Ry.—Replying to a request made by a deputation from the Rimbey district recently, the Premier of Alberta is reported to have stated that it is the Government's intention to extend the Lacombe and North Western Ry. from the present end of track in the direction of Edmonton. Speaking later in the Legislature, he said that further construction would be provided for this year but, that owing to financial conditions, he could not give any promise as to the mileage which would be built. Provision would be made in the estimates this session for construction purposes.

The line is in operation from Lacombe to Rimbey, 36.5 miles, and in 1921 the Legislature authorized its extension from Rimbey to Edmonton, which would give it a total length from Lacombe to Edmonton of approximately 125 miles. The construction of an extension to Pigeon Lake was authorized in 1921, to some gravel pits in order to obtain a supply of ballast. This extension will form part of the line between Rimbey and Edmonton. (Aug. 1921, pp. 419.)

Lake Huron and Northern Ontario Ry.—We are advised that attempts are being made to reorganize the directorate, and that if it is expedient some Toronto men will be included. A meeting of shareholders was called to be held in Toronto, March 14, but no information as to what was done has been obtainable. (March, pp. 124.)

Mattawankego to Drew's Plantation.—A press report states that Houlton, Me., business men have arranged to finance the Mattawankego and Eastern Maine Rd., to build a branch line from the C.P.R. at Mattawankego, Me., to Drew's Plantation, Me., 15 miles. This

line would connect with the line projected by the Eastern Maine Rd. from Drew to Houlton, Me., 35 miles.

Montreal, Joliette and Transcontinental Junction Ry.—In connection with this company's application to the Dominion Parliament for an extension of time within which it may build its projected line from Montreal, via Joliette, to a junction with the National Transcontinental Ry., J. J. Denis, M.P. for Joliette, has given notice of a motion in the House of Commons that it is advisable that such a line should be built as soon as financial conditions permit. (Mar., pp. 124.)

Pacific Great Eastern Ry.—Extra gangs of men were reported recently to have been sent out to different points between Squamish and Deep Creek, on account of ice and snow troubles, which are said to have been unusually bad during the winter. (Feb., pp. 76.)

Roberval and Saguenay Ry.—The Quebec Legislature has authorized the company to build a number of lines as follows:—From Roberval, on the Quebec & Lake St. John Ry., around Lake St. John to the Peribonka River, thence southeasterly crossing the Saguenay River to the junction of the Quebec & Lake St. John Ry. and the Ha Ha Bay Ry.; a branch from the above line west of the Saguenay River southerly to Bruno on the Quebec & Lake St. John Ry.; the branch lines and sidings authorized by the Revised Statutes of 1909, article 647, par. 22, 20 miles; and all sidings and branches useful for connecting the companies, with timber limits, or navigable waters; and a branch from its line in Chicoutimi County to a junction with the Quebec & Saguenay Ry. at La Malbaie, Charlevoix County. These lines may be operated either by steam or electricity, or both. (Mar., pp. 124.)

Pere Marquette Rd.—A United States press report states that the company's plans for improvement and betterment for 1922, will involve the expenditure of \$4,035,000, and that an additional \$1,200,000 will be required to complete two of the works which cannot be finished until 1923. The work to be done covers the following betterments on the company's Canadian lines:—Relaying track between Sarnia and Wallaceburg, Ont., 31 miles, and rebalasting line from Sarnia to Chatham, 54 miles.

Quebec and Chibougamou Ry.—H. S. Blake, Montreal, and a representative of British interests associated with the project of building a railway into the Chibougamou mining district, were in Quebec, March 14, arranging for taking men for development works at Chibougamou. The mining area is northerly from Roberval, about 225 miles by the present available route, but Mr Blake is reported to have stated that it would be reduced to about 165 miles by the construction of the railway, that \$250,000 had already been expended by the British capitalists upon the project, and that it was expected to go on with the railway as soon as financing could be arranged. (Feb. 1921, pp. 85.)

Timiskaming and Northern Ontario Ry.—We are officially advised that Grant Smith & Co. and McDonnell Ltd., general contractors for the 70 mile extension from Cochrane, Ont., to near New Port on the Abitibi River, have let the following sub-contracts:—For clearing and grading the whole of the 70 miles, to

Noehren and Mannix, Calgary, Alta.; for concrete work on the first 11 miles out of Cochrane, including the work at the first crossing of the Abitibi River, to C. D. French and Co., Montreal; for building all track from mile 12 to 47, to James Brennan, Arrnprior, Ont. We are further advised that S. D. Hogan will be in charge of the grading work for Noehren and Mannix, who, it is reported, has purchased a number of dump cars from Foley Brothers, which had been stored in the vicinity of Sudbury, Ont. (Mar., pg. 124.)

Wabash Rd.—We are officially advised that the press report stating that it is proposed to erect locomotive repair shops at St. Thomas, Ont., at a cost of \$500,000, is incorrect. The Wabash Rd., which operates over the old G.T.R. Air Line, has had the repair work on the locomotives used in Canada done for several years in the shops of the old Lake Erie and Detroit River Ry., in St. Thomas, owned by the Pere Marquette Rd. H. Eisele, Assistant Superintendent, Locomotive Department, Decatur, Ill., visited the P.M.R. shops at St. Thomas recently, to see how the work on Wabash locomotives was progressing.

The Newfoundland Railway Situation.

The problem of what is to be done with the Newfoundland Ry. has been under discussion for a considerable time between the Newfoundland Government, and the Reid Newfoundland Co. In July, 1921, the Newfoundland Legislature passed an act, confirming an agreement, based upon suggestion, made by Sir George Bury, under which the Reid Newfoundland Co. undertook to operate the lines for 12 months from July 1, and to give certain specified services, the Government to pay any loss on operation up to \$1,500,000. A General Manager, from Canada or the United States, was to be appointed by the company subject to the Government's approval. R. C. Morgan, Superintendent, Winnipeg Terminals, C.P.R., subsequently went to St. John's in connection with the appointment, having been granted leave of absence for that purpose, but he was reported in February to have finally resigned the position.

It was reported recently that an inventory of the railway property was being made at the Government's instance in connection with the making of a new agreement with the company. That some new arrangement is to be made is evident from the fact that the Governor in his speech at the opening of the Legislature, on March 14, said that proposals for operating the railways would be presented for consideration. Mr. Morgan's report to the Government was submitted to the Legislature on March 20. One press report states that he has recommended that the Government take over the system and operate it by a commission, and another report states that one line may be leased by the Government for an indefinite period.

Railway Operation of Steamboat Lines.—Major-General L. H. Beach, Chief of Engineers, U.S. Army, in addressing the National Rivers and Harbors Commission at Washington, D.C. recently, advocated that Congress should adopt legislation to permit the railways to operate boat lines on inland waterways. The present U.S. law prohibits railways from operating boat lines.

Traffic Orders by Board of Railway Commissioners.

Temporary Doors for Lime Shipments.

General order 360. March 6.—Re application of D. Robertson & Co., Milton, Ont., and Standard White Lime Co., Guelph, Ont., for an order requiring railway companies to supply temporary doors for shipments of lime, in carloads, or to make an allowance when the same are furnished by shippers. Upon hearing the matter at Toronto, Jan. 5, 1922, the applicants, the Christie, Henderson Co., and the Grand Trunk and Canadian Pacific Railways, being represented, and what was alleged; and upon reading the further submissions filed, the Board orders that railway companies be required, not later than March 16, 1922, to amend their tariffs so as to provide for the allowance, at points east of Port William, of 50c. a car door of not less than 21 sq. ft. when furnished by shippers of lime, in bulk.

Milling in Transit Arrangements.

32,195. March 6.—Re application of Robin Hood Mills, Ltd., Moose Jaw, Sask., and Montreal, for a ruling whereby secs. 1 and 2 of general order 234, May 22, 1918, are applicable to milled in transit arrangements to destinations east of Port Arthur, Port William, and Armstrong, Ont. Upon hearing the application at Ottawa, Feb. 17 and June 15, 1920, the applicants, the Canadian Pacific, the Grand Trunk, and the Canadian National Railways being represented, and what was alleged. The Board declares that the words "to final destination," appearing in rule 1 of the order, which are operative when the shipments in question originated, read in connection with the provisions as to reshipment made to Westport, Port William, Port Arthur, and points east thereof, mean that the through rate, the inception of which in point of time is defined by general order 234, applies to the final destination, even if that destination be east of Port William or Port Arthur.

Coal Switching Tariff A.C. & H.B. Ry.

32,196. March 8.—Re application of Century Coal Co., Montreal, for an order suspending Algoma Central & Hudson Bay Ry. tariff, C.R.C. 585, effective March 15, 1922, showing increases in switching rate on coal from New Ontario Coal Co.'s dock to the C.P.R. at Sault Ste. Marie, to 2c. per 100 lb. Upon reading the application and what is alleged in support thereof, the Board orders that, pending hearing and decision, the said tariff be suspended.

Pig Iron Rates from Collingwood to Black Rock.

32,217. March 14.—Re New York Car Wheel Co.'s complaint against the rates charged by G.T.R. on pig iron from Collingwood, Ont., to Black Rock, N.Y. Upon hearing the matter at Ottawa, Feb. 7, the applicant and the G.T.R. being represented at hearing, and what was alleged, the Board orders that the complaint be dismissed.

Export Rates on Grain Products.

32,227. March 13.—Re application of Canadian National Millers' Association for an order directing the Canadian Pacific, Grand Trunk, Canadian National and any other Canadian railways interested, to reduce to an equitable basis the export rates on grain products to that of wheat, particularly for shipment lake and rail, and re application of Dominion Millers' Association regarding flour arbitraries over wheat, for export. Upon hearing the applications at Ottawa,

Jan. 26, 1922, the Canadian National Millers' Association, Dominion Millers' Association, Grand Trunk, Canadian Pacific and Canadian National Railways, Quaker Oats Co., Maple Leaf Milling Co., Western Canada Flour Mills, Dominion Flour Mills, St. Marys Milling Co., and Montreal Board of Trade being represented, and what was alleged; and upon reading the further written submissions filed, and the report of the Board's Assistant Chief Traffic Officer, the Board orders that the applications be refused.

Canadian National Railways Construction, Betterments, Etc.

Meductic, N.B., to Bangor, Me.—The New Brunswick Minister of Lands and Mines, in speaking in the Legislature, recently, advocated the building of a line to 41 miles, from Meductic, on the St. John and Quebec Ry., to a junction with the Maine Central Rd. at Bangor, Me. During 1921 there was some discussion as to the construction of a connection between the St. J. and Q. Ry. and the Maine railway system, the suggested starting point being Pokio, N.B., 12 miles nearer Fredericton than Meductic, the connecting point with the Maine railway system, was to be at Danforth, Me. A press report states that some progress has been made in the Maine Legislature with a bill for the building of a line to connect with Canadian lines as outlined above.

St. Boniface, Que.—The Board of Railway Commissioners has authorized the opening for traffic of a portion of the Canadian Northern Quebec Ry., near St. Boniface, Que., mile 87.5 to 91.5. This is a division between Glendon and St. Boniface, which includes the viaduct at East Burrill, a description of which was given in Canadian Railway and Marine World, May 1921, pg. 247.

Regina Improvements.—A press report states that a large strip of land has been bought in the northwest part Regina, Sask., for the purpose of effecting improvements and extensions of the C.P.R. facilities. It is stated that the curves in the line north of the city will be straightened out; additional yard space laid out, larger shops built, and increased facilities for handling grain provided.

Regina City Council has given an extension of time for the installation of automatic safety devices at the C.N.R. crossings at Smith St. and Dewdney Ave., and at Bigg Ave. and Main St. The railway track at Regina is to be laid with 80 lb. rails in place of the 60 lb. rails now in use, the work to begin in May. The automatic devices were to have been installed within 90 days from Jan. 16; but in order that the whole work of track relaying and the installation of the devices could be done at the same time, the city consented to a three months postponement.

Vancouver Island Lines.—A press report of March 14, stated that track laying is being started from the end of Cowichan Lake, and that about 12 miles will be laid to the Cottonwood mills. The line has been graded to Nitinat, but it is said not to be the intention to lay track beyond Cottonwood at present.

The report also states that construction is likely to be started this year on a line from Deerholm to Cowichan Bay, about 10 miles, in order to give access to salt water for the shipment of logs from the Cowichan Lake district.

Canadian Pacific Railway Construction, Betterments, Etc.

St. John, N.B., Crossing.—In connection with the Board of Railway Commissioners' order respecting the diversion of Douglas Ave., and the construction of an overhead bridge, referred to in our last issue, the St. John City Council was advised Feb. 28, that a proposed deputation would not wait on it, as the Mayor had announced that no expenditure would be incurred until the courts had decided the action pending between the New Brunswick Government, the C. P.R., and the St. John Ry. Bridge and Extension Co. A summary of the Government's claims was given in our January issue, pg. 23.

We are officially advised that the concrete arch which it is proposed to build will be a skew one with a 96 ft. opening, the arch to be designed and built by the C.P.R., and the St. John City Council grade the road approaches on either side. The gradient of the approach from Douglas Ave. will be 3.5%, and from the summit of the arch running westward to the end of the highway bridge over the river at the falls it will be 5.5%. The cost of the work is divided in the following proportions, after the \$15,000 contribution from the Dominion grade crossing fund is deducted:—C.P.R., 50%; New Brunswick Power Co., 25%; St. John City, 25%. The estimated cost of the work is \$110,000, including land damages. It will be necessary to divert the Strait Shore Road. The gradient from the end of the highway bridge eastward down Strait Shore Road will be 12%, but this is only intended as a more or less temporary gradient until another street is extended giving a lighter gradient, or until the traffic down Strait Shore Road warrants the lessening of the gradient.

St. John to McAdam.—A press report states that 50 miles of new heavy rails will be laid between St. John and McAdam, N.B., this year.

Shore Line Track Relaying.—A press report states that it is intended to lay 72 lb. rails, replacing the present lighter ones, on the Shore line subdivision, West St. John to St. Stephen, N.B., during this year.

Park Ave. Subway, Montreal.—A press report states that it is contemplated to build a subway under the C.P.R. tracks on Park Ave. extension, Montreal, at an estimated cost of \$200,000.

Smiths Falls Freight Sheds.—A press reports states that a fire in the Smiths Falls, Ont., freight sheds on March 2, did considerable damage, the total loss to the C.P.R. and others being about \$75,000.

Windsor Freight Shed, etc.—We were officially advised March 4 that plans and specifications for the new freight shed and yard improvements at Windsor, Ont., were being prepared.

Jack Pine River Bridge.—The Board of Railway Commissioners has authorized the rebuilding of bridge 464 over the Jack Pine River, Nipigon Subdivision, Algoma District, Ont.

Fort William Old Station.—Fire broke out on Feb. 22 in the building used formerly as a station at Fort William, Ont., and now located in the yards near the foot of Bethune St., and latterly used as offices by some outside department. The building was practically destroyed, along with a quantity of records, the total loss being put at about \$50,000. Work was

started at once on clearing up the ruins, and the provision of temporary accommodation for the burned out officials.

Sheho Northwesterly.—A press report of March 12, stated that a C.P.R. party was making a survey from the end of a piece of grading from Sheho, Sask., northwesterly, 16 miles, which was completed about 15 years ago, towards Wadena, Sask. Sheho is a station on the extension of the old Manitoba and North Western Ry. It is stated that the original intention was to extend the line to Prince Albert, and the 16 miles of grading northwesterly from Sheho was done. Later the line from Sheho was extended to Saskatoon.

Drumheller Connection.—The Board of Railway Commissioners authorized the C.P.R. to connect its line with the Canadian National Ry., so as to give it access to the Drumheller coal mining area in Alberta. Chief Commissioner Carvell, in giving judgment, said:—"The question of an entrance into the Drumheller coal field by the C.P.R. was settled by Parliament when a charter was granted giving that right. An agreement was then made by the Canadian National Ry. and this Board providing for the construction of a joint line of 30 miles east of Rosedale, and the Board, only a short time ago, approved the location asked for by the C.P.R. on the north side of the Red Deer River. The C.P.R. now claims that temporarily it wishes to use a connection already in existence on the south side of the river by which it may carry on business for the present, north and west, but not to the east, until the original scheme is carried into effect. The principle which I think should settle the Board's action in the matter would be what would the Board do should the C.P.R. build its line along the north bank of the Red Deer River, and the joint section from Rosedale to Bullpound Creek, and thence to its eastern connection. Would the Board grant transfer facilities or not under these conditions? I think it would—in fact I fail to see how we could do otherwise, and, therefore as the C.P.R. is now into Drumheller, under these conditions I fail to see how we could refuse to grant the physical connection, and therefore an order should issue granting the application."

The C.P.R. line to Drumheller starts at Aene, and its proposed length was about 35 miles. Construction was started in 1920, and track was laid that year for 18.5 miles, and in 1921, a further 16.93 miles were laid.

Coquitlam River Bridge.—A press report states that a bridge is to be built across the river at Coquitlam, B.C., to an estimated cost of \$100,000, to replace the one carried away by floods on Oct. 28, 1921, which was replaced by a temporary bridge, which in turn was carried away by a second flood on Dec. 11, 1921. The new structure will be somewhat longer than the former one, the concrete abutments and piers being placed farther apart, and the total length of the bridge increased to 300 ft. (Mar., pg. 131.)

Electric Operation in Buffalo.—A bill providing that steam railways entering Buffalo, N.Y., city limits shall operate electric locomotives within the city, has been proposed by the Assistant Corporation Counsel.

Railway Earnings.

Canadian National Railways.

Following are total operating revenues total operating expenses, and net operating revenues or deficits, for the Canadian National Ry. System, Grand Trunk Pacific Ry., and Canadian Government Ry., the last including the Intercolonial Ry., Prince Rupert and the various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government:—

million Government:—		Net deficit.	
	Revenue	Expenses	1921 1922
Jan.	\$8,216,191	\$10,433,564	\$2,223,163 \$2,863,068
Decr.	\$2,640,509	3,280,104	639,895
Approximate earnings for February, \$7,471,399, and for two weeks ended March 14, \$4,379,376, against \$10,225,436 and \$4,759,936, for same periods 1921.			

Canadian Pacific Railway.

Following are monthly gross earnings, working expenses and net profits for 1922, compared with those for 1921. The discrepancies between these figures and those issued by the Dominion Bureau of Statistics are owing to the fact that the Bureau is, at its request, furnished with figures by the C.P.R., including the Equinault & Nanaimo Ry., and the Montreal & Atlantic Ry. earnings, as well as the C.P.R. ones. The figures supplied by the C.P.R. are, therefore, certain income items which are included in figures supplied Canadian Railway and Marine World.

	Gross	Expenses	Net	Decreases
Jan.	\$11,337,975	\$10,554,498	\$783,477	\$187,948
Decr.	\$3,127,455	\$2,969,508	\$157,948	

Following are total operating revenue and total operating expenses for lines in Canada for 1921, also total net operating revenues or deficits for 1921 and 1920, with increases or decreases in totals, as compared with those for 1920, as far as they are available to date.

	Gross	Earnings	1921	1920	Net revenues or deficits
Jan.	\$6,187,539	\$6,886,930	\$699,391*	\$624,810*

*Deficit.

British Ministry of Transport Abolition Likely.—When Sir Eric Geddes gave up his position as Minister of Transport in England recently, he is reported to have stated that in view of the Railways Act of 1921, which restored the railways to private ownership, there was no justification for retaining a separate Ministry of Transport. The Committee on National Expenditure apparently agrees with his views, having stated, "We do not consider that the separate existence of the Ministry can longer be justified," having especially in view the movement of activity on the termination of Government control of the railways." The members of the committee suggest that economy and efficiency would be attained if all questions of transport by sea, rail, road and canal, and questions of power and coal, were grouped in the Board of Trade, under one Parliamentary Secretary to assist the Premier. In view of this, it seems likely that the Ministry of Transport will cease to exist in the near future.

The American Association of Traveling Passenger Agents will visit the Pacific Coast at an early date. The C.P.R. is reported to have arranged to place two special trains at the members' disposal and to have arranged for their entertainment at Banff, Lake Louise, Vancouver and Victoria. The visit has been arranged in connection with C.P.R. plans for the promotion of tourist travel to Rocky Mountain and British Columbia resorts from United States points.

Mainly About Railway People Throughout Canada.

James Allen, Assistant Master Mechanic, Canadian National Ry., Winnipeg, died there, March 6, aged 64. He was born at Perth, Ont., and was, for some time, a locomotive man on the Northern Pacific Ry., Winnipeg, and when the Canadian Northern Ry. took over the Northern Pacific lines in Manitoba, he transferred to C.N.R. service, and in 1913 was appointed Road Foreman of Locomotives, and subsequently, Assistant Master Mechanic at Port Rouge shops.

William A. Armstrong, whose appointment as City Passenger Agent, C.P.R., Windsor, Ont., was announced in a recent issue, was born in Melancthon T.P., Ont., Nov. 25, 1887, and entered C.P.R. service Dec. 12, 1904, since when he has been, to Sept., 1909, clerk, Car Department; Dec. 1909 to Aug. 1911, ticket clerk; Aug. 1911 to Jan. 1914, refund clerk; Jan. 1914 to Jan. 1922, rate clerk, Passenger Department, all at Toronto.

H. E. Beasley, General Superintendent, Esquimalt and Nanaimo Ry., Victoria, B.C., visited C.P.R. headquarters in Montreal in March, afterwards spending a few days with relatives in Toronto. He was accompanied by Mrs. Beasley.

J. E. Dalrymple, Vice President, Traffic, G.T.R., Montreal, gave a silver cup for competition amongst the teams in the G.T.R., Freight Traffic Department's bowling league, the season of which has just closed.

Col. J. S. Dennis, C.M.G., Chief Commissioner Colonization and Development Department, C.P.R., Montreal, addressed the Empire Club of Canada, at Toronto, March 30, on immigration and settlement.

Sir John Craig Eaton, President, The T. Eaton Co., and director of the C.P.R., who died at Toronto, March 30, from influenza, followed by complications, after an illness of six weeks, was born there April 26, 1876. He was, at one time, interested in the Turbine Steamship Co., which had the s.s. Turbinia built in England, for service on Lake Ontario, and later acquired the controlling interest in the Hamilton Steamboat Co., which, with the Turbine Steamship Co., both of which companies he owned, was subsequently sold to Canada Steamship Lines Ltd. He was elected a director of the C.P.R. in Dec. 1919.

John Ehrke, Assistant to General Superintendent Western Lines, G.T.R., Chicago, Ill., died at Battle Creek, Mich., Feb. 21, aged 63, while there on business.

Watson Smyth Hall, whose appointment as Superintendent, Portage Division, Manitoba District, C.P.R., Winnipeg, was announced in our last issue, was born at Montreal, May 23, 1884, and entered railway service, in 1901, since when he has been, to April 1, 1903, stenographer, Denver and Rio Grande R.R., Denver, Col.; Apr. 1, 1903 to July 1906, clerk, General Superintendent's office, C.P.R., Calgary, Alta.; July 1906 to March 1907, secretary and clerk, General Manager's office, C.P.R., Winnipeg; Oct. 1907 to May 1910, chief clerk to Superintendent, C.P.R., Cranbrook, B.C.; May 1910 to May 1912, Yardmaster, C.P.R., Cranbrook, B.C., and Macleod, Alta.; May 1912 to July 1920, Trainmaster, C.P.R., Macleod, Red Deer, Alta., and Cran-

brook, B.C.; July 23, 1920 to Feb. 24, 1922, Superintendent, Cranbrook Division, British Columbia District, C.P.R., Cranbrook, B.C.

Gordon F. Johnston, who has been appointed General Agent, Passenger Department, in Australasia, Canadian National Ry., entered railway service May 1, 1910, since when he has been, to June 1, 1912, ticket clerk, G.T.R., Richmond, Que.; June 1, 1912 to Apr. 1, 1916, ticket clerk, Grand Trunk Pacific Ry., Regina, Sask.; Apr. 1, 1916 to Sept. 1, 1920, City Passenger and Ticket Agent, same road, Prince Rupert, B.C.; Sept. 1, 1920, to March 16, 1922, City Passenger and Ticket Agent, Canadian National Ry., Prince Rupert, B.C.

W. R. MacInnes, Vice President, Traffic, C.P.R., sailed from St. John, N.B., March 10, on the s.s. Montcalm, for Liverpool, Eng.

Mrs. S. McIsaac, who died at Beaver Cove, N.S., Feb. 26, was mother of J. R. McIsaac, Traffic Manager, British Empire Steel Corporation, Sydney, N.S.

Sir Donald McMaster, K.C., who died in London, Eng., March 3, after a long illness, was born at Williamstown, Ont., Sept. 3, 1846, and had a distinguished legal career both in Canada and England, where he eventually settled. He represented the Chertsey Division of Surrey, in the British Parliament since Jan. 1910, and recently resigned on account of ill health. While practising in Canada, he served as an arbitrator between the Newfoundland Government and the Reid Newfoundland Co., in connection with railway matters.

Royden Findlay McNaughton, who has been appointed District Passenger Agent, Canadian National Ry., Prince Rupert, B.C., was born at Petrolia, Ont., June 23, 1889, and entered railway service April 1908, since when he has been, to Oct. 21, 1910, relieving agent, Middle Division, G.T.R., Toronto; Oct. 21, 1910 to July 1, 1912, assistant rate clerk, Canadian Northern Ry., Winnipeg; July 1 to Nov. 1, 1912, chief ticket stock clerk, same road, Winnipeg; Nov. 1, 1912 to March 1, 1913, chief clerk to District Passenger Agent, same road, Saskatoon, Sask.; March 1, 1913 to July 1, 1914, Travelling Passenger Agent, same road, Saskatoon, Sask.; July 1, 1914 to Sept. 1, 1916, Travelling Passenger Agent, same road, Edmonton, Alta.; Sept. 1, 1916 to March 16, 1922, Travelling Passenger Agent, same road, latterly Canadian National Ry., Regina, Sask.

Sir Augustus M. Nanton, one of the C.P.R. directors, returned to Winnipeg early in March, after visiting in England and Scotland. He was the principal guest at a dinner given by the Canadian Club of Great Britain, in London, Eng., Feb. 23, among the other guests being Lord Shaughnessy, Chairman of the Board, C.P.R., and Sir George McLaren Brown, European General Manager, C.P.R. Sir Augustus Nanton spoke on Canada's needs and opportunities, dealing particularly with the development of the great prairie provinces and the opportunities they afford for settling the surplus population of Great Britain. Lord Shaughnessy spoke on Canada's advantages as a field for settlement. A vote of thanks was accorded to the speakers on Sir George McLaren Brown's motion.

Robert Patterson, formerly Master Mechanic, G.T.R. shops, Stratford, Ont.,

died at his home there, March 25. He was born at Brantford, Ont., March 13, 1860. His father was employed in the G.T.R. shops at Stratford for several years. He was educated at the Model School, Toronto, and entered G.T.R. service in 1874, as apprentice machinist, Montreal, and on the expiration of his apprenticeship, was transferred to the Stratford shops as machinist, remaining there until 1881, when he went to Philadelphia as machinist with the Baldwin Locomotive Works, and was later appointed Foreman, machine shop, G.T.R., Stratford, and in the same year General Foreman, Midland Ry., Port Hope, Ont. From 1883 to 1887 he was Locomotive Foreman, G.T.R., Montreal; 1887 to 1888, Locomotive Foreman, G.T.R., Toronto; 1888 to 1896, General Foreman, G.T.R., Toronto; 1896, acting Master Mechanic, G.T.R., Gorham, N.H.; 1896 to 1897, General Foreman, G.T.R., Port Huron, Mich.; 1897 to 1899, Master Mechanic, lines west of St. Clair River, G.T.R., Port Huron, Mich.; Feb. 1899 to Jan. 1918, Master Mechanic, G.T.R. shops, Stratford, Ont. In Jan. 1917 he was loaned to the Imperial Munitions Board and placed in charge of the General Car and Machinery Co.'s plant at Montmagny, Que., and on the completion of his work there, retired from G.T.R. service on pension. During his service with the G.T.R. at Stratford, he was largely instrumental in the inauguration of the present system of training apprentices in force throughout the G.T.R. The funeral took place at Mount Pleasant Cemetery, Toronto, March 27, and was attended by a number of G.T.R. officials. Mrs. G. P. P. all, wife of the Assistant Foreign Freight Agent, G.T.R., Toronto, is a sister.

F. H. Phippen, K.C., formerly Chief Counsel, Canadian Northern Ry., who was compelled to withdraw temporarily from the Toronto Ry. arbitration case a short time ago, owing to ill health, returned to Toronto from England, with Mrs. Phippen, on March 11.

F. E. Pittman, General Passenger and Ticket Agent, Reid Newfoundland Co., St. John's, Nfld., left Montreal, March 11 for Halifax, en route to St. John's, after a visit to Canada.

Albert A. Polhamus, General Agent, Passenger Department, C.P.R., Los Angeles, Cal., died there March 11, as a result of internal injuries received when he fell in playing with his young son.

John Bissell Reeve, whose appointment as Night Chief Dispatcher, Districts 4 and 5, Montreal Division, Eastern Lines, G.T.R., Montreal, was announced in our last issue, was born at Island Pond, Vt., May 16, 1886, and entered railway service Oct. 26, 1900, since when he has been, to Sept. 1, 1901, call boy, G.T.R., Island Pond, Vt.; Sept. 1, 1901, to May 1, 1903, car checker, G.T.R., Island Pond, Vt.; May 1, 1903, to May 10, 1906, clerk, G.T.R., at various points; May 10, 1906 to April 10, 1916, operator and relieving agent, G.T.R., at various points; April 10, 1916 to July 1, 1918, dispatcher, G.T.R., Richmond, Que.; July 1, 1918 to June 20, 1919, dispatcher, United States Railroad Administration, Island Pond, Vt.; June 20, 1919, to March 1, 1920, dispatcher, U.S.R.A., Portland, Me.; March 1, 1920 to March 26, 1921, dispatcher, G.T.R., Portland, Me.; March 26, 1921 to Feb. 1, 1922, dispatcher, G.T.R., Richmond, Que.

F. M. Rutter, who was appointed Superintendent, London Division, Ontario District, London, Ont., recently was presented with a gold watch and chain by the staff of the Bruce Division, Ontario District, Toronto, of which he had been Superintendent for about 10 years.

R. B. Stanton, who died at Stamford, Conn., Feb. 24, from pneumonia, aged 76, was, at one time, Division Engineer, Union Pacific Ry., and was also engaged as a mining engineer in Canada, the U.S., Mexico, Cuba and the East and West Indies. He was the author of a number of engineering works, including one on the great landslides on the C.P.R. in British Columbia.

F. C. Stebbins, who died at Montreal recently, aged 62, was an old C.P.R. employee. He entered railway service May 1, 1879, with the South Eastern Ry., at Chambly, Que., and was later transferred to St. Lambert, Que., serving as a telegraph operator. When the South Eastern Ry. was taken over by the C.P.R., in 1889, he was appointed car distributor at Farnham, Que., and transferred to Montreal in June, 1891. In July, 1908, he was pensioned on account of ill health.

Guy Tombs, traffic manager and freight broker, Montreal, and formerly in Canadian National Rys. service, addressed the Electrical Co-operative Society at Montreal on March 1, on transportation.

Amalgamation of English Railways.—London cablegram Mar. 19.—An agreement was signed last night completing the first big railway amalgamation promoted by the Government with a view to saving economy in operation, greater efficiency and the termination of wasteful competition. The companies amalgamated are the London & North-western and the Midland. The London & North-western has a capital of £188,292,156 (roughly \$828,458,484), and the Midland, £203,069,435 (\$897,136,496). The actual amalgamation will take place on Jan. 1, 1923, but this year the lines will be operated in the closest co-operation. The name of the new company will be announced later. The debentures will be guaranteed, and the preference stock of the two companies will be exchanged at par for stock in the new company.

United States Railways Consolidation.—The tentative plan for the consolidation of U.S. railways into large systems, proposed by the Interstate Commerce Commission, was given in detail in *Canadian Railway and Marine World* for Nov. 1921, p. 566. The commission has issued notice of a hearing to be held at Washington on April 24, to hear evidence on the proposed consolidation in the south-eastern region, which includes systems 10, 11 and 12 as outlined in the original tentative plan. The notice points out that while the value of the properties to be consolidated must be of the greatest importance in any actual consolidation, evidence as to value will be neither helpful nor material at the present rate of the enquiry. Alternative or modified plans of consolidation may be submitted in lieu of any system proposed in the original tentative plan.

Chairmen of House of Commons committees have been elected as follows:—Railways, canals and telegraph lines, F. S. Cahill, Pontiac, Que. Marine and Fisheries, W. Duff, Lunenburg, N.S.

The Windsor-Detroit Bridge Project.

The Canadian Transit Co. is applying to the Dominion Parliament for the following amendments to its act of incorporation obtained in 1921:—To enable the meetings of shareholders to be held in Detroit, Mich., to ratify an agreement dated June 6, 1921, with American Transit Co., enabling it to mortgage its assets and undertakings in conjunction with any other company, to secure payment of lands issued by such other company for the construction of the projected bridge from Windsor, Ont., to Detroit, Mich.; to enable the directors to issue bonds and other securities at not more than 7½ interest; and for such other powers incidental thereto as may be necessary. (Feb., pg. 76.)

C. E. Fowler, Chief Engineer of the company, spoke on bridge building before the Toronto University Engineer's Club, on March 14, and is reported to have stated that the borings for the foundations of the proposed Windsor-Detroit bridge had been completed. The work showed that rock was found everywhere within 100 ft. of the surface of the water, except at one point where it was 101.8 ft. Borings had been made 14 ft. into the rock, the results showing that it would be possible to have the foundations entirely in solid rock.

A press report states that the terminus of the bridge in Detroit will be in the vicinity of 24th Street, and that the terminal and approach to the bridge on the Canadian side will be at Sandwich.

The Toronto Transportation Club held its second monthly luncheon on March 27, with an attendance of over 70. Vice President G. W. Vanuxem, General Agent, Union Pacific Ry., occupied the chair, in the absence of the President, Thos. Symington, Superintendent Shelden Forwarding Co., who was in New York. As it was the 40th anniversary of Mr. Symington entering the Shelden Co.'s service, the club sent him a congratulatory telegram, and forwarded a copy of it, with a bouquet of roses to Mrs. Symington, who was at home in Toronto. R. M. Yeomans, of the City Industries Department, spoke on "Toronto as it is" dealing with the city's position and advantages, and was given a vote of thanks proposed by J. W. Hickson, Canadian Freight Agent, New York Central Rd.

British Exports of Railway Material.—That Great Britain has regained its position as an exporter of railway materials, and is maintaining it, is shown by the exports for Jan. 1922, compared with Jan. 1921 and 1920. Locomotive exports for Jan. 1922 were £863,981, compared with £547,428 in Jan. 1921 and £326,147 in Jan. 1920. Steel rail exports for Jan. 1922 were £415,585, compared with £454,887 in Jan. 1921 and £106,953 in Jan. 1920. The total value of all permanent way material exported in Jan. 1922 was £1,046,063, compared with £1,378,393 in Jan. 1921 and £600,939 in Jan. 1920.

Station Careraker Agent's Duties.—*Canadian Railway and Marine World* for February, continued, on pg. 60, the Board of Railway Commissioners' general order 355, passed Jan. 5, defining the duties of a caretaker agent at stations at which regular agents are not maintained. On March 2, the Board passed general order 359, rescinding order 355.

Railway Finance, Meetings, Etc.

Atlantic, Quebec and Western Ry.—Quebec Oriental Ry., J. S. Gordon, Manager of these two railways, is reported to have stated in Quebec, March 10, that the loss in operation for December, January and February, of this winter, was about \$16,000, against \$106,000 for the same three months of 1920-21.

Canadian National Rys.—A syndicate headed by Dillon Read & Co., New York, N.Y., offered recently an issue of \$11,000,000 Canadian Northern Ry. 3-year 5% notes guaranteed as to principal and interest by the Dominion Government at 99%, to yield about 5.15%. The notes are a direct obligation of the Canadian Northern Ry. Co. which forms part of the Canadian National Rys. system, and the prospectus stated that Canadian counsel had advised that they would be secured by the Dominion's full credit and taxing power, equally with its direct obligations. The issue was disposed of quickly.

Minneapolis, St. Paul and Sault Ste. Marie Ry. financial results in 1921 were such that the dividends on preferred and common stock have been reduced to a 4% basis, instead of 7% as heretofore. In 1921 the net operating deficit was \$189,983, fixed charges were about \$4,100,000, and dividends, paid out of surplus, were \$2,646,714, making a total deficit of \$6,937,000. Depressed traffic caused a decrease in gross revenue of 12.7%, compared with 1920, and operating expenses were not curtailed in proportion, the operating ratio being 91.8 in 1921, compared with 90.7 in 1920. In Jan. 1922, the operating deficit was \$350,959, compared with \$974,515 in Jan. 1921. Expenses were cut 26%, compared with Jan. 1921, and gross revenues declined 17.1%.

Thousand Islands Ry.—The annual meeting of shareholders was held at Gananoque, Ont., March 15, when the following directors were elected: J. E. Dalrymple, President; H. W. Cooper, General Manager; J. H. Valleau, Secretary-Treasurer; J. M. Sparling, and J. Yates. J. M. Rosevear is General Auditor.

C.P.R. After Russian Trade.—London, Eng., cablegram stated that the C.P.R. has been negotiating with the Russian Soviet Government to secure the right to quote through rates over Russian railways. The C.P.R. had this privilege before the war, and as a result was able to capture a large share of the trade with Russia and Siberia. Believing that the time had come for a resumption of trade, the company sent a representative to Petrograd to arrange matters. It is said, however, that so far nothing has come of the negotiations.—Copyright, Montreal Gazette.—A prominent C.P.R. official, to whom *Canadian Railway and Marine World* referred this press report for verification, characterized it as "hot air."

Bicycle Trespass on a Railway.—The Kingston, Ont., police magistrate fined a Frontenac County school teacher \$10 and costs recently for trespass on C.P.R. tracks. The teacher had 10 miles to go by highway to get to his school, but he could make it in 5 miles by using the railway track, and he had a bicycle fitted up with a third wheel, so that he could operate it on the rails on his daily trips. The railway officials warned him against the practice on several occasions before taking proceedings.

Reporting of Railway Accidents by Conductors, Etc.

The Board of Railway Commissioners passed general order 261, March 15, as follows:—Re sec. 285 of the Railway Act, 1919; general order 244, July 26, 1918, as amended by general order 251, Oct. 4, 1918; circular 110, April 3, 1913, and supplements thereto, April 30, 1918, and June 6, 1918; circular 131, March 11, 1914; and circular 161, March 8, 1918; the Board orders as follows:—

1. That every railway company be required and directed, within six days after the head officers of the company have received information of the occurrence upon the railway belonging to it, or operated by it, of any accident attended with personal injury to any person using the railway, or to any employee of the company, or whereby any bridge, culvert, viaduct, or tunnel on or of the railway has been broken or so damaged as to be impassable or unfit for immediate use, to give notice thereof to the Board, such notice to be addressed to the Board's Chief Operating Officer, and to be printed on hard paper in the forms A (relating to highway crossing accidents only) and B (relating to accidents other than those occurring at highway crossings), schedules to this order; such reports to refer to such accidents as above specified as occur as a result of transportation, that is to say, where movements of trains, engines, or cars are involved therein, and not to accidents occurring in railway shops, or manufacturing establishments, or other places on the railway, unless caused directly or indirectly by train, engine, or car movements.

2. That in the case of derailments, collisions, failure of locomotive boiler, highway crossing accidents, and where the same are attended with personal injury to any person using the railway, or to any employee of the company; all other accidents occurring on the railway, attended with personal injury to any person using the railway, or to any employee of the company, and in which accidents the movements of trains, engines, or cars is involved (but not in the case of accidents occurring in railway shops, manufacturing establishments, or other places of the railway company in which the movement of trains, engines, or cars is not involved in the accident); and any damage caused by any such accident to any bridge, culvert, viaduct, or tunnel on the railway, rendering the same impassable or unfit for immediate use (and whether attended by personal injury to any person or employee of the company or not)—the conductor or other employee of the railway company who is in charge of the train, place, or structure in connection with which the accident occurred, shall, at the expense of the company, and at the same time as he reports to the company, send a telegram, addressed to the Board's Chief Operating Officer at Ottawa, containing the following information:—date and place; name of railway; number and description of train or trains, engine or engines, concerned; number of passengers, employees, or others killed and injured; statement of any damage to any bridge, culvert, viaduct, or tunnel; a short and concise statement of the apparent cause of the accident; name and title of person sending report.

3. That where any such company grants, or has granted, running rights, or the joint use of its line, or any por-

tion thereof, to another company, and the last named company is concerned in an accident occurring on the said joint section required under this order to be reported, the operating company shall report to the Board as herein provided.

4. That every such railway company place before its conductors or other employees affected by this order a copy of paragraph 2 of the Order, directing them to comply directly with its requirements.

5. That all reports, whether written or telegraphed, made pursuant to this order, be privileged from production.

6. That general order 39, circular 110, with supplements 1 and 2, circular 171, circular 161, and general orders 244 and 251 be rescinded.

A Baggageman is Engaged in Train Operation.—Canadian Railway and Marine World for February, gave on p. 67, a summary of the facts and the judgment of the Quebec Court of Appeal in the prosecution of Frank Lang, a C.P.R. baggageman, for being under the influence of liquor while in his car at Windsor St. Station, Montreal. The Court of Appeal declared that a baggageman is a person whose employment has to do with the operation of trains, and therefore liable under the Railway Act, sec. 423. Lang appealed against this decision, and the Supreme Court of Canada dismissed his appeal, March 14.

C.P.R. Officials' Meeting.—A meeting of C.P.R. freight, passenger, operating, and telegraph officials, and of Dominion Ex. Co.'s officials was held in Prescott, Ont., March 7, E. F. Lawson of the freight department presiding. Among the subjects discussed were prevention of losses of freight; the care necessary in switching freight trains; precautions to be taken in marshalling freight trains; efficiency in service; securing of co-operation between shippers and the public; the safe transportation of explosives and other dangerous articles, and matters affecting claims and accounting.

Exchange and Surcharge on International Traffic.—In accordance with the Board of Railway Commissioners' judgment and order of Jan. 14, 1921, the rate of exchange in connection with shipments of freight between points in Canada and the U.S. from March 1 to 14 was 2 3/16%, and from March 14 to 15, was 4%. The surcharge on that traffic for March 1 to 15 was 1%, and from March 15 to 31 was 2%. The rate of surcharge on international passenger business from March 1 to 14 was based on 2% exchange, and from March 15 to 31, on 4% exchange.

Railway Employes' Voting Act.—The Ontario Legislature is being asked to amend this act, which authorized the holding of special polls at which railway employes, who may be absent on election days, may vote prior to the regular days, by including among those entitled to vote at the special booths, railway express clerks, and express companies' employes.

The International Railway Association's ninth annual congress will be held in Rome, Italy, from April 18 to 30. Among the reports to be presented is one by H. G. Kelley, President G.T.R., on freight stations.

Port Arthur Elevator Contract.—James Richardson & Sons, Kingston, Ont., are reported to have let a contract for the erection of a storage annex of 1,500,000 bush. capacity to their elevator at Port Arthur.

Grand Trunk Railway Construction, Betterments, Etc.

Pembroke Subdivision.—A press report states that new rails are to be laid from Pembroke to Golden Lake, Ont., 21.9 miles, during this year.

Toronto Belt Line.—The widening of upper Yonge St. necessitated the lengthening of the bridge carrying the old Belt Line across the street. The present width of Yonge St. is 66 ft., and the abutments of the bridge will be carried 10 ft. back on each side, so as to make the roadway 86 ft. wide.

Guelph Freight Shed.—The Board of Railway Commissioners visited Guelph, Ont., March 2, in connection with the company's application to erect a freight shed on the block bounded by Huskisson, Waterloo, Farquhar and Gordon streets, with the spurs and connecting tracks necessary to give connection thereto. The city council opposed the application on the ground that Huskisson St. along which the Guelph Radial Ry. runs, would be crossed on the level; the Hydro-Electric Power Commission of Ontario, which operates the Guelph Radial Ry., also opposed the proposal. It was stated that the placing of the shed on the situation proposed would depreciate property in the vicinity from 20 to 50%. The G.T.R. case was that the shippers desired better freight accommodation, and that the site had been selected after a careful survey as being the best from every point of view. The Board refused the application; the main ground against the proposal was the tracks down Waterloo St.

London Division Improvements.—A press report states that at a meeting of maintenance of way officials in London, Ont., March 7, arrangements were made for the carrying out of this year's maintenance and betterments work on the London Division. Considerable work will, it is said, be done by the bridge and building and track departments, including the erection of a new overhead bridge at Hyde Park, to replace the one destroyed by the wreck, on March 3. A temporary bridge was erected immediately after the wreck.

Air Line Division.—A press report states that the track between Glencoe and St. Thomas, Ont., 27 miles, is to be relaid with 100 lb. rails, at an estimated cost of \$200,000. The work is to be done jointly by the G.T.R. and the Wabash R.R., which has an operating contract over this line. (Mar. pp. 133.)

Mabou Coal Areas.—A press report states that the British Empire Steel Corporation is negotiating for the purchase of the Greenwood collieries, and the Mabou collieries in Inverness County, N.S. The Mabou coal areas are estimated to cover 17 square miles, and to contain about 675,000,000 tons. The companies named are reported to be willing to sell their interests for \$750,000. The Mabou Coal and Ry. Co. built about 5 miles of railway to serve coal mines in the district prior to 1907, and in 1908 had partially graded a 3 mile extension to a junction with the Inverness Coal and Ry. Co.'s line.

Five Canadian National Ry. passenger conductors are reported to have been laid off, and a sixth one to have been put back to conductor of a freight train, as a result of enquiries into handling tickets, according to a Moncton, N.B., press dispatch.

Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,
Marine, Shipbuilding, and Railway, Harbor and
Canal Contractors' Interests.

Official Organ of the various Canadian Transportation Associations.

The Canadian Pacific Railway's Results for 1921.

An inspection of the C.P.R. annual report for the calendar year 1921, which is published on pages 220 and 221 of this issue will show that, all things considered, the company had a year which may be described as satisfactory. While gross earnings, \$193,021,854, were less than in 1920, when they were \$216,641,349, despite the average higher freight and passenger rates obtaining during 1921, the fact is of more significance as an indication of the extent of the business depression which existed during the year, than of anything else, and the large reduction of operating expenses which took place, from \$183,488,305 in 1920, to \$158,820,114 in 1921, is worthy of greater attention. While decreases in material costs and in wage rates have been of great assistance, the fact remains that the task of decreasing expenses to meet conditions of reduced traffic is at all times a difficult one, and the C.P.R. management is to be congratulated on the success it attained in this task in 1921. The figures for the year dealing with special income account may also be referred to as satisfactory.

With an operating ratio of 82.28 in 1921, compared with 84.70 in 1920, the net earnings for 1921 were \$34,201,740, compared with \$33,153,044 in 1920. After payment of fixed charges, preferred and common dividends, and the pension fund contribution, the net surplus for the year from rail and lake steamship operation was \$755,391 compared with \$450,359 in 1920. In 1921 this net surplus was \$844,250, in 1918 it was \$2,205,621, in 1917 it was \$2,420,915, and for the year ended June 30, 1916, it was \$15,444,158. These figures are worthy of careful consideration. In our introductory paragraph we stated that 1921 was satisfactory for the C.P.R., "all things considered," and the modification must be noted. The statement that the year was satisfactory must be accepted as true, because various factors are taken into consideration, one being the business depression which obtained during the year, another being the results of the preceding two years, in both of which also the surplus was but nominal, and a third being the fact that the railway business throughout the world has operated with financial results of a nature altogether different from those attending railway operation a few short years ago. To compare the 1921 figures with those of 1916, say, without taking these facts into consideration, would lead one to the belief that the C.P.R. had a very lean year in 1921. Even taking such facts into consideration, the figures, as we have said, are worthy of careful consideration. Such consideration would lead, presumably, to the conclusion, and it is a correct conclusion, that the railway business has still some distance to go before operating revenues and expenses bear a proper relationship to each other. An operating ratio of 82.28 is too high. Everyone believes that this country will prosper; that growth and additional railway facilities, in the absence of which growth and prosperity will be greatly handicapped. It will be well if these facilities can be provided by a company whose credit is of the highest, and that their provision does not mean the imposing of unduly great additional fixed charges, the meeting of which would tend to keep rates unduly high.

The operating ratio must be reduced.

Much is heard these days of the fact that the C.P.R. is able to earn more than the customary 10% on its common stock, at a time when many individuals and corporations are able to secure but limited returns on capital, and this is often used as an argument in propaganda for the reduction of freight rates. While in 1921 there was earned from the combined railway and special income ventures a return of 11.5% on the common capitalization, this figure being 11.4 in 1920, 10.8 in 1919, 10.97 in 1918, 15.59 in 1917, and 16.76 in 1916, if due consideration be given to the sums put back into the property and to the relationship as between capitalization and property value, the return to capital in this venture paid by the Canadian public will be found to be extremely moderate. Stress is laid on this fact in an article appearing elsewhere in this issue dealing with C.P.R. and Canadian National Ry. results for January, where it is argued that railway revenues should not be further contracted until expenses are reduced to compensate. The latter principle cannot be enunciated with too great emphasis.

The portions of the annual report dealing with land sales, additions to fleet, new financing and proposed capital expenditures are worthy of attention; the latter would indicate that amounts to be used for improved facilities and for economies in operation will be expended with the utmost care and only after a thorough study directed to secure the maximum return, which is in keeping with the times and with the financial returns secured by the company during the last three years. The divisions of operating revenues and expense and the classification of freight rates are worthy of study, and an examination of the train mileage, car mileage, car loading, train loading and other operating statistics will indicate that there has been no decrease in the high efficiency which characterizes C.P.R. operation.

The one great thing about the C.P.R. report for 1921, and a thing which has marked all the company's preceding annual reports, is that it is expressive of the efficiency, economy and good management which have always marked the company's operation, and for this reason it gives rise to confidence. It would be difficult to doubt the continued success of the C.P.R. venture, for that is coincident with the continued success of Canada. While it is but natural that cheap transportation is desired by all classes of the community, and why it is but natural also, perhaps, that some sections of the community should show too great zeal for their own ultimate good, in the effort to secure cheap transportation, we are cognizant of the fact, as these over-zealous people should be cognizant of it, that we have in Canada the cheapest and most efficient rail transportation of any country. Further, we are confident that we will have a continuation of that regulation of railways which, after all is said and done, has been fair, to the end that the C.P.R. will be enabled to keep its credit high, to grow and expand with the growth and expansion it makes possible for the country, and to continue to furnish a prosperous Canadian transportation which on a basis of cost and efficiency, is unsurpassed in any other country in the world.

An Unnecessary Locomotive Boiler Explosion.

A disastrous locomotive boiler explosion occurred on the London & North-western Ry. of England on Nov. 11, 1921. At an enquiry at which over 40 witnesses were examined, it was shown that continual difficulty had been experienced by locomotive men handling the locomotive the boiler of which exploded in working the injectors when the boiler was high in steam, and that as a consequence most of the men who had operated it made a practice of working with a reduced steam pressure. The locomotive was reported for defective injectors 12 times in the three months preceding the explosion, and the steam gauge was reported defective four times, and at the enquiry it was shown that the gauge would register up to 300 lb. without the pops opening, although the pops were supposed to be set for 200 lb.

The lesson from this carries right across the Atlantic. Lack of maintenance at locomotive terminals can be "got away with" for a time, but the chance may be taken once too often. The great underlying principle of equipment maintenance is that a stitch in time saves nine, an old and homely adage, but ever ingeniously true. With injectors booked twelve times, and the trouble still unlocated, a wrong condition is indicated. It may happen that service demands require repairs to be postponed, but they can be postponed too long. A locomotive man may even start off with but one inspirator working in the cab, but it certainly should not be done.

Tired of Public Ownership?

The French Government will, it is stated in a press dispatch, send the publicly owned railways, finding that governing the country is a large enough job in itself.

Hotel Rates.

While the public are continually demanding lower railway freight and passenger rates, and strongly object to even a 1c raise in street car fares, most of them put up with other war time increases without any publicly proclaimed objection. This is particularly true in regard to hotel rates, which even before the war had advanced considerably, and are still at the war peak, and in many cases extortionate. A notable exception is the King Edward Hotel, Toronto, which reduced its rates recently, the present ones for rooms on the European plan being as follows per day: Single rooms, without bath, \$2 and \$2.50; with shower bath, \$3 and \$3.50; with tub bath, \$2.25 and up. Hotels in other principal cities, notably Quebec, Montreal, Ottawa, Winnipeg, Edmonton, Vancouver and Victoria should follow suit and get down to reasonable prices.

"A Statistical Expert?"

J. L. Payne, who either styles himself "Former Statistical Expert of the Department of Railways and Canals," or is designated by Toronto Saturday Night, is contributing a series of articles to that and other papers on "Canada and its Railway Problem." He never had such a title in the public service, but was Comptroller of Statistics in the Department until a former Minister decided to dispense with his services. He was simply a compiler and tabulator of statistics furnished to the Department by transpor-

tation companies, to the inaccuracies in which, as compiled and published by him, Canadian Railway and Marine World found it necessary to call attention year after year. If the figures he is now giving are not more correct than many of those he used to send out officially, little, if any, attention should be paid to them. It would require a great stretch of one's imagination to consider him "A Statistical Expert."

Embargo on Grain to Vancouver for Export.

While British Columbia Government representatives were attending Board of Railways Commissioners' hearings at Ottawa recently in an effort to obtain lower freight rates which would, presumably, encourage the shipment of export grain through Vancouver, Canadian railways had in force an embargo on grain moving west to Vancouver for export. This embargo was placed by the Canadian Pacific and Canadian National Rys. on March 1, owing to the Dominion Government elevator at Vancouver being full, and as the prospect of obtaining release of the large number of cars loaded with grain on the tracks of both railways for delivery to the elevator did not appear bright. The congestion was caused by slow clearance of grain from the port by ocean steamships. The embargo as issued was modified to the effect that for any shippers who have grain for shipment and have ocean tonnage arranged for at a reasonably near date, the railways will issue instructions to their agents to accept such shipments. At the time of writing (March 29) but little, if any improvement in the situation had taken place, and the embargo was still in effect. This condition of affairs shows the absolute necessity of providing additional elevator accommodation at Vancouver, which should be pressed for during the Dominion Parliament's present session. The exporting of wheat from Alberta and possibly from portions of Saskatchewan through Vancouver, which is its natural route, only in its infancy and any obstacles in its way should be removed by prompt government action.

Railway Accidents Throughout Canada.

The total number of railway accidents throughout Canada, during February, reported to the Board of Railway Commissioners, was 144, resulting in 14 persons being killed and 154 being injured. Of those killed, 2 were passengers, 6 were employees and 6 were others, and of those injured, 126 were passengers, 121 employees and 17 were others. Under "others" are included 2 persons killed and 6 injured, in 7 highway crossing accidents. In 3 of these accidents, the crossings were unprotected; in 3, there were speed restrictions; and in 1 the crossing was protected by a flagman, who was not on duty at the time of the accident. A motor truck and an automobile were concerned in 2 of these accidents, a sleigh and a railway motor and sleigh in another 2, pedestrians in 2, and a van in one.

Canadian National Rys. Officials' Salaries.—The Minister of Railways stated in the House of Commons on March 29, in answer to O. Turgeon, Gloucester, N.B., that D. B. Hanna, President, was paid during 1921 \$35,000 salary and \$2,000 director's fees. A. J. Mitchell, Vice President, Finance and Accounts, was paid \$20,000 salary and \$2,000 director's fees.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Any change or absence of error in our announcements will confer a favor by advising us.

Canadian National Rys.—D. S. DAV-
IDSON, Roadmaster, Portage la Prairie, Man., having resumed duty, F. Scott, who has been acting during his absence, has been assigned to other duties.

B. S. DUNCAN has been appointed tool room foreman, Port Rouge ships, Winnipeg, vice J. Holden, deceased.

W. H. FLEMING, heretofore foreman steam shovel, Boston Bar, B.C., has been appointed Roadmaster there, vice — Flynn.

W. J. FOSTER has been appointed Locomotive Foreman, Eisdale, B.C., vice G. A. Cameron, resigned.

G. I. HEMS WORTH and D. ROSS, whose appointments as Traffic Representatives in the Far East, were announced in a previous issue, will cover the following territory,—China, Japan, Philippine Islands, Straits Settlements and Dutch East Indies, reporting to the General Traffic Agent, Shanghai, China.

P. HENZE, heretofore locomotive man, Dauphin, Man., has been appointed acting Road Foreman of Locomotives there, vice N. C. Ferguson.

G. F. JOHNSTON, heretofore City Passenger and Ticket Agent, Prince Rupert, B.C., has been appointed General Agent, Passenger Department, in Australasia, with office in Australia.

R. F. McNAUGHTON, heretofore Travelling Passenger Agent, Regina, Sask., has been appointed District Passenger Agent, Prince Rupert, B.C., vice G. F. Johnston. City Passenger and Ticket Agent, appointed General Agent, Passenger Department in Australasia.

Canadian Pacific Ry. — G. D. BROPHY, heretofore District Passenger Agent, Banff, Alta., has been appointed District Passenger Agent, Regina, Sask., vice J. A. McDonald, transferred to Banff, Alta.

S. C. HURKETT, whose appointment as Assistant Foreign Freight Agent, Montreal, was announced in our last issue, has charge of the solicitation of export and import rail traffic, via Atlantic ports. A. W. SNELL, who is also Assistant Foreign Freight Agent, Montreal, has charge of the solicitation of export and import ocean traffic via Atlantic ports.

J. A. McDONALD, heretofore District Passenger Agent, Regina, Sask., has been appointed District Passenger Agent, Banff, Alta., vice G. D. Brophy, transferred to Regina, Sask.

Dominion Atlantic Ry. — F. G. J. COMEAU, heretofore General Freight Agent, has been appointed General Freight and Passenger Agent, Halifax, N.S.

R. U. PARKER, heretofore General Passenger Agent, Halifax, N.S., has been appointed District Passenger Agent, States territory, vice J. S. Carder, New England, Agent, who has been appointed chief assistant to General Agent, Office, 12 Milk St., Boston, Mass.

Freight Claims.—The American Railway Association Freight Claims Division states that U.S. railways paid freight claims as follows: Sept., 1921, \$6,640,527; Oct., 1921, \$6,441,925; Nov., 1921, \$5,783,142. The November figure showed a decrease of 44% from Jan. 1921.

Steam Railway Operating Statistics for Year Ended Dec. 31, 1920.

In the following table the column headed "First track mileage," includes the first track of main line, branches and spurs of lines represented by the respective companies' capital stock, the lines of proprietary companies, the lines operated under lease, and lines operated under contract, but not lines operated under trackage rights, the mileages of which are included in those for the respective owning companies. There were 26 companies operating under trackage rights over 1,076.95 miles of other companies' tracks, the principal being: Canadian Northern, 156.20 miles; Canadian Pacific, 93.90 miles; Grand Trunk Pacific, 129.96 miles; Midland of Manitoba, 69.88 miles; Pere Marquette, 137.93 miles; Vancouver, Victoria & Eastern, 54.95 miles; Wabash, which does not own any line in Canada, 245.40 miles. In addition to the 38,895.64 miles of first

track operated, there were 2,590.55 miles of second track, details of which are given under "Notes to Steam Railway Statistics" on the following page.

The figures in the column headed "Gross earnings" includes passenger and freight earnings, as well as miscellaneous earnings from operation, the latter not being shown separately; the next four columns give the principal operating expenses classified under their various headings, while the last gives the net earnings, which are arrived at by deducting the totals of the four columns referred to, together with some other figures referred to in a note, from the figures in the gross earnings column. The minus (—) mark before figures in the net columns shows that there was a deficit in the operation of the line to the extent of the figures given. The cents have been omitted in all cases.

and the figures in the totals show the aggregate earnings, etc., including the cents, omitted from the detailed items.

The figures in the last column of the table show the net earnings or loss from the operation of the various railways, and their necessary adjuncts. Many companies have income from other sources, and in some cases carry on business apart from their railways; these revenues are brought together in the "Income account," and from them are deducted taxes, rents for lease of other lines, etc., interest or funded debts, sinking funds, etc., leaving, in the final analysis, the net corporate revenue available for dividends, or the gross deficit for the year.

The figures, in brackets, after the names of railways in the following table refer to paragraphs in "Notes to Steam Railway Statistics," on the following page.

Name of Railway	First track mileage	Passenger earnings	Freight and switching	Gross earnings from operations	Maintenance of way and structures	Maintenance of equipment	Traffic and transportation expenses	General expenses	Net operating earnings

Notes to Steam Railway Statistics.

(1) The following companies either have not reported or are not operating their railways:—Inverness Ry. and Coal Co.; Northern New Brunswick and Seaboard Ry. Co., and New York Ry. Co. It was reported in 1919 that the latter company's rails had been lifted and sold.

(2) The Detroit River Tunnel Co., operated by the Michigan Central Rd. Co., which controls the Canada Southern Ry., and the International Bridge Co., and the St. Clair Tunnel, owned by the G.T.R. Co., are of an international character, and are reported on separately, along with other transportation companies of an similar character. See paragraph "International Railways" at the end of this article.

(3) The Canadian Government Ry. include the following which were reported on separately for 1919:—Intercolonial Ry., Elgin and Havelock Ry., International Ry. of New Brunswick, Moncton and Buctouche Ry., Prince Edward Island Ry., St. Martins Ry., Salisbury and Albert Ry., York and Carleton Ry., Lotbiniere and Megantic Ry., and National Transcontinental Ry.

(4) The figures as to earnings, etc., of the Cape Breton Ry. are for six months only.

(5) The Grand Trunk Pacific Ry. figures include those of the Grand Trunk Pacific Branch Lines which were reported upon separately for 1919.

(6) In addition to traffic and transportation expenses, six companies showed \$1,878,156 as water line transportation costs; and 16 lines showed \$7,814,424 as the cost of miscellaneous operations connected with transportation. In addition eight companies showed as credits on account of transportation for investment, the following amounts:—

Algonia Eastern	\$1,013.00
Alberta & Great Waterways	7,919.00
Canada Southern	7,986.53
Canadian Northern	708,042.94
Grand Trunk	6,392.28
Timiskaming and N. Ontario	819.55
Vancouver, Victoria and Eastern	15.47
Wabash (in Canada)	69.54
Total	\$727,258.71

Second Track.—Following are the second track mileages in addition to the first track mileages given in the first figures column on this and the preceding pages:—

Canada Southern	243.04
Canadian Government	118.10
Canadian Northern	11.01
Canadian Pacific	1,420.00
Grand Trunk	722.86
Grand Trunk Pacific	25.97
International Bridge Co.	0.58
Montreal and Atlantic	6.50
Quebec Ry., Light and Power Co.	9.50
Sydney and Louisburg	1.00

Timiskaming and Northern Ontario	1.70
Toronto, Hamilton and Buffalo	14.07
Vancouver, Victoria and Eastern	7.12

International Railways.—The following table gives particulars of operations of companies which are of an international character, operating across the International Boundary:—

	Total revenue \$	Total operating expenses \$	Net operating revenue \$
Detroit River Tunnel Co. 1,058,250.90			1,058,250.90
Int. Bridge Co. 431,316.76	146,461.97	284,854.79	
Pallman Co. 1,210,247.00	963,252.63	246,994.37	
St. Clair Tunnel Co. 306,289.89	279,474.43	26,815.46	
Van Buren Bridge Co. 25,512.21	3,104.29	22,407.92	
Total.....	3,031,616.76	1,392,293.32	1,639,323.44

Notices re Railway Crossings of Highways in Western Provinces.

The Board of Railway Commissioners passed general order 358, Feb. 22, as follows:—Re applications to the Board in respect to railway crossings of highways in Manitoba, Saskatchewan, Alberta and British Columbia. In pursuance of the powers conferred upon the Board by the Railway Act, 1919, secs. 34 and 256, and of all other powers possessed by it in that behalf, the Board orders that all railway companies within the legislative authority of the Dominion Parliament, constructing or operating railways in Manitoba, Saskatchewan, Alberta, and British Columbia, do, in addition to any notice required to be served upon the local municipality, or other persons concerned, serve copies of notices of all applications to the Board with respect to railway crossings of highways in the said provinces, and outside the limits of incorporated cities or towns therein, upon the following representatives of the Governments of the said provinces, respectively, viz., in Manitoba, upon the Minister of Public Works; in Saskatchewan, upon the Minister of Highways; in Alberta, upon the Minister of Public Works; in British Columbia, upon the Minister of Public Works; and shall furnish the Board with evidence of service of such notice before any such application shall be disposed of by the Board.

Ride Stealing.—Georges Tessier, in the Montreal Police Court recently, was fined \$10 and costs or 15 days in jail for stealing a ride on a G.T.R. train from St. Henri to Bonaventure station. He was caught riding on the cowcatcher of the engine by one of the railway policemen.

The Railways and Daylight Saving.

The Railway Association of Canada issued the following early in March:—"The railways are, of course, not expressing any opinion as to the merits or demerits of daylight saving. They are themselves controlled by Federal enactment and other legislation in the matter. Put where one city advances its time on one date, the second on another date, and still a third retains sun time, confusion and inconvenience are caused to travellers, business men, and railway employees. For many years past the railways have made it a rule to change their winter train schedules to summer train schedule on the first hour of the Sunday nearest to May 1, and vice versa on the first hour of the Sunday nearest to Oct. 1. These dates have been found generally satisfactory as the dividing points between summer and winter, and we feel that they might safely be adopted as the dates when daylight saving, if adopted, should begin and end. In this way all important changes in time schedules would take place simultaneously over the whole country."

Montreal and Toronto have already decided to again adopt daylight saving, Montreal acting on the Railway Association's suggestion to put it in effect from April 30 to Oct. 1. Toronto has fixed its dates from May 14 to Oct. 14 and Ottawa from June 4 to Sept. 3.

Grain Shipments Through Port McNicoll, Ont.

Following are particulars of grain shipped through Port McNicoll, Ont., by the C.P.R., from Sept. 1, 1921 to Feb. 28, 1922, and from Sept. 1, 1920 to Feb. 28, 1921, respectively:—

	1921-22	1920-21
Total bush. shipped	31,343,433	31,222,637
Bush. shipped per day	173,168	66,970
Total cars shipped	16,633	7,002
Cars shipped per day	82	43

Atlantic City Conventions.—The American Railway Association, Mechanical Division, will meet at Atlantic City from June 14 to 21 inclusive. Up to March 1, 240 applications had been received from exhibitors, requiring in the aggregate about 80,000 sq. ft. of space. The A.R.A. Purchases and Stores Division will meet on June 19 to 21, and the Association of Railway Electrical Engineers on June 19.

Railway Lands Patented.—Letters patent were issued during February for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia as follows:—

	Acres
Edmonton, Dunvegan and B.C. Ry.	12,234
Grand Trunk Pacific Branch Lines	188,590
Total	201,144

Canadian Pacific and Canadian National Railways' January Earnings and Expenses.

The C.P.R.'s gross operating revenues for January were \$11,337,974, compared with \$14,465,430 in Jan. 1921, and operating expenses were \$10,854,497 compared with \$13,824,005 in Jan. 1921, leaving net earnings of \$483,477 in Jan. 1922, compared with \$644,424 in Jan. 1921, a decrease of \$157,947. While as compared with Jan. 1921, gross earnings decreased \$3,127,455, operating expenses decreased only \$2,969,508, leaving the company with the smallest monthly net earnings for many years.

The Canadian National Rys., including the Canadian Northern Ry., the Canadian Government Ry., and the Grand Trunk Pacific Ry., gross operating revenues for January were \$8,210,400, compared with \$10,850,909 in Jan. 1921, and operating expenses were \$10,433,563 in Jan. 1922, compared with \$13,713,967 in Jan. 1921, which resulted in the operating deficit being reduced from \$2,863,057 in Jan. 1921 to \$2,223,162 in Jan. 1922.

January is commonly supposed to be one of the worst months of the year in Canadian railway business, as the traffic offering is generally the smallest of any month in the year, and for the additional reason that the difficulties of conducting transportation are increased by unfavorable weather conditions. That the C.P.R. gross earnings should have been smaller than they were in preceding months was to be expected, and that they would probably be smaller than in Jan. 1921 was also to be expected in view of the rate reductions which have taken place within the year. But the fact remains that the C.P.R. Jan. 1922 results are such as to indicate that there does not as yet exist a proportionate drop in earnings as compared with the drop in ship as between income and outgo in the Canadian railway industry. There does not exist a proper relationship as between gross earnings and operating expenses so far as the railways are concerned, and what is more important, so far as the country as a whole is concerned. The Canadian National Rys. earnings support this statement, particularly in view of the fact that in some months of 1921 those lines earned their operating expenses. After the months of 1921 during which the C.N. Rys. were making a small operating surplus, the January results are most disappointing, and show in an unmistakable manner that, even after allowing for the influence of reduced traffic in January, the relationship as between earnings and expenses has become much worse.

Leaving the Canadian National Rys. out of consideration for the time being, an examination into the C.P.R. position cannot fail to be informative. It is a fact that the C.P.R. is earning and paying dividends of 10% annually on its common stock, although all of this does not come from railway operation. If the common impression that the capitalization of the road represents a sum in excess of the value of its property devoted to the public service is at all correct, western and other daily newspapers would have some justification for their demands that rates and dividends be reduced. But the facts, as disclosed by W. B. Lanigan, the company's Freight Traffic Manager, during recent rate proceedings before the Board of Railway Commissioners, are that in 1921 the value of the investment in the

C.P.R. enterprise was \$894,807,714; the net earnings were \$34,201,740; fixed charges, dividends and contribution to pension fund were \$33,502,277; the rate of return earned on the investment was 3.822%, and the contribution to surplus was 8 1/8 of 1%. Now, while for the year 1921 the rate of return on the value of the C.P.R. property used in the public service was 3.822%, the Board of Railway Commissioners ordered a reduction in freight rates of 10% effective Dec. 1, 1921, without any reduction of operating expenses accompanying the forced reduction in rates. And at present there are demands from all parts of the country for further reductions in rates, regardless of whether further reductions in expenses are possible or not.

Our contention is that further rate reductions on the traffic handled by the C.P.R. before reduced expenses are accomplished fact, would be injurious, not only to the C.P.R., but to the country. We maintain that a rate of return of 3.822% on the value of the Company's property used in the provision of efficient transportation for the people is a just and reasonable return so far as the people are concerned, and that it would not be logical to expect to have transportation performed for any smaller return. It has been pointed out that while the C.P.R. is getting this return, industrial concerns, and farmers, are earning smaller returns, or no returns. It has not been pointed out that during 1916, 1917, 1918, 1919 and 1920, when any business man or farmer worthy of the name was able to go ahead and make extraordinary returns on his capital, the C.P.R. being a privately owned, but publicly regulated, undertaking, was held down to a return on the value of the investment of 5.473% in 1917, of 4.172% in 1918, of 4.078% in 1919 and 3.862% in 1920. Nor have those publications which have so much to say about the injustice of C.P.R. rates being such as to permit the company to earn a rate at present, brought to their readers' attention the fact that the United States law prescribes a return of 6% on the value of railway property devoted to the public use. If the U.S. people see fit to try to attract capital into the work of providing transportation by offering it this return, why should any one in Canada object when the C.P.R. is content to provide transportation for a return of 3.822% on the value of its property? If the C.P.R. had outstanding capitalization equal to the value of its property, and was paying 6% annually on such capitalization, those who complain about the company being able to maintain its dividend at present might have some basis for such complaint; under present circumstances, they are closely akin to the Russian Bolsheviks in their desire to destroy capital.

So much for the equity of the C.P.R. position. How will it affect the country, in the final analysis, if further rate reductions are made before reductions in expenses are accomplished fact? Looking at this matter broadly, there is a certain amount of rail transportation service to be performed in Canada, and the performance of this service has to be paid for. If anyone can find a way to make transportation more efficient and cheaper, they will be conferring a

service on the country at large, but for the present it is reasonable to assume that the C.P.R., having been in the transportation business for a good many years, is performing its service as cheaply and efficiently as it can be performed. To perform that service, facilities are necessary, which call for expenditures of capital from time to time, and if that capital is not available for expenditure, or is available only on very unfavorable terms, the chances are that the expenditure will not be made, and advantage will not have been taken of the opportunity to make transportation cheaper and more efficient. The more such expenditures are deferred the more inefficient and costly transportation will relatively become, whether such deferred improvements consist of the electrification of a portion of line at a cost of \$100,000,000, the construction of a short line at an expenditure of \$1,000,000, the application of economy devices to locomotives at a cost of \$1,000 each, or the erection of a cattle loading platform at a cost of \$100. After all, the whole scheme of industry and economics is largely automatic in its applications; if labor be denied a fair return, the community will suffer in the end, and if capital, which is merely wealth collected by saving, be denied a fair return, the community will likewise suffer in the end.

Here is the proposition. If the Canadian people, in their quest for lower transportation charges, see fit to deny the C.P.R. rates for its services, performed as efficiently as it is humanly possible to perform them, which will yield it a fair return and provide something for necessary new expenditures, then the people will be guilty of a policy of false economy which will cost them dearly in the end. There are only two things which will permanently reduce transportation charges, after fair wages to labor and capital have been determined, and those things are greater traffic, and greater efficiency in conducting transportation. Greater traffic will come; in the meantime, let us not be guilty of placing the men who are operating our railways in a position where they will be financially unable to increase transportation efficiency.

The general reduction in rates effective Dec. 1, 1921, took a large revenue from the railways, which should not have been taken until operating expenses had been decreased to compensate, and then the reduction should have applied to specified commodities. One of the big troubles in this country today is that many of the chief industries are out of gear with each other. The reduction of rates should have been applied so as to assist in putting industries into proper relationship. Further decreases in rates, applied to specified basic commodities, are now talked of. But let it be thoroughly understood that such reductions, if made before reductions in railway operating expenses are made to compensate for them, and for the reduction of Dec. 1, 1921, will be not only an injustice to the C.P.R., with its return of 3.822% annually on the value of its property devoted to the public use, but will be injurious to the whole of Canada. If rates must be further reduced, operating expenses must first be reduced.

The Canadian National Rys.' position is different, as the people as a whole are called upon to make good the deficits and provide the money for the new facilities which are needed to make transportation efficient. But the fact remains, that the smaller the deficits are which have to be met by the proceeds of taxation, the more equitable will be the operation of these railways so far as the people are concerned. A railway should be a self-supporting commercial proposition. Why should A and B help C to pay for transportation which C receives and which is of no benefit to A and B, and which C will make them pay for anyway if he sells them any of the goods on which he paid the transportation? With railway rates bearing the same relation to expenses as they did before the cut of Dec. 1, 1921, the Canadian National Rys. were in a fair way to earn operating expenses for a complete year; some encouragement was provided. But with rates reduced, and expenses remaining as they were, hope seems once more conspicuous by its absence, and the discouraging influence of monthly deficits is once more apparent. The sooner the C.N. Rys. are able to earn their operating expenses, the better will it be for all Canada, and for that reason further rate

reductions, without reductions in operating expenses to compensate for them, and for the rate reduction of Dec. 1, 1921, would be most ill advised.

So the matter stands. The January results reflect the true position. Railway rates, in relation to railway expenses, are, and have been for some years, too low for the ultimate good of this country. Whether railway operating expenses will be substantially reduced remains to be seen. It may be taken for granted that wage decreases would be strenuously resisted, but the fact is that railway rates must depend largely on wages. If the public thinks railway rates are too high, it will have to realize that it is not because the railways are deriving unduly great net earnings, but because they are faced with unduly high operating expenses, of which wages constitute the greater part, and it will have to realize that railway rates cannot be reduced unless and until railway wages are reduced. If the public realized this, the public should realize that their differences are with railway employees, whether their present wages are just or unjust. To look for rate reductions before railway operating expenses are reduced to compensate is to look for something entirely unreasonable.

United States Railways' Financial and Operating Results.

Information furnished Canadian Railway and Marine World by the U.S. Railway Executives, based on reports to the Interstate Commerce Commission, shows that in Dec. 1921 the net operating income earned by class 1 roads in the U.S. was \$51,510,478, representing an annual return on the value of the properties of 3.44%. Operating revenues for the month were \$425,044,000, a reduction of 22.8% compared with Dec. 1920. Operating expenses were \$348,973,000, a decrease of 31.7% compared with Dec. 1920. The net operating income of \$51,510,478 lacked \$38,412,522 of being a 6% return. In Dec. 1921 the railways expended \$142,159,296 for maintenance work, 34.8% less than in Dec. 1920.

Reports, complete except for that of Henry Ford's road, the Detroit, Toledo and Ironton, showed that the railways in the U.S. Eastern District had operating revenues in Dec. 1921 of \$206,383,581, a reduction of 24.7% compared with Dec. 1920, while operating expenses totalled \$165,515, a reduction of 34.9% compared with Dec. 1920. The net operating income was \$30,156,634, compared with \$4,057,047 in Dec. 1920. The net operating income for Dec. 1921 was at the annual rate of 5.13%, but fell short by \$5,111,366 of the 6% return authorized by the Transportation Act.

The railways in the Southern District had operating revenues of \$55,070,332, a decrease of 19.1% compared with Dec. 1920, while operating expenses totalled \$40,664, were 40.4% smaller than in Dec. 1920. Net operating income was \$11,209,482, compared with a deficit of \$2,650,282 in Dec. 1920. This was at the annual rate of return of 4.92%, but was \$2,472,518 below a 6% return.

The railways in the Western District had operating revenues of \$163,590,011 in Dec. 1921, a reduction of 21.5% from those of Dec. 1920, and operating expenses for the month were \$143,187,838, a decrease of 24.1% compared with Dec. 1920. Net operating income was \$10,144,362, compared with \$1,942,008 in Dec. 1920. The net operating income

earned was representative of an annual return of 1.49%, but was \$30,828,638 below a 6% return.

The Interstate Commerce Commission report on revenues and expenses for the class 1 roads for the calendar year 1921, with the single exception of the Detroit, Toledo and Ironton, the report of which was not compiled on time, shows that the total railway operating revenue for the year was \$5,563,232,215. Of this, \$3,918,699,970 came from freight, \$1,153,752,002 (including \$32,601,960 sleeping and parlor car surcharge) from passengers, and the remainder from mail, express, etc. Operating expenses for the year were \$4,597,479,241, of which \$765,479,568 went for maintenance of way and structures, \$1,254,221,299 for maintenance of equipment, \$2,286,043,830 for transportation expenses, \$84,186,263 for traffic expenses, and the remainder for miscellaneous operations, general expense and transportation for investment. Net revenue from railway operations was \$965,752,974; taking from this \$280,000 in tax accruals, and \$1,978,578 in uncollected revenue, the railway operating income was \$683,332,908. Further subtracting the debit balances of joint facility and equipment rents, the net railway operating income was \$614,810,531, a return of 3.31% on the tentative valuation of the properties. The operating ratio for the year was 82.64, compared with 93.65 in 1920.

The net operating income of class 1 railways for 1921 scarcely more than covered their interest charges alone, these amounting to \$603,000,000 in 1920 and being somewhat greater than in 1921. Fifty-four railways, with 26,022 miles of track, had operating deficits in 1921, the deficits amounting to \$29,114,000. A belief has existed in the minds of a large part of the U.S. public that the railways were "guaranteed" a percentage of 6% on the value of their properties. The return of 3.31% is all they get. As pointed out by the Association of Railway Executives, the difference, when expressed in dollars and cents, is large.

Location of Freight Cars.

The Railway Association of Canada reports the location of freight cars on March 1, based on returns from the following railways: Algoma Central & Hudson Bay; Canadian National, including Grand Trunk Pacific; Canadian Pacific; Central Vermont, in Canada; Dominion Atlantic; Edmonton, Dunvegan and British Columbia; Grand Trunk; Kettle Valley; Michigan Central, in Canada; Napierville Jct.; Pere Marquette, in Canada; Quebec Central; Quebec, Montreal & Southern; Temiskaming and Northern Ontario; Temiscouata; Toronto, Hamilton & Buffalo; Wabash, in Canada. The figures are as follows:—Cars owned by reporting railways, 222,862; home cars on Canadian foreign lines, 17,681; home cars on U.S. lines, 38,010; home cars on home roads, 167,171; Canadian owned foreign cars on home lines, 15,062; U. S. owned foreign cars on home lines, 21,396; total cars on line, 203,629; percent on line to total owned, 51.4; excess on line to total owned, 15,062; deficiency on line to total owned, 19,233; home cars in bad order, 19,805; foreign cars in bad order, 568; total cars in bad order, 20,373; per cent in bad order, 10; privately owned U. S. cars on line, 1,799; privately owned Canadian cars on line, 1,034.

C.P.R. Locomotive Data.

A Vancouver correspondent wrote us recently as follows:—"Has the C.P.R. built any locomotives recently larger than Santa Fe 2-10-2? Has the C.P.R. any really large switch locomotives in use?"

We have been furnished with the following official information in this connection. The C.P.R. has not built any locomotives larger than the Santa Fe 2-10-2 type, which were turned out in 1920. The largest switch locomotives the C.P.R. has are those of the 10-0 type, of which it has three in yard service in Winnipeg. These were built in 1914, and have a maximum tractive effort of 55,200 lb. The principal dimensions are as follows:—

Cylinders	2½" x 30 in.
Boiler pressure	200 lb. per sq. in.
Diameter of drivers	51 in.
Total engine weight	241,000 lb.
No. of 2½ in. tubes	210
No. of 1½ in. flues	20
Length between tube sheets	16 ft. 5½ in.
Grate area	49.5 sq. ft.
Total equivalent heating service	3781 sq. ft.
Water capacity of tender	7,000 imp. gall.
Coal capacity	12 tons

"The Great Landslides of the C.P.R. in British Columbia."—R. B. Stanton, civil engineer, of New Canaan, Conn., who died recently, is mentioned as the author of a number of works, including "The Great Landslides of the C.P.R. in British Columbia." Canadian Railway and Marine World is particularly anxious to obtain a copy of this work, and would be much indebted to anyone who could give information as to whom it was published by, the date, and any other particulars.

Buffalo and Fort Erie Public Bridge Co.—The Dominion Parliament is being asked to incorporate a company with this title to build a highway bridge over the Niagara River, from Walnut St., Fort Erie, Ont., to Hampshire St., Buffalo, N.Y., with provision for electric railway tracks. Authority for tolls for crossing the bridge is asked. German and Brooks, Welland, Ont., are solicitors for applicants.

The Canadian National Railways Discussed in Parliament.

The Canadian National Rys. have been very much to the fore in the House of Commons since Parliament opened on March 9, when the Governor General's speech contained the following paragraph:—"In order that government ownership and operation of our national railways now extending through every province of the Dominion may be given a fair trial under the most favorable conditions, it is intended at an early date to co-ordinate the government-owned systems in the manner best calculated to increase efficiency, and to effect economies in administration, maintenance and operation." The whole transportation situation is one which will require your best attention. It weighs heavily upon our national finances. To assist in obtaining the information essential to an exact understanding and an adequate appreciation of the problem in its many bearings, it is proposed to supplement the work of co-ordination by a thorough enquiry."

E. J. McMurray, North Winnipeg, in moving the address in reply to the Governor General's speech, said: "Private operation has laid down the burden and asked that we take it up and carry it. That being the case, state ownership should be given a chance, not for a year or two, but for a reasonable length of time, having regard to prevailing conditions, to the vastness of the project, and to the failure of private ownership. State ownership should be given a reasonable opportunity to demonstrate its capacity to deal with this tremendous problem."

Right Hon. Arthur Meighen, leader of the Opposition, in his contribution, stated clearly the fact that he has no confidence in the way in which the Liberal Government will solve the railway problem. Concerning the reference to the railway situation in the Governor General's speech, he said: "It will be noted how sedulous the draftsman of the speech has been to use the most evasive and nebulous terms at his command. He does not say there is to be unification of the roads owned by the Government; he does not say there is to be amalgamation; he does not say all are to be brought together as one system, as was the intention of the last Parliament, and is the intention of the law today." Mr. Meighen went on to say that if the Liberal Government meant to carry out unification and consolidation as contemplated by the law, it would have the support of the Conservative members. Dealing with actual methods of operation of the national system, he said: "With the Grand Trunk coming in, and the entire mileage owned by the people of this country brought into one system, there should be what are called grand divisions, whereby, without in any way impairing the advantages of unification, a measure of local supervision in the operation of the lines would be feasible." In the latter part of his speech he showed his pessimism as to the future of the National roads in the hands of the present Government, and said: "I see in front of me those who have pledged themselves, not that the National Rys. will be unified, but that they will be disrupted; not that the National Rys. will be co-ordinated, but that they will be disintegrated; not that the National Rys. will be kept out of politics, managed by a business board and all brought under a

business board, but that portions of the system will be taken back into politics as they were in politics for many decades. I know the Prime Minister has declared, and I see referred to it, in the speech from the throne, that national operation and ownership shall be given a fair trial, but I for one am apprehensive of the fairness of the trial to be given national ownership and operation at the hands of its inveterate enemies. Gentlemen opposite are elected by the forces opposed to public operation in this country, and they know what those forces are. They know those interests were backing them in the contest, determined to secure their election. I venture to predict that the propagandist will be at work, and that there will be overflooding this Dominion an anti-government operation propaganda, designed to turn the minds of the people in disgust from the public ownership of railways; and that propaganda, the signs of which we see all around, and under the onrush of which we sit at this very hour, will be very powerfully financed by interests most friendly to this administration."

Hon. W. L. Mackenzie King, Prime Minister, said that in his opinion the Government's intentions were clearly set forth in the Governor General's speech, and any further statement would come from the Minister of Railways. He took exception to Mr. Meighen's insinuations, and said: "So far as this administration is concerned, I will not for one moment accept any of the insinuations or suspicions of my right honorable friend in regard to its intentions in administering the National Rys. We intend to give government ownership of the National System the fairest trial under auspices the most favorable it is possible for a government to secure. We go into it with all sincerity, and in the hope that we may make it a success. I will say with perfect candour that there are gentlemen on this side of the House, as I know there are on the other side of the House, who doubt very much whether public ownership can be made the success which private ownership might be. But there are others who believe that it can be made a success, and so far as it is possible for this Government to demonstrate what can be done under government ownership, it is our intention to see that it is done."

Hon. T. A. Crerar, leader of the Progressive party, said that he was glad to note what was said in the Governor General's speech in connection with the railways. He took it to mean that the Government's intention is to give public ownership of railways a full and fair trial. He pointed out, however, that some things were absolutely vital, the first being that all the roads comprising the Government system be placed absolutely and without any question of doubt under one central management. He said that he was a believer in the principle of public ownership of public utilities. He emphasized the need of consolidation, and said:—"Build your system into one complete whole, and then, no matter what disposition you may desire to make of it in the future, you will have an asset that is worth while. I submit that these roads must have a fair and full trial, and I am glad to know that it is the Government's intention to give them that trial; and so far as their efforts go

in that direction I can assure them that we in the Progressive section of the House will give the Government our support in their endeavors in this respect."

W. F. Maclean, West York, Ont., praised the G.T.R. organization, stating that it was one of the country's greatest assets, and he drew a most impressive picture of the opposition to which government ownership in Canada will be subject, stating, "I think I can see the hand of the Canadian Pacific, and that of its close associate, the Bank of Montreal, joined together in an effort to thwart the Grand Trunk, which is a real rival." In reply to a question, he said that during the last two or three years the Canadian National Rys. have been "fairly well operated." He drew a sharp difference between railway consolidation and co-ordination as mentioned by the Government, and stated that mere co-ordination of the railways owned by the Government would not be sufficient; they must be consolidated under one management. He made an attack on private operation generally, and on the privately owned U.S. railways particularly, claiming that they had "fallen down" badly.

Premier King interjected:—"If it will help to clear my honorable friend's mind, I may say that it is the Government's intention to have one board of directors that will manage the entire system in a manner that will effect economies and further efficiency very much in regard to what has been in view."

Mr. Maclean, in arguing why all the Government railways should be consolidated, pointed out how great economies could be effected, mentioning in illustration the proposed construction of the C.N.R.-N.T.R. Long Lake cut-off, and by the reduction of gradients through Toronto, which latter, he said, would save "hundreds of thousands of dollars."

R. Forke, Brandon, Man., stated that many people in the west had been most favorably impressed with the service given by the Canadian National Rys., and added, "I can see daylight ahead. I can see hope in the future. We have a valuable property and we are going to maintain it, develop it and keep it, and the day will come when we will be proud to have it."

H. J. Logan, Cumberland, N.S., claimed that the management of the Intercolonial Ry. should be centered in the Maritime Provinces, and his arguments followed closely those given by him in a communication to Canadian Railway and Marine World, published in the March issue.

T. L. Church, North Toronto, recommended the adoption of the measure proposed in the Drayton-Acworth report. He stated that his understanding of the C.P.R. was that it "always changed its politics with the party in power; and was friendly to every administration." "The greatest politicians that this country has ever produced have never sat in the legislatures at all. They have been general managers and presidents of railways."

Sir Lomer Gouin, Minister of Justice, said:—"The leader of the Opposition, in speaking of the railway question, endeavored to convey the impression that some mysterious power had inspired those members who expressed themselves as not believing in state owner-

ship or state operation of railways. He has come out categorically in favor of the nationalization of our railways. He is sincere in his views, I know; but why should he cast suspicion on those members who are not of the same opinion in the matter? As the Prime Minister declared in his speech, there are on this side of the House, as there are on the other side, members who do not look upon state ownership or state operation of railways as practicable and profitable for the country. But we own our system of railways and the Government has decided to give the system a fair trial under the best possible conditions. I cannot understand why the leader of the Opposition should doubt the good faith of the Government or of any of its members in this matter. The question is not one which concerns Montreal, Toronto, Winnipeg, Vancouver, or any city in particular; it concerns Canada as a whole, and the solution which we seek is a solution which shall be satisfactory to the interests of our country generally."

A. W. Neill, Comox-Alberni, B.C., said that while in his opinion there was only one course for the Government in connection with the railways, viz., a continuance of the trial of public ownership, he had not very hopeful anticipations as to the result. He related his experiences

in connection with railways in New Zealand, where, he said, politics were fatal to the railways' success, and where large annual losses were experienced until an expert railwayman was put in charge and given full authority. He advocated the securing of a competent railway manager from the U.S. to take charge of the national lines, not that he doubted the ability of Canadians, but he considered it better to bring a man in from the outside, who would be free from all party influences.

E. M. McDonald, Pictou, N.S., stated that the Government had no choice in the matter of operation of the Government railways; it would have to operate them and do the best it could, for the reason that no private interests would acquire them. He made a long speech in which he blamed the Conservative party for the railway situation. He opposed the Canadian Government operating a railway lying partly in the U.S., stating that there was no precedent for such a situation. He argued that the Intercolonial Ry. control should be centered in the Maritime Provinces, and claimed that its operation as a public comment on the proposition was ruining those provinces' trade and commerce.

Sir Henry Drayton, West York, Ont., in a long speech, blamed the Liberal par-

ty for overburdening the country with railways. Concerning Government operation of the portions of the G.T.R. within U.S. territory, he said that the mere fact of the road being owned by the Canadian people generally would not matter; the situation would be the same as if the railway was privately owned by Canadian stockholders. He pointed out that the ownership of the Minneapolis, St. Paul and Sault Ste. Marie Ry. by the C.P.R. had not led to any difficulty. He defended the Conservative Government's action in connection with the Grand Trunk Pacific.

H. Marler, St. Lawrence-St. George, Que., stated that he was not in favor of public ownership of railways, and said: "Public ownership has always meant to me inefficiency, irregularity of service, greater cost, greater taxes, and mounting up of the public debt." He would do everything in his power to help the Government make public ownership a success, but he was apprehensive of the result.

R. J. Manion, Fort William and Rainy River, Ont., said that the only way to remove the deficits attending national railway operation would be to secure a large immigration of the proper type and build up the population of the country on the right basis.

Railway Wages and Working Conditions in Canada and the United States.

No developments of importance took place in the railway wage situation in Canada during the past month. All wage rates agreed upon as between the railways and employes, as outlined in previous articles on the subject in Canadian Railway and Marine World, are still in force. It is reported that the Railway Association of Canada's wage committee is preparing to take up the question of wages and working conditions with the maintenance of way employes and the railway shop employes, but at the last meeting (March 23) no definite action has been taken. It is expected that a convention of the chairmen of American Federation of Labor, Division No. 4, Railroad Department, which embraces in its membership Canadian railway shop employes, will be held in Winnipeg, March 27, when, it is presumed, general wage conditions will be discussed.

During March a good deal of publicity has been given in Toronto newspapers to statements made by J. F. M. Stewart of the Canadian Manufacturers Association's executive before Toronto Board of Trade's young men's membership, his statements resulting in a recommendation to the Board that it "take some definite step toward having placed before the Canadian people information as to wage conditions on railways, with their consequent effect on freight rates and the prosperity of the country." It is reported that Mr. Stewart stated, in connection with wages paid to members of the stronger railway unions, that no industry could live for a week and pay corresponding wages for similar kinds of work.

While, as before stated, no developments of importance have taken place in Canada during the week, much has been going on in the U.S. Practically all the U.S. railways have applications before the Labor Board for wage reductions affecting most classes of employes, and hearings on them began before the Board in Chicago on March 7. J. W. Higgins, Executive Secretary, Associ-

ation of Western Railways, initiated proceedings by stating that of over 300,000 employes in 5,327 industries in 28 different states, about 80% are receiving much lower wages than are being paid to railway employes who are performing work of a similar nature. He commented that the high wages paid on railways are a cause of great dissatisfaction among employes in industrial works, and he expressed the opinion that this condition is largely the cause of the hostility toward railways exhibited by industrial interests and a large portion of the public. He attacked the proposition of having standard rates of wages to apply throughout the entire U.S., stating that living costs and other conditions varied so widely that it was impossible to have just rates of pay prevailing under such an arrangement. He particularly emphasized that it is entirely unfair for a railway to have to pay the rate for skilled shopmen to men who were employed on rough work which does not require any great degree of skill. In addition to the testimony of Mr. Higgins, representing the western carriers, a number of individual carriers had representatives at the hearing, who acquainted the Board with conditions peculiar to their properties. In the western railway's application, the following changes are asked for: machinists, boilermakers and blacksmiths, reduction from 77c. to 67½c. an hour; car repairers, 72c. to 50c.; car repairers' helpers, 54c. to 35c.; pipe-fitters, 77c. to 50c.; bridge and building mechanics, 58c. to 53c.; helpers, 44c. to 36½c.; signal gang foremen, 78c. to 72½c.; signal maintainers, from 73c. an hour, to a graded scale of from 60c. to 67½c.; shop trades apprentices, from present range of from 34c. to 59c., to 29c. to 54c. an hour; for monthly paid employes, decreases from \$10 to \$14 a month, according to present salaries and class of work.

J. G. Walber, representing U.S. eastern railways, stated that investigations

had shown that for ordinary labor, while the average paid by the railways is 41c. an hour, the average for outside industries is 30c. For car repairers, the railway rates average 72c. an hour, and outside industry rates 48.8c. For machinists, the railway rate is 77c. an hour, and the average rate in outside industries 56c. He further pointed out that while the peak in prices was reached in May, 1920, when the index number of wholesale prices was 272, on Jan. 1, 1922, the index number was 148, representing a reduction of 45% from the May peak. He submitted the following statement:

"The employes' interests are not opposed to those which we represent. The prosperity of railway workers is interwoven with and dependent upon the success of the railway business itself. The public generally, including wage earners in other industries, should not be called upon to pay transportation charges based on an inordinately high level of railway wages. It is not alone, however, because of the compelling necessity for reduction in labor costs that the carriers proposed to their employes wage reductions, but also because the carriers are convinced, and now respectfully submit to the Board, that the new schedules of pay which they have proposed are just and reasonable in the light of the specific elements enumerated in the statute for the determination of wages."

B. M. Jewell, President American Federation of Labor Railway Employees' Department, claimed that a great many of the carriers were not legally before the Board because their applications to the Board for wage reductions had not been preceded by conferences such as are required by the Transportation Act. The carriers' representatives disputed this, and Mr. Jewell's representations did not apparently carry much weight, the carriers' representatives being successful in showing that the Transportation Act had been complied with. The labor representatives then tried to have other railways denied a hearing, on the ground

that they had contracted out a lot of equipment repair work, the contractors for the repair of this equipment, not being subject to the Board and paying lower wages than the railways would be compelled to pay. The Board did not see fit to deny these roads opportunity to present their applications for the reason mentioned, Ben Hooper, a public member of the Board, stating that a decision in this matter would soon be rendered by the Board, altogether independently of the wage hearing in progress. Details of the hearing before the Board concerning this contracting of equipment repairs were given in a previous issue of Canadian Railway and Marine World. The wage hearing before the Board is being continued, but an early decision is not expected.

As stated in Canadian Railway and Marine World for March, arrangements had been made for a committee representing eastern U.S. railways to meet in the city of the locomotive and train service brotherhoods in an effort to come to some agreement concerning wages without the necessity of going before the Labor Board. This action was taken on the suggestion of the Secretary of Commerce, Herbert Hoover. A committee representing eastern railways met representatives of the locomotive men and firemen, but it soon became evident that no agreement could be arrived at, with the consequence that the matter of wages as it affects these employees will go before the Board.

On March 4 the Labor Board announced new rules covering the service of railway telegraphers, the chief features of which are that while the basic 8-hour day is recognized, punitive overtime will not be paid till after the completion of the 9th hour of continuous service, and split tricks may be required as long as the day's work is kept within a 12-hour spread. New rules for "supervisors of mechanics," which means all foremen below the rank of general foreman, who supervise mechanics in the repairing of equipment, have also been issued by the Board. These men are to be paid monthly salaries, and no reduction in salary is to be made because of shops working short time. The Board has also drafted a new set of rules for American Railway Express Co. employees recognizing the basic 8-hour day, providing for payment of punitive overtime after the 9th hour of continuous service, and permitting the use of employees in split tricks, providing the day's work comes within a spread of 12 hours. A new set of rules covering train dispatchers' services was also made effective by the Board March 1.

Newfoundland Hydro Electric Development Plans.—A St. John's press dispatch of March 15, states that the Premier had been advised by the Reid Newfoundland Co., that it would withdraw its proposals for extensive water power development for the use of general industries along the Humber River on the west coast of Newfoundland. Details of the proposal which had been reported on by Sir W. G. Armstrong Whitworth & Co., Newcastle-Upon-Tyne, Eng., were given in previous issues Canadian Railway and Marine World.

Railway Electrification in Switzerland.—The Swiss Government is reported to be planning to spend 57,000,000 francs this year, in extending the electrification of its railways.

Grain in Store at Elevators.

Returns made to the Dominion Bureau of Statistics, Internal Trade Branch, for the week ended March 10, showed that the quantity of grain in store at elevators throughout Canada, increased by 1,501,119 bush., made up as follows:—oats 1,125,655, barley 337,317, and rye 38,147. The amount of wheat decreased 1,048,829 bush., and flax 32,080. In western country elevators increases were shown as follows,—wheat 480,665 bush.; oats 475,725, barley 102,856, and rye 2,507; flax decreased 25,644 bush. Of the total quantity in store, viz., 38,174,507 bush., the amounts held by provinces were as follows,—Manitoba 4,765,085, Saskatchewan 20,584,540, Alberta 12,656,147. The receipts of wheat were 2,880,741 bush., and the shipments 2,385,932. The inferior terminal elevators showed increases in wheat of 57,091 bush., oats 82,526, barley 12,814, flax 5,410, and rye 696. The receipts of wheat at Vancouver were 345,020 bush., and the shipments by ships were 448,437.

In the public and private terminal elevators at Fort William and Port Arthur, increases were shown in wheat, of 684,929 bush., oats 279,167, barley 93,787, and rye 33,808. There was a decrease in flax of 7,846 bush. The receipts of all grains were 2,802,675 bush., and the shipments by rail were 1,718,830. Of the total rail shipments of all grains, 457,054 bush. were shipped to the Atlantic seaboard, and 528,705 were shipped for domestic consumption.

The private terminal elevators at Winnipeg showed decreases in wheat and oats of 45,169 and 22,646 bush., respectively, and an increase of 4,870 in barley.

The eastern public elevators showed a decrease in wheat of 1,043,537 bush., and increases of oats 368,368, barley 145,503, and rye 2,136. The receipts of wheat were 65,843 bush. by ships, and 589,601 by rail, and the shipments were 512,873 by ships, and 1,237,551 by rail.

The quantity of U. S. grain in store in the public elevators in the east was 3,781,166 bush., compared with 433,888 at the same period of 1921. The U. S. lake ports showed decreases in wheat of 1,336,193 bush., oats 207,794, and barley 39,035.

Among the Express Companies.

L. J. Columbus heretofore assistant accountant, has been appointed cashier, Dominion Ex. Co., Calgary, Alta., and has been succeeded by F. R. Young.

The Canadian National Ex. Co. has opened an office at McDiarmid, Ont., and closed its office at Kelly's Siding, Ont., the latter place being made a star point.

The Dominion Government has referred back to the Board of Railway Commissioners, for further consideration, its order of Feb. 1921, authorizing an increase in rates on cream, and has asked the Board to consider the question of a reduction of the rates on cream, and also whether in view of the fact that cream is only one commodity affected by the 20% increase authorized in the commodity rates, a general reduction in commodity rates can be made. The appeal was made for the National Dairy Council, by D'Arcy Scott, K.C., a former member of the Board of Railway Commissioners.

The City of Toronto's appeal against the Board of Railway Commissioners'

recent judgment re express rates, was dismissed by the Dominion Government on March 19. The Minister of Justice having reported that it was not a case in which the Government should interfere with the Board's order, and he recommended that the appeal be dismissed. The city asked that general order 327, with regard to express rates be rescinded, or in the alternative, that the order be varied by reducing the percentage of increases authorized.

Telephone, Telephone and Cable Matters.

G. D. Perry, Vice President and General Manager, Canadian National Telegraphs, Toronto, and Mrs. Perry, have been spending a short time in Florida.

The annual meetings of the American Railway Association, Telegraph and Telephone Division, were held at the Jefferson Hotel, Richmond, Va., March 21 to 23.

Repairs to the Canadian Pacific Telegraph lines between Fort William and Port Arthur, proceeded during March, following on the damage caused by storms. The estimated cost is reported as exceeding \$12,000.

Sir Babin Smith, Chairman, Pacific Cable Board, and other officials, are expected to visit British Columbia next summer, in connection with the proposed duplicate cable line to Australia. The duplication of this cable will probably cost about \$20,000,000, and in this connection, it is proposed to lay a 6-wire cable between Vancouver and Bamfield Creek, where the Canadian end of the cable starts.

Louis Samuel Humes, District Commercial Superintendent, Canadian National Telegraphs, Montreal, died there suddenly from a ruptured artery in the brain, aged 62. He was born in Freeport, Ill., and started as a student in telegraphy with the Western Union Telegraph Co. at Menominee, Wis., and later served with that company in various capacities at Minneapolis, Minn., Marquette, Mich., Duluth and St. Paul, Minn. He moved from St. Paul to Toronto about 18 years ago, and entered Great North Western Telegraph Co.'s service, and shortly after was transferred to Montreal as local manager. In Jan. 1915, he was appointed Superintendent, Montreal District, and continued in the same position when Canadian National Telegraphs assumed control. He was buried at Mount Royal Cemetery, March 6.

Broadcasting by Radio Telegraph Experimental Stations.

The Deputy Minister of the Naval Service, G. J. Desbarats, C.M.G., sent the following circular on March 10 to experimental license holders:—"With regard to your experimental license no. . . which authorizes broadcasting by radio-telephone, the Department has decided that this class of service has now passed beyond the experimental stage, and that commencing with the next fiscal year, April 1, 1922, stations undertaking this service will be classified as Public Commercial and will require a public commercial license for which the fee is \$50 a year. Your experimental license automatically expires on March 31. Kindly advise if you desire to have it renewed or if you wish to make application for a public commercial license to cover your broadcasting service."

Electric Railway Department

Electric Railway Operating Statistics for Year Ended Dec. 31, 1920.

The figures in the following table are reproduced from statistics prepared by the Dominion Bureau of Statistics. The following abbreviations are used in the names of railways: E., electric; E.R., electric railway; E.S.R., electric street

railway; S.R., street railway. The minus mark (—) in the column for the net income or deficit, shows that there was a deficit in the operation of the line to the extent of the figures given.

The figures in the first column of figures show the first main track mileage. In addition to this mileage, the lines reported having 504.32 miles of second track, and 219.14 miles of sidings and turnouts.

The Ontario Government's Policy Regarding Hydro Electric Radial Railways.

The Ontario Government's position in connection with the Hydro Power Commission of Ontario's proposal for the construction of a number of hydro electric radial railways, centering on Toronto, and for the acquirement of certain electric lines, now owned by the Dominion Government, and by interests, headed by Sir William Mackenzie, has been under discussion for some time, especially since the commission, appointed by the Ontario Government, to enquire into the whole scheme, reported adversely to it. A resume of that report, and comments on it, have been published in previous issues of Canadian Railway and Marine World. In order that the whole matter may be laid before the public, and with the view of forming a public opinion as to the merits, or demerits, of the proposals, the Toronto Board of Trade, with a number of other business associations, invited those who might be considered the leaders of both sides of the question, viz., the Premier of Ontario, Hon. E. C. Drury, and the Chairman of the Hydro Electric Power Commission of Ontario, Sir Adam Beck, to address separate public meetings, at which no discussions would be permitted. The Premier addressed a public meeting at Toronto, March 16, but Sir Adam Beck's recent illness has, up to the time of writing, March 19, prevented him from deciding on the matter.

The Premier made extensive references to the power development carried out, and projected, by the H.E.P. Commission, at various points in the province, and also to the radial railway proposals, and the report of the royal commission thereon, and announced the Government's final decision not to guarantee the H.E.P. Commission's bonds, for which provision is made in existing legislation for the construction of hydro electric radial railways, under the Commission's control. He also announced, that, in fulfillment of a promise made last year, he had that day, introduced into the Legislature, a bill to permit municipalities to build and operate radial electric railways, within their own territories, without Government guarantees.

He said that the bill had been framed to prevent the creation of a system of provincial railways which would compete with and increase the difficulties of the nationally owned steam roads.

In explanation of the bill, he said,—"Any number of municipalities may form what would practically be a partnership with regard to a radial railway. These municipalities would appoint five

persons, not members of any of the municipal councils, who would be termed an association. The members of this association, who will hold office for five years, would to a very great extent have the same powers as the directors of a railway company. The method of appointment has been so worked out that both the large and small municipalities will get proper representation. The municipalities must first obtain, at their own expense, a report from the H. E. P. Commission, giving estimates of the cost of construction, operation, probable revenue, etc. The municipalities will then enter into an agreement, which must be submitted to and receive the approval of the electors qualified to vote on money bylaws in each municipality whereby the proportions in which the cost of construction and equipment to be borne by each municipality will be settled. The agreement must also provide for the construction of the railway either by the association or by the H. E. P. Commission. After the railway has been constructed the association may, if the agreement between the municipalities so provides, enter into an agreement with the H. E. P. Commission for the operation of the railway by the commission as its agent, for not exceeding five years, but such agreement may be renewed for further periods of five years. The financing of the enterprise will be done by the association issuing bonds, which will be secured on a mortgage deed given to a trust company and secured upon the railway. Each municipality will also be required to deposit with the trust company its debentures for the proportion of the cost for which it is liable under the agreement, and these debentures will be deposited with the trust company as collateral security for the bonds issued and charged upon the railway. Such bonds and the debentures issued by the municipality will bear the same rate of interest, and will be repayable in 44 years. The association must fix the tolls and fares so that the revenue derived therefrom will be sufficient to provide for the operation of the railway, the payment of the interest and sinking fund on the bonds, and all other probable charges. If there is a deficit in any year the municipalities must pay such a deficit within one month, in the proportions in which they contributed to the cost of construction. If there is a surplus the association may pay it over to the municipalities in the same proportion, or may use it for im-

provements and additional equipment, or may build up a reserve fund to meet the cost of future operation or contingencies. Where the original agreements so provide, the association, with the consent of each of the municipalities, may enter into an agreement with any adjacent municipality for the extension of the railway into the latter municipality. Such agreement will require to be carried by the electors qualified to vote on money bylaws in such adjacent municipality. Practically all existing legislation relating to radial railways is to be repealed, excluding, however, that relating to the Sandwich, Windsor & Amherstburg Ry. and the Toronto and York Radial Ry."

Toronto Transportation Commissioners' Inspection Trip.

D. W. Harvey, Assistant Manager, and W. R. McRae, Superintendent of Rolling Stock and Shops, Toronto Transportation Commission, left Toronto on Feb. 19, to visit various U.S. cities for the purpose of examining street railway rolling stock, and to note equipment and operating methods employed, with a view to altering or confirming the tentative programme as to equipment and operation which the Commission's officials have drawn up. The chief points visited were Detroit, Mich.; Milwaukee, Wis.; St. Louis, Mo.; and Baltimore, Md., where thorough study and enquiry were made. Mr. Harvey is reported as having stated that none of these cities visited have large cars superior to those introduced in Toronto in 1921 by the Commission, and that cities looking forward to the purchase of large cars lean to the view that that type is the best yet developed. These cars were described in detail in Canadian Railway and Marine World for Oct. and Nov. 1921. Messrs. Harvey and McRae returned to Toronto March 3.

Winnipeg Electric Ry.'s Proposed New Franchise. For some time past negotiations have been in progress between the company and a special committee of the city council, in connection with a proposal to extend the company's franchise for 20 years. A press report states that the company made certain proposals to the special committee recently, which after being discussed by the committee, formed the basis of a progress report sent on to the city council public service committee, and came up for discussion at a meeting on March 15.

Electric Railways and Bus Transportation.

At the American Electrical Railway Association midyear conference at Indianapolis recently, the relationship between trackless urban transportation and street railway systems was one of the principal topics of discussion. Four papers on this subject were read by C. D. Emmons, President, United Railways and Electric Co., Baltimore; E. B. Whitman, Maryland Public Service Commission; H. Reid, President, Indianapolis & Louisville Traction Ry., and Paul Shoup, President Pacific Electric Ry., Los Angeles, Cal.

Mr. Emmons dealt at length with conditions in England and Scotland, as noted by him on a recent trip, and pointed out that London, Eng., has the greatest development in bus transportation in the world. There are 3,000 buses operated, carrying almost a billion passengers yearly on 150 different routes. While in Scotland he saw Jas. Dalrymple, General Manager, Glasgow Municipal Tramways, who expressed the opinion that municipal operation of city transportation in America is a mistake. Mr. Emmons presented the views of a good many of the leaders in urban transportation in England and Scotland, showing that the majority of them consider the bus a necessary in urban transportation, but that its chief use is to augment the rail system, which must remain the backbone of city transportation.

Mr. Whitman emphasized the fact that urban transportation must be a natural monopoly. If good service is to be rendered, a unified system is essential. He pointed out that the Maryland Commission in Maryland recognized this, and acted accordingly. He and his associates on the Commission are convinced that the bus has a place in urban transportation, but that the problem is one of determining its place and then keeping it there. He considers that every community will be best served by a co-ordinated rail and bus service, in which the street car, the trackless trolley and the bus will each play an important part; that a street railway company is making a big mistake which is not alive to its opportunity of putting in bus transportation service to supplement its car service, and thus keep such operation out of competitors' hands; and that established transportation systems owe this duty to the public, on account of being able to afford the service at a smaller cost to the public than independent operators.

Mr. Reid said that he is an enemy of motor bus lines competing with motor urban carriers, and is of the opinion that bus lines should be as strictly regulated as rail lines; he stated, however, that bus operation is invaluable in its place, viz., as a connection and feeder to existing rail lines, and as the forerunner of a rail extension when population and industry have sufficiently developed. He described how his road is arranged for joint tariff rates with bus and auto truck lines in the vicinity of Indianapolis, as illustrative of the co-operation between rail and trackless transportation which should obtain.

Mr. Shoup stated that in California the trackless transportation industry has developed in competition with electric railway lines, and not in co-operation with them, and considers the competition very bitter and very unfair for

the electric railways. The buses and trucks have a great advantage in competition with electric railways, having a good roads system on which to operate, while the license for bus operation is very small as compared with taxes on electric railways. The paving, paid for in part by the electric railways, in various cities, is used by buses and trucks free of charge. He considered that the use of trackless trolleys should be looked on only as temporary, and that they should be figured on as being subject to replacement by rail lines as conditions demand. He emphasized that the streets on which trackless trolleys are operated should be paved, or power and maintenance costs would be prohibitive.

Amendments Proposed to Ontario Railway Act.

The Ontario Railway Act, Revised Statutes, 1914, Chap. 185, contains a di-

Canadian Electric Railway Association.

Honorary President, Thomas Ahearn.
President, Ottawa Electric Railway.

Honorary Vice President, George Kidd,
General Manager, British Columbia Electric Railway.

President, G. Gordon Gale, Vice President
and General Manager, Hull Electric Co.

Vice President, Major F. D. Burpee,
Manager, Ottawa Electric Railway.

Treasurer, A. Gaboury, Superintendent,
Montreal Tramways Company.

Executive Committee, E. P. Coleman,
General Manager, Dominion Power
Transmission Co.; H. H. Couzens, General
Manager, Toronto Transportation Commission;

C. G. Carr, Manager, Cape Breton
Electric Co.; W. S. Hae, Managing
Director, Three Rivers Traction Co.; A.

McLennan, Vice President, Winnipeg
Electric Ry.; R. Mayfield, Superintendent,
Quebec Ry., Light & Power Co.;

Lt. Col. G. C. Royce, General Manager,
Toronto Suburban Ry.; and C. L. Wilson,
Assistant Manager, Toronto & York Radial
Ry.

Auditor, H. E. Weyman, Manager, Lewis
County Railway.

Secretary, L. E. Moreland, Clerk, Clerk,
Hull Electric Co., Hull, Que.

Official Organ, Canadian Railway and
Marine World, Toronto.

vision dealing with municipal street railways. Sec. 232, Sub-section 1, is as follows:—"The corporation of a city or a town may conduct, equip, maintain and operate street railways, in, along and over such highways of the city or town, and subject to or upon such terms as the Ontario Railway and Municipal Board may approve; and may lease the same from time to time on such terms as may be determined on."

A bill was introduced in the Legislature, March 1, by Major A. C. Lewis, one of the Toronto members, to amend this sub-section by striking out the word "conduct," and inserting in place thereof the word "construct." This section has been referred to the Law Clerk, and will, it is held, probably be passed.

The bill also proposed to further amend the Act by adding a new sub-section to sec. 232, providing that a municipally-owned street railway may sue and be sued in its own name. We are advised that this section has been withdrawn from the bill, and that it is intended to insert it in a private bill relating to the Toronto Transportation Commission.

Toronto Transportation Commission Proposes to Expend \$13,542,000 Additional.

H. H. Couzens, General Manager, Toronto Transportation Commission, applied to the City Board of Control, March 15 for sanction no. 3, to authorize the issue of debentures for \$13,542,000 for the Commission's 1922 programme as follows:—Extension and rehabilitation of trackwork and special work, inclusive of materials and labor, and construction equipment. This covers the equivalent of approximately 55 miles of single track. A further instalment of the shops and stores, provision for the commencement of which was included in the city's sanctions 1 and 2. A joint terminal at the city limits on Yonge St., to provide for the interchange of passengers and freight from the radials and the city system as per the agreement between the city and the Hydro-Electric Power Commission of Ontario. The provision of loops for turning back the cars at the end of routes. Additional land and accommodation at car house sites. Two hundred and fifty additional cars, and buses, with snow ploughs and other equipment. Office furniture, service equipment and stores taken over from the former civic lines. Office accommodation at Front and Yonge St.

Mr. Couzens stated that the whole of the funds will not be required immediately, and suggested that they be provided from time to time by arrangement with the Finance Commissioner, with whom the application has been discussed, and added that the Commission would appreciate an opportunity of conferring with the Board at an early date in connection with the matter, as the season is rapidly approaching when construction work can be commenced.

Toronto's Proposed Purchase of Toronto Suburban Railway.

Toronto City Council is asking the Ontario Legislature to approve bylaw 8968, passed Jan. 23, after having been adopted by the voters on Jan. 2, authorizing an agreement between the Hydro-Electric Power Commission of Ontario and the city, for acquiring the Toronto Suburban Ry. Co.'s property and assets under the Hydro-Electric Railway Act, 1914, and amendments thereto.

This bylaw was approved by the ratepayers on Jan. 2, by 16,087 votes to 13,580. The agreement provides for the purchase of the T. S. Ry. Co.'s lines for \$2,628,000, by taking over the outstanding bond issue to that amount. The city will pay \$202,000 cash for the lines in the city, will provide \$150,000 for the betterment of these lines, which will become part of the city system under the control of the Toronto Transportation Commission. The other portions of the system, viz.: the Lambton-Guelph and the Weston-Woodbridge lines, will be operated by the H.E.P. Commission of Ontario, the city to provide for any further capital expenditure, and for any deficits. The Hydro-Electric Railway Act requires that before a bylaw can be submitted to the ratepayers it must be approved by the Ontario Government, which approval was not given in this case. The ownership by one municipality of a railway running through other municipalities was referred to by the Premier of Ontario before the vote was taken, as an objection to the bylaw.

Proposed Equipment of Electric Railway Cars with Jacks.

The Board of Railway Commissioners, on Feb. 8, notified electric railway companies that they would be required to show, at a sitting in Ottawa on March 7, why every car in service should not be equipped with suitable and sufficient jacks, or other mechanical devices, for raising the car in case of accident. At the hearing, G. Gordon Gale, Vice President and General Manager, Hull Electric Co., and President, Canadian Electric Railway Association, presented statements for the Association's member companies, saying that upon receipt of the Board's notice a circular was issued by the Association's Secretary to all member companies interested, the replies having been compiled as follows:—

"The conditions on electric railways differ to some extent as between city and suburban service and interurban service. In all cases, however, electric railway companies have established the practice of having one or more points at which a wrecking outfit is maintained in charge of a crew trained in the use of the apparatus. The wrecking outfit usually consists of two or more jacks, having a capacity of from 15 to 35 tons, cables, chains, replacers, bars and blocking. This equipment is carried on a special car or locomotive. A derailed car is frequently cut off from the power line and the wrecking car forms a necessary part of the re-railing equipment.

On all city and suburban cars, and most of the interurban cars, there is not sufficient accommodation for even a small part of the required wrecking outfit. On interurban lines where flagmen requirements must be observed, and on city lines where one-man cars are operated, the crew could not properly handle the heavy jacks, and other equipment, even if they were trained to do so. It is quite possible that further and more serious damage might result from the use of wrecking equipment by those unfamiliar with it. The expense of providing each car with an outfit of jacks would be very heavy, and the cost of providing space for and transportation of this equipment would be prohibitory. The arrangements that are now made to take care of derailed cars, and other disabled equipment, have filled practically all the requirements, and there is no real indication of a necessity for individual wrecking outfits. Electric railway companies have stated that over a period of from 10 to 25 years, cases have seldom, if ever, occurred where an outfit on the disabled car would have been of any greater value than the regular wrecking outfit and crew. The following is a summary of the reasons why every car should not be equipped with suitable and sufficient jacks or other mechanical devices for raising the car in case of accident:—1. There has been no real indication of the general usefulness or of necessity for this equipment. 2. No space for this equipment is usually available. The cost of an outfit, together with space and transportation for same, is prohibitory. 3. The limited number of the crew, unfamiliar with the apparatus, untrained in its use, are unable to use the equipment safely. 4. The established wrecking outfits have indicated their suitability, and they have generally filled all the requirements of the service."

The following representatives of electric railway companies, in addition to Mr. Gale, stated their views to the Board:

A. Eastman, Windsor, Essex & Lake Shore Rapid Ry.; R. Gilbert, Toronto Suburban Ry.; M. W. Kirkwood, Grand River Ry. and Lake Erie & Northern Ry.; E. W. Oliver, Niagara, St. Catharines & Toronto Ry.; J. E. Richards, London & Port Stanley Ry.; G. E. Waller, Dominion Power & Transmission Co.; W. C. Chisholm, General Solicitor, G.T.R., for Montreal & Southern Counties Ry.; A. Fraser, General Solicitor, Canadian National Ry., for Niagara, St. Catharines & Toronto Ry., and Toronto Suburban Ry. Chief Commissioner Carvell stated that the Board was pleased to have received such complete information from the electric railway companies and that the matter would be given full consideration.

Electric Railway Freight and Passenger Rates.

Ontario Legislation.—The Ontario Legislature gave a second reading on March 15, to a bill to amend the Ontario Railway Act, introduced by R. Cooper, of Welland. The section of the bill affecting electric railways is as follows:—"Notwithstanding anything to the contrary contained in any agreement with a municipality or other corporation or persons, or in any special act, the fare to be taken by a railway operated by electricity shall be such as shall be approved by the Ontario Railway and Municipal Board, and no fare shall be charged upon such railway which has not been so approved." It was stated in the House that London and Hamilton are the only two cities that would be affected by the bill. There was considerable opposition to the second reading, and the bill was ultimately referred to the municipal committee. This is the third session that bills dealing with this matter have been introduced in the Legislature.

Hamilton St. Ry.—After a long discussion Hamilton City Council passed a resolution, Feb. 28, granting an increased fare to the company. The increased fare is to be effective to Dec. 31, and the company is to restore the service to what it was in 1921, prior to the defeat of the bylaw on Jan. 2, 1922, and to rebuild tracks on certain streets. Following the passing of the resolution, the company issued the following notice: "Taking effect March 10, the rate of fare will be 5c. cash or 5 tickets for 25c. On and after that date the present class of tickets positively will not be accepted for passage. Outstanding tickets may be redeemed at the company's office and at the terminal station. Regulations regarding transfers, night fares, children's fares and school tickets will remain the same as in the past."

Nova Scotia Tramways & Power Co.—Under the Nova Scotia Acts of 1913, chap. 1, sec. 23, as amended, the N.S. Board of Commissioners of Public Utilities began sitting at Halifax, Feb. 23, to enquire into the extent, condition and value of the Nova Scotia Tramways & Power Co.'s physical assets and into the condition and value of the same as a going concern. The section mentioned authorizes the Commission to enquire into the extent, condition and value of the physical assets of any public utility as a going concern, and to make rules and regulations to facilitate enquiries under the section. Under an act of 1920, a

special commission was provided for, to make an investigation and fix fares on the company's electric railway for two years from the passing of the act. The commission was organized in 1921.

St. Thomas Municipal Ry.—A press report states that the street railway committee has recommended the St. Thomas, Ont., City Council to do away with tickets at a reduced fare, and to adopt a straight 5c. fare.

Winnipeg Electric Ry.—The Manitoba Public Utilities Commissioner on March 2 refused the municipality of Assiniboia's application to have the Winnipeg Electric Ry.'s zone system changed to the divisions in force in St. E. Anderson, K.C., is reported to have stated that the company was preparing to take action with regard to the general conditions existing in several suburban municipalities, and could not single out Assiniboia for special consideration. The request would be dealt with sympathetically. Under the circumstances the Commissioner refused the application for the present.

The British Columbia Electric Railway and Dominion Jurisdiction.

The committee appointed by Vancouver and surrounding municipalities to oppose the British Columbia Electric Ry. Co.'s application to the Dominion Parliament, for amendments to the Vancouver, Fraser Valley & Southern Ry. Co.'s act of incorporation, which would bring the company's various lines, not now subject to Dominion jurisdiction, under the Board of Railway Commissioners' control, is reported to be raising funds necessary to assist in opposing the measure, and to be collecting the information required to make out its case. A suggestion was made that an outline of the municipalities' case be sent to every member of Parliament, and that application be made for the fixing of a date when the bill will be considered. The Union of Canadian Municipalities advised the committee by telegram that it would render all the assistance it possibly could in opposition to the measure. The Mayor of Quebec is reported to have written to the Mayor of Vancouver protesting against the proposal on the ground that if the charter is granted it will form a dangerous precedent for street railways all over the continent.

The Mayor of Victoria is reported to have said at a recent meeting of the city council:—"If we are going to fight the transfer of the electric railway to Ottawa control, then the three municipalities around Victoria should share the cost equally, because they are interested as we are, in the proposal. I doubt the wisdom of entirely confining public service corporations to the prejudice and whims and fancies of the particular districts they serve. The Board of Railway Commissioners would look at electric railway questions in a broad way and would be more likely to do justice for the whole people."

Electric Overhead Wires in Edinburgh.

Citizens of Edinburgh, Scotland, have been concerned for sometime past about the placing of standards to carry overhead trolley wires on Princes St., claimed to be the finest street in the world. As a result of the controversy the Minister of Transportation has directed the holding of an enquiry into the whole matter.

Electric Railway Wages, Working Conditions, Etc.

Dominion Power and Transmission Co.—At the end of February the Minister of Labor appointed two boards of conciliation and investigation to deal as follows:—(1) with a dispute between the company and its linemen, groundmen, etc., members of the Canadian Electrical Trades Union, Hamilton Branch; (2) with four separate disputes (a) between the company and its subsidiary companies and their employees who are members of Local 700, International Union of Steam and Operating Engineers, (b) between the company, the Hamilton and Dundas Electric Ry., Hamilton, Grimsby and Beamsville Electric Ry., Hamilton Radial Electric Ry., and Brantford and Hamilton Electric Ry., and their employees who are members of Division 876, Amalgamated Association of Street and Electric Railway Employees of America, (c) between the company and its shopmen and barn men, members of Division 107, Amalgamated Association of Street and Electric Railway Employees of America, and (d) between the Hamilton St. Ry. Co. and its motormen and conductors, who are members of Division 107, Amalgamated Association of Street and Electric Railway Employees of America. The company having failed to nominate a representative, the Minister of Labor appointed F. H. McGuigan, Toronto, to represent it on each board. The employees' representative on the board named first is J. G. O'Donoghue, Toronto, and on the second board, to deal with four separate disputes, F. Bancroft, Toronto, Messrs. McGuigan, O'Donoghue and Bancroft not having made a joint recommendation, the Minister appointed J. M. Godfrey, K.C., Toronto, chairman of both boards, which commenced sitting at Hamilton, March 3.

Hull Electric Co.—We are officially advised that an agreement has been reached between the company and its conductor and motormen as to wages which were dealt with recently by a board of conciliation. The agreement provides that the rates in effect previous to Dec. 1, 1921, less 2c an hour in each case, shall be effective from Dec. 1, 1921, to July 1, 1922, and that negotiations for a new schedule of wages effective on and after July 1 may be opened at any time. Following are the rates per hour which were put into effect under a majority report of a board of conciliation dated Aug. 26, 1920: First six months, 41c; second six months, 44c; second year, 46c; third year and thereafter, 48c. The company gave notice that these rates would be cut by 10% on Dec. 1, 1921, and in consequence of this proposed reduction another board of conciliation was appointed, the majority report of which recommended the continuance of the old scale to July 1. As a result of recent negotiations a compromise has been brought about under which the wages are reduced by slightly over 4%.

London St. Ry. Co.—We are advised that on Dec. 30, 1921, the company gave its employees 60 days notice, in accordance with the terms of its agreement, that effective March 1, 1922, wages of motormen and conductors would be reduced as follows:—First year, 43c, an hour to 40c; second year, 46c, to 43c; third year, 48c, to 45c. Shopmen, trackmen and other employees are not affected. The employees objected to the proposed reduction, and claimed that the company

was violating the Industrial Disputes Act, Sec. 57, by changing wages without the change being dealt with by a board of conciliation. The men had not asked for a board, claiming that the company should do so, which the company did not concur in. On March 2, the employees applied to the Ontario Railway and Municipal Board to restrain the company from putting the reduction into effect, but the Board refused, on the ground that it has no jurisdiction. A second application to the Board was similarly refused.

The employees called a meeting for March 18, to discuss the situation and to decide as to whether to take legal proceedings. The president of the local union is reported to have stated that if it was decided to take legal action, and a court's refusal to grant an injunction restraining the company from putting the reduction of wages into effect, there would be but one recourse, an appeal to the Minister of Labor for a conciliation board.

Ottawa Electric Ry.—Major F. D. Burpee issued the following bulletin Feb. 27, to all employees:—"In April 1920, a board of conciliation, appointed by the Labor Department, recommended that this company's employees' wages should be increased from 20 to 22%, because of the very high cost of living prevailing at that time. The company accepted the board's recommendation with full knowledge that its income could not afford such rates of wages to be permanently established, and in the hope that the high cost of living was only a temporary condition. In April 1921, although the Labor Gazette showed a considerable reduction in the cost of living, the company agreed to continue the rates of wages established in 1920 for another year. Since April 1920 the cost of living, as shown by the Labor Department's family budget, has fallen nearly 20%, and the general tendency is downward. All employees are hereby notified that on May 1 next the rates of wages paid by this company will be reduced in proportion to the drop in the cost of living. The details of this reduction will be announced in April."

The matter was taken up at the meeting of the union employees on Feb. 28, but nothing in the way of negotiations had been reported up to March 15.

Toronto Transportation Commission.—When the Toronto Ry. Co.'s lines were taken over by the city on Sept. 1, 1921, and handed over, together with the Toronto Civic Ry. lines, to the Toronto Transportation Commission for operation, the following wages per hour were being paid the conductors and motormen:—Toronto Ry., 1st 3 months, 55c.; next 9 months, 57½c.; thereafter, 60c. Toronto Civic Ry., 1st 3 months, 60c.; next 9 months, 63c.; thereafter, 66c. On the consolidation of the lines the Toronto Ry. scale of wages was put in force, the Civic Ry. employees being reduced accordingly, the agreement to expire March 31, 1922. Negotiations were started early in March between H. H. Couzens, the Commission's General Manager, and the Toronto Ry. Employees' Union, resulting in a tentative agreement on March 20, the terms of which were given by Mr. Couzens in a letter to the union's secretary as follows:—"Following the conference held with the committee of the men in connection with

wages and conditions after March 31, the following sets out my understanding of what was agreed on between us, to apply for 12 months as from March 31:—1. The present rates of wages to remain in force. 2. Overtime conditions to be amended as per the draft clause enclosed herewith, which is subject to agreement as to wording. 3. Sunday work to be paid for as at present, but holidays to be paid at regular rates. 4. The rates for trackmen to apply only to certain specially skilled men as at present. 5. The necessary amendments in the other conditions now in force to be made to conform to the above. The Commission, in agreeing to the above, did so in view of the specially difficult year which is ahead, due to the abnormal amount of rehabilitation work which is included in this year's programme; also that the present rates will in effect be granted to the men as soon as was the case in other lines of industry."

The draft clause mentioned is as follows:—"Overtime rates shall not be paid, except in the case of regular scheduled crews, and then only after 8½ hours work, and provided the cause of the overtime is not due to failure of the power supply, or breakdown of the track, plant or equipment, or to any cause beyond the Commission's control. Overtime when paid as above shall be at the rate of time and one half."

The agreement was ratified by the men at a mass night meeting on March 21. The situation therefore is, that the rates of wages in force heretofore, viz., 55c. for first 3 months, 57½c. for next 9 months, and 60c. an hour thereafter will remain in force for one year from March 31, while conditions have been modified to cut out a lot of punitive overtime payments. As before, Sunday work will be paid for at time and a quarter, but holiday service will be paid for at regular rates. In the past, the greater part of the overtime rates paid by the Commission was necessitated by men being used for spare runs after the completion of their scheduled runs. After 8½ hours service, the employee was paid time and a half, and if he was called out on a spare run, in addition to having performed his service on a regular run, he was paid time and a half for the spare run.

In future, men will be paid time and a half only when they have completed 8½ hours service, in regular schedule service, and are held for further work by the management at its discretion, or for reasons within the management's control. If necessary for the men to remain on duty for more than 8½ hours for any reason beyond the management's control, they will be paid straight time only. A request by the men that they be given a fortnight's holiday annually, with pay, could not be considered by the Commission.

Ottawa Electric Ry. Franchise.—The special committee appointed to negotiate with the Ottawa Electric Ry. Co. in regard to a new franchise agreement met Feb. 22, to discuss the whole matter. The company has advised the mayor that it is willing to submit to the committee its profit and loss statements for 1920 and 1921; to give access to the plant and equipment mentioned in the inventory, and to help forward the negotiations as far as possible.

Canadian Electric Railway Association's Annual Meeting at Quebec in June.

The Canadian Electric Railway Association's annual meeting, to be held at Quebec, Que., June 1, 2, and 3, promises to be the most largely attended in the Association's history, and for the first time electric railway supply manufacturers will make exhibits. The meetings will be held, and the exhibits will be displayed, in the armouries on Grande Allée. The following is a preliminary draft of the programme, which is subject to alteration:—

June 1, Thursday, 9 a.m.; registration; 9.30 a.m., addresses of welcome by Provincial Premier and Mayor of city; business session, including President's address, reports of Secretary, Treasurer and special committees; appointment of nominating committee; general business, to be followed by inspection of exhibits; 1 p.m., get together luncheon for members and ladies, chair to be taken by an associate member, and a speech to be made by a prominent guest; 2.30 p.m., paper by a member; 2.45 p.m., observation on a sight-seeing trip round the city for ladies; 4 p.m., paper by an associate member; 5 p.m., inspection of exhibits; 7.30 p.m., association dinner, chair to be taken by the Honorary President, Thos. Ahearn, and speeches to be made by prominent guests; 10 p.m., dancing, and band concert on Dufferin Terrace.

June 2, Friday, 9 a.m.; inspection of exhibits; 10 a.m., paper by a member; 11.30 a.m., trip to Quebec Bridge, by steamboat, for members and ladies, in formal buffet luncheon to be served on board; 2.30 p.m., paper by an associate member; 4 p.m., unfinished business; election of officers; 4.30 p.m., inspection of exhibits; 9 p.m., reception and ball at Chateau Frontenac.

June 3, Saturday, inspection of exhibits, and trip to Ste. Anne de Beaupre, to be followed by a trip to the Saguenay. R. Mayne-Read, Superintendent, City Division, Quebec Ry., Light & Power Co., who is chairman of the exhibit committee, has made very complete arrangements for the display of electric railway supplies, etc. Those who will have moving exhibits will be supplied with a.c. current.

Customs Duty on Intersections for Railways.

A special meeting of the Customs Board was held in Ottawa, March 18, to consider an application from Canadian Steel Foundries Ltd., Montreal, in regard to tariff item 390, which provides for the following duties on switches, frogs, crossings and intersections for railways, viz.:—British preferential tariff, 20%; intermediate tariff, 30%; general tariff, 32½%. Lt.-Col. A. T. Thompson, solicitor, Ottawa, representing Canadian Steel Foundries, argued that the whole layout constitutes an intersection coming under item 390. A. Haydon, solicitor, Ottawa, for the Toronto Transportation Commission, argued that the track layout on a street intersection is composed of straight and curved rails, coming under tariff item 388, on which the duty is, British preferential, \$4.50 a ton; intermediate, \$6 a ton; and general, \$7 a ton; fish plates and the plates coming under item 389, on which the tariff is, British preferential, \$5 a ton; intermediate, \$7 a ton, and general, \$8 a ton; switches, frogs, crossings and intersections coming under item 390. The bars are dutiable under the general tariff at 30% as manufactures of iron or steel, n.o.p.

G. Gordon Gale, Vice President and General Manager, Hull Electric Co., and President, Canadian Electric Railway Association, agreed with Mr. Haydon's contentions, and towards the conclusion of the hearing obtained the Board's permission to file evidence from electric railway companies which are members of the Association, and which were not represented at the hearing and may wish to present their views.

Others present at the hearing in addition to those mentioned above were: W. W. Horwood and O. C. Rehfuß, of Canadian Steel Foundries; I. S. Fairty and A. T. Spencer, of the Toronto Transportation Commission; and Major W. D. Burpee, Manager, Ottawa Electric Ry., and Vice President Canadian Electric Railway Association.

The Board reserved its decision, heretofore it has held that intersections are the individual special pieces to be inserted in the track line where the actual cross or intersection occurs.

Detroit United Railways Agree to Sell Lines to the City.

Detroit United Rys. shareholders at the adjourned annual meeting Feb. 27, agreed, without a dissenting voice, to accept the latest offer from the Detroit, Mich., City Council to purchase the lines in the city for \$19,850,000. The meeting was adjourned to permit an agreement to be entered into with the city, and it was arranged that the purchase would be submitted for the approval of the citizens at a special election, in April.

The property to be taken over by the city under the bargain consists of all the company's lines in the city, outside the 20 miles recently taken over \$2,000,000, together with the real estate included in the agreement of 1919, which was not ratified by the ratepayers, with the exception of the Highland Park paint shop, and a tract of land at Mackinaw and Grand River Avenues. The price fixed for the property is \$19,850,000, of which \$2,770,000 is to be in cash, and the balance in semi-annual payments of \$50,000 each to July 1, 1923, the final payment to be made Dec. 31, 1931. The city will pay interest on the deferred payments at 6% a year.

Two propositions will be submitted to the people in April, the first being for the approval of the purchase agreement and the second to authorize the issue of bonds for \$2,770,000, for the initial payment. It is anticipated that the city will be able to provide for the payment of interest on the balance of the purchase money, and for the half yearly instalments on account of principal, out of surplus earnings.

The company Board has been reorganized with Elliot G. Stephenson as acting President until the city vote is taken in April. C. Laurendeau, K.C., of Montreal, has been elected first Vice President and General Manager, with E. J. Burck, of Detroit as Vice President; E. R. Decary, formerly head of the Montreal Administrative Commission, has been added to the Board; A. A. Gingras of Montreal, who was chiefly responsible for the change in the directorate, has been appointed Treasurer and J. Brampton as Assistant Treasurer.

Proposed Abolition of Manitoba Public Utilities Commission.

The Manitoba Legislature had under discussion from the early part of its session the following motion submitted by Mr. Talbot:—Whereas the Legislature did, on April 28, 1921, give this mandate to the Executive Council of the province: 'The Public Utilities Commission having outlived its usefulness, should now be dispensed with, and its duties transferred to the Provincial Secretary's Department.' And whereas, ample time was granted to the Government for winding up the business of the Public Utilities Commission and transferring the duties of the Public Utilities Commissioner to the Provincial Secretary's Department; And whereas, the decision arrived at by the majority vote of this Legislature is final and should have been acted upon without further consultation with outside bodies; And whereas, ignoring such mandate the Government has been delinquent in the duties directed by and imposed upon it by the Legislature; And whereas, the Government in defiance of the first principle of constitutional government has seen fit to usurp the prerogatives and sovereign rights of the people as vested in the members of this Legislative Assembly; now therefore be it resolved, that we, the members of the Legislative Assembly, assert our right as the supreme governmental authority in this province, and further, we hereby censure the Government for its arbitrary and autocratic action and express our want of confidence in the Executive Council of this province.'

The discussion was concluded March 14 when the resolution was passed by 27 to 23, and a few days later Premier Norris tendered his resignation to the Lieutenant-Governor, but which up to March 23 had not been accepted.

The Public Utilities Commissioner is P. A. Macdonald.

Levis Tramways Co.'s Service. — In reference to the article on this subject, in Canadian Railway and Marine World for March, we are informed that the company's service was closed down on Nov. 20, 1921, owing to the impossibility of arriving at any satisfactory arrangement with the municipalities, since which no local transportation service has been given, except what is furnished by a couple of auto buses belonging to a local garage, which run between Levis and Lauzon intermittently. Until recently no move was made by either company or the public to break the deadlock, but in the middle of February, a delegation waited on the Quebec Prime Minister asking that something be done to secure car operation. We are advised that until satisfactory arrangements can be arrived at between the company and the municipalities, the company cannot raise the capital to refinance its heavy fire loss, and that the only service which it will be possible to furnish in the spring after the snow has gone, will be what the few cars left after the fire will be able to give.

Steel Rails Ordered. — The Toronto Transportation Commission has ordered 8,500 tons of 122 lb. 7 in. grooved girder rail from the United States Steel Products Co., delivery to be made in 1,000 ton lots at intervals as required during the coming summer.

Winnipeg's Electric Railway Situation.

The Winnipeg Electric Service News said in a recent issue:—For some time past negotiations have been proceeding between the civic authorities and representatives of this company with a view to effectually clearing up controversial matters and differences which have developed over a number of years past. These negotiations, we are pleased to say, have been of a harmonious nature, with a broad degree of co-operation resulting to the interest of the car riding public. The point is now reached where consideration must be given to the future, looking to provision for extension of present transportation facilities. The company has intimated that because of the peculiar financial and other conditions arising out of the past few years it is almost impossible to finance extensions and improvements which should be made if the transportation system is to keep pace with the growth of the city. Street railways find it is impossible to sell short term securities. If money is to be obtained, investors must be assured that the investment is one for a reasonable term of years. That is why Victory Bonds are so popular. If the company has been put into a position where it could issue saleable securities there would be but little difficulty about getting the necessary money for capital expenditures. It is an easy matter to assume an indifferent attitude and say "The company is under contract . . ." No one disputes that for a moment. But since the contract was made in 1892 the world has been turned topsy-turvy, and because of new conditions which have arisen, many of the conditions which, in the light of 1892 looked easy to perform, are now impossible of achievement.

The city and the street railway agree that it is proper that a programme of improvements and extensions to service should be put into execution right away. But the position which the street railway finds itself in, owing to the uncertainty of the future, is one which makes impossible the securing of the needed capital to carry out this programme. The next logical step, therefore, is to continue these negotiations and in mutual interests work out a plan that will meet the new conditions as they arise and ensure that the natural development of Winnipeg and district will not in any way be hampered by an inadequate and crippled street car service.

Mainly About Electric Railway People.

Sir Adam Beck, Chairman, Hydro Electric Power Commission of Ontario, returned to Toronto on March 6, after spending a few weeks at Asheville, North Carolina, during a portion of which he was ill with bronchitis, and was seriously threatened with pneumonia.

Edward H. Ives, Second Assistant General Superintendent, Detroit United Rys., Detroit, Mich., with his wife and three of his children, with ages ranging from 18 months to 7 years, together with a girl companion, aged 15, were killed, when an automobile, in which they were travelling, was struck by a D.U.R. train, near Rochester, Mich., March 19. One of his children, aged 14, jumped and escaped without injury.

Sir Augustus M. Nanton, President, Winnipeg Electric Ry., returned to Winnipeg early in March after visiting England and Scotland.

C. U. Peeling, formerly Manager, Cornwall St. Ry. Light and Power Co., Cornwall, Ont., and latterly with the Palmetto Power and Light Co., Florence, S. C., is now with the Carolina Power and Light Co., Raleigh, N. C.

Mrs. Sarah Robert, mother of E. A. Robert, President Montreal Tramways Co., died at Beauharnois, Que., March 20.

Electric Railway Projects, Construction, Betterments, Etc.

Brantford Municipal Ry.—The Ontario Legislature is being asked to ratify bylaw for the issue of \$80,000 of debentures to pay for the extensions of the railway made in 1921. (Mar., pg. 150.)

Port William Municipal Ry.—The Port William City Council is asking the Ontario Legislature to pass a bill which contains a provision authorizing the council to acquire right of way for the proposed extension to Chippewa Park, the right of way to be available as a public highway and to be considered to be within the city limits; to build the extension, and to use for such purpose \$30,000 now on hand for street railway purposes, instead of issuing \$30,000 of debentures as authorized by bylaw 2102. (Feb., pg. 97.)

London and Port Stanley Ry.—Tenders are reported to have been asked for the construction of an amusement building at Port Stanley, Ont., which it is expected to have completed by June 15. (Mar., pg. 150.)

Montreal Tramways Co.—Montreal City Council has been considering a proposal to reopen negotiations with the company for the construction of a line along the Shakespeare Road to the top of Mount Royal.

When this matter was last under consideration in June, 1921, the council was advised by the Montreal Tramways Commission that it had no intention of directing the construction of this line on account of the other construction and reconstruction work necessary. Surveys for the line were made but no decision was reached as to the route to be followed. (Jan., pg. 42.)

Ottawa Electric Ry.—A press report states that the company is planning the construction of an extension of its line on Bronson Ave., from Gladstone Ave., to the Driveway Ottawa.

Residents of Gloucester Tp. are asking for an extension of about a mile and a half of double track so that cars may run out on the Metcalfe Road, from where they now turn at Sunnyside Ave., to about a mile beyond Billings Bridge. The township council on March 2 decided to appear before the management as a body, along with the petitioners. (Oct. 1921, pg. 548.)

Waterloo-Wellington Ry.—The Kitchener, Ont., Board of Trade's Council is reported to have endorsed the company's proposal to extend its line from Kitchener, via Bloomingdale and New Germany, to Guelph, provided action be taken within two years. The company's application to build this line is before the Ontario Legislature.

A press report states that Waterloo Township Council has asked the com-

pany to remove the tracks from Main St., Bridgeport, prior to its being paved. The railway runs for about 250 ft. on Main St., and then switches off on to a private right of way. (Feb., pg. 97.)

Electric Railway Notes.

British Columbia Electric Ry. has received 6 one-man standard safety cars for service in Victoria, from Canadian Brill Co. The balance of the order for 10 was expected to be shipped before the end of March.

The City of Toronto is asking the Ontario Legislature for authority to raise \$1,012,579.30 by debentures to provide for the cost of construction, repair or renewal of pavements in connection with the construction, repair and renewal of the Toronto Transportation Commission's street railway tracks without submitting a bylaw to the ratepayers.

A Saskatoon, Sask., Municipal Ry. car ran off the tracks at the foot of the long hill on the Nutana side of the Saskatchewan River, March 4, turned a somersault at the bridge and landed on the bank 30 ft. below, the momentum of the fall carrying the heavy trucks over the passengers' heads. Three of the 20 passengers sustained more or less serious injuries.

The Nova Scotia Legislature has under consideration a bill providing for the change in the rule of the road so as to bring it into conformity with the rest of Canada. This step will render necessary changes in the electric railways' roadbed and rolling stock by the Nova Scotia Tramways & Power Co. in Halifax; the Cape Breton Electric Ry. in Sydney, Louisbourg and vicinity; the Pictou County Electric Co. in New Glasgow and vicinity; the Yarmouth Light & Power Co., and the Calais Street Ry. Co.

The Quebec Ry., Light & Power Co.'s 10 new cars, the bodies of which were described in our last issue, and which are being fitted up complete at its own shops, will have short wheel base 4 ft. 10 in. double trucks for outside running motors, and inside hand brakes. They will be placed in service on the City Division. In the details of these cars published in Canadian Railway and Marine World for March, pg. 154, the width over all was mentioned as 70 ft. 10 in., instead of 7 ft. 10 in., an obvious error.

New Brunswick Hydro-Electric Power Development.—The N. B. Government is building a hydro-electric power plant at Musquash Falls, near St. John. The St. John Board of Trade is reported to have approved of a report suggesting that the power be distributed by the New Brunswick Power Co., under a contract with the St. John City Council, and that, in the event of such an agreement not being arrived at, an independent commission be appointed.

British Columbia Electric Companies Amalgamations.—A special general meeting of shareholders of the Vancouver, Fraser Valley and Southern Ry. Co. will be held in Vancouver, B.C., April 17, to consider, and, if thought advisable, approve and execute the following leases to the company:—From the British Columbia Electric Ry. Co., Ltd., of its railway system and light and power distributing system on the mainland on Vancouver Island; and from the Vancouver Power Co. of its railway system and light and power distributing system in North Vancouver and district, and between New Westminster and Chilliwack.

Winnipeg Electric Railway Co.'s Annual Report and Meeting.

The directors' report for the calendar year 1921, presented at the annual meeting in Winnipeg on March 10, is published in full on page 222 of this issue. It is very satisfactory to note, that notwithstanding the industrial depression and that the company continued to make extensive improvements in rehabilitation of rolling stock, roadbed and track, the gross earnings increased \$184,323.06 and the net earnings increased \$132,389.41. After paying all fixed charges, and allowing for depreciation, the net profit was \$727,914.64, out of which \$182,367.13 was paid in dividends, and an additional allowance of \$122,605.82 was made for depreciation, leaving \$422,941.69 to be transferred to surplus. The company's preferred stock has all been marketed and the proceeds have been used to retire floating liabilities.

Vice President McLimont's policy of maintaining good relations with the public was continued, and wide publicity has been given to the Company's problems, so that all patrons might be acquainted with the conditions surrounding the property's operation. The management has stressed its desire to provide courteous and efficient service, which the public appears to appreciate.

The following were elected directors: Sir A. M. Nanton, President; A. W. McLimont, Vice President; F. Morton Morse, Secretary; W. R. Bawlf, W. J. Bulman, D. H. Finnie, C. V. Hastings, A. J. Nesbitt, and Hugh Sutherland. Other officers are:—L. Palk, Assistant Secretary and Assistant to President, and J. S. Mackenzie, Treasurer.

Electric Railway Finance, Meetings, Etc.

Hamilton St. Ry.—The Hamilton, Ont., City Treasurer received \$2,732.19 from the Hamilton St. Ry. on March 4, being percentage for the quarter ended Dec. 31, 1921, \$19,521.57, and mileage \$2,210.53. This makes the total received from the company for 1921 \$87,396.84, against \$96,395.10 for 1920.

Moncton Tramways, Electricity & Gas Co.—The following were elected directors at the annual meeting at Moncton, N.B., March 1.—E. B. Reeser, R. Low, J. E. O. Bartlett, F. H. Minhard, J. A. L. Henderson and E. A. Cummings. Some matters connected with the company's power franchise are under consideration by the city council, and a special meeting called to consider the matter March 6 was adjourned owing to the inability of E. B. Reeser to attend.

Montreal Tramways Co.—A London, Eng., cable of March 3, stated that the Stock Exchange had accepted the Montreal Tramways Co.'s application to have the recent issue of its 1914 bonds listed. This makes an aggregate of slightly over \$18,000,000 of the company's bonds now listed on the London exchange.

A dividend of \$2.50 a share for the quarter ended Sept. 30, 1921, has been declared on the paid up capital of the company to shareholders of record Mar. 20, payable Mar. 28. This is the last payment on account of arrears of dividends amounting to 17½%. During the last two years the company has paid regular dividends at the rate of 10% a year, and has wiped out the accumulation of arrears.

New Brunswick Power Co.—The St. John St. Ry. receipts for February, in-

creased \$786.16, or 2½%, over those for Feb., 1921. The number of passengers carried was 532,716, compared with 391,347 during Feb., 1921. This is an illustration of the effect of a decreased rate of fare put into effect during the year, that while the number of passengers carried has increased by approximately 30%, the receipts have only increased 2½%.

Oshawa Ry.—The annual meeting of shareholders was held at Gananoque, Ont., March 15, when the following directors were elected for the current year:—J. E. Dalrymple, President; J. H. Vallee, Secretary-Treasurer; J. M. Sparling and J. Yates. J. M. Rosevear is General Auditor.

Quebec Ry., Light & Power Co. is asking the Dominion Parliament to authorize it to borrow money and to issue bonds to retire or replace its outstanding bonds. W. J. Lynch, General Manager, has issued a statement saying that the application is being made for the purpose of confirming the company's power to issue bonds. In connection with the rounding out of the Quebec Ry., Light & Power Co.'s financial plans, it may be necessary for the subsidiary company to issue new bonds to replace those which are outstanding, and the proposed legislation is for the purpose of giving it the required power.

St. Thomas Municipal Ry.—The St. Thomas City Council is applying to the Ontario Legislature for power to issue debentures for \$32,666.21 to pay an overdraft of \$18,296.88 on street railway account, and accounts for \$14,369.33 for remodelling the street car barns for other uses.

Winnipeg Electric Ry. has within the past 14 months paid to the city \$709,589 in taxes, percentages of earnings, and car license fees, an average amount of about \$50,000 a month. This, of course, does not all represent one year's taxes, etc. The yearly amounts charged against the company aggregate about \$400,000. The company's last cheque to the city was for \$182,869.70, being the city percentage and car license fees for 1921.

The Yarmouth Light and Power Co., which operates the Yarmouth St. Ry., is applying to the Nova Scotia Public Utilities Commission for authority to issue an additional \$150,000 in bonds.

Motor Omnibus Notes.

A bus service, in which the Owen Sound Board of Trade is stated to be interested, is being operated between Owen Sound and Durham, Ont., 28 miles.

The International Harvester Co. is reported to be operating a motor bus in St. Thomas, Ont., for demonstration purposes, and will report the results to the city council.

Owen Sound, Ont., interests are reported to be arranging for motor bus service to be opened up on the highways radiating therefrom during the summer. A press report states that buses will be run to Meaford and Collingwood, to Southampton and Goderich, to Wiarton.

The Canadian Highways Transit Co., Hamilton, Ont., is reported to have in operation several motor bus services which together give a service between Toronto and London, via Hamilton, Brantford, Woodstock, Ingersoll and Thamesford. It is expected that the company will during this year add further routes which will enable a trip to

be taken by motor bus from Toronto to Sarnia.

The Ontario Minister of Public Works introduced in the Legislature on March 20 a bill to authorize the Department's highways section to regulate motor bus traffic in the province. The bill provides for the inspection of buses; the regulation of the number to be used on the highways; their operation on fixed schedules, and generally gives the Department power to make regulations of all kinds for the traffic.

The Ontario Legislature passed through the committee stage, on March 6, a bill to authorize the Hydro-Electric Power Commission of Ontario, to operate, in connection with and as part of the Sandwich, Windsor and Amherstburg Ry. a service to meet the requirements of any particular district by motor bus or cars, operated by trackless trolleys, and that it may, for such purpose purchase, maintain and operate motor buses, cars and trackless trolleys.

The St. Thomas, Ont., City Council is applying to the Ontario Legislature for authority to operate on the streets and in the parks, vehicles driven by electricity, gasoline or other power; to substitute, if and when expedient, such vehicles in place of the St. Thomas Municipal Ry. cars, to vary routes of the railway's cars, to fix fares; to include any deficit for operation in the annual estimates and, with the assent of the voters, to pass bylaws to pay for the purchase of buses.

Arbitration of Value of Toronto Railway Co.'s Property.

After an adjournment of over six weeks, the proceedings to determine the value of the Toronto Railway Co.'s property transferred to the city on Sept. 1, 1921, before the arbitrators—Hume Cronyn of London, Ont., chairman; Sir Thomas White, nominated by the company; and Sir Adam Beck, nominated by the city, were resumed on March 14, when Pearce Butler, of the Minnesota bar, appeared as additional counsel for the company. It was expected that the proceedings would open with the presentation of the city's case, but N. W. Rowell, K.C., and Senator Beaubien tendered their witness for the company, who testified as follows:—L. A. Herdt, D.Sc., Professor of Electrical Engineering, McGill University, and Vice Chairman Montreal Tramways Commission, as to the efficacy of reserve steam plants; F. G. Clarke, Chief Engineer, Toronto Ry., as to interruption of power since the view between Niagara Falls and Toronto on Feb. 22 and 23; F. L. Hubbard, Assistant to Manager, Toronto Ry., as to equipment of cars which the company considered should be taken over by the city; J. E. Allison, consulting engineer, St. Louis, Mo., as to the railway's extra value as a going concern. The hearings were adjourned from March 15 to 21 owing to the chairman's illness, and on their resumption, F. G. Clarke gave further evidence as to storm interruptions and the necessity for reserve steam plant, and O. A. Matthews, accountant, explained the valuation of the tracks based on consulting engineer's estimates. The city's case was opened on March 22, when A. J. Richer of Worcester, Mass., testified as to the value of the company's cars and costs of converting them. On March 23 the arbitrators and counsel inspected a lot of the company's old cars.

Uniform Specifications for Crossings of Overhead Wires.

A conference called by the American Engineering Standards Committee at the at the American Electric Railway Association's request was held in New York, Mar. 2, to consider the question of uniform specifications for crossings of overhead wires, and to dispose, if possible, of differences of opinion in regard to the National Electrical Safety Code, part 2, which deals with overhead lines. More than 50 representatives were present from the following bodies:—Connecticut Public Utilities Commission, Iowa Railroad Commission, Minnesota Railroad and Warehouse Commission, New York State Transit Commission, New York State Public Service Commission, Rhode Island Public Utilities Commission, American Electric Railway Association, American Institute of Electrical Engineers, American Railway Association, American Telephone & Telegraph Co., Bureau of Standards, Board of Railway Commissioners for Canada, Canadian Engineering Standards Committee, Electrical Manufacturers Council, Federal Power Commission, Hydro Electric Power Commission of Ontario, National Bureau of Casualty and Surety Underwriters, National Electric Light Association, National Safety Council, Postal Telegraph-Cable Co., U. S. Commerce Department, U. S. Labor Department, U. S. Independent Telephone Association, Western Association of Electrical Inspectors, Western Union Telegraph Co.

M. B. Rosevear, on behalf of the American Electric Railway Association, presented a statement outlining the considerations which had led the Association to request the conference and stating in general terms its position on the various items of agenda. W. A. Durrin explained the U. S. Commerce Department's motive in promoting simplification in industry and industrial standardization along national lines. M. G. Lloyd, of the U. S. Bureau of Standards, outlined the development of the National Electrical Safety Code and its present position before regulatory bodies and utility companies and associations.

John Murphy, Electrical Engineer, Board of Railway Commissioners, Ottawa, representing the Commission and the Canadian Engineering Standards Association, outlined the status of crossing specifications in Canada, stating that the Board has general jurisdiction over wire lines crossing or passing near railway right of ways, and also over other wire crossings in case either one of the companies concerned is operating under a Dominion charter. The rules which have been followed by the Board are of a very simple character. They work out so satisfactorily from the railways, telephone, telegraph and electric light companies' viewpoint that the Board does not hear from 1% of the cases which arise. The great feature is that the parties concerned must of necessity get together and co-operate before the work is done.

A. E. Davison, of the Hydro Electric Power Commission of Ontario, in discussing crossings generally, said that the Commission has some 1500 crossing and allied agreements, the majority of which come under the Board of Railway Commissioners' jurisdiction. These crossings, wherever carried out in accordance with the sense and intent of the

regulations, have operated without failure. Inasmuch as most of the crossings are 12 or more years old, special attention must be given shortly to inspection for maintenance. As the work develops in Canada a tendency to criticize the rules, with the idea of strengthening the structures and wires crossing under supply conductors, the Commission was pleased to have the opportunity of co-operating in the conference.

The following resolution was passed unanimously:—It is the opinion of this conference that (1) The remaining differences of opinion on the National Electrical Safety Code, part 2, are small, and the different interests are approaching agreement, and it is therefore advisable, (2) that the code should be approved by the American Engineering Standards Committee with the understanding that (3) there should immediately be organized a thoroughly representative sectional committee under the procedure of the American Engineering Standards Committee to consider any revisions of part 2 of the code which may be deemed necessary by any of the interested parties, and (4) that there should be a set of national specifications for crossings between overhead electrical wire lines and railways, and between different wire lines, because there is disagreement among existing specifications, and that (5) such specifications should be prepared by thoroughly representative sub-committees so as to make them in agreement with the code, with such revisions as may be made under the provisions of paragraph 3 above.

The Ontario Liberals' Hydro Electric Railway Policy.

Ontario Liberals, at their convention in Toronto, on March 1, passed the following resolution unanimously: "Whereas provincial assistance in the construction and operation of hydro electric railways is a matter of serious moment, involving, as it would, the pledging of the credit of the province to the extent of many millions of dollars; and whereas such railways and such benefit as might accrue therefrom would be sectional or local, rather than provincial; and whereas, nevertheless, the Liberal party stands emphatically for the principle that every opportunity and privilege should be afforded to municipalities to undertake on their own responsibility, the construction and operation of such railways; and whereas the construction and operation of such railways is an undertaking absolutely and entirely distinct from the generation and transmission of electric energy, now and heretofore under the control and management of the Hydro Electric Power Commission, appointed by and responsible to the Ontario Government; be it resolved, that the Liberal party adopts the principle that municipalities should be enabled on their own responsibility, but with the approval and consent of the municipal electors in such municipalities, as required under the Municipal Act, in cases of voting upon money bylaws, to undertake the construction and operation of such radial railways whenever and wherever such municipalities may desire; and that, in view of the large amount of power the Chippawa scheme is likely to develop over and above the requirements for

rural and other extensions, and of the advantages and economies which may be effected by the electrification of steam railways, the province should do everything in its power to encourage and co-operate with the owners of the same, having in view their electrification wherever practicable and the creation of markets for such surplus power as may be available."

Another Motor Bus Added by Toronto Transportation Commission.

In addition to the motor buses placed in service by the Toronto Transportation Commission and described in Canadian Railway and Marine World, March 18 issues, the Commission has received a gasoline motor bus from the Eastern Canada Motor Co., Ltd., Hull, Que. This latest acquisition is a double decker, arranged so that the top bands, railing and seats may be removed quickly and the bus operated as a single deck enclosed type. Operated as a double decker, the total seating capacity is 51, there being accommodation for 30 passengers on the top and for 21 on the bottom. The length of the bus overall is 25 ft. 10 in. and the extreme height 10 ft. 8 in. A Buda 4-cylinder 40 h.p. type Y-T-U engine is used, with cylinders 4½ in. diam. by 6 in. stroke. Inside seats, arranged transversely, are finished in rattan. The bus exterior is painted the Commission's standard color, red with cream trim and stripe. It was placed in service in West Toronto March 2.

Mexican Power Development.—G. R. C. Conway, formerly chief engineer, British Columbia Electric Ry., now managing director, Mexican Light and Power Co., is carrying out an important hydro-electric development. The Mexican company's load has been creeping up enormously during the past three years, and is now about 420 million kilowatt hours per year. This enormous growth of load has seriously handicapped the company and some time ago it was decided to proceed with the development of a new plant below the existing Nacaxa plant, capable of generating about 40,000 additional h.p. This work is in progress and involves the construction of a tunnel about 4½ kilometers long, destined to carry about 27 cubic meters a second. The work is being forced rapidly ahead, and it is hoped to have the power available by March, 1923. The company is also developing a smaller plant to the south of Mexico in the State of Morelos, which will give about 25,000 h.p. additional. Half of this will probably be available for use about next July.

Toronto Transportation Commission Offices.—The Commission, which some time ago bought the old Board of Trade building, at the corner of Front and Yonge Sts. and some adjoining properties on Yonge and Front Sts., has moved its interior of the Board of Trade building overhauled and rearranged, and will probably remove its offices there, from 229 Yonge St., early in April, when it will occupy the building temporarily until the adjoining buildings are rearranged and added to, after which it will probably move into one of them, and the Toronto Hydro Electric System will then probably use the Board of Trade building. Tenders for the construction of an east wing, to adjoin the Board of Trade building on Front St., have been invited by the Toronto Hydro Electric System.

London Street Railway Co.'s Annual Report and Meeting.

The directors presented the following report for the calendar year 1921 at the annual meeting held in London, Ont., recently:—

Earnings—	
From passengers	\$559,838.57
Other sources	8,027.69
Gross earnings	\$567,866.26
Operating expenses—	
Maintenance, wages and structures	\$6,177.96
Maintenance, equipment	69,673.69
Depreciation	27,454.83
Operation of cars	272,895.83
General and miscellaneous	51,581.81
Total operating expenses	\$487,844.13
Net earnings from operation	\$80,022.13
Interest on bonds	\$5,195.94
Interest on loans	1,006.74
Taxes	8,401.50
Net income, before providing for depreciation	\$64,009.95
Deduct depreciation	51,495.65
Net income	\$12,514.30

The gross earnings were \$567,866.26, an increase of \$43,137.96 over 1920, or 8.22%. The operating expenses were \$487,844.13, an increase of \$32,786.78 over 1920, or 7.23%. Wages included in operating expenses for 1921 were \$351,476.24, an increase over 1920 of \$22,549.22. The net earnings from operation were \$80,022.13, and after deducting fixed charges and depreciation, the net income was \$12,514.30.

Your company experienced considerable difficulty in operating the railway, on account of the increased cost of labor and materials and, in view of the fact that the company is still required to carry passengers at the extremely low rate of fare of seven regular tickets for 25c, and nine limited tickets for 25c, during certain hours of the day. The Ontario Railway and Municipal Board operated the railway until April 30, 1921, and published a report covering its operation to Dec. 31, 1920, a copy of which was mailed to shareholders. A letter from D. M. McIntyre, Chairman, Ontario Railway and Municipal Board, to the Mayor of London, dated Feb. 8, 1921, was embodied in the report. The Chairman emphasized the need of prompt action looking to some workable solution of the transportation difficulties in this city, which would meet the then present and future requirements. No action, however, has been taken by the city council toward this end. The matter of providing adequate transportation for the increasing passenger traffic is a matter for serious consideration. That the problem cannot be consistently left unsettled until the expiration of the company's franchise, on March 8, 1925, is indicated by this and previous reports, which show an increase each year in the number of passengers being carried. During 1921, the passengers carried numbered 14,866,566, compared with 13,788,209 in 1920. As the company is now operating all its available equipment during rush hours, no further improvement in the service can be made, except by additional new equipment. The company, however, admits its inability to finance the purchase of the necessary new equipment under existing conditions. Your directors are of the opinion that the matter should be again presented to the city council, in an endeavor to secure a permanent solution of the difficulties now existing and under which the company is operating. It would not only be fair to

the company but of a decided advantage to the city to have the matter considered at once, so that the company can make its arrangements to meet the capital expenditures which will be involved in the work required to place the railway in a position to furnish adequate service to the public. Action in this connection will be commenced in the near future.

Statistical Statement.—Passengers carried, 14,866,566; car earnings per revenue passenger, 3.76c; transfer passengers, 1,611,801; total passengers, 16,478,367; car mileage, 1,783,275; gross earnings per car mile, 31.84c; operating expenses per car mile, 27.33c; net earnings per car mile, 4.51c; number of miles of track, 36.10; gross earnings per mile of track, \$15,730.37.

J. C. Elliott, of Ivey, Elliott & Ivey, solicitors, London, was elected a director to succeed C. H. Ivey, deceased, and H. H. Allyn of Cleveland, Ohio, was elected a director to succeed R. R. Alexander, of Cleveland, resigned. The other directors were re-elected. The board of directors is now constituted as follows:—Charles Currie, Cleveland, Ohio, President; R. G. Ivey, London, Vice President; C. B. King, London, Manager; J. C. Elliott, London; W. M. Spencer, London; P. W. D. Brodric, Toronto; H. A. Allyn, Cleveland. The Secretary-Treasurer is L. Tate.

Safety Cars, International Transit Co.

The International Transit Co., Sault Ste. Marie, Ont., is adding five safety cars to its equipment. Their dimensions will be as follows:—

Length over all	28 ft. 0 1/2 in.
Length over dashers	26 ft. 9 1/2 in.
Length of platform over dashers	14 ft. 6 in.
Length over body corner posts	17 ft. 9 1/2 in.
Width over sheathing	7 ft. 8 in.
Width of platform	7 ft. 1 1/2 in.
From rail to top of roof boards	9 ft. 9 1/2 in.
From rail to top of floor (with 24 in. clear)	2 ft. 3 1/2 in.
Seat spacing	2 ft. 4 1/2 in.
Post spacing	2 ft. 4 1/2 in.
From floor to top of window sill	2 ft. 0 1/2 in.
From floor to bottom of top sash	4 ft. 2 1/2 in.
From floor to underside of arch in bulkhead	6 ft. 9 1/2 in.
Width of exit entrance doors in the clear	2 ft. 5 1/2 in.
From rail to top of trolley boards	10 ft. 7 in.

The underframing will include side sill angles 3 x 3 x 3/16 in. in one continuous piece from body corner posts to vestibule corner posts; cross sills, consisting of 3 in. 4 lb. and 4 in. 5.25 lb. channels, joined to the side sill angles, and reinforced at the truck bearings with 3 x 2 x 5/16 in. angle brackets and 1/4 and 3/16 in. steel gusset plates, securely riveted; platform knees of 6 in. 8 lb. channels, and center platform sills at ends of 3 in. 4 lb. channels, and crown pieces of oak, 1 1/2 x 14 in., bolted to the sills.

Side framing and roof construction, and interior finish, will conform closely to the usual specifications for the standard safety car, the only variation being that the International Transit Co.'s cars will have longitudinal seats throughout, with hand hole brackets, instead of hand straps. Wheels are to be 26 in. rolled steel, and the equipment will be Canadian General Electric type 264, with 25 h.p. motors.

The cars are being built by Canadian Brill Co. and are to be delivered early in May.

Bill Respecting the Toronto Clean-Up Deal.

The bill which has been introduced in the Ontario Legislature at the Government's instance, respecting the filing of claims against certain companies or their properties, to which reference was made in Canadian Railway and Marine World for March, pg. 152, is to facilitate the "clean up" of the so-called Mackenzie electric power, lighting and railway properties in Toronto and the surrounding district. Sec. 1 provides that the Hydro-Electric Power Commission of Ontario and the Toronto Ry. Co. shall advertise in newspapers in Toronto, Montreal, Winnipeg, London, Eng., and New York, N.Y., calling upon all persons having causes of action against any of the companies to file particulars of the same with the H.E.P. Commission by April 1, 1923; bondholders are not required to file particulars of claims in respect of bonds or notes. Sec. 2 will bar all claims if not filed within the time specified; Sec. 3 excludes the bondholders from those required to file claims; Sec. 4 states that actions in connection with unsatisfied claims, notice of which had been filed by April 1, 1923, shall be indicated before Oct., 1923, and if not then commenced shall be barred. Sec. 5 provides that nothing in the Act shall revive any claims or right already barred by any statute, or to extend the period fixed by statute within which action to enforce any claim might be taken in respect of any such claim. Sec. 6 states that the act shall go into force the day it is attested to.

The London and Port Stanley Ry. and the Michigan Central Rd.—The Michigan Central Rd. has an agreement with the London Railway Commission for hauling of its cars over the London and Port Stanley Ry. For some time past negotiations have been going on with regard to the charge for this service, and the matter has been before the Board of Railway Commissioners, which suggested that an agreement be reached between the parties, but it is reported that the Michigan Central Rd.'s latest offer was refused by the London Railway Commission on March 12. The Board of Railway Commissioners will now be asked to fix the rate.

Niagara, St. Catharines and Toronto Ry. Purchase Proposal.—A meeting of representatives of the various municipalities, through which the Niagara, St. Catharines and Toronto Ry. runs, is reported to have been held at Niagara Falls, E. R. Riffer, chairman of St. Catharines civic railway committee, to consider the position of the proposed purchase of the line by the municipalities under the act relating to hydro electric railways. It is felt locally that the proposed purchase is shelved for the present, following the defeat of the by-laws in Humberstone, Thorold and Niagara Falls. The municipalities in St. Catharines and in Niagara Falls have expired.

Canadian Shipping Brokers Ltd. has been incorporated under the Dominion Companies Act, with \$100,000 authorized capital and office at Toronto, to carry on business as shipping broker, forwarding agent, ship agent, booking agent for transportation companies, etc., with power to own and operate ships of every description. The incorporators are, W. E. Miller, K. C. W. F. Mulock, J. L. Grogan, H. A. Brule and W. A. Murray, Toronto.

Marine Department

General Shipbuilding Matters Throughout Canada.

Alberta Motor Boat Works, Edmonton, Alta., has completed and shipped a number of canoes and small boats of different types for the Hudson's Bay Co., and other organizations on the north-Mackenzie River. A recent shipment included 68 boats, and further consignments of 21 for the Mackenzie River country, and 50 for the Hudson's Bay Co.'s service on the northern lakes will be made early in the spring.

Dave Shipbuilding and Repair Co., Levis, Que., has received a contract for repairs and renewals for the Dominion Public Works Department's dredge 116 and steam tug Witherbee.

Fletcher Ship Repairing Co., Levis, Que., which, as stated in our last issue, is operating the shipbuilding and repairing plant at Hadlow, near Levis, which was operated formerly by the National Shipbuilding Co., carried out repair work during the past 12 months on the Canadian Government Merchant Marine's steamships, Canadian Recruit, Canadian Supper, Canadian Settler, Canadian Signaller, Canadian Squatter, Canadian Warrior, J. A. McKee and T. J. Drummond; Dominion Government steamships Bellechasse, Eureka and Rouville; the s.s. Lady Evelyn for Dimahan-Thomson Co., and on a floating crane for Quebec Harbor Commissioners. This work comprised general hull, engine and boiler repairs, and in the case of the s.s. Canadian Settler, there was an extensive overhauling in drydock, as well as large repairs to boilers, engines and hull. The plant includes a patent slipway which will accommodate a ship of 3,000 tons, and which will draw a ship up clear of the water within two hours. The driving power has steam engines, geared with heavy tackle and blocking, the top cradle moves on greased skids and the friction is comparatively small, considering the great weight carried. There is a wooden floating dock which will accommodate a ship 145 ft. long. There is also a fully equipped machine shop, blacksmith forge and carpenter plate and angle shops. Electricity is used for motive power, except for the compressors, which are driven by steam. Neil Baker is Manager.

Fraser, Brace Co., Three Rivers, Que., has, as mentioned in our last issue, received an order from the George Hall Coal Co. of Canada, for 4 Welland Canal size bulk freight steamships, each of approximately 3,500 tons gross. They are being built at the Three Rivers yard, operated formerly by National Shipbuilding Corporation Three Rivers Shipyard Ltd. Division, now in bankruptcy. They will be steel, single screw, lake freighters, classed with the British Corporation of Shipping B.S., and their principal dimensions will be: length over all 258 ft., length b.p. 250 ft., breadth 45 ft., depth, moulded, 20½ ft., with full topgallant forecastle and long raised quarter-deck aft. The design has been planned so that every modern improvement has been taken advantage of to make for economy in operating the ships, rapidity in handling cargo, etc. The hulls will be built on the Isherwood system, with water ballast in the cellular double bottom, which will be divided longitudinally for about two-thirds of

the ship's length, for turning purposes in working the cargo, and water ballast will be provided in the fore and after peaks. There will be two cargo holds, with 6 large hatches, 2 of which will be especially large, for handling beams and billets of 60 ft. length, and generally the design has been arranged to carry heavy pulp wood cargoes, in the holds and on decks. Under the forecastle, accommodation will be provided for passengers, and spacious quarters for the officers and pilot, all in separate rooms with baths, w.c.'s, etc., complete. The captain's room on the forecastle deck, will consist of sleeping room, office, bath room, etc. The navigating bridge will be placed over the captain's rooms, extending the full width of the

peak, and controlled from the wheel house forward, and out of deck house aft. Three steam winches for rapid handling of cargo will be provided, and 2 specially designed steam winches for warping purposes. A steam and hand combined windlass will be placed on the forecastle deck, with one of the warping winches placed alongside for warping purposes. A patent snubbing wire compressor and the George Hall Coal Co.'s special fairleads and bollards will be supplied for the quick and efficient working of the ships in and out of docks and through canals. Each ship will have 2 pole masts and 3 heavy derricks for working the cargo. A complete system of electric lighting will be provided, with large cluster lights for working the cargo, regulation signal lamps, etc. There will be refrigerating plant for making ice, and for keeping the refrigerating chamber cool and providing cold water for the ships' use. The plumbing system will include water purifiers, baths, w.c.'s, lavatories, constant supply of running water, and hot water when necessary. There will be two lifeboats to each ship, with patent davits and disengaging gear, and these will be placed aft on top of the deckhouse. The ships are designed for a deadweight carrying capacity of 2,500 tons, on canal draft of 14 ft., with grain capacity of about 120,000 bush. Work is proceeding rapidly, and it is expected that they will be ready for operation in the spring.

Georgian Bay Shipbuilding & Wrecking Co., Midland, Ont., is building a wooden tug, 70 ft. long by 15 ft. beam, for Sable Spanish River Boom Co. She will be equipped with a Steeple compound engine, with cylinders 10 and 20 in. diam. by 41 in. stroke. The company is also reported to be overhauling the hull of the s.s. Major, which it has acquired from the Great Lakes Transportation Co., into a floating drydock. The bow is being cut off, gates fitted, and the necessary valves, etc., placed for filling and emptying the dock. When completed she will accommodate ships up to 200 ft. long with 33 ft. beam.

Grand Truck Pacific Drydock, Prince Rupert, B.C., during February, repaired the Grand Truck Pacific Coast Steamship Co.'s s.s. Privity, overhauling her extensively and putting her in shape for Lloyd's reclassification. The same company's ocean going steam tug Lorne was cleaned and copper painted on the bottom and a new keel shoe fitted, and 2 of the company's barges were docked, cleaned and copper painted. Work is proceeding on the 55 ft. steel ferry for the British Columbia Public Works Department's Francois Lake service, and a 30 ft. ferry pontoon for use at Terrace, B.C., was built for the same department. Considerable repairs were done on halibut fishing boats operating out of Prince Rupert.

Hoffar Motorboat Co., Vancouver, B.C., is reported to be building a 41 ft. schooner for Major A. H. Buck, of the Royal Victoria Yacht Club. The keel was laid Feb. 1, and it is expected that she will be ready for Privity by May 1. She will be 30 ft. long on the waterline and have a beam of 11½ ft. She will be

Dominion Marine Association.

Honorary President, A. A. Wright, President, Elderwater Shipbuilders, and Vice President and Managing Director, Dave Shipbuilding & Repairing Co., Montreal.

President, J. R. Eady, Operating Manager, Canada Steamship Lines, Montreal.

First Vice President, Hon. L. C. Webster, President, Webster Steamship Co., Montreal.

Second Vice President, G. J. Madden, George Hall Coal Co. of Canada, Ogdenburg, N.Y.

Executive Committee, The President, First and Second Vice Presidents, and W. E. Burke, Canada Steamship Lines, Montreal; J. D. Duro, Sincennes-McIntosh Line, Montreal; M. J. Haney, Canada Steamship Lines, Toronto; A. E. Mathews, Mathews Steamship Co., Toronto; W. J. McCormack, Algoma Central Steamship Co., Sault Ste. Marie, Ont.; Col. G. P. Murphy, C.M.G., Ottawa Transportation Co., Ottawa, Ont.; E. W. Oliver, Niagara, St. Catharines & Toronto Navigation Co., Toronto; W. H. Smith, Ontario Car Ferry Co., Montreal; J. F. Sowards, Kingston, Ont.; J. E. M. Stewart, Point Anne Quarries Ltd., Toronto; John Walker, Keystone Transports, Montreal; Honorary members, L. L. Henderson and A. A. Wright, Montreal.

Counsel, Francis King, K.C., Kingston, Ont.

Official Organ, Canadian Railway and Marine Week, Toronto.

ship, with a wheel house, containing the steering wheel, compass, docking telegraph, telephone, speaking tube, engine room indicators, etc., with the standard steering compass on top. The dining room, engineers, stewards, pantry, refrigerator room, galley and engine room staff, including deck hands, will be accommodated in a 60 ft. house aft on the quarter-deck. The propelling machinery will consist of triple expansion engines, with cylinders 19, 32 and 56 in. diameter by 36 in. stroke, supplied with steam by 2 Scotch multitubular marine boilers, each 14 ft. 7 in. diameter, by 10 ft. 8 in. long, at 160 lb. working pressure. The boilers will be equipped for coal burning, and there will be bunker accommodation for 150 tons, and an ash ejector will be provided in the stokehold for discharging ashes. There will be the usual ballast pumps and auxiliaries, and extra large pipes will be fitted to the ballast tanks for rapid filling and emptying. Powerful steam and hand steering gear will be placed aft over the after

equipped with auxiliary power, consisting of a 20 h.p. high speed motor.

A. McMillan & Heighon, New Glasgow, N.S., have a contract from the Dominion Public Works Department for repairs, renewals, etc., to the steel hopper scow 197, of the Department's dredging fleet, for \$4,950.

R. J. Morrill, Collingwood, Ont., is building the hull of a motor tow boat for the Abitibi Pulp & Paper Co., for towing logs from Couchiching Falls to Twin Falls, on the Abitibi River. The principal dimensions are,—length over all 83 ft., length on water line 77 ft. 4 in., breadth 20 ft., draft extreme 9½ ft., power 300 shaft h.p. The design follows the usual type for tow boats suitable for harbor work, and as the tug will make the round trip each 24 hours, accommodation is provided for two crews and extra raft men and officers. The draft will be sufficient to immerse a bronze wheel propeller 6½ ft. The machinery will consist of a direct reversible 6 cylinder 12, 15-16 x 18 in. Winton Diesel engine developing 300 brake h.p. at 210 r.p.m., an auxiliary air compressor with 12 h.p. motor, bronze fuel oil transfer and service pump with 1 h.p. motor, fire, bilge and general service pump with 5 h.p. motor, 1 10 k.w. electric generator driven by 15 h.p. engine, and a 25 cell, 32 volt Edison storage battery, etc. The hull scantlings will be in excess of Lloyd's requirements, the keel, frames, stem, stern, etc., being of white oak, plankings, etc., of yellow pine, and ceilings and decks of Oregon pine. There will be 3 watertight bulkheads, and the fuel tanks will hold 4,200 gall. Accommodation will be provided for 12 men, 6 in the forecabin, 2 in the engineer's stateroom, 2 in the captain's room, and the usual galley, mess room, store rooms, etc.

Sydney Foundry & Machine Works Ltd., Sydney, N.S., has a contract from the Dominion Public Works Department for repairs, renewals, chipping, scraping and painting steel hopper scow 157 of the Department's dredging fleet for \$6,900.

Three Rivers Shipyard Ltd. — The Quebec Court of Appeal has decided that the City of Three Rivers must pay what is still owing on a bond issue of \$100,000 put out by Three Rivers Shipyard, Ltd., now insolvent, as the city guaranteed the bonds. The trust in this case was ex-

cuted in favor of the Sun Trust Co. as trustee for the bond holders. The bonds were made redeemable and payable in annual instalments on Sept. 1 of each year from 1919 to 1927, the first annual instalment to be \$12,000 with \$11,000 each succeeding year, and 6% interest payable half yearly. After Sept. 1, 1920, the Shipyard's Company defaulted in interest after having paid the second instalment of the principal. The company is insolvent and in liquidation and according to the trust deed the balance of the bond issues with interest coupons has come due and the trust company took action against the city to collect the full amount unpaid, with interest. The Superior Court upheld the trust company and the city's appeal against this decision has been refused by the Quebec Court of Appeal.

Vancouver Shipyard Ltd., Vancouver, B.C., has delivered the motor boat Atkinson to the Vancouver Harbor Commissioners, and she has been placed in service on harbor work. Her dimensions are, length 34.2 ft., breadth 9 ft., depth 3.5 ft.; tonnage, 9 gross, 6 net. She is equipped with a 30 h.p. oil engine. She will be used chiefly for night patrol work, in keeping the harbor clear of drifting logs, etc., and for yarding booms.

Vancouver Shipyard Ltd., Vancouver, B.C., has done the following repairs recently:—Celtic and Coaster, for Coast Steamship Co.; Joyful, for Canadian Turbot Co.; Autolycus, for Hastings Shingle Manufacturing Co.; Gipsy, Glenboro, Vigilant and Niluht. In addition, the West Vancouver Ferry No. 5, and two other gasoline boats were overhauled.

Yarrows Ltd., Victoria, B.C., did the following repair work during February: s.s. Canadian Scottish, 5,460 tons, docked, cleaned, painted and sundry small repairs; s.s. Canadian Inventor, 5,497 tons, docked, cleaned, painted and sundry small repairs, for Canadian Government Merchant Mariner; s.s. Princess Alice, 1,363 tons, docked, cleaned, painted and overhauled; s.s. Princess Beatrice, 1,290 tons, docked, cleaned, painted and fitted with new foremast, for C.P.R. British Columbia Coast Service; s.s. Bessie Dollar, 4,329 tons, contract received to repair damage to bridge and deckhouses, etc., and new mainmast and lifeboat, for Canadian Robert Dollar Steamship Co.; s.s.

Newington, 193 tons, docked, cleaned, painted, new tail shaft and propeller installed, and sundry repairs, for Dominion Government; steam tugs Olive M. and Hope, docked, cleaned, painted and sundry underwater repairs for Vancouver Island Tug Co.

The Canadian Government Merchant Marine s.s. Canadian Observer was docked at this company's plant, March 6, for survey, overhaul and minor repairs. The Union Steamship Co. of British Columbia s.s. Cowichan was also taken in hand March 6, for some alterations and repairs.

The work on the s.s. Bessie Dollar was completed March 9, in 10 working days, or 2 days less than the time specified in her contract. It included the restoration of the superstructure and a number of comparatively minor repairs, made necessary by damage received in a severe storm, shortly after leaving Vancouver on her usual trans-Pacific voyage. After taking on a supply of oil fuel, she loaded an additional quantity of lumber, and proceeded on her interrupted voyage, March 11.

A British Columbia Suggestion about Pacific Steamship Service.

A Victoria, B.C., press dispatch of March 10 states that the Provincial Premier has telegraphed the Dominion Premier, suggesting that the Minister of Railways take up the question of entering into a contract for preferential rates between the Canadian National Rys. and Japanese steamships plying across the Pacific to the Orient. The B.C. Premier contends that this would place all through freight for Eastern Canada, United States or Western Europe carried across the Pacific by Japanese liners with the Canadian National Rys. It would also enable the C.N.R. to compete in the handling of Oriental business with the C.P.R., which owns its own steamships on the Pacific, and is thus in the position to grant advantageous through rates. He also contends that if such an arrangement could be made, it would mean that the fleet of Japanese steamships making Seattle its port on this side of the ocean, would also go to Vancouver, and through business which now goes to United States railways, would go through Canadian cities and on a Canadian railway.

Ships Registered in Canada During December, 1921.

In compiling the following lists of ships registered, steamboats and motorboats, operated by engines of less than 10 h.p., are eliminated, as also are sailing ships of less than 100 tons register.

Marine Public Works Contracts.—The Dominion Public Works Department has awarded contracts as follows:—Construction of wharf at Ganong, B.C., Jan. 6, to Vancouver Pile Driving & Contracting Co., Vancouver, B.C., at unit prices; repairs to wharf at Port Washington, North Pender Island, B.C., Jan. 6, to Vancouver Pile Driving & Contracting Co., Vancouver, B.C., at unit prices; repairs to groins 1 and 3, Annie Bar, Fraser River, B.C., Jan. 30, to Fraser River Pile Driving Co., at unit prices; reconstruction of south breakwater, Cobourg, Ont., Jan. 30, to H. A. Croft, Cobourg, Ont., at unit prices; repairs to wharf at St. Michel de Bellechasse, Que., Feb. 10, to J. R. Boulanger, Montmagny, Que., at unit prices.

The United States Merchant Marine's Position.

The U.S. President's plans regarding the future of the U.S. Merchant Marine, presented to both houses of Congress recently, appear to mark the beginning of a new experiment in Government ownership and operation of steamships. The President's principal proposals have been embodied in bills and introduced into each house. They provide that 10% of all customs duties be used as a revolving fund, to raise about \$30,000,000 annually in aid of the merchant marine; to provide tonnage taxes amounting to \$2,000,000 a year, to be paid into the same fund; to provide that not more than 50% of all immigrants into the U. S. may be transported in foreign ships; to provide for the sale of the ships now held by the U.S. Shipping Board, and for the use of the funds realized, for construction loan purposes; to authorize the induction of U.S. merchantmen officers and sailors into the naval reserve, to which he suggested might be employed by the President in an address, and include a possible amendment to the Interstate Commerce Act to permit railway companies to own and operate steamship lines engaged in other than the coastwise trade, and also the making effective of the section of the Merchant Marine Act providing for preferential tonnage and steamship rates on foreign shipments in U.S. ships, and making marine insurance available at no greater cost than is afforded to ships under foreign flags. He concluded his address by saying "we are now operating 400 ships, and there are 400 more available for service."

Various newspaper reports from the U.S. state that the whole of the Shipping Board's ships have been offered for sale, the list covering 1,470 ships, aggregating 10,000,000 tons, built at an initial cost of approximately \$3,000,000,000, and now valued at \$250,000,000. Half of this tonnage is stated to be unfit for operation, and it is said it will be scrapped. These ships were built, or contracted for during the war period, and are consequently excellent, but after making the allowance for this, it is admitted that little discretion was used, the chief aim being to have the greatest merchant marine on earth. The mere building of ships will not create a merchant marine, for unless they are capable of economical operation, efficiently, but not over manned, and able to compete with all and any other ships in any trade, in any part of the world, no merchant marine can be built up on a strong foundation. U.S. shipping legislation, has, for many years past, tended rather to strangle shipping, by undue interference, and by what has been termed "grandmotherly" legislation, and this has had the effect of restricting shipping in what may be termed legitimate channels for U.S. shipping, and of driving many U.S. shipping companies to transfer their ships to foreign flags, where they may be operated more freely and without the disadvantages imposed

on them by faddist laws.

During 1921 most of the Shipping Board's ships were laid up, and one report states that there was a loss at the annual rate of \$300,000,000 a year, approximately the value of the whole fleet, which loss, it is stated, had been reduced to about \$100,000,000. The loss for the current fiscal year, as estimated by the Shipping Board, will be \$56,000,000, of which \$31,000,000 is stated to have been lost during the first six months. It is also stated that the 280 wooden ships owned by the board, all of which have been laid up for some time, cost the board \$52,000 a year as an idle fleet.

Shortly after the signing of the armistice, a number of the ships built during the latter months of the war were sold to private owners at approximately \$200 a ton, the subsequent fall in values to \$50 a ton and less placing many of the purchasers in an unenviable financial position. Several schemes were considered for the relief of the new owners, as it was realized that the ships would form the basis of a U.S. mercantile marine under private ownership and operation, but no efficient scheme has been evolved.

An attempt was made in 1921 to clear up the chaotic condition into which shipping matters had drifted, by the disbanding of the then Shipping Board, and the appointment of a new one, and appropriations totalling \$61,852,000 were made which it was expected would carry the new board to the end of 1921. Of this, \$25,000,000 was for the completion of ships then building. Later an addition of \$50,000,000 was made to the appropriation for the deficiency fund, and the Shipping Board and Emergency Fleet Corporation were authorized to expend no more than \$55,000,000 during this fiscal year, the amount to be derived from the sale of ships and surplus property, and also from profits of operations, if any.

Under the reorganization of the Shipping Board, its duties, and those of the Emergency Fleet Corporation, which had become entangled, were separated, the Board acting as a regulatory body, and the Corporation handling exclusively the Government tonnage, and devoting itself to the liquidation of the war investment. The operation of the ships. Amongst the work to be cleared up, arising out of the building, operation and sale of ships, were 500 lawsuits with claims amounting to \$5,000,000; 1,700 admiralty cases, \$50,000,000; and 900 claims against the Construction Claims Board for \$100,000,000, as well as other cases, the total claims against the Board on various accounts being stated as being between \$400,000,000 and \$500,000,000.

Towards the latter part of 1921, it was announced that a maximum of 750 ships were withdrawn from operation, but the tendency later was to show allocations of ships in excess of withdrawals. At that time, the cost of upkeep, including damages, drydock charges, repairs to decks and engine rooms, and betterments, averaged 5 9/10c, a d.w.t. a week, a reduction from 8c, which prevailed in May 1921. The cost of maintenance on the Shipping Board's ships was quoted at slightly over \$3 a ton a year, which was stated to be considerably below the rate on privately owned ships.

In the autumn of 1921, the Board received an offer of \$2,100 each for 205 wood steamships from the Ship Construction and Trading Corporation, New York, with the object of operating the greater proportion of them in the Mediterranean trade, but this offer was not acted upon.

In the latter months of 1921, A. D. Lasker, Chairman of the Shipping Board, stated that the operating losses had been reduced from over \$10,000,000 a month to approximately \$5,000,000, chiefly through a reduction of about 25% in the pay rolls, and of nearly 50% of the ships in operation, it having been decided to withdraw from operation all Government ships except those necessary to maintain strategic services, as directed by the Jones Act. The Board's aim was to have not more than 350 ships, out of 1,400 in active service, all services being eliminated except those considered essential in maintaining adequate lines from each port. A scheme was also worked out for a bareboat charter system for as many of the ships as possible, and where charters were not made, the Board was to assume the loss on operations of such of the ships as were operated by private companies, until such companies were able to show promise of profitable operation.

An inventory of surplus property covered material of a present market value of \$44,000,000, compared with cost values of \$220,000,000.

The position of the pioneer purchasers of ships is still under consideration. There are 42 of these companies, which bought 428 ships for \$293,000,000. On an average they have paid about a quarter of the amounts due, but in practically all instances they are in arrears. Under the terms of the sales, the Board has the right to foreclose and seize the ships, and it has been advised that it has no power to revise the contracts to relieve the buyers. Several of these companies have gone into bankruptcy.

All matters relating to the upbuilding of a U.S. mercantile marine, except those of a purely domestic nature, were kept in suspense during the sittings of the Disarmament Conference at Washington, D.C., during the past few months, but they are now brought to the front, and in most cases are showing signs of being pressed by those interested.

Among the various schemes propounded for the upbuilding of the mercantile marine are preferential through rail and water rates for merchandise exported from, and imported into, the U.S. in U.S. bottoms, the limiting of immigration by foreign ships, favorable classification and registration of ships, reduced insurance rates, and the elimination of Panama Canal tolls on U.S. ships trading between the Atlantic and Pacific coasts.

Judging from the proposals made to Congress by the President, it is the Government's intention to rid itself of the ownership of ships, and the responsibility of their operation, and for this purpose, it is offering the whole of its shipping for sale, for private operation, and will absorb the losses occasioned by the difference in prices per ton obtaining at the time the ships were built, and under present conditions.

Press reports of March 20 state that all the tenders received by the U.S. Shipping Board called for up to March 14, have been rejected.

Canadian Pacific Railway Ocean Steamship Services.

The C.P.R. steamships sailing from Glasgow, Scotland, for Canada, will call at Belfast, Ireland. The service was opened by the s.s. *Tunisian*, which sailed from Glasgow, March 25, for St. John, N.B., and it is announced that, should local conditions warrant it, the steamships Corsican and Metagama will also make regular calls there.

Capt. E. Beetham, Marine Superintendent, Vancouver, B.C., who returned from Montreal, March 7, is reported to have stated, that the company's steamships to the Orient, will make a call, when outbound, at Honolulu, commencing with the sailing of the s.s. *Empress of Australia* from Vancouver, Nov. 15. No call will be made there on the homeward trip.

The s.s. *Montezuma*, which arrived at St. John, N.B., March 5, from London, Eng., has been placed in service between St. John, N.B., Boston, Mass., Havana, Cuba, and Kingston, Jamaica. It commences this service March 15, supplementing the s.s. *Scilian*. The chief cargo on the southbound trip consisted of potatoes, fish, newsprint, iron and steel manufactured articles, butter and cheese, while on the northbound trip the cargo space will be fully occupied with sugar, cocoa beans, coffee and fruit.

The C.P.R. has placed two additional steamships in regular freight service between Canadian and European ports. The s.s. *Holbrook* is running between St. John, N.B., and Antwerp, Belgium, and the s.s. *Batsford* between St. John, N.B., London, Eng., and Hamburg, Germany. The s.s. *Mottisfont* is running between St. John, N.B., Halifax, N.S., and Avonmouth, Eng., the steamships *Bothwell* and *Dunbridge* between St. John, N.B., and London, and the s.s. *Bolingbroke* between St. John, N.B., London, Eng., and Hamburg, Germany.

The s.s. *Empress of Australia* will be placed in service early next summer, her first trans-Pacific sailing being scheduled to start from Hong Kong, China, June 29, for Vancouver, and her return trip from Vancouver, July 27. She is practically a new ship, having been in the builders' hands at the outbreak of war. She is one of the German steamships bought from the Reparations Commission by the C.P.R., and was originally named *Tirpitz*, her name first being changed to *Empress of China*, and finally at *Empress of Australia*. She has recently been changed to burn oil fuel, and is similar in equipment to the company's s.s. *Empress of Scotland*, also a former German ship. Her dimensions are,—length 590 ft., breadth 75.2 ft., depth 41.5 ft.; tonnage 21,400 gross. She is twin screw driven, and is expected to maintain a speed of 22 knots. She has accommodation for 410 first class, 130 second class, 300 third class, and 1,000 Asiatic steerage passengers.

The *Empress of Canada*, the C.P.R.'s new 22,000 ton ship, the type of which took place early in March, has, according to a London, Eng., copyright cablegram of March 15 to the *Montreal Gazette*, been returned to the builders, for alterations, due to her alleged failure to comply with the specifications. It is said that her speed proved disappointing. The ship, which would have been the largest tonnage in the Pacific this season, has been dogged by bad luck from the start. Her completion was delayed a year by

the joiners' strike, some 300 passengers who had booked accommodation far in advance having to be disappointed. She was to cost £1,700,000 when completed by the Fairfield Co., which also built the *Empress of Britain* and *Empress of Ireland*. The failure of a ship to reach its contract speed is not an altogether unusual occurrence; a celebrated instance being that of the *City of Berlin*, of the *Imnar* Line, which proved to be three knots slower than other ships of the line, with which it was supposed to achieve a record speed. We have been officially advised that during the *Empress of Canada's* speed trials, some minor defects were found, which necessitated readjustment, and this will delay her sailing by about a month. It is expected that she will sail from Hong Kong, June 1.

The s.s. *Monteagle*, which arrived at Vancouver, March 12, was the first trans-Pacific steamship to reach Canada after the seamen's strike at Hong Kong, China. The strike, which seriously affected trans-Pacific shipping for several weeks, has now been settled. On the outbreak of the strike, the s.s. *Empress of Japan* was detailed to recruit crews for the company's other ships and convey them to Hong Kong, and as a result of this, the steamships *Monteagle* and *Empress of Russia* were able to secure regular crews and continue their voyages with little delay. In Nov., 1921, the Chinese Seamen Union, under the leadership of P. S. Cham, said to have been a waiter on one of the trans-Pacific steamships, requested an increase of 30% in wages for all men earning over \$30, and 40% increase for those earning under that sum. The request was made on the statement that the cost of living had increased to \$30 a month for an average family, while the average wages for men engaged in deep sea, coastwise and river service, were \$22. The C.P.R., and other lines plying to Vancouver have been paying over \$30. The strike, which lasted about two months, had a material effect in delaying ships and reducing cargoes to North America and Europe. The strike notice served on the companies read as follows:—"To the Captain, Dear Sir, we, seamen, serving on board various steamers, in view of the high cost of living have respectfully written to our boss requesting them to favor us with an increment. Not having been able to arrive at satisfactory result we have at last turned our tendency to seeking of some other profession within 24 hours from above date."

The British and Foreign Sailors' Society of Canada has been incorporated by Dominion letters patent, with office at Toronto, the incorporators being James Craig, ex-judge of the Yukon Territorial Court; Dr. A. A. McDonald, Dr. H. A. Beatty, B. L. Smith, Manager, Royal Trust Co., Ltd., and Sir Frederick Stupart, all of Toronto. Its aims are to assist naval and merchant marine veterans' associations and to aid shipwrecked mariners, needy sailors and the relatives of needy seafaring men applying for relief; to give expression to Canada's practical interest in all who serve her on the sea; and to co-operate as a self governing and self sustaining organization with the British and Foreign Sailors' Society of London, Eng.

Ice Conditions on the Great Lakes.

The U.S. Agriculture Department Weather Bureau office at Detroit, Mich., issued the following March 14.—Report from the regular and display stations of the U.S. Weather Bureau and Canadian Meteorological Service furnish the data for the following summary of the several lakes.

Lake Superior.—The ice in Duluth-Superior harbor ranges about 24.5 in. thick and is covered with slush; the field in the lake extends out five miles beyond Two Harbors; moving fields of ice extend beyond vision from Portage Canal; the field ice at Eagle Harbor extends out about one fourth mile, beyond which is open water; the ice is breaking up in Keweenaw Bay; the ice fields from Grand Marais, Mich., to Whitefish Point are moving with the wind; Whitefish Bay continues solid with snow covering, which is fast melting; at Sault Ste. Marie, the ice is in the form of a wearing away; snow covering is melting rapidly; the harbors in Chequamegon Bay and Thunder Bay are solid.

Lake Michigan.—The ice in Green Bay at Escanaba is about 26 in. thick, 24 in. at Menominee and 15 in. at Green Bay; ice is covered with melted snow slush. In Lake Michigan, no ice is reported along the west or south shore nor up the east shore to North Manitou Island; from Charlevoix northward to the Straits the ice remains solid and reported not moving except off Charlevoix and Beaver Island. At the Straits, the ice averages 12 to 20 in. thick and is firm; over the shoal places, the ice is much thicker.

Lake Huron.—There are a few fields of moving ice over the northern portion; in Thunder Bay the ice extends out half a mile; in Saginaw Bay the ice continues firm; no fields reported on the southern portion; those along the east shore are breaking up and disappearing; St. Clair River reported open.

Lake St. Clair and Detroit River.—The ice is breaking up and moving out of Lake St. Clair and much open water was visible March 12; the ice has been running freely in the river during the week and will soon be out of the lake.

Lake Erie.—The fields are broken up and moving with the wind and are small over the west portion east of the Islands; from Erie east to Buffalo along the east shore the fields are extensive and moving slowly with the wind. No ice is reported along south shore from Huron to east of Fairport.

Lake Ontario.—There is but little ice reported in the lake and that is confined to the extreme east portion; the ice in the harbors is breaking up except at the extreme east end. The ice continues solid at Ogdensburg.

North Vancouver Floating Drydock.—There has been no change in the position of affairs in regard to this projected drydock, since Canadian Railway and Marine World for March, which contained very full information in regard to the matter, was issued. In response to a request for information as to the present position, the Dominion Minister of Public Works, Hon. J. H. King, wrote Canadian Railway and Marine World, March 20, as follows:—"The Burrard Drydock Co., Ltd., was notified by the Department on Dec. 30, 1921, not to proceed with, or incur any liability in connection with, the new floating dock until further advised, and the matter remains in that position today"

The First St. Lawrence River Pilot.

For over 300 years the St. Lawrence River has been the great waterway into the interior of the American continent. It was the route by which La Salle, Marquette, Joliette, Hennepin and Del'hut penetrated to Lake Michigan, although a round about passage had to be taken up the Ottawa and Mattawa Rivers and over Lake Nipissing into Lake Huron, to avoid the hostile Indians below Lake Erie. For ocean going travel today the chief ports are Montreal and Quebec, and they show an ever increasing volume of traffic. The 1921 shipping season was a record for Montreal, a total of 807 trans-Atlantic steamships, registering a tonnage of 2,598,494, arrived at and steamed out of the port. This was 105 ships, or 556,856 tons, over the highest previous record, made in 1919. Last year also showed a large increase in the number of ships trading from Montreal to the Maritime Provinces and Newfoundland, a total of 157, registering 293,462 net tons. The trans-Atlantic ships came under many flags, British, Norwegian, American, Italian, Dutch, French, Swedish, Greek, Jugo-Slav, Spanish, Finnish and Icelandic, as well as Canadian.

The position of pilot on the St. Lawrence is therefore very important, as it is to the pilots that the route, with its rapidly increasing traffic, depends for its reputation as to safety. There are 50 licensed pilots between Montreal and Quebec and 62 between Quebec and Father Point. The taking on of the pilot is always a picturesque incident to the ocean traveler and takes an interested crowd to the ship's side. The first known pilot on the St. Lawrence was Abraham Martin, after whom the Plains of Abraham at Quebec are named. In the Jesuit Relations, he is referred to as "dit l'Ecosais" or "called the Scot," so that in addition to being the first pilot of the King of France, he was also the first known Canadian of Scotch descent. Although married to a Frenchwoman, and very possibly born in France, Abraham Martin was no doubt descended from one of the numerous soldiers of fortune who fought in the French King's army, and perhaps formed one of the Scots Guards which became famous in the days of Louis the Eleventh and plays an important part in Sir Walter Scott's romance *Quentin Durward*. The Plains of Abraham are named from the grant of land which Abraham Martin received from Samuel de Champlain in 1617, at the time of the settlement of Quebec. Louis Hebert, a famous first colonist of Canada, received a grant alongside at the same time. Abraham Martin, but doubtfully cultivated his own farm, but apparently was also a carpenter, and took sufficient interest in shipping to get the appointment of King's Pilot.

The C.P.R., in view of its great steamship interests, has decided to erect a simple but artistic Memorial to Abraham Martin, which has been designed by Henri Hebert, the French-Canadian sculptor, who is connected with the original Louis Hebert. It is to be made of granite with a plinth crowned by a globe of the world, supported by thistles. The Lily of France, rising out of the sea, will be carved in low relief. The inscription will be in both English and French, the former reading:—"This Monument recalls to the passer-by Abraham Martin, called the 'Scot,' first King's pilot on the St. Lawrence, who tilled the soil and on the illustrious plains which bear his name."

Mainly About Marine People.

Sir John Biles, of J. H. Biles and Co., consulting naval architects, C.P.R., London, Eng., visited Canada early in March and returned to England March 10, on the s.s. Montcalm.

W. L. McDougald, President, Montreal Harbor Commission, left Montreal, Feb. 27, for New York, whence he sailed on the s.s. Aquitania, accompanied by his wife and family, for a month's holiday in Europe.

G. M. Bosworth, Chairman, Canadian Pacific Steamships Ltd., accompanied by Mrs. Bosworth, was a passenger on the s.s. Montcalm, which sailed from St. John, N.B., March 10, for Liverpool, England.

Capt. R. C. Brown, O.B.E., heretofore Deputy Port Warden, and since the death of Capt. J. Bales, acting Port Warden, has been appointed Port Warden, Montreal. He was appointed Deputy Port

for a short business trip. They returned to England by the s.s. Montcalm, March 10.

Capt. Ralph Forrest, who died at Winnipeg at the end of February, aged 38, was a well known navigator, on Lake Winnipeg, and was first officer of the s.s. Premier, which was burnt at Warrens Landing in 1908. He had also sailed ships on the Peace River, from Hudson Hope to Fort Vermilion, and for some time after, served on steamships on the Great Lakes between Fort William, Ont., and Cleveland, Ohio. He returned to Winnipeg recently after five years service on inland water transportation in Mesopotamia and India.

E. Hawken, Assistant Deputy Minister of Marine and Fisheries, and Frank McDonnell, Chairman, Board of Steamship Inspection, left Ottawa, March 9, for England, on official business.

Alex Johnston, Deputy Minister of Marine and Fisheries, is stated in a press report as likely to resign and to re-enter the British Empire Steel Corporation's service, but Canadian Rail and Marine World has been unable to obtain either confirmation or denial of the report. Mr. Johnston resigned his position as Deputy Minister in Oct. 1920, to enter the British Empire Steel Corporation's service, presumably as Assistant to the President, but returned to the Department on March 1, 1921, when he was reinstated in his former position.

Francis King, M.A., K.C., of Kingston, Ont., Counsel, Dominion Marine Association, has been elected President of the Ontario Bar Association.

Capt. J. F. Lindsay, who has been appointed Deputy Port Warden, Montreal, has been engaged in seafaring life for about 30 years, and settled in Halifax, N.S., in 1913. He served with the Royal Naval Reserve on special duties during the war and retired with the rank of Commander. Latterly, he has been in business in Halifax.

S. J. Lister, Manager, Cunard Line, Liverpool, Eng., who is visiting points in North America reached by his line, was in Montreal, March 11, and made an inspection trip over the harbor.

C. H. Nicholson, Manager, Grand Trunk Pacific Coast Steamship Co., Vancouver, B.C., has been elected Honorary President, Vancouver Golf and Country Club.

J. W. Norcross, President, Canada Steamship Lines, Montreal, sailed on the White Star Line's s.s. Olympic, from New York, March 11, for Southampton, Eng.

Sir Thomas Royden, Deputy Chairman, has been elected Chairman, Cunard Steamship Co., vice Sir Alfred Booth, who has resigned on account of continued ill health. Sir Percy Bates has been elected Deputy Chairman.

Capt. C. Troop, who died in London, Eng., recently was on old time captain, having entered C.P.R. service in 1903, and served at different times on that company's steamships Montezuma, Assiniboia, Mount Royal and Princess Charlotte, and later as Superintendent at Millwall Dock, London, Eng., before retiring on pension.

Senator L. C. Webster, President, Webster Steamship Co., has resigned from the Mount Royal Hotel Co.'s directorate at Montreal.

Tom Ranger Enderby,
Operating Manager, Canada Steamship Lines, and
President, Dominion Marine Association.

Warden Apr. 12, 1920, after having been for 7 years captain of the Anchor-Donaldson Line's s.s. Cassandra. He commenced his seafaring life in 1888 on a sailing ship out of Glasgow, Scotland, qualified as second officer in 1893, and as master in 1896. He entered Donaldson Line's service in 1897 and in 1904 was in charge of that company's s.s. Solacia. He afterwards had command of the same company's steamships Concordia and Orithia, and in 1913 was transferred to the Anchor-Donaldson Line's s.s. Cassandra. He commanded this ship throughout the war and was engaged in conveying troops and war materials, for which he was given the Order of the British Empire.

Sir Thomas Fisher, K.R.E., General Manager, Canadian Pacific Steamships, Ltd., London, Eng., arrived at St. John, N.B., by the C.P.R. s.s. Minnedosa, on Feb. 27, accompanied by Lady Fisher.

Atlantic and Pacific Oceans.

The Canadian-Australian Line's s.s. Makuro, which arrived at Vancouver recently, had, as part of her cargo, 14,200 sheep carcasses and 5,000 tons of butter.

The Jamaica Government is reported to be considering making Kingston a free port of call, to attract ships passing between the Atlantic and the Pacific Oceans, via the Panama Canal.

The Holland-America Line announces that the s.s. Soestdyk, which sailed from Rotterdam, Holland, March 14, for New York, Baltimore, Philadelphia and Boston, will call at St. John, N.B.

The Anchor-Donaldson Line's s.s. Oritha arrived at Halifax, N.S., March 12 in a damaged condition, having burst a steam pipe. The extent of the damage was not stated, but as she is to be dry-docked it was probably extensive.

The s.s. Cathay, the first of the four ships bought by Canadian Robert Dollar Steamship Co., from the U.S. Shipping Board, as mentioned in our last issue, sailed from Vancouver, B.C., for the Orient, Feb. 28. It is stated that on her return to Vancouver, she will be renamed Diana Dollar.

The Admiral Line's trans-Pacific sailings for the summer from Seattle, Wash., and Victoria, B.C., for Japan, China and Manila, commenced March 4, and are arranged fortnightly, the steamships Wenatchee, Bay State, Keystone State, Silver State and Pine Tree State being used.

The Royal Mail Steam Packet Co.'s motorship Loch Katrine arrived at Vancouver, B.C., from England, during March, and the second ship of the same type, named Loch Goll, is expected to be on the route early in the summer. They have each about 13,500 d.w.t. capacity, and are a little over 500 ft. long.

The Norwegian s.s. Grontoft is believed to have foundered at sea with all hands. Wireless messages were received at the Naval Service Department's Cape Race station, to the effect that the s.s. Estonia had responded to the Grontoft's call for help, and it transpired later, that when the Estonia arrived at the point indicated by the wireless messages, there was no trace of either the ship or the crew.

The Anchor-Donaldson Line's s.s. Athena, which has been built at Glasgow, Scotland, for service between Glasgow and Montreal, is of the shelter deck type, with straight stem and cruiser stern. Her principal dimensions are,—length 520 ft., breadth 66 ft., depth 42 ft., loaded draft 27 ft. 8 in., tonnage, 12,000 gross. The propelling machinery consists of two sets of Brown-Curtis double reduction geared turbines, with all the latest appliances to ensure steady running and freedom from vibration. Steam is supplied at 210 lb. working pressure, by 3 double ended and 2 single ended boilers, equipped to burn oil fuel. Accommodation is provided on the bridge deck amidships for 354 cabin passengers, arranged in 1, 2 and 4 berth rooms, and on the shelter deck amidships there is accommodation for 162 cabin passengers. The third class passengers will be accommodated on the upper and main decks in 2 and 4 berth rooms. The dining room is on the upper deck, the full width of the ship, and has seating accommodation for 264 persons. Lounges, nursery, drawing room, smoke room and verandah cafe are arranged on the promenade deck.

Maritime Provinces and Newfoundland.

The St. John, N.B., harbor revenue for February, was \$26,400, compared with \$19,200 for Feb. 1921. Top wharfage contributed largely to the revenue, and grain was the chief outward cargo. We have been officially advised that there is no truth in the report.

A Frederickton, N.B., report states that the C.P.R. is planning to place a steamboat service on the St. John River. Canadian Railway and Marine World is officially advised that there is no foundation for the report.

The Reid Newfoundland Co.'s s.s. Portia was drydocked at the company's yards, St. John's, Nfld., early in March for a complete overhauling, cleaning and painting. While this was being done, her place on the route between St. John's and Argentina was taken by the s.s. Malakoff.

The Newfoundland sealing fleet of nine ships, viz., Terra Nova, Eagle, Ranger, Viking, Neptune, Thetis, Diana, Seal and Sagona, sailed from St. John's early in March with 1,300 men, for the north, on the annual sealing expedition. An effort is being made to have an aeroplane conduct observations for the fleet.

The three survivors of the crew of the Newfoundland schooner J. N. Rafuse, which was abandoned at sea Feb. 20, arrived at St. John, N.B., on the C.P.R. s.s. Melita, March 14, on their way to Newfoundland. Three members of the crew lost their lives, and the remaining three were picked up by the s.s. Terrier, and taken to Liverpool, Eng., where they shipped for home.

Province of Quebec.

The Lachine Canal was drained March 18 for the usual annual repairs prior to the reopening of navigation.

The depth of water reported in the ship channel at Montreal, March 15, was 41 ft. 3 in., compared with 45 ft. 8 in. on the same date in 1921.

Gaspe Coast Co.'s representatives appeared before the Quebec Board of Trade council recently, asking that the Government be urged to grant a subsidy for steamship services by the s.s. Brumath.

The Quebec premier stated in the Legislative Assembly recently, that a subsidy of \$25,000 had been granted to the Clarke Steamship Co. for carrying fish on the north and south shores, under a written contract, which had been fulfilled. Other requests had been made for

similar grants, but the Government decided that it could not give grants to all, and therefore gave it to the company which seemed to give the best service.

The Montreal harbor sheds have all been allocated to the various shipping companies using the port, for this year. The Cunard, Anchor-Donaldson and Donaldson-Thomson Lines have leased shed 24, used last year by Canadian Government Merchant Marine, in addition to the 4 they used last year. The C.P.R. in addition to the 4 used last year, have leased shed 19, used formerly by Canada Steamship Lines, and which has transferred to shed 18. The White Star-Dominion Line will use sheds 4 and 6, Canadian Government Marine, sheds 12, 14 and 25, and Furness Withy and Co., sheds 16 and 17. Other companies which will use their previous locations are: Hudson's Bay Co., Elder Dempster and Co., Montreal Shipping Co., Head Line, Houston Line, The Elmer Bucknall Steamship Co. will use shed 47 for its service to Java and India.

The Admiralty Court decided at Quebec, Que., March 6, that the s.s. Bella, then in drydock at Levis, should be returned to A. Johnson, New York, who claims ownership. It appears that he bought the ship in New York in 1919, and placed her in drydock, while he went to Europe. On his return he found that she had disappeared, and it transpired subsequently that she had been sold by auction for wharfage dues alleged to have been a charge against her before he assumed ownership. The new purchaser was W. J. Thomson, Quebec, Que., who paid \$1,560 for her and took her to Levis, where repairs and alterations were made at an approximate cost of \$10,000. Application was made to have the sale by auction nullified, and a writ of seizure was served on W. J. Thomson, with the result stated, no allowance being made for the amount spent on repairs and alterations.

Ontario and the Great Lakes.

The Pere Marquette Rd. car ferry Bessemer arrived at Port Stanley, March 15, from Conneaut, Ohio, loaded with coal, this being her first trip this year. Lake Erie was reported to be comparatively free of ice.

The Howe Fish Co.'s s.s. Glen Erie was considerably damaged by fire at Port Stanley, March 14. She was built there in 1918, and is screw driven by engine of 20 h.p. Her dimensions are,—length 68.5 ft., breadth 17.2 ft., depth 7.4 ft., tonnage 37 gross 18 net.

The U.S. lighthouse service has announced that the light on the St. Clair

Ships Added to and Deducted From the Canadian Register During December, 1921.

lightship is to be changed on the reopening of navigation to a 230 c.p. light, 35 ft. above the water line, and visible for 13 miles. There will be a flash of 9.3 sec, every 3 sec. As a daymark, there will be a new lantern deck gallery railing.

Chicago Steamship Lines, Inc., has written the Montreal Chamber of Commerce that it proposes to inaugurate a steamship service between Chicago and New York, calling at Montreal, utilizing four or five steamships in the service, and requesting the views of the members as to the prospects for such a service.

The Niagara, St. Catharines and Toronto Navigation Co.'s steamships Dalhousie City and Northumberland have been having a thorough overhauling during the winter, and it is expected, at the time of writing (March 18), that the Dalhousie City will be able, owing to the favorable weather, to make her first trip to Toronto, before the end of March. E. W. Oliver, General Superintendent, is reported to have stated that conditions for a good season are favorable.

A deputation of residents of Belleville, Picton and Kingston, waited on the Minister of Public Works and Highways at Toronto, March 14, requesting that the ferry between Adolphustown and Glenora be taken over by the Government and operated as part of the provincial highways system. It was pointed out to the deputation that the Department has no powers to operate ferries, the provincial highways system, as at present constituted, being concerned only with highways and bridges.

British Columbia and Pacific Coast.

The Neptune Association, of the U.S., has given notice that the pilot ship King and Winge, stationed off Cape Flattery, has been withdrawn, and the pilot service heretofore rendered by it, discontinued.

The C.P.R. British Columbia Coast Service resumed service on the route from Vancouver to Ocean Falls and Prince Rupert, March 1, with the s.s. Princess Beatrice. The service is weekly, and calls are made at Campbell River, Alert Bay, Nanu, Ocean Falls, East Bella Bella, Swanson Bay, Butedale and Prince Rupert.

The Imperial Oil s.s. Talaralite, which has been laid up at loco, B.C., for some months, was scheduled to go into drydock at Esquimalt recently, after a trip to Victoria, thence to Prince Rupert, and return to Esquimalt. It is stated that after examination and overhaul in drydock, she will be towed to the Atlantic coast, via the Panama Canal, by the company's s.s. Calgarolite.

Owing to an accident to the Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince John, towards the end of February, the balance of her trip from Vancouver to Prince Rupert was cancelled, and the balance of her schedule was taken up by the company's s.s. Prince Albert, completing the Prince John's unfinished trip, and sailing from Vancouver, March 10, for Prince Rupert.

The gasoline tug M.T. No. 3, owned in Victoria, B.C., was completely burned at the Great Northern docks there, at the end of February. The loss is estimated at \$10,000 with no insurance. She was built at Tacoma, Wash., in 1905, and originally named Vixen. Her dimensions were: length 46.4 ft., breadth 12.6

ft., depth 4 ft., tonnage 15 gross, 10 net, and she was screw driven by engine of 3 h.p.

The Admiral Line's s.s. Admiral Farragut was labelled recently on behalf of Capt. C. H. Cates, on a claim of \$26,000 for services rendered the ship when she broke from the ways at the Wallace Shipbuilding and Drydock Co.'s plant at North Vancouver, and floated down the inlet with her seacocks open. The Admiral Farragut, at the time of the mishap, was being docked at the Wallace Co.'s plant, for overhaul and repair, the contract having been awarded to the company in January, for \$63,500.

The steam tug Dauntless, owned by E. J. Coyle Towing Co., Vancouver, which ran ashore at Broughton Island, and sank in 28 fathoms, Jan. 24, was raised March 7, by Vancouver Dredging and Salvaging Co., and taken to Wallace Shipbuilding and Drydock Co.'s plant, for examination.

The old Japanese s.s. Togo Maru's wooden hull was sold recently, to L. G. Marpole, Vancouver. The boat was built at Berven Island by Japanese in 1904, her dimensions being: length 48 ft., breadth 12 ft., tonnage, 30 gross, 24 net. She was originally a sailing ship, and had a gasoline engine installed later, but this was removed some time ago. It is said to be the new owner's intention to install a gasoline engine of about 50 h.p., and to operate her out of Prince Rupert.

Vancouver Pilots Ltd., the incorporation of which was announced in our last issue, has bought the motor boat Andante, for operation between Vancouver and William Head, in connection with its pilotage service. The Andante was built at Vancouver in 1911, her dimensions being: length 31.6 ft., breadth 9.1 ft., depth 4.2 ft.; tonnage, 10 gross, 7 net. She is screw driven by engine of 1 1/5 h.p. Capt. B. L. Johnston, D.S.O., is the manager of the company, which is operating a complete pilotage service from Vancouver.

A ferry service will, it is stated, be established between Sidney, B.C., and Anacortes, Wash., early in May, chiefly to handle the automobile traffic. The Harvester King is reported to have been bought in Anacortes, for the service, and it is said to be the intention to run one round trip a day for 5 days and 2 round trips on Saturday and Sunday, each week. The single trip between the two points will take about 3 hours, and the charge for an automobile and five passengers will be \$16 for the round trip.

The Mexican State Steamship Line is reported to be enquiring as to the prospects for the establishment of a steamship line between Vancouver and Mexican ports. The company has been operating steamships from Salina Cruz to San Francisco for some time, and it wishes to extend the service, if the statistics asked for from the Vancouver Board of Trade, indicate prospects of sufficient business. Several years ago service was given by the Canadian Mexican Steamship Line, between Vancouver and Salina Cruz, in connection with the Tehuantepec Ry., which crosses the Tehuantepec Isthmus to Puerto Mexico, where transhipment was made to trans-Atlantic steamships. General conditions in Mexico, and the opening of the Panama Canal, however, tended to decrease the amount of business by this line, and the service was subsequently given up.

Canada—British West Indies Steamship Service.

In connection with the renewal for two years of the subsidy of \$340,666.66 to the Royal Mail Steam Packet Co. for a fortnightly service from St. John, N.B., and Halifax, N.S., to Bermuda, St. Kitts, Antigua, Montserrat, Dominica, St. Lucia, Barbados, St. Vincent, Grenada, Trinidad and Demerara, full particulars of which were given in Canadian Railway and Marine World for March, a correspondent writes:—"Possibly to the uninitiated, the subsidy may sound a large one, but the West Indian trade is subject to considerable fluctuation and calls have to be made at a number of small places, which are, from shipowners' point of view, unremunerative. Four combined passenger and freight steamships are engaged in the business, three of which are about 5,000 tons gross, the fourth being 4,000 tons. The passenger and freight rates are controlled by the Trade and Commerce Department. At not less than eight of the 11 ports touched at in the West Indies, it is necessary to lighten the cargo ashore, as there are no dock facilities, and in any case large steamships cannot approach very near the land. The cost of lighterage on south-bound cargo has to be borne by the shipowner. There has been a marked development in the export business from Canada, and the Royal Mail Steam Packet Co.'s tonnage is now supplemented by the Canadian Government Merchant Marine, to the presence of which in the trade the Royal Mail Steam Packet Co. objects."

In reference to the Dominion Government's order in council authorizing an agreement with the Royal Mail Steam Packet Co., for renewal of its previous contract for two years, from March 31, 1922, to March 31, 1924, we were officially advised from Ottawa on March 2 that all the West Indian islands had been notified in regard to the matter, as well as the Royal Mail Steam Packet Co., that nothing had then been heard from any of the islands and that the company's Canadian representative had transmitted the proposal to London, England, but that the contract had not been signed.

British Columbia—Jamaica—United Kingdom Steamship Services.

Canadian Trade Commissioner G. R. Stevens has written from Kingston, Jamaica, as follows:—"The Royal Mail Steam Packet Co., at present operating a service between British Columbia and the United Kingdom, are considering Kingston as a port of call upon this service. This colony is almost directly upon the trade route to the Panama Canal, and if sufficient cargo offers, it is probable that British Columbia will shortly enjoy this direct connection with the Eastern Carribean. In this event, Jamaica will be enabled to enter Vancouver as a competitor of Fiji with her raw sugar, and British Columbia exporters of flour, fish and lumber will be granted access to a market which has long been a monopoly for the eastern exporters. The Canadian commodities which would be most largely affected by such an innovation would be Douglas fir timber, canned fish, and flour."

World Shipbuilding in 1921.

Lloyd's Register of Shipping reports during 1921, the total output of shipping throughout the world, aggregated 4,341,679 tons, a decrease of 1,520,000 tons from 1920, but over 1,000,000 tons greater than for 1913, when the pre-war record output was reached. The percentage of this output, pertaining to the United Kingdom was practically the same as in 1920, viz., 35%, compared with 58% in 1913. Steam turbines were applied to 167 ships, having a total of 1,195,000 tons, and internal combustion engines were applied to 306,000 tons of shipping, compared with 156,000 in 1919. The total tonnage launched during the four years, 1918-1921, was nearly 23,000,000 tons, considerably higher than the total output for the nine years, 1905-1913.

During 1921, the United Kingdom launched 371 steamships, with a total of 1,429,757 tons, 28 motorships, with a total of 102,356 tons, and 27 barges with a total of 5,539 tons. All of these ships were of steel, with the exception of 3 forced concrete of 300 tons. No sailing vessels were launched in 1921, and of re-inships were 1,273 tons, the U.K. during the year. The 1921 figures were 517,512 tons lower than for 1920, which constituted a record, and were about 35.5% of the world's output for 1921, compared with 58% for 1913.

Of the U.K. output, 946,182 tons were for registration in the U.K., and 591,870 tons were for owners abroad, this representing about 38.5%, which, while lower than for 1920, compared with 23.3% for the five years immediately preceding the war. Of the U.K. foreign tonnage, 134,551 tons were for Norwegian owners, 127,854 for French owners, 123,811 for Dutch owners and 66,373 tons for owners in the British Dominions. Twenty-four ships of 10,000 tons and over were launched, among which was the C.P.R. s.s. Montclare, 16,400 tons, which was one of the 10 largest launched.

The total tonnage launched in British Dominions during 1921 was 129,675 tons, about 74,000 less than in 1920. Of this total, 78,420 tons were launched in Canada, less than half the output of the previous year.

The U.S. launched 1,008,413 tons, or 1,469,840 tons less than in 1920, and over 3,000,000 tons less than in 1919.

H.M.S. Shearwater is being offered for sale by tender to Apr. 10, by the Naval Service Department, as she lies at Halifax, N.S., for breaking up only. She is built of steel, wood sheathed, and equipped with a single screw, two bladed propeller, triple expansion, inverted, surface condensing, reciprocating engines 260 lb. sq. in., electric light, evaporators, distilling plant, Weir's feed pumps, etc. Her dimensions are—length 200 ft., beam 33 ft., draft 12 ft. 5 in. She has a displacement of 980 tons.

C.P.R. Great Lakes Steamship Service.—Reference was made in Canadian Railway and Marine World for March, to a Port Arthur, Ont., newspaper dispatch, which stated that the C.P.R. proposed building a new steamship for its upper lakes service, and though we had no official advice on the matter, we indicated the unlikelihood of the report. We have since been officially advised that the press dispatch was absolutely without foundation, and the management cannot understand how such a report became current.

Canadian Government Merchant Marine, Operation, Etc.

Officers of Steamships. The following captains have been appointed in addition to those mentioned in previous issues.—Canadian Coaster, Captain W. E. Baker, formerly on s.s. Canadian Warrior, vice Capt. J. H. Hubley transferred to Canadian Warrior; Canadian Mariner, Captain J. E. Faulkner, vice Capt. G. B. Leonard; Canadian Warrior, Captain J. H. Hubley, formerly on s.s. Canadian Coaster, vice Capt. W. A. Baker transferred to s.s. Canadian Coaster.

The s.s. Canadian Navigator, which arrived at St. John, N.B., from London, Eng., Feb. 24, sailed again from St. John, Feb. 28, for Halifax, N.S., for inspection. She was reported the same day to have become disabled about 10 miles n 77 w off Bear's Head Light. She returned, partly under her own steam and with the assistance of the tug Gopher to St. John, where temporary repairs were made, and she then proceeded to Halifax, where arrangements had been made for her to drydock. The accident was only an ordinary one, the h.p. cylinder cover being fractured.

Mediterranean Service. In connection with the information on this subject given in Canadian Railway and Marine World for March on pg. 166, we are officially advised that E. G. Laing, who has been sent as special representative, with headquarters at Naples, was for nine years on the G.T.R. staff in London, Eng., and latterly has been chief clerk to the European Manager in London. St. John, N.B., Sailings.

For Liverpool Canadian Seigneur, April 8; Canadian Commander, April 22.

For London Canadian Rancher, April 4; Canadian Trapper, April 18.

For Glasgow Canadian Runner, April 12; Canadian Carrier, April 26.

For Cardiff and Swansea, Canadian Aviator, April 19.

For Australia and New Zealand, Canadian Mariner, April 27.

For Barbados, Trinidad and Demerara, Canadian Harvester, April 7; Canadian Coaster, April 21.

For Nassau, Kingston and Belize, Canadian Forester, April 19.

For Newfoundland Canadian Sapper, March 30, and each 12 days thereafter.

Nautical Assessors Recommended.—The Dominion Marine Association has recommended the following captains as qualified to act as nautical assessors in investigations by the Dominion Wreck Commissioner:—A. E. Mathews, Mathews & Co., Toronto; W. J. Bassett, Toronto; W. J. Mole, Toronto; J. Foote, Toronto; Jno. Williams, Toronto; H. King, examiner, etc., Toronto; Geo. Batten, Kingston, Ont.; Chas. Martin, Kingston, Ont.; Arthur Lefebvre, Valleyfield, Que.; R. D. Foote, Point Edward, Que.; Ben Garvey, Point Edward, Que.; J. McNab, Sarnia, Ont.; L. Morrison, Sarnia, Ont.; G. T. Cross, Superintendent, Imperial Oil Ltd., Sarnia, Ont.; R. Alexander, real estate agent, Sarnia, Ont.; and Jno. Burney, Courtright, Ont.

Hospital Dues on Ships.—The Dominion Marine Association is urging amendment of the Canada Shipping Act, with reference to the imposition of hospital taxes upon ships entering Quebec ports,

and it is at least hoped to obtain partial relief by the exemption from these taxes, of ships from the U. S. side of the Great Lakes, so that they, as well as the ships from Ontario, which are already exempt, would enter Quebec free. The result would be freedom of Quebec ships when they enter U. S. ports on the southern side of the Great Lakes, where they are now subject to a heavy tonnage tax which is imposed on ships of any country in the ports of which U. S. tonnage suffers taxation. Ontario ships entering U. S. ports, and U. S. ships entering Ontario ports are free of this tax.

The largest floating drydock in the world is said to be now owned by the London & South Western Ry. of England, having been bought from the British Government. It was stationed formerly at Blohm and Voorn shipbuilding yards, Hamburg, Germany, and was handed over to the British Government, under the reparations agreement, in connection with the sinking of German warships, by Germans, at Scapa Flow, Scotland, after surrender. The dock is in three parts, and is equipped with some unique machinery. She will be stationed at Southampton, Eng., where she will be utilized for repair work on the largest British steamships.

Ice Conditions in St. Lawrence River.—Reports on ice conditions in the St. Lawrence, March 15, indicated that there was little prospect of any navigation in Montreal harbor before April 15. It was reported that the river was frozen across for about 100 miles between Quebec and Montreal, while in normal seasons it is not frozen across for more than 15 miles. This will cause considerably more work for the icebreakers than usual, and the opening of the channel is not expected for less than a fortnight after last year's date, which was March 31.

The icebreaking steamship J. D. Hazen, the purchase of which is being considered by the Dominion Government, for operation in the St. Lawrence River, as mentioned in our last issue, is still at Cherbourg, France, and no information is available from the Marine Department as to the conclusion of the negotiations. We are informed, however, that the ship has been offered to the Government for \$400,000 at Cherbourg, and that this offer has been made by both the Anderson Co. of Canada, and the Hudson's Bay Co. We were officially advised, March 24, that no decision had been reached as to the purchase of the ship by the Dominion Government.

C.P.R. Transportation Agreement with Italy.—An agreement is stated to have been made between the C.P.R., the Italian State Rys., the Navigazione Generale Italiana, the Societa Italiana dei Servizi Marittimi and the Lloyd Triestino. The last named company, it is stated, will place its ships at the C.P.R.'s disposal for a fortnightly service between Trieste and Montreal, calling at Naples, Messina, and Palermo, the agreement providing for direct booking between C.P.R. and Italian State Rys. stations.

Clyde Shipbuilding.—Eight steamships were launched at Clyde yards, Glasgow, Scotland, during January, aggregating 52,500 tons, which is stated as constituting a record. Nearly all of them are oil burners. During 1921, 249 ships of 511,000 tons total, were completed on the Clyde. This was a decrease of 81 ships, and 161,000 tons from the 1920 figures.

Canada Steamship Lines' Finances.

J. W. Norcross, President, Canada Steamship Lines Ltd., who sailed for England recently, is reported to have stated in Montreal, just before leaving, that the situation in respect of the company's new financing was developing favorably, a Canadian and U.S. banking syndicate being in negotiation for the company's bonds. He is also reported to have stated that Covadale & Colpitts, consulting engineers, New York, were conducting an investigation into the company affairs, operations and prospects, from its inception.

In connection with the recent objections on the part of certain shareholders to the continuance of the common stock voting trust vested in the advisory committee, in London, Eng., G. A. Barnard, K.C., the company's counsel, is reported to have written a shareholder as follows: "The voting trust is a matter entirely outside of the company, and no bylaws or resolutions were ever passed or could be passed by the company in connection therewith, as the matter is in a way a company matter, but one, as already stated, of shareholders between themselves. The company has not, and never has had, any official information in connection with the voting trust, but, it is a matter of public knowledge inasmuch as the voting trust certificates have been listed and quoted on the Montreal Stock Exchange since 1914, that certain holders of ordinary shares of the company in 1914 pooled their shares, transferring them to the Royal Trust Co., which is registered on the Canada Steamship Lines' books as the holder of the shares in question, and consequently acquiring the right to vote on same. "The voting trust certificates listed on the Stock Exchange show that this transfer to the Royal Trust Co. was made under and in virtue of a voting trust agreement under the terms of which the vote on the shares in question was vested in the Royal Trust Co., to be exercised in such manner as the London Advisory Committee of Canada Steamship Lines would direct. The London advisory committee is named, and has always been named, by the shareholders at the annual general meeting of the company, and the names of the committee are set out in the annual printed report mailed to all the shareholders. The first voting trust expired in 1919, but, before its expiration, a second voting trust agreement was entered into under the terms of which the voting trust was extended till 1929. The matter, as already explained, is one of public knowledge since 1914, as is disclosed by the wording of the voting trust certificate issued by the Royal Trust Co."

During the visit of Mr. Norcross to London, Eng., the matter of the voting trust, it is stated, is being negotiated, with the view of assisting further financing.

A Montreal press dispatch of March 17 states that preliminary figures for 1921 indicate that the net earnings were approximately \$2,500,000, which would provide for all fixed charges and dividend on preferred stock, and leave a balance of approximately \$125,000 for common stock. The report also states that about \$500,000 was lost on the company's ocean traffic during the year, and there was also a loss of business towards the end of the St. Lawrence season on account of grain congestion at Montreal.

Canadian Notices to Mariners.

The Marine Department has issued the following:—

6. Feb. 8.—14, Ontario, western end of Lake Erie and lower end of Detroit River, list of buoys.

7. Feb. 17.—15, British Columbia, Strait of Georgia, Fraser River entrance, Frasermouth outer range, color of lights.

8. Feb. 23.—16, Ontario, Georgian Bay, Christian Island, light to be discontinued, Campana Shoal, spar buoy to be replaced by gas buoy. 17, Ontario, Lake Erie, Long Point Bay and adjacent coast, new edition of chart.

Reduction of Coal Rates on Lake Ontario.—A press dispatch from Kingston, Ont., March 15, stated that at a meeting of shipowners there, it had been decided to reduce freight rates 25% for the navigation season. We are advised that this reduction relates only to coal carried across Lake Ontario from points in New York State to the area roughly bounded by Cobourg and Gananoque, Ont. This traffic is carried mostly by a few steamships of the smaller sizes, and by sailing craft.

Those interested attending the meeting were Capt. Hinckley, Oswego, N.Y.; Capt. A. G. Waggoner, Alexandria Bay, N.Y.; Capt. Daryaw, Capt. C. Daryaw, Jas. Richardson & Sons, and Capt. J. F. Sowards, Kingston, Ont.

U. S. Shipments from Alaskan Ports by Canadian Lines.—In a case brought by the Territory of Alaska and the Juneau Hardware Co., Juneau, Alaska, against the Customs Collector for Alaska, recently, the U. S. Supreme Court decided at Washington, D.C., Feb. 27, that the Merchant Marine Act of 1920, known as the Jones Law, prohibits the transportation of merchandise between Alaskan and U.S. continental ports, by Canadian rail and water lines.

United States Shipbuilding.—The U.S. Bureau of Navigation reports that 69 ships, totalling 46,108 tons gross, were built in the U.S. in Dec. 1921. Of these, 10, with a total of 43,438 tons gross, were of steel, exclusive of 3 of 12,444 tons gross for foreign owners. Nine, of 43,247 tons gross, were built on the Atlantic coast; one, of 191 tons, was built on western rivers, and one, of 14,187 tons gross, was built for the U.S. Shipping Board.

Steamship North Pacific Ltd. has been incorporated under he Dominion Companies Act, with office at Montreal, and with 700 shares of no nominal or par value, provided however that it shall carry on business with a capital of \$3,500 as shipowner, carrier by land and water and general trader. The incorporators are of G. S. Stairs, J. W. P. Ritchie, L. G. Bell, B. I. Brandt, and K. M. Gladish, Montreal.

Sale of German Ships.—Lord Inchcape, Chairman, British Shipping Board, has reported to the Reparations Commission, as to the sale of the German ships allotted to Great Britain, stating that 418 ships, totalling 2,500,000 tons, have been sold, realizing over £200,000,000, and that the cost of selling them was 2s. 6d. per £100 realized, or one-eighth of 1%.

Eaton-Nelligan Shipping Co. Ltd. has been incorporated under the Dominion Companies Act, with \$100,000 authorized capital and office at Montreal, to carry on a general shipping business, and to own and operate ships.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

American Association of Port Authorities—Canadian Committee, W. D. Parsons, Sec., Montreal.

Canadian Car Demurrage Bureau—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal.

Canadian Electric Railway Association—L. E. Moreland, Hull Electric Co., Hull, Que.

Canadian Freight Association (Eastern Lines)—G. C. Ransom, 909 Shagbush Bldg., Montreal.

Canadian Freight Association (Western Lines)—W. E. Campbell, 805 Boyd Bldg., Winnipeg.

Canadian Passenger Association—Eastern Lines, G. H. Webster, 308 Hill, Montreal.

Western Lines, E. J. Stone, 308 Union Station, Winnipeg.

Canadian Railway Board of Adjustment No. 1—R. Chapple, 263 St. James Street, Montreal.

Canadian Railway Club—W. A. Booth, 68 Rushbrooke St., Montreal. Meetings at Montreal 2nd Tuesday, each month, 8.30 p.m., except June, July and August.

Canadian Ticket Agents' Association, E. de la Hooke, London, Ont.

Canadian Trade League—R. J. Fitzgerald, 4 Queen St. West, Toronto.

Dominion Marine Association—F. King, K.C., Courthouse, Montreal.

Engineers' Club of Montreal—C. M. Strange, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto—R. B. Wolsey, 84 King Street West, Toronto.

Engineering Institute of Canada—F. S. Keith, 176 Mansfield St., Montreal.

Express Freight Association of Canada—C. N. Ham, Montreal.

Great Lakes and St. Lawrence River Rate Committee—A. E. Storey, 310 G.T.R. General Office, Montreal.

Hydro-Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.

International Water Lines Passenger Association—M. R. Nelson, Des Moines, Iowa.

Niagara Frontier Summer Rate Committee—James Morrison, Canadian National Ry., Montreal.

Quebec Transportation Club—A. F. Dion, Honorary Commissioner's Office, Quebec, Que.

Railway Association of Canada—C. P. Riddell, General Secretary, 263 St. James Street, Montreal.

Western Operating Committee, E. J. Stone, 306 Union Station, Winnipeg.

Shipping Federation of Canada—Thos. Robb, Manager, 42 St. Sacrament Street, Montreal.

Transportation Club of Toronto—W. J. Hotnam, 595 Runnymede Road, Toronto.

Transportation Club of Vancouver—C. A. Dorrill, 454 Hastings St. West, Vancouver, B.C.

Winning Traffic Club—J. Barber, 114 Cadomin Bldg., Winnipeg, Man.

Transportation Conventions in 1922.

May 9 to 12.—Air Brake Association, Washington, D.C.; F. M. Nellis, 165 Broadway, New York, N.Y.

May 10 to 12.—American Railway Development Association, Denver, Col.; J. F. Jackson, Central of Georgia Ry., Savannah, Ga.

May 17 to 19.—Association of Railway Claim Agents, Montreal; H. D. Morris, Northern Pacific Ry., St. Paul, Minn.

May 22 to 25.—International Railway Fuel Association, Chicago, Ill.; J. G. Crawford, 702 East 31st St., Savannah, Ga.

May 23 to 26.—Master Boiler Makers Association, Chicago, Ill.; H. D. Vought, 26 Cortland St., New York City.

June 1 to 2.—Canadian Electric Railway Association, Quebec, Que.; L. E. Moreland, Hull, Que.

June 11 to 14.—American Railway Association, Mechanical Division, Atlantic City, N.J.

June 15 to 18.—American Association of General Hazards Agents, Minneapolis, Minn.; E. L. Duncan, 342 South Michigan Ave., Chicago, Ill.

June 23 to 26.—American Association of Railroad Superintendents, Kansas City, Mo.; J. Rothschild, 400 Union Station, St. Louis, Mo.

October 1 to 3.—American Electric Railway Association, Chicago, Ill.; C. L. Darling, 1519 Madison Bldg., Chicago, Ill.

June 19 to 21.—American Railway Association, Purchases and Stores Division, Atlantic City, N.J.; J. P. Murphy, General Storekeeper, New York Central R.R., Cincinnati, Ohio.

June 25 to 29.—American Society for Testing Materials, Atlantic City, N.J.; C. L. Warwick, University of Pennsylvania, Philadelphia, Pa.

June 25 to 29.—American Association of General Hazards Agents, Minneapolis, Minn.; E. L. Duncan, 342 South Michigan Ave., Chicago, Ill.

Aug. 23 to 26.—American Association of Railroad Superintendents, Kansas City, Mo.; J. Rothschild, 400 Union Station, St. Louis, Mo.

October 1 to 3.—American Electric Railway Association, Chicago, Ill.; C. L. Darling, 1519 Madison Bldg., Chicago, Ill.

Oct. 17 to 19.—American Railway Bridge and Building Association, Cincinnati, Ohio; C. A. Lichy, Chicago & Northwestern Ry., 219 North Waller Ave., Chicago, Ill.

Report of the 29th Annual Meeting of the WINNIPEG ELECTRIC RAILWAY COMPANY

Held March 10th, 1922

At the annual general meeting of the Shareholders of the Winnipeg Electric Railway Company, held in the head offices of the Company on March 10th, 1922, the report of the President and Directors and the financial statements for the year ending December 31st, 1921, were presented and adopted.

The following directors were elected for the ensuing year and until their successors are appointed: Sir Augustus Nanton, A. W. McLimont, Hugh Sutherland, G. V. Hastings, F. Morton Morse, A. J. Nesbitt, W. J. Bulman, W. R. Bawlf, and D. N. Finnie.

The following are the officers of the Company for the ensuing year: Sir Augustus Nanton, President; A. W. McLimont, Vice-President; F. Morton Morse, Secretary; L. Palk, Assistant Secretary; and J. S. Mackenzie, Treasurer.

The report of the President and Directors to the shareholders was as follows:

To the Shareholders:

Your Directors beg to submit a statement of the operations for the year ended the 31st December, 1921, as follows:

Gross earnings from	
Operations	\$5,418,923.71
Operating Expenses, before charging Depreciation	3,559,380.00

Net Operating Revenue..	1,858,643.71
Miscellaneous Income	161,406.70

Income available to meet fixed charges, etc.....	\$2,020,050.41
From which the following deductions are made:—	
Interest charges on Debenture Stock, Bonds, Gold Notes, etc.	\$633,331.02
Extinguishment of Discount on Securities	52,526.18
City Percentage and Car License Taxes	183,069.70
Taxes	164,314.55
Miscellaneous Non-Operating Expenses	3,311.99
Other Income Deductions	54,532.33
	<u>\$1,091,085.77</u>

Net Income as shown on Accounts submitted herewith, excluding depreciation	\$928,964.64
--	--------------

The gross earnings for the year 1921 show an increase of \$184,323.06 over the previous year, and the net income shows an increase for the year of \$132,389.41.

The year was marked by the industrial depression which prevailed practically throughout the world, and while public utilities in general felt the consequences in a diminished and more frugal use of electricity, gas and traction service, nevertheless, our property passed through the period in a relatively successful manner.

The Company has continued making extensive improvements,

particularly in the rehabilitation of rolling stock, track and road-bed. Substantial extensions were also required to take care of the expansion of the electric utility business and there were also improvements at the gas works.

It will be observed that after payment of all fixed charges and making the usual provision for depreciation that the Company made a net profit of \$727,914.64. From this amount has been deducted the dividends paid on Preference Stock amounting to \$182,367.13, and also an additional allowance for depreciation amounting to \$122,605.83, leaving \$422,941.69 to be transferred to surplus.

The Preferred Stock has all been marketed and the proceeds have been used to retire floating liabilities.

The Company has continued its policy of maintaining good relations with the public and has given wide publicity to the problems confronting it, so that all patrons may be acquainted with the conditions surrounding the operation of the properties. Emphasis has been stressed on the Company's desire to provide courteous and efficient service, and the public appears to appreciate the sincere efforts on the part of the Company to bring this about.

Respectfully submitted,
(Sgd.) A. M. NANTON,
President.

Canadian Railway and Marine World

May, 1922

The Newfoundland Railway's History, Position and Future.

The present position and the future of the railways and steamship lines owned and operated by the Reid Newfoundland Co., Ltd., under agreement with the Newfoundland Government, is again forming the chief subject for consideration at the Newfoundland Legislature's current session. The matter was briefly referred to by the Governor in his speech at the opening of the Legislature, March 15, and the basis for the discussion was given a few days later when the Premier submitted a report on the state of the railway prepared by R. C. Morgan, Superintendent, Winnipeg Terminal Division, who was granted leave of absence by the C.P.R., towards the end of 1921, to act as Chairman of the Management Committee, Reid Newfoundland Co., under an act passed in that year providing for the appointment as manager of a Canadian or United States railway man of experience by the Reid Newfoundland Co., subject to the Government's approval. Mr. Morgan resigned the position at the end of February, and has since been acting in an advisory capacity to the Government in connection with the transportation problem.

Mr. Morgan's report is a long one, and it is apparent from the context, that one part of it was prepared for the Reid Co., and the other for the Government; the whole, however, being presented to the Legislature. In the letter covering the report, dated Jan. 30, Mr. Morgan said:—"I feel safe in assuming that the railway has been a losing venture from its inception. If, therefore, it seems apparent that the existing contract for railway operation must be modified, and in the accompanying report I have included recommendations to try and meet a very difficult problem."

Development of the Railway and Steamship Lines.

In order that Mr. Morgan's report may be thoroughly understood it will be necessary to recount briefly the development of the railway and steamship lines operated by the Reid Co. The Reid contracts with the Newfoundland Government cover first the construction of the railway and secondly its operation and the provision and operation of steamships in connection therewith. Prior to the Reid connection with Newfoundland in 1890, two railway projects had been initiated, and about 90 miles of line had been completed, and some additional grading done. The first project initiated was in 1880, when the Legislature provided for raising a loan of £1,000,000 for the building of a railway from St. John's to Hall's Bay, a branch of Notre Dame Bay on the north shore, to open up for agricultural settlement the Gander and Exploits Rivers' valleys, and to reach the mining areas round Hall's Bay; and for the construction of a branch line to Brigus, Harbour Grace and Carbonear; the total length of the projected lines being 340 miles. A contract was let and construction was started in the following year, the line being completed to Whitburn, 54.62 miles. In 1885 con-

struction was started on a line from Whitburn to Placentia, 27 miles, the extension being completed in 1888, but construction on the line to Hall's Bay was abandoned owing to the contractor's failure. The second project was one of the numerous proposals put forward for shortening the trans-Atlantic passage by using the shortest ocean route between Newfoundland and Ireland, and consisted of the construction of a railway from St. John's along the south shore to Cape Ray, opposite the Cape Breton coast, to build which the Legislature in 1882 passed an act for the incorporation of the Great American and European Short Line Ry. Co. This project never materialized, but it had an effect in shaping the later railway construction policy on the island. In 1890 the Government decided to proceed with the construction of the line to Hall's Bay, and let a contract to the late Sir Robert G. Reid in Oct. 1890 to complete the line. Work under this contract had been in progress for some time when, as the result of surveys made, it was proposed to abandon the line to Hall's Bay, and divert it along the Exploits River valley across to the Humber River valley, and then on to Port Aux Basques, near Cape Ray. This route was finally adopted, and a new contract was signed May 16, 1893, under which the line was to be completed within three years for \$15,600 a mile, payable in Newfoundland bonds. Under this contract the transinsular line, and some branch lines were completed, and opened for traffic in 1898, giving the island a total of 638 miles of railway. The second construction contract was entered into between the Newfoundland Government and the Reid Newfoundland Co., in 1909, and ratified by the Legislature in 1910, under which the Government undertook to provide \$6,000,000 for the construction of about 400 miles of branch lines. In 1913, \$2,000,000 additional was provided for the completion of these branches, and 263 miles of them had been placed in operation, and about 120 miles were partially completed when construction was abandoned at the outbreak of war in 1914. The mileages of the transinsular line, and of the branch lines completed and operated, are as follows:—

St. John's to Port aux Basques	545.65
Partial contract to the Exploits	101.13
Brigus Jet. to Baie des Verdes and branch to Grades	96.56
Whitburn to Heart's Content	12.00
Placentia Jet. to Placentia	20.00
Shore Harbour to Rona Vista and branch to Port Union	96.00

The railways are operated under a separate contract. The first operating contract is dated Sept. 1, 1893, and under it Mr. Reid undertook to construct a telegraph system and to operate it, as well as the railway, for 10 years, at his own expense, in consideration of a grant in fee simple of 5,000 acres of land per

mile of railway built. The financial disaster of 1894, brought about such a condition of affairs in the Island, that when the line was completed in 1898, a new operating contract was made, which was the subject of a lengthened and bitter controversy. Under this contract Mr. Reid undertook to operate the lines for 50 years without cost to the Government, on the expiration of which period the property of the railways was to become vested in him; to build seven steamships and operate them on specified routes, and to pay to the Government within a year \$1,000,000; the Government to hand over the telegraph system; to sell the Government dry dock at a fixed price, and to grant an additional 2,500,000 acres of land in fee simple. Mr. Reid also undertook to build an electric railway, and do certain paving work in St. John's. Controversy over this contract continued to be waged, and in 1900 the Government, which had agreed to it, was defeated. The new Government was approached by Mr. Reid with a view to the creation of the Reid Newfoundland Co., to take over his interests, but consent was refused until modifications of the 1898 contract were made. An amending agreement was approved by the Legislature in 1901, and authority was given for the formation of the Reid Newfoundland Co. Under the new contract Mr. Reid made some concessions in regard to the lands granted; agreed that the railway should revert to the Government at the end of the 50-year contract, when the \$1,000,000 paid in cash under the 1898 contract would be repaid with interest, the value of improvements made to the railway during the currency of the lease to be determined by arbitration. He also agreed to hand back the telegraph lines to the Government, and an arbitration court, of which the late Sir Donald MacMaster was a member, was formed to adjust a number of specific matters arising out of the amended contract. In 1910, the operating contract was supplemented by a contract for the operation of the 400 miles of branch lines to be built, bringing them under the same terms as the rest of the lines, the company to receive a grant of 4,000 acres a mile in respect thereof.

The steamship lines established and operated under the contract are:—Port aux Basques to North Sydney, N.S.; Trinity Bay; Placentia Bay; Green Bay; Notre Dame Bay; Rona Vista Bay; Placentia Bay along the south coast to Port aux Basques; Humbermouth and Battle Harbour; St. John's to Labrador Coast.

In 1920, owing to the condition of the lines, the Government voted \$1,000,000 to buy additional locomotives and cars, for the betterment of the line, the provision of additional terminal accommodation at St. John's, and a new terminal at Argentia, and placed the operation of the line under a commission. The year's operation resulted in a loss of \$1,650,000, and the commission was disbanded. Sir George Bury was called in early in 1921 to advise the Government, and upon his

recommendation an act was passed providing for the operation of the line for a year, under the charge of a Canadian or United States railway man; the non-operation of certain branch lines during the winter months; the provision of funds for betterments by means of loans, and the payment by the Government of loss on operation up to \$1,500,000 for 1921-22.

R. C. Morgan's Report.

Mr. Morgan's report is based on the assumption that the railway has been a losing venture from its inception, which is borne out by the figures given in an appended table showing the earnings and expenses of the line for the 18 years from 1904 to 1921 inclusive. In each of these years there was a loss, ranging from \$19,362.41 in 1910 to \$1,681,261.23 in 1921. The increasing rates of expenses to earnings began to mount up with the bringing into operation of the new branch line construction after 1910, and to a still greater extent from 1918, when the increased cost of coal, etc., and higher wages due to the war took effect. In 1919 the earnings were 88% of the expenses; in 1918, 86%; in 1919, 66%; in 1920, 52%, and in 1921, 45%. The totals for the whole period were—Earnings, \$14,317,343.40; expenses, \$20,096,246.96; loss \$5,779,003.56. Average of earnings to expenses, 70%. The report discusses the whole situation in considerable detail and assigns seven main reasons for the losses as follows:—

Insufficient Traffic.—Nearly 1,000 miles of line have been built to serve a population of 250,000, a large proportion of whom live beyond its reach, and the balance live at points directly accessible to water transportation. The main industries of the colony is fishing, and as practically the entire population lives at tide-water there is very little traffic which could not move by water, and a great proportion does so. There are, so far, no producing mines to furnish a large and continuous tonnage for the railway, and the existing pulp and paper mills are so located that they have direct access to ocean transportation. All centers of population are located on excellent natural harbors, and as was transportation is admittedly cheaper than rail transportation, it is not to be anticipated that rail traffic will greatly increase, unless new industries are developed in the interior, where they would be obliged to depend on using the railway facilities now provided. The volume of traffic is also adversely affected by the unfair and unfair steamship competition fostered by government subsidies. In 1920-21, 20,850 passengers were carried, earning \$737.85 a mile of road; and 27,006 tons of freight were carried, earning \$681.68 a mile of road.

Excessive Gradients, etc.—Owing to the light construction of the line, the light rails, and bridges, and the heavy gradients, over the entire line, it has never been possible to get an average train-load much over one-tenth of that obtainable on a Canadian line. The railway has a larger amount of heavy gradients than most cases on the American continent, and, while no high elevations are crossed, the line is a succession of gradients, largely 2½%. A computation of the amount of elevation in feet overcome by a train making a trip from St. John's to Port aux Basques shows the total to be 8,000 ft., a greater climb than is necessary on any transatlantic line in crossing the Rocky Mountains. This handicap cannot be overcome, owing to

the physical character of the island making it necessary to touch at water level points, and to cross high ridges of land between such tidewater points. The railway is laid with light rails, and the bridges are of light construction, which precludes the use of anything but light locomotives; the capacity of the rails is low to conform with the narrow gauge of the tracks (3½ ft.) and the light nature of the railway generally. Efficient handling of freight consists of getting a heavy carload and a heavy trainload, or in moving the greatest possible number of tons of freight with the fewest number of train miles. Train mileage cost does not vary greatly on different railways. For 1920-21 the Newfoundland Ry. handled its trains at a cost of \$3.06 a train mile, a not unfavorable comparison with the C.P.R. and other lines, but when account is taken of the number of tons handled per mile run the comparison is most unfavorable, being 41, as against the C.P.R.'s 498. The Newfoundland Ry. in 1920-21 earned \$1.46 a train mile run against the C.P.R.'s \$8.44. The result was that the Newfoundland Ry. carried on at a loss of \$1.60 against a profit of 74c, a train mile on the C.P.R., or carrying the analysis still further, it cost the Newfoundland Ry. 7½c. to carry one ton of freight one mile, while it cost other companies less than 1c. The revenue per ton mile for 1920-21 was 2.55c., representing about one-third of the cost of operation.

Unremunerative Branches.—One of the most oppressive burdens which has been borne by the railway has been the operation of unremunerative branches, which appear to have been built without any reliable estimates as to their traffic possibilities or, if estimated, a gross error was made in assuming that they would produce sufficient revenue to make them self-sustaining. Such branches do, in a certain measure, provide business for the main line, but unfortunately the rates have been so low that the additional business produced has been handled at a loss. In general, it is a fact that the more business the railway handled the greater the loss involved; the years in which the earnings were highest, were those in which the largest deficits resulted. The actual operating losses for the various branches is hard to determine, as no division of earnings and expenses has been made in the accounts, but a close estimate has been made from which it appears that the following annual losses may be expected on the various branches—Trenton, \$13,000; Bona Vista, \$74,000; Bay de Verde, \$54,000; Heart's Content, \$37,000. Total, \$278,000.

Too Low Freight Rates.—The railway has been operating under too low freight rates since its inception. The basis of freight rates was adopted from a comparison with Canadian rates in force in 1898; but even the low rates authorized by the 1898 contract were not actually made effective until 1918. From 1898 to 1918 the basis of rates averaged 11% lower than Canadian rates was in effect. The maximum rates which became effective in 1918, while producing an increased revenue, did not bring in anything like sufficient to meet the increased and increasing operating costs. Between 1915 and 1921 the total expenses per train mile increased 227% and the transportation cost per train mile increased 170%, while the earnings per train mile only increased 102%. Canadian railways have from time to time been granted increases

of rates, and while the present local mileage rates on the Canadian National Ry. are 48% higher than those on the Newfoundland Ry., the C. N. Ry. are not earning sufficient to pay operating costs.

Insufficient Mail Subsidies.—The Newfoundland Ry. was carrying mail for approximately \$42,000 a year from 1904 to 1912, which was increased from time to time until in 1917 it was raised to \$61,251.49, at which figure it has remained. In 1919 the Board of Railway Commissioners for Canada granted an increase in mail compensation to Canadian railways averaging 116%. The mail subsidy received by the Newfoundland Ry. is too low, and it should be greatly increased by the government.

Deferred Maintenance.—Expenditures for maintenance of road and structures averaged \$184 a mile in 1904, and were maintained at a low level until 1918, when they averaged \$294 a mile. The result was that the roads reached a condition where large expenditures were necessary to enable trains to continue operating. The expenditures since, which ran from \$415 a mile in 1919, to \$575 in 1920, and to \$900 in 1921, have resulted in a great improvement in the physical condition of the property, but this high expenditure must be continued if the ground gained is not to be lost. The question of rail renewal has also to be faced. Some of the rails have been over 20 years in service, and as no charge has been made against operating expenses for deterioration of rails new money must be provided for their renewal.

Rolling Stock.—Expenditures for locomotives and cars averaged \$95 a mile of line in 1904 and were kept at a very low rate until 1918, when they were \$267 a mile. Owing to the additional traffic diverted to the railway, owing to the withdrawal of ships during the war, the locomotives and cars were worn out in service with such rapidity that large additional expenditures had to be made, amounting to \$344 a mile in 1919; to \$530 in 1920 and to \$690 in 1921. The condition of rolling stock is now nearly up to the standard of other lines, and expenditure on this account is likely to decrease rather than to increase.

Unremunerative Agencies.—A large number of agencies are maintained at points where the amount of business does not warrant the expenditure. At 44 agencies regarding which figures are given, there are stated to have been receipts: 10 are not doing sufficient business to pay expenses; 10 are making little more than expenses, and the remainder are doing better.

Cost of Labor and Material.—The 1921 wage bill increased by 248%, and the material bills by 283% over 1915, and while the peak has apparently been reached the downward trend has not yet afforded much relief.

Increased Revenues and Reduced Expenditures Required.—Mr. Morgan points out that relief of the present condition can only be brought about by increasing the revenues, and by reducing expenditures. The Government should authorize an increase in freight rates to a maximum at least as high as now authorized in Canada, allowing the management to meet traffic requirements, competition, etc., within the maximum; by reducing unnecessary steamship competition, thus diverting to the railway such traffic as naturally belongs to it; and by giving an increased compensation for carrying mails. The railway manage-

ment should inaugurate a more active and persistent campaign of traffic solicitation; should promote tourist traffic and the provision of accommodation therefor, and should secure the co-operation of business men to aid in bringing traffic to the railway.

Traffic should be restricted on the transinsular line during January, February and March and the traffic to and from Canada should be diverted to St. John's or to the partially completed new terminus at Argentia; only local trains should be operated between certain points, and a weekly mixed train between Millertown Jct. and Port aux Basques each way; closing the Trepassey, Baie de Verde and Bonaville branches. Locomotive and train mileage should be kept down to the lowest minimum; cars should be loaded fully and no freight train should be run without full tonnage; trains should be made up on a tonnage instead of a car basis; locomotives should be helped to ascertain hauling capacity, and if necessary two locomotives should be used on a train, this being the only method of securing fair tonnage per train apart from securing full car load and maximum train load; every train mile saved means a saving of approximately \$1.25 a mile for actual train operation. Coal, oil and other costs should be investigated, and their consumption placed on a basis of 100 mile runs; the necessary inspectors and instructors and coal-loading appliances should be provided so that savings may be made; agency stations where traffic is insufficient to justify keeping agents or operators should be closed; train crews should be reduced as traffic declines; monthly estimates of pay rolls should be required and they should not be exceeded; and monthly reports for the guidance of the management should be made according to modern practice.

Remedies Proposed.—"As the experience of about 20 years," Mr. Morgan says, "operation of the railway has demonstrated that the contract made in 1898 cannot be carried through its 50-year term, as no private company could possibly absorb the losses involved; the facts should be faced and the old contract should be abrogated on terms fair to all concerned. All claims should be waived in settlement to be made. The ownership of all physical property should be vested in the Government, which now owns nearly all the right-of-way, track structures, and certain of the rolling stock. As the steamships now owned by the Reid Newfoundland Co. are a necessary adjunct to the colony's transportation system, these should be acquired by the Government, so that they may be managed in complete harmony with its system, and rates and routes adjusted so as to best serve the colony's interest. The present division of the ownership is confusing, uneconomical and unsatisfactory tending to creation of conflicting claims, which will undoubtedly lead to costly litigation in the future. With the ownership of the steamships and railway consolidated in the Government, they would be free to operate or lease same to any contractor who would best serve the interest of the people; duplication of service should be eliminated; conflicting rates harmonized; competition of outside steamships met, to the end that traffic on which the people of the Island pay the freight charges shall be carried by the Government boats and railway, so that the money will go to the citizens of the col-

ony instead of being paid to outsiders and spent in Canada or elsewhere. While it will soon be necessary to face the question of large expenditures for improvements, particularly the relaying of the line with heavier rails, it does not appear that this is the proper time to undertake such expenditures in a large way; interest rates are receding; materials and labor rates are on the downward course, making it reasonable to expect that such improvements can be done more cheaply if postponed for a while. The operation of the railway is in course of readjustment and has not yet reached a settled basis; the trend of traffic following war conditions cannot be foretold with certainty; hence it appears wise to carry the railway along for a year or two with only moderate expenditure on capital account, taking care only of such items of improvement as are imperative."

Recommendations for 1922-23. — Mr. Morgan recommends that the Legislature appropriate \$300,000 for recovering rails from the Fortune Bay branch, which is now well completed, and sending it to replace worn out rail on the main line; relocating the line in the vicinity of Killgrews and Holyrood so as to protect it from storm damage; rebuilding a number of structures urgently needed; and for providing additional 100 box cars. The purchase of the Reid Newfoundland Co.'s equipment and steamships, the abrogation of the 1898 contract; readjustment of subsidies in mail, branch lines, stations, etc., and leasing of steamships. Morgan says that the above constitutes as large a plan as can reasonably be expected to be taken care of at one session of the Legislature.

Mr. Morgan anticipates that the operation of the line for 1922-23 under present conditions will result in a loss of approximately \$1,000,000, which he proposes should be provided for by: increased rates—Authorize a maximum tariff equal to that in force on Canadian lines, permitting the management to make whatever rates it pleases within the limit allowed. It is estimated that \$200,000 additional revenue will thereby be produced. Unremunerative branches:—The estimated loss on the four branches is \$278,000, which should be met by a direct payment on account of each branch to cover the estimated loss, or by a subsidy of \$2 a mile for each train mile run on each branch. He proposes the latter plan. Mr. Morgan proposes an additional subsidy of \$190,000 for carrying mails. The above increases amount to \$668,000, the difference between which and the estimated loss would have to be provided for by direct taxation.

Plan for Future Operation.—The concluding section of Mr. Morgan's report, outlines a plan for the future operation of the unused railway and steamship properties. It does not appear, he says, that the conditions which have prevailed will be materially changed in the next few years, and it is therefore evident that if the road is to be maintained at all, it can only be done by considering it as a public utility, as it appears hopeless to expect that it can be run as a commercial venture paying its way. It recommends that the property be operated as a public utility, the Government to assume the obligation of maintaining the roadway, buildings and structures, bridges, etc.; also the maintaining of its equipment, locomotives, cars, etc., and the lessee taking care of operation, the lessee to collect all the earnings of every

description of operation and to pay all the expenses of operation. It appears to be the general belief that the Government has not been successful so far as economical operation is concerned, and Mr. Morgan suggests this plan in order to secure the benefits of private operation combined with a plan for the efficient maintenance of the property. He further said,—"I recommend that an agreement be entered into with some responsible contractor, possibly the present management, for the operation of the railway, on the basis that the contractor will operate the road, receive the earnings from traffic, and pay all operating expenses as specified under the head of conducting transportation, dining and sleeping car service and general expenses. The earnings of the property ought to be, with economical operation sufficient to meet these charges. If a surplus should result from the operation, some agreed proportion of the balance should be paid to the contractor as his remuneration, and the agreed difference or balance should go to the Government as an offset against advances paid for the maintenance of track and equipment."

Birthdays of Transportation Men in May.

Many happy returns of the day to:—
J. F. Aitchison, Auditor of Disbursements, G.T.R., Montreal, born at Edinburgh, Scotland, May 28, 1880.
Jas. Bain, Superintendent, Bridgewater Division, Maritime District, Canadian National Rys., Bridgewater, N.S., born at Pictou, N.S., May 24, 1860.
B. A. Bourgeois, Assistant to Comptroller and Treasurer, Canadian Government Railways, Moncton, N.B., born there May 24, 1869.
B. T. Chappell, General Superintendent, Prairie District, Western Lines, Canadian National Rys., and Grand Trunk Pacific Ry., Saskatoon, Sask., born at Charlottetown, P.E.I., May 1, 1878.
N. R. DesBrissay, District Passenger Agent, C.P.R., St. John, N.B., born at Minneapolis, Minn., May 18, 1888.
A. E. Duff, ex-District Passenger Agent, G.T.R., Toronto, now of Winnipeg, born at Sherbrooke, Que., May 1, 1881.
G. C. Dunn, Assistant to Chief Engineer, Eastern Lines, Canadian Northern Ry., Toronto, born at Quebec, May 13, 1862.
C. S. Gzowski, Jr., Assistant to Vice President, Construction, Canadian National Rys. and Grand Trunk Pacific Ry., Toronto, born there, May 1, 1876.
W. S. Hall, Superintendent, Portage Division, Manitoba District, C.P.R., Winnipeg, born at Montreal, May 23, 1884.
G. H. Hledge, Works Manager, Canadian National Rys., Winnipeg, born at Neath, Wales, May 26, 1865.
G. A. Hoag, Superintendent of Transportation, Ontario District, Canadian National Rys., Toronto, born at Walters Falls, Ont., May 31, 1866.
J. Irwin, Superintendent, Edmonton Division, Western District, Canadian National Rys., Edmonton, Alta., born at Clinton, Ont., May 28, 1866.
H. E. Kane, Port Agent, Canadian Government Merchant Marine, St. John, N.B., born there, May 20, 1895.
J. N. Murphy, Roadmaster, C.P.R., Brandon, Man., born at Mooretown, Ont., May 10, 1879.

Sir Augustus M. Nanton, President, Winnipeg Electric Ry., and director, C.P.R., Winnipeg, born at Toronto, May 7, 1860.

A. V. Redmond, District Engineer, Central District, Canadian National Rys., Winnipeg, born at Kingston, Ont., May 16, 1879.

A. C. Shaw, Passenger Department, C.P.R., Montreal, born at Detroit, Mich., May 12, 1865.

W. H. Snell, General Passenger Agent, C.P.R., Montreal, born at Palmyra, Neb., May 23, 1872.

W. Stapleton, District Passenger Agent, Canadian National-Grand Trunk Pacific Rys., Saskatoon, Sask., born at

Bristol, Eng., May 20, 1884.

R. B. Teakle, Manager, Canadian Government Merchant Marine, Montreal, born at Quebec, Que., May 19, 1877.

E. E. Teiford, Marine Superintendent, Canadian Government Merchant Marine, Montreal, born at Yarmouth, N.S., May 21, 1870.

J. M. Walker, District Agent, Canadian National Rys., Glasgow, Scotland, born there, May 14, 1880.

J. H. Walsh, General Manager, Quebec Central Ry., Sherbrooke, Que., born at Quebec, May 12, 1860.

H. K. Wicksteed, B.A.Sc., C.E., ex-Chief Engineer of Location, Canadian National Rys., Toronto, born at Quebec,

May 25, 1855.

C. L. Wilson, Assistant Manager, Toronto & York Radial Ry., Toronto, born at Boston, Mass., May 23, 1871.

A. O. Wolff, Resident Engineer, Brownville Division, New Brunswick District, C.P.R., Brownville Jet, Me., born at Copenhagen, Denmark, May 14, 1887.

J. M. Woodman, General Superintendent, New Brunswick District, C.P.R., St. John, N.B., born at St. Marys, Ont., May 15, 1866.

C. H. Worby, Assistant Superintendent, Sleeping, Dining and Parlor Cars and News Service, Western Lines, Canadian National Rys., Winnipeg, born at London, Ont., May 18, 1883.

The Proposed Windsor-Detroit Bridge.

Development of the plans for the Detroit River bridge to connect Windsor, Ont., and Detroit, Mich., a project that has been under consideration during the past two years, has progressed far enough to put into concrete form some of the outstanding individual features of the proposed structure. A span of 1,803 ft. center to center of towers will

security brokerage house to sell the bonds and stock. In the meantime an advisory board of engineers has been formed, comprising G. H. Pegram, Prof. W. H. Burr, C. N. Monsarrat and Prof. C. R. Young.

The principal dimensions of the structure are given in fig. 1 herewith. The towers will be of steel, consisting each

load of 36,000 lb. per lin. ft. of bridge (24,000 lb. for 4 railway tracks, 5,000 lb. for 2 trolley tracks, and 7,000 lb. roadway and sidewalk load. This is regarded as full or "congested" loading, a condition that would probably never be possible of realization as a test load, and to which extreme unit stresses might be applied. The normal live load, for the ap-

Fig. 1. Windsor-Detroit Bridge, Dimensions and Structural Arrangement, Truss reinforcement when second deck is added.

be required, and for this purpose a suspension bridge with unloaded backstays, carrying two decks for separate accommodation of railway and highway traffic, has been designed. The plan has been adapted to the requirement of construction in two stages, the highway deck to be built first and the railway deck to be added later, together with the cables and extra stiffening truss capacity required to take care of it. The unprecedented span length and the high load capacity necessary for the service to be carried made the design a difficult problem. Some drawings of the design prepared by C. E. Fowler, Chief Engineer, and D. B. Steinman, Assistant to Chief Engineer, are reproduced herewith.

The promoters have obtained the necessary authority from the Dominion Parliament, and the U.S. Congress, through the granting of charters to a Canadian and a U.S. company for the construction of the bridge, and these companies have been organized for joint action. Arrangements have also been made with a

of 4 posts in the vertical planes of the 4 pairs of cables (one pair to each stiffening-truss). A sag ratio of one-tenth has been adopted, with stiffening-truss depth one-fiftieth of the span length; a sag ratio of one-ninth and a truss depth of one-sixtieth are being investigated for economy, deflection and general appearance of the structure. The sag in question is the mean of that of upper and lower cables. The two decks will be spaced the full depth of the trusses. The lateral system will have a paneling four times the length of the stiffening-truss panel.

On account of the heavy loading, special effort has been made to utilize the material to fullest efficiency by careful adaptation of the unit stresses to the available strength. For the floor, normal concentrations have been taken into account, including E60 loading on the railway deck, with impact 50% of that specified by the Pencoyd formula, for railway speed of 20 m.p.h.; for the major elements of the structure, a total live

plication of normal unit stresses, is made up of three-quarters of the congested railway load (four tracks at 4,500 lb.), 40% of the trolley load (two tracks at 1,000 lb.), and half the roadway and sidewalk loading (50 lb. per sq. ft.), making a total of 23,500 lb. per lin. ft. of bridge, or 65% of the congested loading. Wind was computed at 30 lb. per sq. ft. of exposed surface, including the projected surface of 2 trusses and train and traffic loading, a total of 1,850 lb. per lin. ft. of bridge, considered as a moving load. The railway and highway floors will however absorb nearly half the lateral force. A temperature variation of 60 deg. F. above and below mean was allowed for. The suspended dead load for the design as worked out amounted to 37,700 lb. per lin. ft. of which the cables and suspenders make up 6,700 lb. and the 4 trusses 16,500 lb. Unit stresses have been applied as follows, the 2 stresses given being in each case extreme and working, respectively: Cables, 100,000 and 85,000; suspenders,

50,000 and 40,000; alloy steel for towers and trusses, 45,000-150 1/r and 30,000-120 1/r; structural steel, 20,000-80 1/r. The extreme stresses are to be applied to congested loading and temperature, or to normal loading with temperature and wind. The working stresses are to be applied to normal load and temperature, or to empty bridge with temperature and wind.

Eight cables are considered necessary primarily because of the long span and great load. Cables of 21 in. diameter are considered the largest practicable for construction and efficiency. How-

load with temperature.

As the development of railway traffic arrangements and connections is believed likely to delay the realization of the project if construction to full capacity at the start is contemplated, the present intention is to build a highway bridge first, under such method of construction that only so much will be built as is necessary to support the highway deck, while at the same time the additional supporting and carrying structure for the railway deck can be provided by direct attachment to the original bridge. Accordingly the design is such that the

the difficulty or impracticability of 2-stage construction.

Two special elements of the structure are given in fig. 2, showing one of the towers and one of the anchorages. The 4 posts of each tower will be portal-braced, instead of being connected by full diagonal bracing. Below roadway level they will be braced by transverse diaphragms. While these towers are to be built of alloy steel, the working stresses in compression will not exceed 35,000-140 1/r even under congested loading. The maximum compression in an inner tower post is 30,500,000 lb., for working live-load conditions, with extreme temperature and wind action. The towers will be hinged at the base to allow for movement of the saddles due to temperature change of the cables. Their weight will be about 20,000,000 lb., while towers fixed at the base would be more than twice as heavy.

The stiffening trusses were designed 2-hinged for reduction of deflections and to avoid high suspender loads near midspan such as may occur with a center hinge; the weights of 2-hinged and 3-hinged truss were found to be about equal for the conditions of the Detroit bridge.

Unloaded backstays are to be used primarily on account of a curve in the railway approach, but the avoidance of large deflections in the side spans and decrease of main-span deflection were considered weighty additional reasons for this type as against loaded backstays, although there was little difference in economy between the two arrangements.

For the anchorages the novel construction shown has been devised to provide for direct transfer of the cable pull to the underlying rock, with a concrete anchorage block only heavy enough for the desired solidity of construction and for the purposes of bracing the 4 strut frames. This will be attained by providing an inclined strut from rock up to the anchorage saddle, from which saddle (taking the pull of one upper and one lower cable) 2 eyeball chains will pass backward and downward into a pit in the rock containing anchorage girders. Both strut and anchorage chains will be encased in shafts of concrete as protection from corrosion and indirectly a reinforcement of the anchorage.—Engineering News-Record.

Fig. 2. Windsor-Detroit Bridge, Portal-braced tower and street-and-tie anchorage.

ever, this arrangement also affords a ready solution of the problem of 2-stage construction. Six of the 8 will be 21 in. in diameter, containing 7,980 parallel wires each, of 0.192 in. diameter, galvanized. Two of them will be 18 in., with 6,700 wires of the same size. Wire of 215,000 lb. ultimate and 70% elastic limit was counted on, though material of about 10% higher elastic value may be obtained. The cables are to be continuous from anchorage to anchorage, and to be wrapped with no. 9 soft annealed galvanized steel wire; the suspenders will be pairs of galvanized-wire ropes 1 1/2 and 1 3/4 in. diameter. Maximum cable stress will amount to 19,700,000 lb. for a 21-in. cable, under normal

four lower cables (inner 21 in., outer 18 in.), the 4 stiffening-trusses, and the entire upper deck structure could be built first, but with the omission of one (of two separate) web systems and of reinforcing plates of the chords of the stiffening-trusses. The second or upper set of cables would be reeved and assembled only when the railway or lower deck is required. These cables, separated near midspan from the lower ones by a height of some 20 ft., are to pass over saddles directly above the saddles of the lower cables and then run closely parallel to them along the backstay length to separate anchor chains. Anchorages, tower piers and towers are to be built of full capacity in the beginning, on account of

The Railway Chief Clerk, His Problems, Duties, and Required Qualifications.

By H. A. Balkwill, Car Accountant, G.T.R., Montreal.

The modern railway is of so complex a character and the chief clerk is such an important part of the organization that we cannot hope to deal fully with our subject in the time allotted to us. I am aware that in claiming such an important position for the chief clerk, a very prominent railway man some years ago declared the position illogical, mainly on the ground that no man can sign another man's name without a "dis honest violation of the fundamental laws of matter." It is respectfully submitted, however, that the position of the chief clerk, not only before, but since this statement was made, has proved its worth, and granting his place in the modern railway organization, there can be no doubt in respect to his responsibilities. His problems will, of course, like his responsibilities be governed by the size of the staff over which he has control, as well as the nature of the

peculiar duties of the office with which he is connected. We will endeavor to show later that the qualifications necessary for a successful chief clerk are those which all of us must possess to some degree if we are to play our part in life with any resultant credit.

It is, of course, a fundamental truth that no man can serve two masters. The modern chief clerk in a large railway office, however, successfully upholding his chief to the benefit of the company by demonstrating to his fellow employees that his selections for the various tasks are in line with justice and the legitimate demands of their employer, has as closely approached this impossible task as can well be expected of any man and has thereby solved one of his most, if not the most, important problems confronting him. The problem I refer to is that of securing an organization, for it is a fundamental truth that team work will

give results greatly in excess of uncontrolled individual effort. As the ability of each employee differs in degree, it is absolutely necessary that they be assigned to the various tasks, so as to become an efficient whole, thereby securing the maximum of service for the company. The wise employee will admit the truth of this statement, as an unorganized staff or a staff not properly organized will require a larger number of employees with a possible decreased output and it does not necessarily follow under such conditions that the company alone will be the loser. The problems generally confronting the chief clerk in some of the more important railway offices are as varied as the complications of the road itself, and if he is to successfully measure up to his responsibilities, he should have a general knowledge of matters affecting every activity of his railway as well as the work of his own particular

office. The majority of employees are conscientious, not merely time servers, but, being human, dislike and resent apparent injustice. A successful chief clerk will, therefore, see that his fellow employees receive justice, with courteous treatment, for courtesy will ever bring large dividends in the dealings of every day life. We can all possibly recall men eminently just, but so harsh in manner as to largely counteract the justness of their actions. I have endeavored to stress the important facts concerning the chief clerk, that he must secure for his company efficient as well as cheerful service, by wise selection, firm and courteous bearing, so that both he and his fellow employees will be divided producing advertisers for their road, instead of being merely 8-hour day clerks. A disgruntled employee is not a profitable investment during office hours, and may by his "knocking" both at home and in society become a positive liability.

If the duties of a chief clerk bring him in touch with the public, his problems as well as his responsibilities are necessarily increased, as the particular problem then confronting him is to satisfactorily meet the demands of those whose knowledge of the difficulties concerning railway operation must of necessity be limited, and while a great majority of the public are fair and broad-minded, still there is always a considerable portion to whom the one and only important matter before the railway is their particular case, and no allowance will be made for any failure to measure up to the standard set up by them. In fact cannot we railway men recall a similar attitude of mind towards commercial houses when to they have most inexcusably failed in service.

The wise chief clerk will also always bear in mind the telephone is probably the most important point of contact with the public, and will carefully mark the manner in which the public is approached by this avenue. Even an unwise answer over the phone will leave a feeling of irritation and may result in the shipper listening to the wiles of the other road's solicitor. Of course the clerk, as much human nature in the public as in railway employees and occasionally the employee is hard put to it to control his temper. In such an event he should be trained to turn the customer over to the chief clerk, whose larger experience will generally win the day. Do not let us forget that while a soft answer will turn away wrath, a wise answer in the first instance will obviate the necessity for the soft answer later on.

No endeavor has been made to draw a sharp distinction between the responsibilities, the problems and the qualifications of a chief clerk, as it is somewhat difficult to separate them into their component parts and our purpose will be equally served if we do not attempt to draw too sharp a distinction. If, therefore, we are prepared to admit the responsibility attaching to the position, it logically follows that the problems add to the responsibilities, and the responsibilities are because of the duties confronting the occupant of the office.

The heads of some offices are of necessity absent from headquarters a considerable portion of each month; the chief clerk then becomes in the full sense of the term the "assistant" and must shape his actions so that the interests of the company are laid down by his head will be fully served. This emphasizes the necessity for practical

knowledge of all of the details of the work coming under his supervision, so that urgent and unexpected demands for special information, or statistics, in which time is a vital essential, can be fully complied with.

Of course, chief clerks being only human we sometimes find that the possessor of the title has magnified the importance of his position and has assumed responsibilities out of all proportion to their real value; then is the unfortunate caller overruled by the magnificent presence and regal manner and if he does not feel that his business demands an interview with the head, he frequently leaves that particular office fighting mad with a desire to get even with the cause of his irritation. If, however, the caller finds it necessary to see the head of the department, he draws his first assured breath only on being admitted to the private office, feeling that he has come in contact with the fallible human being.

On the other hand we have the timid chief clerk, a man afraid to shoulder responsibility and apparently unable to reach a decision even in matters of every day detail. Such a one is greatly bothered by a request for prompt decision, and usually asks that the matter be submitted in writing, so that careful consideration may be given to it. Of course, such a chief clerk has his value to the pulp and paper industry, as many a file of correspondence is started on its innocent way to assume large proportions simply as the result of the timid chief clerk. Again we have the offhand chief clerk, the bright snappy optimistic fellow, who will do all things are possible and who will promise practically everything requested, but whose promises must of necessity fall short on many occasions. It is a source of satisfaction, however, to note that such varieties of chief clerks are becoming rare, necessarily so, as modern business has no room and cannot afford time for self glorification, undue timidity or reckless optimism.

As against the foregoing, let us recall with pleasure the competent chief clerk encountered in so many railway offices, whose quiet manner, supported by an intelligent grasp of the subject, leaves you with a feeling of respect, not only for the chief clerk as a man, but for the office of the road he represents.

In considering the qualifications required by the really successful chief clerk, we could, of course, sum it up in the one word efficiency. This word has, however, I think, been overworked and does not completely define the qualifications considered necessary. It will, therefore, doubtless prove profitable to consider the matter in more detail. A certain railway man of this continent, in an endeavour to bring himself prominently before the railway public, has stated he possesses the qualifications of being "viciously ambitious and yet cautious and determined." Without ambition, advancement cannot, of course, be achieved, but I fail to comprehend why a man should claim viciousness as a virtue necessary to advancement. Viciousness must necessarily be a handicap even to the "cautious and determined" man. I would strongly advise my ideal chief clerk to purge such a poison out of his system without delay. Would not the better motto be "Ambition controlled by fairness and aided by determination?"

As the ideal chief clerk I would picture a man mentally alert, with a broad understanding of humanity, whose heart is kept in proper control by his reason.

In such a person we will expect to find, and will find enthusiasm, for enthusiastic leadership will turn many an apparent defeat into victory. With it the morale of the staff will be raised to a high level, and will be consistently maintained, resulting in more efficient service. In fact I would place enthusiasm properly controlled close to the top of the qualifications required by the successful chief clerk. We have, however, referred previously to the necessity of the chief clerk securing cheerful as well as efficient service. This of necessity involves a systematic arrangement of the work, but system must not become a fetish, otherwise the results will not be those hoped for. These two qualifications, viz., enthusiasm and system, necessarily imply the faculty to plan. If, therefore, we are prepared to admit that enthusiastic leadership and systematic arrangement of the office are essentials to the career of a successful chief clerk, it necessarily follows that the possessor of these two important attributes must likewise possess the power of seeing, to a certain extent, into the future, and be able to plan for today, so that tomorrow's changes may be taken care of without serious derangement of the main plan of the organization. Thus enthusiastic leadership, aided by judicious system, strengthened by foresight, will go far towards success, and the office so blessed with a chief clerk possessing these attributes will rank high in the organization of any road. In fact a staff of average ability, under such conditions, will give better results than one depending rather on the outstanding abilities of the few, hindered more or less by the unintelligent efforts of the many.

I have endeavored to show that the qualifications I would demand in the ideal chief clerk are those of enthusiasm, systematic habit of mind, ability to forecast and plan for the future, ability to select the individual for the work best suited to his mental qualifications, firmness of character tempered by mercy, so that true justice will prevail. Such a one will of necessity be courteous; in fact I would again emphasize the tremendous importance of courtesy. Many a man occupying a high position, occupies the position in some measure at least by being able to say "Please" and "Thank You" with such natural courtesy that it is a pleasure to receive such a one's service. I cheerfully admit the ideals I have endeavored to set forth are high ones, but on the other hand, I can claim that the chief clerk possessing such characteristics will successfully deal with his daily problems and will fully measure up to his responsibilities.

The foregoing paper was read before the Canadian Railway Club in Montreal recently.

Editor's Note.—In some offices the practice is for the chief clerk to simply sign the head's name, without anything to show that it is not a personal signature; in other offices the clerk's initials are added, but frequently very indistinctly. In our opinion the name of the head should be typed or written, followed by "per," and the chief clerk's signature. This is, of course, a debatable question, and Canadian Railway and Marine World will be pleased to receive expressions of opinion on it from any of its readers.

The West Australian Government has invited tenders for shop machinery for locomotive building.

Movements of Canadian Grain for the Crop Year Ended Aug. 31, 1921.

The Dominion Bureau of Statistics, Internal Trade Branch, has prepared a summary of the main movements of Canadian grain during the crop year ended Aug. 31, 1921, (crop of 1920), from the eastern and western fields into the principal channels of consumption within the country and towards export markets. For purposes of the grain trade, Canada has been divided into two main inspection divisions, the western and the eastern, the dividing line falling east of Port Arthur. It has been impossible to include all the details of the movement within the country, and the expedient has been adopted of showing a pool for each division, with the principal streams into and out of each of these pools for the crop year.

The chief source of supply is, of course, the wheat crop of the year, computed at 263,189,300 bush., of which 235,059,827 were produced in western division. Stocks on hand at the beginning of the crop year Sept. 1, 1920, amounted to 4,580,228 bush. and imports to 269,892. This makes the total flow into the western pool for the crop year 239,909,947 bush.

The quantity of wheat disposed of for commercial purposes in the western division, that is, shipped out of the division or milled within the division, amounted to 188,304,783 bush. Shipments out of the division were 163,964,892 bush., distributed as follows: exports to the United States, 46,272,438; exports to the United Kingdom and other countries, 37,717,742; shipments to the eastern inspection division, 79,074,712. The quantity milled for consumption in Canada was 21,404,712 bush. and 2,935,179 were milled but exported in the form of flour. In addition to the above amounts disposed of commercially, it is estimated that 38,900,860 bush. were retained for seed, and 5,257,073 were carried over in store to the next crop year. (Aug. 31, 1921).

The primary movement of the wheat is, of course, from the farm to the inspection points and on to the public and private terminal elevators at Port William and Port Arthur. Inspections were 187,185,000 bush. and receipts at these elevators 141,816,632. In addition 306,149 were shipped by rail to the east via Armstrong, Ont., without touching the head of the lakes. The rail shipments from Port William and Port Arthur were 17,897,597 bush. These, with direct shipments other than those mentioned above, amounted to 24,013,837 bush., making a total shipment all rail out of the division of 24,319,986. The water movement from the head of the lakes was 123,059,577 bush., 55,270,869 going to Canadian lake ports and 67,788,708 to U.S. ports. Canadian wheat shipped from Duluth, Minn., amounted to 687,744 bush., of which 77,708 went to Port McNicoll, Ont., the balance, 609,666, going to U.S. ports.

Of the total lake shipments from Port William and Port Arthur 30,344,757 bush. entered Georgian Bay ports, rail shipments from which totalled 31,530,139 bush. The bulk of the rail shipments no doubt found their destinations Montreal for export. Goderich elevators received 7,817,918 bush. by water and 395,832 by rail. This was all shipped out by rail, either as wheat or flour. Port Colborne elevators received 17,523,017 bush. by water and 553,848 by rail, a total of 18,076,865. Of this amount 12,

011,597 were shipped out by water, the rail shipments of 6,056,030 from Port Colborne including grain milled by the Maple Leaf Milling Co. there, 10,004,103 bush. were received at Montreal by water, of which 880,639 were direct shipments from the head of the lakes. Rail receipts were 20,935,743 bush., making the total quantity of wheat handled at Montreal 1,039,846.

Shipments by water from Fort William and Port Arthur to United States ports were as follows:—

	Bush.
Duluth-Superior	4,990,940
Chicago	1,650,485
Detroit	411,440
Toledo	1,753,496
Cleveland	895,800
Buffalo	57,626,003
Other U.S. ports	466,541

Total 67,788,708
Customs returns show that 37,251,394 bush. of wheat were exported and billed direct from Fort William and Port Arthur to countries other than the U.S. via U.S. seaboard ports. Total lake shipments increased from 80,803,960 bush. to 123,059,577, shipments to Canadian ports decreased while shipments to U.S. ports increased.

Shipments from the western division into the eastern pool were 79,974,712 bush. as shown above. The eastern crop was 28,129,473 bush., and the quantity carried over from the previous year was 5,267,363. Imports from the U.S. were 322,592 bush., making the total quantity entering the eastern pool 113,694,140.

Shipments out of the eastern pool to U.S. were 2,941,113 bush.; to other countries, via Canadian seaboard ports, 32,300,858; to other countries via U.S. ports, 16,941,616, a total of 52,183,605 bush. Mill grindings for domestic consumption were 18,074,160 bush., for export 28,054,341; a total of 46,128,501. The total quantity disposed of commercially was 98,312,106. Of the balance 1,806,282 were required for seed and the carry over at the end of the crop year was 2,599,732 bush. The exports of 32,300,876 bush left Canada through the following ports:

	Bush.
Montreal	2,571,118
Quebec	11,186
Total, St. Lawrence ports	2,582,304
North Sydney, N.S.	400
St. John's, N.B.	333
St. John, N.B.	6,173,398
	32,300,876

Other exports through Canadian ports were as follows:—to the Orient, via Vancouver, B.C., 466,329 bush.; from Dawson, Yukon, 20 bush., making total export of 32,767,224 bush., passing through Canadian points.

Rail shipments from the eastern division to the U.S. for consumption were 16,941,616 bush., and for re-export to other countries 16,941,616, a total of 33,883,232. Of this amount 3,065,492 left Canada through Ontario ports of exit, 13,917,750 through Coaticook, Que., other Quebec inland ports of exit showing 18,464. Exports of Canadian wheat through Portland, Me., were 13,883,449 bush.

Total exports of wheat to the U.S. for consumption were 49,215,551 bush. Exports to the United Kingdom and other overseas countries were 86,960,271 bush., 32,767,224 being shipped via Canadian ports and 54,193,010 via U.S. ports. Total exports of wheat from Canada were 136,173,785 bush.

Comparative figures of export shipments overseas via Canadian and United States seaboard ports for the crop year are as follows:—

Sept. 1 to Aug. 31	Canadian ports	U.S. ports	Total
1918-1919	25,292,000	10,000,000	35,292,000
1919-1920	18,009,632	5,023,281	23,032,913
1920-1921	32,767,224	54,193,010	86,960,234

The bulk of the exports of Canadian grain via U.S. ports during the crop year 1920-21 passed through New York. Other U.S. ports handled Canadian grain in the following order:—Portland, Baltimore, Philadelphia and Boston.

Movement of Canadian Oats.

The crop of oats in the western division was computed for the crop year 1920-21 to be 316,418,280 bush. The amount on hand at the beginning of the year was some 5,825,352 bush. The only other stream entering the western pool is the small amount of 3,666 bush. imported from the U.S. This makes a total flow into the pool during the year of 322,247,298 bush. Of this 55,186,098 were used for commercial purposes, i.e., shipped out of the division or milled within the division. Shipments out of the division were 49,657,772 bush., distributed as follows: to the eastern inspection division 44,076,446, exported to the U.S. 2,427,874, exported to the United Kingdom and other overseas countries 3,138,452. There were ground in the west 5,528,326 bush., 4,512,860 for domestic consumption and 1,015,466 for export. In addition to the quantity disposed of commercially it is estimated that 27,213,735 bush. were required for seed, and 23,653,459 were carried over in store to the next crop year.

Receipts of oats at the public and private terminal elevators at Port William and Port Arthur were 50,302,399 bush. Shipments were 45,299,610 bush., 39,300,489 by lake and 5,999,121 by rail. In addition 3,866,072 were shipped straight through to the east by rail, 882,522 going via Armstrong, Ont., making a total rail movement from the western division to the east of 9,865,193 bush.

Lake shipments to Canadian ports were 34,211,253 bush. These, with the rail shipments of 9,865,193 made a total movement of 44,076,446 from the western inspection division to the eastern. No oats were shipped via Duluth. Exports via Vancouver, B.C., were 8,080 bush.; via Prince Rupert 29, and via Dawson 600.

Of the total lake shipments to Canadian ports 21,078,990 bush. entered the Georgian Bay port elevators, from which 18,986,196 were forwarded by rail; 4,606,460 bush. from the lake streams were received at Goderich, shipments by rail from these elevators being 4,055,284. Receipts at Port Colborne elevators were 4,586,225. Shipments from Port Colborne by water were 4,275,198 and by rail 257,858, a total of 4,533,056. Water shipments from Port Colborne were mainly transshipments of grain en route to Montreal, 6,782,984 bush. were received by water at Montreal, including 2,283,509 shipped direct from Port William and Port Arthur. Rail receipts of oats at Montreal were 17,279,248 bush., making total receipts at Montreal 24,062,332.

All oats shipped during the crop year 1920-21 by water from the head of the lakes to U.S. ports were destined to Buffalo, and amounted to 3,958,648 bush. Customs returns show that 3,129,738

bush. of oats were exported billed direct from Fort William and Port Arthur to countries other than the U.S. via U.S. seaboard ports.

The eastern crop of oats was estimated at 214,291,420 bush. Shipments from the west as above were 4,076,448. In addition to the crop of the year and shipments from the western division 4,287,807 were carried over from the previous year. There also was an importation from the U.S. into the eastern division of 1,017,435. The total quantity of oats entering the eastern pool was 263,673,108.

The movements out of the eastern pool during the crop year 1920-21 included 6,494,626 bush. of oats for domestic consumption, 2,030,308 milled for export, and export shipments from Mont-

real of 19,214,321, from St. John 1,282,722, from Halifax 471,541, from Charlottetown 39,254, from Sydney and North Sydney 50,554. Fifty bushels were also shipped out through Amherst, N.S., making a total export shipment of 21,058,842 bushels through Canadian Atlantic seaboard ports.

Shipments to the U.S. for consumption were 428,599 bush. and 1,645,715 were shipped from the eastern pool for export to other countries through U.S. ports, making the total shipments by rail from the east into the U.S. 2,074,314. Seed requirements in the east were 15,558,837 bush. and 19,120,264 bush. were carried over into the next crop year.

Two main streams went into the U.S., 3,958,648 by water via Buffalo, and 2-

074,314 moved by rail from the eastern pool. These, with other shipments southerly by rail from the western inspection division, amounted to 7,646,926 bush., of which 2,871,473 were for U.S. consumption and 4,775,453 were for re-export to other countries, via United States Atlantic seaboard ports. These shipments, together with the shipments of 21,067,556 bush. through Canadian ports, both eastern and western, made a total export movement of 28,714,482 bush.

During the crop year the export of Canadian oats through U.S. ports dropped from 5,802,538 bush. in 1919-20 to 4,775,453, compared with an increase from 3,427,156 to 21,067,556 in the movement through Canadian ports.

Switching and Transfer Locomotives, Grand Trunk Railway.

As stated in Canadian Railway and Marine World for February, the G.T.R. is having 10 switching locomotives and five transfer locomotives built at its Montreal shops. The switching locomotives' principal details are as follows:—

Gauge	4 ft. 8½ in.
Fuel	Bituminous coal
Weight in working order	34,381 lb.
Weight on drivers	171,000 lb.
Weight of engine and tender in working order	174,600 lb.
Wheel base, driving	304,000 lb.
Wheel base, total	11 ft. 6 in.
Wheel base, engine and tender	45 ft. 9½ in.
Length, overall	62 ft. 6½ in.
Weight on drivers	171,000 lb.
Tractive effort	5,060 lb.
Heating surface, grate area	28.4 sq. ft.
Cylinders, diam. and stroke	18 in. x 26 in.
Valves	Piston 14 in.
Driving wheels, diam. over tires	56 in.
Driving wheels, thickness of tires	3½ in.
Driving journals, main, diam. and length	9½ x 12 in.
Driving journals, others, diam. and length	9½ x 12 in.
Boiler, style	Extended wagon top
Boiler, working pressure	180 lb.
Boiler, outside diam. and length	7 ft. 8 in. x 26 ft.
Boiler, firebox, length and width	96½ x 75½ in.
Boiler, firebox plates, thickness	¾ in. tube, ¾ in. crown, sides and back
Boiler, firebox, water space	Front, 5½ in.; sides and back, 4½ in.
Boiler, tubes, number	178
Boiler, tubes, outside diam.	2 in.
Boiler, flues, number	28
Boiler, flues, outside diam.	¾ in.
Boiler, tubes and flues, length	12 ft. 4 in. over sheet
Boiler, heating surface, tubes and flues	1,777 sq. ft.
Boiler, heating surface, firebox and tubes	168 sq. ft.
Boiler, heating surface, total	1,945 sq. ft.
Grate area	24.6 sq. ft.
Tender, tank	Water bottom
Tender, frame	Built up type
Tender, weight	139,000 lb.
Tender, wheels, diam.	32 in.
Tender, wheels, material	Cast iron
Tender, journals, diam. and length	5½ x 12 in.
Tender, water capacity	6,000 gal.
Tender, coal capacity	9 tons

A number of existing G.T.R. standards are being used in the construction, the locomotives will be thoroughly modern, and equipped with all economy devices, which, in combination with a tractive power of over 34,000 lb. and the factor of adhesion shown, will make them highly efficient power units for switching. They will be designated as class F 12.

The locomotive frames are to be of cast steel, 4 in. wide, provided with heavy cast steel deck castings, and cast steel bumpers at the front, and cross tie and angle section will be employed. The back end of the frame will be fitted with cast steel foot plate or deck casting, and the front and back ends will be of a very substantial and strong design.

The boiler courses will be fitted with sextuple riveted joints, and double stag-

gered rivets, in circumferential seams, and the firebox will be fitted with two special blow off cocks, applied to the throat sheet. The locomotives will be equipped with a superheater and brick arch, the arch bricks being supported on four 3 in. tubes. Boiler accessories will include an air-operated firebox door of modern design, double turret valves, inspirators of the latest type, and a five feed lubricator. Smoke boxes will be equipped with A.R.M.M. front ends.

The cylinder castings have been designed with steam and exhaust passages of ample area and with easy bends. Cylinder and steam chest bushings, and packing rings in the piston heads and piston valves, will be of Hunt-Spiller gun iron. Piston rods and valve stems will be fitted with metallic packing. Baker valve gear will be employed, and greatly facilitating the handling of the locomotive in switching service.

Driving wheel centers will be of cast steel, and all tires will be flanged ¾ in. thick, and shrunk on. Franklin adjustable driving box wedges will be used.

The cab will be spacious and spaced well back, providing ample deck space for the fireman, and special attention has been paid to the location of the cab fittings, to place brake valves, throttle handle, reverse lever, valves, etc., within easy reach of the crew, and the position of the steam, air and water gauges will be such that they can be easily read.

The tender will be carried on two 4-wheeled trucks of the equalizer design, with pedestals and McCord boxes, for 5½ x 10 in. journals.

Heavy driving cast iron wheels will be used with inside hung brake beams. The tender frame will be of channel steel design, and fitted with heavy cast steel bumpers at front and back ends, and stub casting for use with M.C.B. coupler. The radial buffer will be used. The tender tank will be of the water bottom type, with capacity of 6,000 U.S. gall., and the coal capacity will be 9 tons. The coal will be carried in a special hopper, designed so that the locomotive man and fireman will have an unobstructed view over the top of the tank.

The specifications of the five 8-wheel transfer locomotives are as follows:—

Tractive effort	52,329 lb.
Weight in working order	24,507 lb.
Weight on drivers	242,750 lb.
Weight engine and tender in working order	410,400 lb.
Wheel base, driving	15 ft. 6 in.
Wheel base, engine and tender	53 ft. 4½ in.
Length overall	71 ft. 3½ in.
Weight on drivers	242,750 lb.
Total weight: tractive effort	4.6

Heating surface—grate area	48.35
Cylinder, diam. and stroke	26 x 30 in.
Valves	16 in.
Valves, diam.	14 in.
Driving wheels, diam. over tires	56 in.
Driving wheels, thickness of tires	3½ in.
Main driving journals, diam. and length	11 x 20 in.
others	10 x 15 in.
Boiler, style	Extended wagon top
Working pressure	170 lb.
Outside diameter first ring	74 in.
Firebox, length and width	108½ x 75½ in.
Firebox plates, thickness	¾ in. tube, ¾ in. crown, sides and back
Firebox, water space	Front 5½ in., back 4½ in., sides 4½ in.
Tubes, diam.	2 in.
Tubes, number	178
Flues, diam.	¾ in.
Flues, number	28
Tubes and flues, length	15 ft. over sheets
Heating surface, firebox, with arch tubes	235 sq. ft.
Heating surface, total	2732 sq. ft.
Grate area	24.6 sq. ft.
Tender—	Water bottom
Tank	Constructed with
Frame	167,550 lb.
Wheels, diam.	32 in.
Journals, diam. and length	5½ x 12 in.
Water capacity	9,000 gall.
Coal capacity	12 tons

These 8-wheel locomotives will be known as class F-12, and will embody a number of existing G.T.R. standards in their construction. The frames will be of cast steel, 6 in. wide, and provided with heavy cast steel deck casting and cast steel bumpers at the front, while cross ties of strong design will be fitted, and the back end of the frame will be fitted with cast steel foot plate, with unit safety arrangement, making the front and back ends of a very substantial and strong design.

The boiler courses will be fitted with sextuple riveted joints, and double staggered rivets, in circumferential seams, and the firebox will be fitted with two special blow-off cocks applied to the throat sheet. Boiler accessories will include air operated firebox door and double turret valves, modern inspirators and five feed lubricator. Superheaters are to be applied, and the firebox will be equipped with four 3 in. arch tubes for the support of arch brick. The smoke box will be fitted with A.R.M.M. front end, and the cylinders will have steam and exhaust passages of ample area and easy bends.

Driving wheel centers will be of cast steel, and spaced equally apart, one from the other, being 5 ft. 2 in. centers, and all tires will be flanged ¾ in. thick and shrunk on. The engines will be equipped with Young valve gear, controlled by power reverse gear. Automatic driving box wedges will be employed. The cabs will be spacious and will provide ample deck space for the fireman.

The tender will be carried on two 4 wheel trucks of the equalizer design, with pedestal and McCord boxes for 6 x 11 in. journals. Tender wheels will be 33 in. cast iron, and Buffalo brake beams,

inside hung, will be used. The tender frame will be of the Commonwealth cast steel design, in one piece, and so arranged that Miner draft rigging may be fitted, with M.C.B. coupler type D, with

6 x 8 in. shank. The tender tank and coal hopper will be so arranged that the locomotive man and fireman will have a good view to the rear over the top of the tank.

Self Propelled Cars on Steam Railways.

Greater Winnipeg Water District Railway.—The Greater Winnipeg Water District Commission has bought a gasoline operated railway motor car for operation on its railway, which extends from St. Boniface, Man., to Shoal Lake, adjoining Lake of the Woods, 92 miles. It has the following general dimensions:—

Length over all	42 ft. 6 in.
Width over all	11 ft. 6 in.
Height from rail to top of ventilators.....	11 ft.
Truck centers	22 ft.
Weight, body and frame	7 tons
Weight of car complete	13 tons

The car underframing consists of four 6 in. 8 lb. channels with cross members, gussets, etc., and the body framing consists of 1½ x 1½ x 3/16 in. steel tees, continuous, forming carline and posts. The siding, to the belt rail, is 3/32 in. steel plate, hot riveted, while the belt rail is 2½ x ¾ in. steel. Each end of the car is slightly rounded, as shown by the illustration. The vestibules are sheathed outside with 13 gauge sheet steel, and inside with 20 gauge sheet steel. The car flooring is double; the bottom layer is 13/16 in. yellow pine,

with 3 concentric rings ¼ in. wide. The valves, of special alloy steel, are 2½ in. diam. and have a 7/16 in. lift. The piston displacement is 381.6 cu. in. The horse power at speed is as follows:—At 800 r.p.m., 37.5 h.p.; at 1,000 r.p.m., 46 h.p.; at 1,200 r.p.m., 53 h.p.; at 1,400 r.p.m., 59 h.p.; at 1,500 r.p.m., 61 h.p.; at 1,800 r.p.m., 66 h.p.

The cooling system consists of a tube and continuous fin type radiator, with a frontal area of 715 sq. in. and a 20 in. diam. 4-blade fan, driven at twice engine speed, by a 2 in. belt. The water pump, of the propulsion type, delivers 22.5 gall. of water a minute at 1,000 r.p.m. Ignition is through high tension magneto, equipped with impulse coupling, and the car is also equipped with a starting motor. The transmission is of the 4-speed, heavy duty type, mounted in a unit with the engine, and the gears are made from carbonized and oil-tempered nickel steel, and carried on nickel steel shafts and taper roller bearings. A multiple dry disc clutch is employed. The gear ratios are as follows:

wheels have cast steel centers, rubber cushioning elements, and M.C.B. rolled steel tires, 30 in. diam. The car is equipped with Westinghouse semi-automatic air brakes, and all wheels are equipped with brake shoes, supported by inside hung rigging. Hand brake staffs for emergency use are fitted at each end of the car. Brill dump type sanders are provided for each of the 4 driving wheels. The gasoline tank is of 50 gall. capacity. Electrical equipment consists of a 12 volt engine driven electric generator of 300 watts capacity, fitted with automatic cut-out and voltage control, and a 140 a.h. storage battery. Control is by a foot operated clutch and hand operated gear shift; the spark and throttle control are by hand.

The interior of the car is divided into passenger and baggage compartments, separated by a paneled partition. The baggage compartment has a sliding door on each side. The inside finish of the car, including all doors, sash, mouldings, etc., is of cherry. The side lining below the window sills is of agasote, and the

Gasoline Railway Motor Car, Greater Winnipeg Water District Railway.

tongued and grooved; over this are 3 layers of tar paper, and the top flooring is also of 13/16 tongue and groove yellow pine. The flooring in the baggage compartment is of 1½ in. yellow pine.

The roof is of the plain arch type, extending the full length of the body, and the roof boards are of ¾ in. poplar, tongued and grooved, and covered with no. 8 canvas, well bedded in white lead. The roof is reinforced by continuous side posts.

The car is driven by a 4-cylinder 4-cycle, valve in head, heavy duty type gasoline engine, with cylinders 4½ in. diam. by 6 in. stroke. The engine is equipped with a pressure oiling system, in which a gear driven pump supplies oil, under pressure, through crankshaft to all main crank and camshaft bearings, the pressure being regulated by automatic control from the intake manifold, so that the oil pressure varies with the load. The oil pump delivers 17 gall. a minute at 1,000 r.p.m. The crankshaft is 3 in. in. diam. and is carried on 3 main bearings, the total main bearing length being 10½ in. The connecting rod bearings are 3 in. diam. by 2½ in. long, and the pistons are 4½ in. long and fitted

1st, 5.35 to 1; 2nd, 2.12 to 1; 3rd, 1.68 to 1; 4th, 1 to 1.

The engine and transmission are mounted at the front of the car so as to be removable as a unit. The drive is through propeller shafts, having two universal joints each, used between the engine and the auxiliary transmission, and between the auxiliary transmission and each of the driving axles. The auxiliary transmission is mounted in the cast steel swing bolster, and transfers the drive through 2 propeller shafts to each driving axle. It is arranged to provide 2 ratios for forward operation, and one ratio for reverse, making a total of 8 speeds forward and 4 reverse. The driving axles are in the forward truck.

The 4-wheeled trucks are pivoted to take curves of radius as short as 70 ft. The truck frames are of 6 in. material. 1 beam side rails extend fore and aft over each axle inside of wheels, supporting channel transoms, which in turn carry the swing motion links. The 1 beams are tied at the ends by gusset plates and cross channels. The axles, of 3 in. diam., are of heat treated steel. Axle housings carry underslung semi-elliptic springs, which support the truck frames. The

baggage compartment is lined from floor to top rail with ¾ in. poplar tongued and grooved sheathing. The seats in the passenger compartment are of cherry, and are arranged transversely. They are finished in brown artificial leather, with the bottom cushions removable. The passenger compartment has accommodation for 38 passengers, and in addition there are folding seats of ash in the baggage compartment to accommodate 8 passengers. There are 11 windows on each side of the car, with double sash, the top sash being stationary and the lower made to raise. Each side window is provided with a pan-tasote curtain. There are 10 exhaust ventilators in the roof, 7 of these being in the passenger compartment, 1 in the lavatory saloon and 2 in the baggage compartment. The car is heated by exhaust from the engine, the waste gases being carried in thin steel wall tubes along either side of the car beneath the seats. The car is lighted by sixteen 15-candle power electric lights inside the car, 2 over the steps, 1 in the saloon, 4 in the baggage room and the remainder in the passenger compartment.

We are advised by the Greater Winnipeg Water District Commission that it

is expected to have the car in operation by about the middle of May, after which it is intended to use the present steam train service for freight only, making about one trip a week. During the past winter the Commission has operated a mixed train three trips weekly, in addition to which during the past two months a special freight train has been making two trips weekly, on account of the large quantity of wood and wood products to be brought out. The schedule for the motor car is not yet worked out, and it will necessarily depend upon the demand for service. It is probable that it will make four round trips a week at least. The car was manufactured by the Service Motor Truck Co., Wabash, Indiana.

The Canadian National Rys. management is continuing development work in connection with self propelled cars for branch line service, and has placed an order with Ledoux, Jennings Ltd., Montreal, for a gasoline driven passenger motor car, 26 ft. long over all, 7 ft. 8 in. wide and 10 ft. 2 in. extreme height from top of rail. The steel car body will be mounted on two 4-wheel trucks. The car will be driven by a Res 6-cylinder 50 h.p. engine, equipped with self starter, dynamo, etc., and water cooled. The cooling system will include a centrifugal pump. The drive will be through a shaft

sioners' attention for some time, and on March 25 the Board issued order 32,224 upon a Canadian National Rys. application for permission to operate the car now being built by Ledoux, Jennings Co., as follows:—"Upon reading the application and the submissions filed in support thereof, and upon the report and recommendation of the Board's Mechanical Experts, the Board orders that the applicants be authorized to operate upon their railway a passenger car propelled by gasoline and constructed to detail plans on file with the Board, the motive power to be a 6-cylinder gasoline engine; and that, before the car is put into operation, it be inspected and approved by the Board's Mechanical Expert. That the Board reserves the right at any time hereafter, upon the report of its Chief Operating Officer or its Mechanical Expert, to order any changes or improvements in the said plans, or in any car constructed thereupon, which to it may seem necessary for the safety and convenience of the public or the applicant's employees; and the Board further reserves the right, at any time, to direct the discontinuance of the passenger service to be afforded by any car built according to the said plans, and the substitution thereof of other service."

Particulars of the gasoline motor passenger car operated by the Canadian

to whether it is the management's intention to re-establish such a service between Brockville and Westport. The Minister of Railway replied that the matter was then under consideration by the management.

The Board of Railway Commissioners has authorized the gasoline motor car service to be restored on the Brockville-Westport run, and the Canadian National Rys. management has therefore ordered another car from Ledoux, Jennings Ltd., Montreal, similar to the one for the Picton-Trenton run described above. Pending the delivery of this car, the present steam train service between Brockville and Westport will be maintained.

The electric storage battery car, described in preceding issues of Canadian Railway and Marine World, is still in operation between Bathurst and Campbellton, 62.96 miles, on the Maritime District, Campbellton Division, Bathurst Subdivision. One of the accompanying illustrations shows this car equipped with a snow plough which will remain on the car permanently. This car is continuing to give good and dependable service at the favorable costs mentioned previously, and despite delays of as great as 30 minutes has no difficulty in making its trips in schedule time on this busy subdivision.

In the latter part of 1921 the Victoria, B.C., Chamber of Commerce applied to the Canadian National Rys. management for the operation of a daily mixed passenger and freight service between Victoria and Sooke, some 22 miles out of Victoria, on the Victoria-Alberni line, track on which has been laid to mile 74.6 from Victoria and on which a freight service is being operated weekly, and occasionally oftener when business offers, by the operating department for the construction department. The Chamber of Commerce suggested that a gas-electric car service, or service by steam car with box car trailer, would be most suitable, in view of the limited population to be served. An investigation by the Traffic Department showed that such a service would be subject to severe competition by highway vehicles, and the management pointed out recently that the business in sight would not begin to pay the expenses of operating a steam train service, but that a railway motor car would be the most economical satisfactory way of handling the business, and that such a service was under consideration. It was also stated that at the conclusion of tests being made with self propelled cars on other C.N.R. lines, about the end of May, the management would probably be able to give a definite decision.

That the Canadian National Rys. management is keenly alive to the possibilities in connection with the operation of self propelled cars in railway service is evidenced by the reference made to the subject by the Minister of Railways in the House of Commons on April 11, when he said: "A problem which in recent years has confronted railway managements is the question of providing suitable service on branch lines at a cost not out of proportion to the earnings, and capable of meeting in many cases motor car competition. For this, the self propelled gasoline car seems to be most suitable. The Canadian National Rys. have been active in obtaining experience with this plan of operation. Much will depend on the attitude of railway labor toward the self propelled car, which could take care of branch line service, if expenses of oper-

Electric Storage Battery Car, Canadian National Railways, with Snow Plough Attached.

to the front axle of the rear truck, and side rods on the wheels of the rear truck will transmit the drive from the leading to the following wheels of this truck. The axles will be of heat treated steel, those in the front truck being 2½ in. diam. and in the rear truck 3½ in. The front wheels will be M.C.B., chilled iron, 20 in. diam., and the rear wheels 30 in. diam. Brakes will include ordinary type brake shoes and beams, operated by toggle joints and pull rods, geared to a hand wheel convenient to the operator. The general finish of the interior of the car will be white and mahogany stain. The floor will be of 2-ply wood, insulated, and the roof of ¾ in. tongued and grooved wood, covered with canvas and painted. The body will be equipped with 2 side doors for regular use by passengers and an emergency door at the rear. The seating capacity will be 32, and the seats, arranged transversely on each aisle, will be finished in rattan. This car will be used on the run between Picton and Trenton, 30.6 miles, on the Ontario District, Ottawa Division, Picton Subdivision, and it is expected that delivery will be made and the service inaugurated by May 15.

The question of the operation of self propelled cars on steam railways has engaged the Board of Railway Commis-

sioners' attention for some time, and on March 25 the Board issued order 32,224 upon a Canadian National Rys. application for permission to operate the car now being built by Ledoux, Jennings Co., as follows:—"Upon reading the application and the submissions filed in support thereof, and upon the report and recommendation of the Board's Mechanical Experts, the Board orders that the applicants be authorized to operate upon their railway a passenger car propelled by gasoline and constructed to detail plans on file with the Board, the motive power to be a 6-cylinder gasoline engine; and that, before the car is put into operation, it be inspected and approved by the Board's Mechanical Expert. That the Board reserves the right at any time hereafter, upon the report of its Chief Operating Officer or its Mechanical Expert, to order any changes or improvements in the said plans, or in any car constructed thereupon, which to it may seem necessary for the safety and convenience of the public or the applicant's employees; and the Board further reserves the right, at any time, to direct the discontinuance of the passenger service to be afforded by any car built according to the said plans, and the substitution thereof of other service."

Particulars of the gasoline motor passenger car operated by the Canadian National Rys. between Brockville and Westport, 44.4 miles, on the Ontario District, Ottawa Division, Brockville Subdivision, were given in Canadian Railway and Marine World for Nov. and Dec. 1921. This car was taken off that run and replaced by steam train service in the latter part of Dec. 1921, and the car was given an overhauling, larger axles and ball bearings being placed in the leading truck, and a larger rear axle, also running on ball bearings, fitted. The car was then run to Ottawa, where members and officials of the Board of Railway Commissioners made a trip on it and inspected it thoroughly, after which it was loaded on a flat car and shipped to the Maritime District, Edmeston Division. It is now in operation between Cross Creek and Stanley, 5.74 miles, on the Nashwaak and Cross Creek Subdivisions. The small motor car which provided service on that run formerly, described in Canadian Railway and Marine World for Dec. 1921, pg. 650, is out of service.

We are informed that the people along the Canadian National Rys. line between Brockville and Westport were greatly pleased with the gasoline car service, which may have had something to do with H. A. Stewart, Leeds, Ont., asking in the House of Commons on April 5

ation are not made too costly in the matter of wages. In this effort to cut excessive costs, and yet provide reasonable service, the co-operation of railway labor is invited. As a matter of fact, these branch lines suffer not only from heavy costs of operation, but from competition of the motor car and motor truck, a competition which is increasingly felt each year by all railways." The Minister's reference to co-operation by labor is significant. An excessively large crew would impose an undue burden on such operation, and it is to be hoped that crews of the right number of men may be arranged, having due regard to the work to be done and to safety of operation. The storage battery car mentioned above is operating with a 3-man crew on a busy subdivision, when the Ledoux, Jennings Co. car, which operated between Brockville and Westport, was handled by one man, with absolute telegraphic protection.

It is evident that the use of self propelled cars for branch line operation is an important one. There has been a lot said and written about the advantages of electrification of branch lines, but a little study of the subject will convince anyone that the fixed charges incidental to their electrical operation would in many cases be prohibitive, and there is little doubt that self propelled cars will furnish the best means of operation. The matter of determining the type of car best suited for a particular service is one that requires a great deal of trial. We are informed by an official who has given this a great deal of study that there is room for all the types of cars so far tried by the Canadian National Rys. management, the main consideration being to get such type of car located on a run for which it is particularly suited. The storage battery type of car has been found to be well suited to a run within the battery power limit, with cheap power available at the required end of the run; the smaller gasoline cars are suitable for short runs where the traffic is light, while for the longer runs, and heavier traffic, a much larger gasoline car should be provided. We are confident that the experiments and trials now being conducted will prove the superiority of the self propelled car for branch line service, and that when they are adopted in large numbers great savings over the cost of steam train operation will be the result.

The Winnipeg Traffic Club, which was established in 1917, has the following objects:—To promote closer relationship between the shipping and traveling public and representatives of transportation companies by private and social intercourse between them, and for the friendly discussion of traffic problems, also to provide clubrooms, reading matter etc., and to create a benefit fund from which payment to certain dependent relatives of deceased members may be made. The club now has a membership of 225, consisting of railway officials and employees, and traffic officials of Winnipeg commercial houses. Its quarters, including reading room and library, are in the Cadomin Building. During the winter the club has had billiard tournaments, dances and smoking concerts. It has an eight team, ten pin bowling league, including some of the city's best bowlers. The officers are C. A. Pullen, President; C. K. Parrish, Vice President and A. J. Barber, Secretary Treasurer.

Proposed Limitation of British Preferential Tariff to Goods Entering via Canadian Ports.

H. J. Logan, for Cumberland, N.S., moved in the House of Commons, April 5, that the British tariff preference should be confined to goods brought into Canada through Canadian seaports. He stated that it would do much to support the policy that Canadian trade should be carried through Canadian channels to the greatest extent possible. He pointed out that the advantages of the policy advocated would not be confined to the Maritime Provinces or the ports of St. John and Halifax, but that all ports in Canada would benefit. He claimed that the autumn importations from Great Britain would come in through Quebec and Montreal, and importations from various British possessions, such as New Zealand, to which the British preference applies, would be brought in via Vancouver and Prince Rupert. He claimed that freight rates on eastbound commodities would be decreased if there were a greater westbound traffic to balance the eastbound traffic, and that legislation to compel the goods to enter Canadian ports to get the preference would give Canadian railways a greater westbound traffic. He also claimed that the Canadian Government Merchant Marine would benefit greatly; the ships would be in a position to get traffic to Halifax, St. John, Quebec, Montreal, Vancouver and Prince Rupert, and would naturally turn it over to the Canadian National Rys. At present, if an importer of goods in Vancouver makes a purchase in London, the goods are likely to be on a U.S. ship to New York, and will then be sent on a U.S. railway as far west as possible, so that all the Canadian railways get out of the transaction is the short haul from a junction in the western U.S., north to Vancouver. In addition to contending that the proposed legislation would benefit Canadian rail and ocean carriers and Canadian ports, he claimed that the policy is necessary for the building of a strong and independent Canada, and that it seemed to him to be the height of folly to spend millions of dollars on Canadian ports and then refuse to pass legislation which would help them. He admitted that an argument could be advanced that freight charges on imported goods would be slightly higher on account of the scarcity of complete cargoes to Canadian ports, but he would not, he said, admit the truth of that argument.

John Evans, Saskatoon, Sask., said that he considered the resolution a "camouflage of intent to curtail British competition," and for that reason, he said, he would not support it.

J. B. M. Baxter, St. John City and St. John and Albert Counties, N.B., supported Mr. Logan's motion, advancing arguments along the same lines as those employed by the mover. C. Marcell, for Bonaventure, Que., asked Mr. Baxter what would happen to the G.T.R. traffic from Portland, Me., if the proposed legislation were adopted. In reply, Mr. Baxter said that the development of Canadian ports is more important than the development of Portland, and pointed out that it is more important to shape railway policy to build up Canada than to build up the U.S.

Hon. T. A. Crerar, Marquette, Man., spoke against the resolution. He said that Mr. Logan's reasoning, by which he

arrived at the conclusion that lower freight rates would be given to the Canadian consumer by reason of return loads being provided for west bound movement from Canadian ports was most fallacious. He said that rates are lower between the U.S. and Europe than between Canada and Europe because of the greater volume of traffic to and from the U.S., and that an attempt to compel British goods to come in via Canadian ports would throw trade out of its natural and normal channel into an artificial channel. Such an attempt would be costly to the Canadian people. He pointed out that a great traffic in U.S. goods is enjoyed through the port of Montreal, and was of the opinion that if Canada attempted to discriminate against U.S. ports, the U.S. would see to it that Montreal got none of the U.S. traffic. He admitted that the proposed legislation would benefit St. John and Halifax, doubtlessly, but that it would retard the progress of Canada generally.

Jas. Malcolm, North Bruce, Ont., said that now that the G.T.R. is a nationally owned railway, it is the duty of the country to see that it has the maximum chance to make good, and he pointed out that if the resolution were given effect to, the G.T.R.'s chief port, Portland would be discriminated against with serious results. Canadians receive package freight in mixed cargoes through U.S. ports, but that is because a solid cargo of mixed merchandise is seldom available from Great Britain to Canadian ports, for the reason that our imports are limited. The present situation is that the Canadian importer gets the benefit of a low freight rate via Portland, but if the resolution were adopted, the Canadian importer would be discriminated against and in fact penalized.

Mr. Logan, in introducing his motion, stated that it was not his intention to press it to a vote, and after further discussion, he asked the Government to give the matter thorough consideration, and withdrew his motion.

Railway Finance, Meetings, Etc.

Canadian Pacific Ry.—The State Department at Ottawa has advised the New York Cotton Exchange, warning it against the acceptance of certain C.P.R. certificates, which present invalid holders are trying to dispose of against deliveries of cotton. These notes were acquired by the Canadian Government under the peace treaty the German Government obligating itself to hand them over. It is reported that the certificates were smuggled out of Germany, to Switzerland, and that endeavors are being made for their disposal through Milan.

The Pere Marquette Rd. Co. has declared a dividend of 1 2/3% for four months, and a dividend of 1% on account of the cumulative dividend of 5% on the preferred stock.

Canadian Government Railways' Deficits. The Minister of Militia and Defence stated in the House of Commons, April 3, in answer to W. Irvine, Calgary East, Alta., that the total amount of deficits paid by the Government for the operation of Canadian Government railways to Dec. 31, 1921, was \$46,097,072.56.

Orders By Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

Important traffic orders made by the Board are given in full on this page.

General order 361, Mar. 15.—Prescribing regulations and forms to be used by railway companies for reports on the accounts to the Board and rescinding orders 39,214 and general order 251, and circulars 110, supplements 1 and 2, thereto. This, heretofore, has been the only order in Canadian Railway and Marine World for April, 1904.

32,219. March 22.—Ordering that 25% of the cost of installing wigwag signal at Michigan Central R.R. crossing at Shedden, Ont., be paid out of the railway grade crossing fund.

32,220. March 16.—Extending for three months, time within which Canadian National Rys. may install bell and wigwag signal at crossing at intersection of Smith St. and Eighth Ave., Regina, Sask.

32,221. March 20.—Approving agreement between Bell Telephone Co., and Tyndin County Municipal Telephone System, Tyndin County, Ont.

32,222. March 17.—Relieving Canadian National Rys. and C.P.R. from maintaining signalman on Sunday at crossing at Galters, Man. so long as present character of movements continues.

32,223. March 16.—Extending to June 30, time within which G.T.R. may build extension to siding for Swift Canadian Co., Ottawa, Ont., authorized by 19,041.

32,224. March 25.—Authorizing Canadian National Rys. to operate a cylinder car propelled by gasoline.

32,225. March 20.—Authorizing C.P.R. to divert roadway in Lots 3 and 4, Range 6, Wright Tp., Que.

32,226. March 24.—Authorizing Brantford Municipal Rys. to operate cars and trains over crossing of Lake Erie & Northern Ry. on Morrell St., Brantford, Ont., pending installation of half-interlocker.

32,227. March 13.—Dismissing application of Canadian Northern Ry. for authority for order directing C.P.R., G.T.R., Canadian National Rys. and other Canadian railways to reduce the export of grain and grain products to that of wheat, particularly for shipment of wheat, and also application of Dominion Millers' Association regarding flour arbitrations over wheat for export.

32,228. March 17.—Authorizing C.P.R. and Canadian National Rys., when signals are clear, to operate trains over crossing at Russell, Man., without first stopping.

32,229. March 24.—Amending order Feb. 14, 1905, authorizing Canadian Northern Ry. to cross C.P.R. near Emerson station, Man., by providing that watchman be appointed by C.N.R., being junior at crossing.

32,230. March 24.—Authorizing Canadian National Rys. to build spur for Pembroke Timber, T. & Pulp Co., at mile 74.4 Ruel Subdivision, Ont.

32,231. March 27.—Amending order 1,359, Aug. 6, 1906, authorizing crossing of C.P.R. and Canadian Northern Rys. at crossing of C.P.R. Ry. at James St. near Pacific Ave., West Fort William, Ont., by providing that watchman at crossing be appointed by the Canadian National Rys. instead of C.P.R.

32,232. March 27.—Approving Michigan Central R.R. plan showing installation of two additional levers to operate signals at crossing of C.P.R. at Southold, Ont.

32,233. March 27.—Approving Canadian National Rys. Standard Release Freight Traffic R.R. and C.R.C. No. E390, in no far as same applies to Halifax & Southwestern Ry., and Tariff C.R.C. No. E393.

32,234. March 16.—Amending order 31,975, re crossing of Ottawa & New York Ry. by G.T.R. at Hawthorn, Ont. to provide that special movements may be made when operators are off duty, provided that N.Y.C. Ry. arrange to have operators called when each special movement is made.

32,235. March 16.—Dismissing National Dairy Company of Canada's application for reduction in express rates on butter from Silverdale and Renfrew, to Hamilton, Ont.

32,236. March 24.—Ordering G.T.R. to install wigwag signal in addition to automobile bell at crossing of Wilton St., Woodstock, Ont.

32,237. March 24.—Extending for four years time within which Board of R.R. may remove and examine the interior of flues and boilers in service on its lines, instead of three years as provided under order 19,041, Feb. 5, 1905, and extending for two years, instead of 18 months, time within which test of flexible staybolts with carbon shall be treated.

32,238. March 29.—Relieving C.P.R. from maintaining signalman at crossing of G.T.R. at

Eldon, Ont., so long as present character of movements continues.

32,239. March 29.—Relieving Canadian National Rys. from erecting fences, gates, and catch guards between Rideau Jet. and Brent, mile 101.2, between mile 109 to 185.3, on both sides, through Algonquin National Park, Ont.

32,240. March 29.—Relieving Canadian National Rys. from erecting fences, gates, and cattle guards from mile 94.4 to 95, between Parry Sound and Capreol, Ont.

32,241. March 29.—Authorizing British Columbia Public Works Department to build highway crossing over Grand Trunk Pacific Ry. at Topsham, B.C.

32,242. March 29.—Ordering Canadian National Rys. to erect fourth class station building at Sherbrooke, Que., by Sept. 30.

32,243. March 29.—Relieving Canadian National Rys. from erecting fences, gates and cattle guards between Brent and Capreol, Ont., mile 0 to 20.8 north side, mile 21.9 to 35 north side, mile 0 to 35 south side, and mile 116.4 to 118.2 on both sides.

32,244. March 30.—Authorizing Windsor, Essex & Lake Shore Rapid Ry. Co. to build siding into property bought for freight terminal at Camilleton, Ont.

32,245. March 31.—Approving location and details of proposed new G.T.R. station at Dixie, Que.

32,246. March 30.—Ordering Town of Lachine, Que., to pay G.T.R. \$150 a year for maintenance of bell installed at crossing of Second Ave.

32,247. 32,248. March 27.—Approving Bell Telephone Co.'s agreements with Shakespeare Telephone Co., and Albany District, Ontario, and with Bridge Telephone Co., Algoma District, Ont.

32,249. March 27.—Ordering Canadian National Rys. to install 90 days to install automatic bell, with wigwag signal, at crossing of main road at Shawinigan Falls, connecting Three Rivers and Saguenay, Que.

32,250. March 31.—Amending order 28,353, July 9, 1919, authorizing Canadian Northern Rys. to make crossing in n.w. ¼ Sec. 19, Tp. 22, Range 4, s.w. ¼ Sec. 15, Tp. 22, Range 10, by showing location of crossing at Sec. 24, Tp. 22, Range 10, instead.

32,251. March 31.—Ordering Canadian National Rys. to erect third class station building at Blackfoot, Alta., by Sept. 1.

32,252. March 31.—Amending order 1,606, Sept. 14, 1906, by providing that watchman at crossing of C.P.R. and Grand Trunk Pacific Ry. instead of C.P.R., be appointed by G.T.P. Ry. instead of C.P.R.

32,253. March 31.—Approving agreement between Bell Telephone Co. and Wakefield & Massabie Telephone Co., Ottawa and Pontiac counties, Que.

32,254 to 32,256. April 1.—Authorizing Lethbridge Northern Irrigation District to build ditch across C.P.R. in s.w. ¼ Sec. 29, Tp. 9, Range 22; in n.w. ¼ Sec. 6, Tp. 10, Range 22; and in n.e. Sec. 19, Sec. 9, Range 26, west 4th meridian, Alta.

32,257. April 3.—Dismissing Montreal Tramways Co. application to rescind order of Railway Board, re re-arrangement of tracks, Jan. 6, 1905, appointing cost of subway under C.P.R. at Forsyth St., Montreal.

32,258. April 1.—Authorizing Lethbridge Northern Irrigation District to make irrigation ditch across C.P.R. in s.w. ¼ Sec. 9, Tp. 10, Range 26, west 4th meridian, Alta.

32,259. April 1.—Authorizing Lethbridge Northern Irrigation District to build irrigation ditch across C.P.R. in s.w. ¼ Sec. 15, Tp. 10, Range 27, west 4th meridian, Alta.

32,260. April 1.—Rescinding orders 25,724, Dec. 21, 1917, and 25,725, June 17, 1920, authorizing transfer track between C.P.R. and Canadian Northern Saskatchewan Ry. at Yorkton, Sask.

32,261. April 3.—Approving deviation of C.P.R. from line 90, Thunder Bay Division, Ont., between miles 46 and 47, Nipigon Subdivision.

32,262. April 3.—Authorizing C.P.R. to build spur and to rearrange existing tracks at St. Pierre, Pigeot & Co. at mile 1.99 MacTier Subdivision, York Tp., Ont.

32,263. April 3.—Authorizing Pipestone rural municipality, Man., to make highway crossing over C.P.R. in Sec. 13, Tp. 7, Range 29, west 4th meridian, Man.

32,264. April 3.—Authorizing Canadian National Rys. to divert highway between Secs. 32 and 33, Tp. 58, Range 9, west fifth meridian, Alta.

32,265. April 3.—Approving Canadian Northern Ontario Ry. revision of proposed branch line in Ontario, between St. Augustin and St. Eustache.

32,266. April 3.—Approving Canadian National Rys. change in proposed branch at mile 35.16 between St. Augustin and St. Eustache.

32,267. April 3.—Approving change of location of north connection between Canadian Northern Ontario Ry. and Grand Trunk Pacific Ry. in n.w. ¼ Sec. 14 and n.e. ¼ Sec. 15, Tp. 23, Range 25, west 4th meridian, Alta.

32,268. Apr. 1.—Amending order 1075 May 9, 1906, authorizing crossing of C.P.R. by Northern Extension Ry. at St. Jacques, Que., by providing that watchman be provided by N.E.R. instead of C.P.R.

32,269. Apr. 3.—Authorizing Canadian National Rys. to cross highway in Sec. 30, Tp. 26, Osoyoos Division of Yale District, mile 32.2 Vernon-Kelowna Branch.

32,270. Apr. 3.—Authorizing C.P.R. to rebuild bridge 112.3 over Coquitlam River, Cascade Subdivision, B.C.

32,271. Apr. 4.—Authorizing British Columbia Railways Department to build temporary structure over Esquimalt & Nanaimo Ry. over Johnson's Subdivision, B.C.

32,272. Apr. 4.—Authorizing C.P.R. to rebuild tunnel 21.45 on its Mountain Subdivision, B.C. District.

32,273. March 27.—Authorizing use of subway under C.P.R. at Algoma station, Ont.

32,274. March 31.—Authorizing Canadian National Rys. to rebuild bridge over Kaminitikwa River at mile 7.7 North Lake Subdivision, near Stanley, Ont.

32,275. March 31.—Authorizing Alberta Public Works Department to make highway crossing over Canadian National Rys. in s.e. ¼ Sec. 27, Tp. 56, Range 10, s.w. ¼ Sec. 15, Tp. 56, Range 10.

32,276. March 27.—Approving C.P.R. plan showing automatic signal substitution at Sharbot Lake, Que., where Highway 100 crosses and connects with its Kingston Subdivision.

32,277. Apr. 6.—Shortening to one week the publication of notice of C.P.R. intention to make application to build a bridge line on Kingston & Pembroke Ry., near Godfrey, Ont.

32,278. Apr. 6.—Authorizing Canadian National Rys. to rebuild bridge over Eastover R.R. tracks at Rochford Bridge, Alta.

32,279. Apr. 6.—Relieving Ottawa Electric Ry. from paying proportion of cost of protection at diamond crossing on Broad St., Ottawa, when work of disconnecting details and switches from interlocking plant is completed, as authorized by order 31,062, and O.E.R. had ceased operations over said crossing, and authorizing G.T.R. to operate over crossing without first stopping train.

32,280. Apr. 6.—Authorizing Canadian National Rys. to rebuild bridge at Birdtail Creek, Man.

32,281. Apr. 7.—Authorizing Canadian National Rys. until further order, to remove station agent at Miller's Crossing, Ont., and to close of cut at first crossing west of Lytton station, B.C., over P.R., be cleared out so that a train can be seen by the crossing at a point about 35 ft. from centre of track.

32,282. Apr. 5.—Authorizing Grand Trunk Pacific Ry. to build spur for Fort Garry Lumber Co. at mile 129.4 on Kingston Subdivision, B.C.

32,283. Apr. 5.—Ordering Canadian National Rys. to improve approaches to farm crossing on G. W. Himmelman's property, Rockland, Ont.

32,284. Apr. 5.—Ordering C.P.R. to close of cut at first crossing west of Lytton station, B.C., over P.R., be cleared out so that a train can be seen by the crossing at a point about 35 ft. from centre of track.

32,285. Apr. 7.—Authorizing G.T.R. to close draw span in its bridge over the St. Lawrence River, near Soulanges, Que., between 8 p.m. and 5 a.m. daily during the navigation season.

32,286. Apr. 10.—Approving agreement between Bell Telephone Co. and Glangarry Telephone Co., Glangarry and Prescott counties, Ont.

32,287. Apr. 10.—Approving order for crossing of Kingston Road at mile 90 Belleville Subdivision, 2 miles east of Belleville, Ont., be altered and made to cross track at right angles instead of at an angle.

32,288. Apr. 10.—Ordering that notice of C.P.R. proposed application for authority to build branch line to Kingston Subdivision, near Godfrey, Ont., be shortened to 7 days.

32,289. Apr. 10.—Authorizing G.T.R. for purpose of protection against fire, to close of cut at Perrottes crossing, east of milepost 209, near Exanville, Ont., to enter upon part of Lot 21, Con. 1, near Perforce Tp., Ont., to cut down trees and shrubs.

32,290. Apr. 10.—Ordering that so long as present crossing existing at Perforce P.R. crossing over Canadian Northern Ontario Ry. at mile 46.9 Fort McNeil Subdivision continues, the C. P. R. will be relieved from maintaining a signalman between midnight and 5 a.m. on each week.

32,291. Apr. 1.—Authorizing G.T.R. to build extension to siding for W. Gracey & Son, Allandale, Ont.

32,292. Apr. 10.—Amending order 31,850, Dec. 2, 1921, authorizing C.P.R. to remove station agent at St. Pierre, by providing that caretaker be appointed.

32,293. Apr. 11.—Rescinding order 16,944, July 3, 1912, authorizing C.P.R. to remove the St. Vincent & York, Ont. on Lot 10, Con. 1, St. Vincent Tp., Ont.

32,294. Apr. 12.—Authorizing C.P.R. to appeal to Supreme Court of Canada, re application of Ontario Lands and Forests Department, for order directing C.P.R. to build crossings on line between Minto and St. Eustache, Ont.

32,295. Apr. 12.—Authorizing C.P.R. to appeal to Supreme Court of Canada, re application of Ontario Lands and Forests Department, for order directing C.P.R. to build crossings on line between Minto and St. Eustache, Ont.

32,296. Apr. 12.—Authorizing C.P.R. to appeal to Supreme Court of Canada, re application of Ontario Lands and Forests Department, for order directing C.P.R. to build crossings on line between Minto and St. Eustache, Ont.

32,297. Apr. 12.—Authorizing C.P.R. to appeal to Supreme Court of Canada, re application of Ontario Lands and Forests Department, for order directing C.P.R. to build crossings on line between Minto and St. Eustache, Ont.

32,298. Apr. 12.—Authorizing C.P.R. to appeal to Supreme Court of Canada, re application of Ontario Lands and Forests Department, for order directing C.P.R. to build crossings on line between Minto and St. Eustache, Ont.

Kenora District, Ont., on a question of law: "Whether, upon the facts stated by the Board, the title of the railway company is subject to a prior right reserved in the Crown to construct and maintain public crossings over the railway company's right of way, as applied for by the applicant herein."

22240, Apr. 11. Authorizing Canadian National Ry. to build bridge over Stillwater Creek, Nipigon Tp., mile 79.72 from Jellicoe, Ont.

Carriage of Mails by Railways.

In answer to a question by W. M. McQuarrie, New Westminster, B.C., in the House of Commons, April 10, the Postmaster General gave the names of 56 steam and electric railways carrying mails. In answer to the question, "What are the details of existing contracts, and on what dates do they terminate?" he said:—Contracts are not entered into with railways for carrying His Majesty's mails, the conveyance of such mails being provided for by the Post Office Act, Sec. 115, as follows:—"His Majesty's mail and persons travelling therewith on postal service, shall, at all times when thereunto required by the Postmaster General, be carried on any steamship or on a steamboat navigating the waters of Canada, and on any railway in Canada, and with the whole resources of the railway company if required, on such terms and conditions and under such regulations as are made by the Governor in Council." Mail services on railways are established or terminated in accordance with the requirements of the postal service, and the detail thereof authorized by order in council. Payment for conveyance of mail by railways is made on a car mile basis, and the existing rates per mile authorized by order in council 472, of Feb. 19, 1921, in effect since March 1, 1921, are as follows:—For a full postal car service, 34.7c. a car mile; for an apartment postal car service, 19.52c. a car mile; for service by baggage car, 8.47c. a car mile; for special train ordered by the department, \$2.71 a train mile; for special passenger trains, \$2.17 a train mile.

In answer to the question, "Does the Government intend to make arrangements to have all mails carried by the Canadian National Railways, where possible?" he said:—"Instructions issued on Dec. 13, 1920, by the then Minister of Railways were to the effect that the Post Office Department should see that the Canadian National Ry. and the C.P.R. were fairly treated in connection with mail service—neither given an unfair advantage. In every case the Department is governed by the requirements of the postal service in the territory served by the railway. Any further intervention on the part of the Government will be announced in due course."

The Anglo-Newfoundland Development Co.'s accounts for the year ended Aug. 21, 1921, show a profit of \$168,442. After meeting interest on first and second debenture stock and writing off \$20,000 off cost of issue of second mortgage debentures, there remains a considerable sum, including \$195,661 brought forward, of \$250,983, out of which the directors decided to apply \$120,000 to writing down stocks of raw materials, mill supplies, etc., and pay the dividend on the cumulative preference shares for the year to Aug. 31, 1920. There was no distribution on the shares in 1920. The company is controlled by the Northcliffe interests, and operates a pulp and paper mill in the Exploits River Valley, Newfoundland, with a railway from Millertown Jct. on the Newfoundland Ry. to Millertown.

Canadian National Railways Construction, Betterments, Etc.

The Minister of Railways stated in the House of Commons April 11 that during this year it is proposed to continue works which were uncompleted at the end of 1921, and undertake new works, of which the principal items are as follows:—

Canadian Government Ry., Eastern Lines.—Continue dredging at Cape Tormentine, yard improvements at Moncton, installation of automatic signals between Lewis and Chaudiere, construction of staff quarters at Parent, replacing trestles over the Coffee and Matagan rivers on Amos Subdivision. Flattening the slope and placing additional rock and large capping stones on breakwater at Cape Tormentine. Provide two 80-ton cranes for Moncton repair shop. Completion of yard extension and rearrangement of main line at St. John. Provide passenger train dispatching service between Mont Joli and Lewis. Extend stores building at St. Malo.

Canadian Northern Ry., Eastern Lines.—Complete the work of curtail deviation and replacement of trestle on various subdivisions. Extend 5 stalls of locomotive house and provide additional machinery at Parry Sound. Ballasting on various subdivisions. Construct new station at Napanee. Provide additional stores accommodation and scrap reclaim building at Leaside. Pave roadways and provide drainage at Cherry St. yard, Toronto. Provide additional terminal accommodation and trackage at Quebec. Construct 6-stall extension to locomotive house and provide additional yard facilities at Limoilou.

Canadian Government Ry., Western Lines.—Erect boarding-house for staff at Sioux Lookout and lengthen 15 stalls of locomotive houses. Fill various trestles. Provide telephone train dispatching service between Sioux Lookout and Winnipeg. Install scrap reclamation plant at Transcona.

Canadian Northern Ry., Western Lines.—On the D.W. and P. Ry., it is proposed to construct car repair shops at Virginia and Duluth as required by Minnesota State laws. Between Port Arthur and Fort William a second track is proposed to provide for the dense traffic. A number of wooden trestles are to be replaced with steel bridges on concrete foundations and a number with concrete culverts and earthfills. Wood trestle bridges over the Kaministiquia and Assiniboine Rivers are to be replaced with steel trusses on concrete substructures. Ballasting on various subdivisions. At Fort Rouge a trunk sewer and a filtering plant for the water supply are to be constructed to serve the terminal. New water supplies are proposed at Maryfield, Rama, Avonlea, Gravelbourg, Delisle, Wiseton, Eston, Lloydminster, Vegreville, Mecheche, and completion of the water supplies at Paskewin and Kindersley.

Grand Trunk Pacific Ry.—Construct additional trackage at Watrous and Rivers terminals and improve water supply at latter point. Provide water supplies at Arrow River, Tate and Bradwell and complete water supply at Hubbard. Complete filling of Battle River trestle. Improve Mirror terminal by construction of 6 additional stalls to locomotive house and additional trackage. Construct a freight repair shop at North Edmonton, this to form a unit of a complete repair

shop at that point. Construct a diversion of the railway at the Big Eddy crossing at Sundance Creek. Complete the construction of a terminal at Coalspur. Complete the construction of a station, salmon dock and warehouse at Prince Rupert. Complete the filling of the Kyax River crossing and erect a steel span to provide permanent waterway at this point. Ballasting on various subdivisions. Replace various trestle bridges with steel spans on concrete substructures or with concrete culverts and earth fills.

Co-ordination, Canadian Northern, Canadian Government and Grand Trunk Pacific Ry.—Connect Transcontinental Ry. with Canadian Northern at Mokomon, to permit abandonment of approximately 28 miles of Lake Superior branch. Provide new classification yards west of Fort William. Consolidation of C.N.R. and G.T.P. yards at Portage la Prairie. Complete consolidation of terminal facilities at Regina. Consolidate G.T.P. and C.N.R. in one line through Camrose and provide the necessary connection. Complete connection between C.N.R. and G.T.P. at East Edmonton. Consolidate C.N.R. with G.T.P. in the vicinity of Entpple and construct the necessary connections. Construct connections between G.T.P. and C.N.R. at Stony Plains and abandon the C.N.R. between Edmonton and Stony Plains. Consolidate Lucerne and Jasper terminals at one point.

Location of Freight Cars on Canadian Railways.

The Railway Association of Canada has issued a report dealing with the location of freight cars as of April 1, based on returns from the following railways: Algoma Central & Hudson Bay, Canadian National, including Grand Trunk Pacific; Canadian Pacific; Central Vermont (in Canada); Dominion Atlantic; Edmonton, Dunvegan & British Columbia; Grand Trunk; Kettle Valley; Michigan Central (in Canada); Napierville Jct.; Pere Marquette (in Canada); Quebec Central; Quebec, Montreal & Southern; Timiskaming & Northern Ontario; Temiscouata; Toronto, Hamilton & Buffalo; Wahash (in Canada).

The figures are as follows: Cars owned by reporting railways, 222,722; home cars on Canadian foreign lines, 17,108; home cars on U.S. lines, 35,963; home cars on home roads, 169,651; Canadian owned foreign cars on home lines, 13,894; U.S. owned foreign cars on home lines, 21,048; total cars on line, 204,593; per cent. on line to total owned, 91.8; deficiency on line to total owned, 18,129; home cars in bad order, 19,964; foreign cars in bad order, 418; total cars in bad order 20,382; per cent. in bad order, 10; privately owned U.S. cars on line, 1,860; privately owned Canadian cars on line, 1,086.

The Toronto Transportation Club had a very successful luncheon on April 24, the President, Thos. Symington, Superintendent, Shedden Forwarding Co., being in the chair. Jos. Muller, Passenger Agent, Bureau of Service, National Parks and Resorts, Chicago & Northwestern Ry., and Union Pacific System, gave a talk on a trip through Rocky Mountain and Yellowstone National Parks, illustrated by a series of colored photographic pictures.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta & Great Waterways Ry.—The Alberta Legislature has passed an act providing for granting to the company, which is owned by the Alberta Government, \$740,000, of which \$225,000 is to reimburse the province's general revenue for the cost of maintenance, upkeep and equipment of the railway during 1921, which the company was unable to defray out of its resources, and the remainder is required for maintenance, upkeep and equipment during 1922. The latter amount is to be paid to the company as may be required from time to time. The total amount is advanced to the company by way of loan.

Replying to questions in the Alberta Legislature recently, the Minister of Railways stated that the contract between the Government and the Northern Construction Co. for reconditioning of the railway, and for its extension, had been terminated, and the Government had paid \$1,740,447.82 for work done under the contract. Other questions asked and the answers given thereto were:—

Q. How do the rates and prices above in the Northern Construction Co.'s schedule for A. & G.W.R. work, compare with prices paid by other railway companies for similar classes of work in Alberta at concurrent periods of time where contractor did not receive the benefit of free transportation? A. The A. & G.W.R. prices average 73% higher.

Q. Was this work performed at the schedule of unit prices referred to in the contract? A. No. These prices were exceeded by from 6% to 67%.

Q. What amount was lost to the province by reason of the agreement made by the province in Aug. 1920, with the Northern Construction Co.? A. Approximately \$548,000.

Q. What loss in revenue, freight and passengers did the A. & G.W.R. sustain through giving the Northern Construction Co. free transportation on the A. & G.W.R. lines? A. Approximately \$70,000.

Q. What loss did the A. & G.W.R. sustain by reason of giving the Northern Construction Co. free transportation over all foreign railways in Manitoba, Saskatchewan, Alberta and British Columbia? A. Approximately \$73,000.

On another occasion the Minister of Railways informed the Legislature, in answer to questions, that there is nothing in the company's act of incorporation, or in the provisions for the guarantee of the bonds by the province requiring the railway to be built into Fort McMurray. It would not be in the public interest to extend the line to Fort McMurray at present and he had no information as to when, if ever, it would be in the public interest to do so. About 5.6 miles of the grading between Waterways and Fort McMurray has been done at a cost of \$37,307.03. There are sufficient rails on hand to complete the line to Fort McMurray. The Deputy Minister of Railways made a thorough examination of the Clearwater River as to navigation, and according to the best information available there is sufficient depth of water in the river to the railway terminals at Waterways during the whole period the Athabasca River is open for navigation. (April, pg. 185.)

Anxox, B.C.—The Granby Smelting & Mining Co. is reported to be building a railway at Anxox, B.C., by day labor, at a cost of \$50,000.

The Canada Central Ry. is operated by the C.P.R., as a branch of the Edmonton, Dunvegan & British Columbia Ry., under an agreement to which the Alberta Government and the J. D. McArthur interests are parties with the operating company. The Alberta Legislature has passed an act authorizing a loan to the company of \$475,500 to build an extension of the line westward for 13 miles. Out of the sum to be advanced \$144,093.39 is to be paid to the Alberta & Great Waterways Ry. Co. for rails, and the balance is to be paid out as required for construction purposes. The operating company is to enter into an agreement with the Government for the construction and operation of the extension, and to secure the advance upon the whole undertaking of the company. The C.C.Ry. branches off from the Edmonton, Dunvegan & British Columbia Ry. at Winagami, mile 273.5 from Edmonton, and is being operated across Peace River, 48.5 miles. In 1921 arrangements were made to build a 25 mile extension in the direction of the Waterhole district, track on which was laid for 23 miles to Berwin, by Dec. 31. The present proposal is to extend the line 13 miles farther. This extension will, a press report states, leave the railroad about 20 miles short of Waterhole. (April, pg. 185.)

The Edmonton, Dunvegan & British Columbia Ry. is operated by the C.P.R., under an agreement to which the Alberta Government and the J.D. McArthur interests are parties. The Alberta Legislature has authorized the lending to the company of \$410,000 to extend the line from Grand Prairie, mile 50, on the branch from MacLennan Jct., westerly to Tps. 71-72, Range 8, west of the 6th Meridian, 15 miles. The sum to be advanced is to form a charge upon the company's whole undertaking, and an agreement for its construction and operation is to be entered between the Government and the C.P.R. Co. as the operating company. In connection with this projected extension, a press report states that two routes have been surveyed, one running west, with a southerly tendency, having as its ultimate destination the Wapte Pass, described as the easiest gradient in the Rocky Mountains, while the other swings more to the north and the Pine Pass.

Nothing has been arranged with regard to construction from Spirit River to the Pouce Coupe district. About 60 miles of grading is reported to have been completed from Spirit River, prior to 1916.

When the bills for the E.D. & B.C. Ry. and the Canada Central Ry. were under consideration the Premier stated that C.P.R. officials had given an undertaking that that company considered itself wholly responsible for any deficits on the lines under its operating agreement. The C.P.R. had also agreed to the lines being taxed on a basis of \$1,300 instead of \$1,000 a mile as previously.

The E.D. & B.C. Ry. Co. is applying to the Dominion Parliament for authority to extend the Grand Prairie branch from mile 50 for 50 miles westerly, and for authority to issue securities for \$400,000 a mile in respect of such extension. (April, pg. 185.)

Hudson Bay Ry.—The Prince Albert, Melfort, Sask., and Pas, Man., Boards of Trade have named deputations to go to Ottawa, to urge the Dominion Govern-

ment to take steps to secure the completion of the railway from Pas to Port Nelson, on Hudson Bay. It is completed from Pas to the second fall of the Kettle River, 332 miles, and the grading thence to Port Nelson, about 90 miles, has been ready for track laying since 1917. (Feb., pg. 76.)

Kettle Valley Ry.—In addressing the Penticon, B.C., Club, during a recent trip to the Pacific Coast, D. C. Coleman, Vice President, C.P.R., Western Lines, and President, K.V.R. Co., stated that the branch line to Oliver will be pushed forward vigorously and will be completed by the autumn. (April, pg. 185.)

Lacombe & Northwestern Ry.—The Alberta Legislature has passed an act authorizing the raising of \$100,000, of which \$65,000 is to be used to reimburse the province's general revenue for advances made to the company for the maintenance, upkeep and equipment of the railway during 1921, and the remaining \$35,000 is to be utilized for its maintenance, upkeep and equipment during 1922. The Legislature also authorized the raising of \$265,000 to extend the line from mileage 37, near Rimbey, Alta., for 11.5 miles in a generally northerly direction. These sums are to be advanced by way of loan to the company, which is owned by the Alberta Government. (April, pg. 185.)

The Lake Huron & Northern Ontario Ry. Co. is in the process of reorganization, and has issued a prospectus, from which the following details are extracted:—The officers are: President, D. G. Curtis; Vice President and General Manager, H. Appleton; Chief Engineer, L. Whitman, B.E.; the office is at 46 King St. West, Toronto. The company's authorized capital is stated to be \$6,000,000 of common stock, and \$6,000,000 of 8% cumulative preferred stock. Of these stocks there are now held 1,000 shares for stockholders, \$600,000 of preferred stock, and \$300,000 of common stock, which form part of the stock issued and to be issued to the Scottish-Canadian Finance Corporation, which corporation, the prospectus states, will retire without burden or obligation on the part of the railway company \$595,000 of bonds at present outstanding. The present issue of stock is stated to be for the purpose of buying and equipping an extension of 14 miles, and the present terminus at Rock Lake, Ont., to the C.P.R. main transcontinental line at Wakami. This stock will be issued in units of two shares of preferred and one share of common stock, each unit carrying a bonus of one share of stock of Ontario National Development Corporation, Ltd., the authorized capital of which is \$5,000,000 of common stock.

The old Lake Huron and Northern Ontario Ry. took over the charter of the old Bruce Mines and Algoma Ry. Co., which was incorporated by the Ontario Legislature in 1899 to build from Bruce Mines northerly for 30 miles, under which charter, and subsidy contract, the company built a line from Lake Huron, through Bruce Mines to Rock Lake, about 17 miles. In 1903 the E. M. and A. Ry. Co. was authorized to extend this line from Rock Lake to a junction with the C.P.R. transcontinental line between Chapleau and Bisco, and in 1905 it was further authorized to extend the line to Hannah Bay or some other point on James Bay, within Ontario. The company was reorganized under the title of

the Lake Huron and Northern Ontario Ry. and in 1913 the Ontario Legislature ratified an agreement providing for granting to the company upon completion of the extension of the line from Rock Lake to the National Transcontinental Ry., and upon certain other conditions the right to purchase at certain prices up to 4,000 acres of land a mile. No construction has been done, and in 1921, the Legislature, after considerable discussion granted an extension of one year for starting construction.

The prospectus refers to the liberal terms of the company's act of incorporation and to the land concession; and to the water powers on the Mississauga River which would be reached, and to the agricultural, timber and mining resources of the territory through which the proposed line will pass, crossing the C.P.R. at Wakami, the Canadian Northern Ry. at Kirkabush, and the National Transcontinental Ry. at Alexander, a total distance of 272 miles from the terminus on Lake Huron. The estimated length of the further extension to James Bay is 328 miles.

The construction of the proposed extension of 114 miles to the C.P.R. would give the company a line of 130 miles from the operation of which, the prospectus states, it is estimated that a gross annual revenue of \$3,295,000 might be realized. The operating expenses are estimated at 60% or \$1,977,000; depreciation, taxes, etc., at \$98,850; sinking fund, \$98,850; fixed charges, \$480,000, or a total of \$2,654,700, which would leave \$640,300 for distribution. (April, pg. 185.)

A deputation from Sault Ste. Marie, Ont., and other districts in Algoma, waited on the Ontario Government, March 29, to urge the extension of the company's franchise for a further two years, and that a grant of the pine along the route of the railway be made to the company at an upset price. It was stated that the company had already expended \$700,000 upon the railway to Rock Lake, and in connection with the projected extension. The Premier pointed out that the Government felt that the land grant to the company had been too extensive, and that the present might be a good time to revise the agreement, and he added that the Government was prepared to do anything it could do with justice. (April, pg. 185.)

Michigan Central Rd.—We are officially advised that the Michigan Central Rd. Co. is negotiating for certain privileges which will make it possible for it to build the proposed new bridge over the Niagara River. Until these matters are agreed on, and details of the structure cannot be definitely settled.

The Niagara River Bridge Co. is asking the Dominion Parliament for authority to enlarge, alter or rebuild its bridge across the Niagara River, or to remove and abandon it, and build, maintain and operate a new one in lieu thereof on the same site or some other one; to enable the company to lease its present bridge and undertakings now existing, or hereafter constructed, and to enter into any contract or agreement with reference to operating and using them. An increase of capital stock and bonding power is also asked for. A bill was introduced in the United States Senate, April 13, to confer powers similar to the above upon the company in the State of New York.

A press report states that a contract has been let to the Hall Construction Co. for the re-laying of several miles of track

on the company's Canadian lines. (Dec., 1921, pg. 645.)

Timiskaming & Northern Ontario Ry. We are officially advised that the T. & N.O.R. Commission has let a contract to Hamilton Bridge Works for the fabrication and erection of the steel superstructures for the following bridge on the extension of the line northerly from Cochrane, Ont.—Abitibi River crossing, at Long Sault Rapids, mile 11.3 from Cochrane, one 75 ft., two 110 ft., and three 90 ft. deck plate girder spans. Sucker Creek crossing, mile 20.3 from Cochrane, two 85 ft. deck plate girder spans. The first named bridges will be carried on concrete piers, and abutments, and the second on one center pier, and 2 reinforced concrete trestle abutments.

The same company has also given a contract for the fabrication and erection of 3 steel viaducts, one over the Jawbone Creek's east branch, at mile 27.3; one over that creek's west branch at mile 29.5; one over Trapper's Creek, mile 37 from Cochrane. These viaducts will consist of 35 ft. lower spans, with 55 ft. between spans, and their length between faces of ballast walls will be 326 ft., 236 ft. and 451 ft. respectively.

We are advised that the Commission's proposals for the electrification of the railway, or of some sections of it, will soon be ready for submission to the Ontario Government. A press report states that the Government is holding the Abitibi Canyon falls in reserve in connection with the electrification project. It is estimated that the development of these falls would produce 200,000 h.p. (April, pg. 185.)

The Bad Order Car Situation.

The Railway Association of Canada reported the total number of freight cars on Canadian lines for the 15 days ended March 15 as 203,497. The allowance for bad order cars on the A.R.A. basis, which assumes a total of 7% of the cars in bad order, worked out to 14,245, while the actual number of bad order cars was 20,167, an excess of 5,922 on the 7% basis. The figure of 20,167 represents a percentage of bad order cars of 9.91. Of surplus cars in good order there were 31,192, making a total number not in use of 51,359, or a total of 37,114 idle cars on the basis of 7% of the cars being normally in bad order.

For the 15 days ended April 1, the total number of cars on Canadian lines was 204,593. The allowance for bad order cars on the A.R.A. basis worked out to 14,321, while the actual number of cars in bad order was 20,382, an excess of 6,061 on the 7% basis. The figure of 20,382 represents a percentage of bad order cars of 9.96. Of surplus cars in good order there were 36,592, making the total number not in use 56,974, or a total of 42,653, on the basis of 7% of the cars being normally in bad order.

In the U.S., according to the American Railway Association's car service division, the total number of cars on line on the class I roads was 2,275,058 on March 15. Of these, 330,338 were in bad order, this number representing 14.5% of the total. On March 1, the bad order car percentage was 14.7. Freight cars idle, but in good order, and fit for use should traffic offer, numbered 216,661. Out of 1,026,550 box cars on line on March 15, there were 154,499, or 15.1%, in bad order, out of 60,315 refrigerator cars, 7,940, or 13.2%; out of 964,574 gondolas,

142,393, or 14.9%; out of 82,629 stock cars, 10,014, or 12.1%, and out of 98,488 flat cars, 12,354, or 12.5%, were in bad order.

An Illuminating Discussion on Locomotive Power?

When traffic men and lawyers discuss locomotives, startling conclusions are likely to be arrived at. In the recent rate proceedings before the Board of Railway Commissioners, a C.P.R. witness had an exhibit prepared showing the average tonnage a C.P.R. 100% locomotive can haul on various districts. This caused the following examination to take place, as recorded officially:—

G. G. McGeer, representing British Columbia:—"I would like to know what the average load per 100% capacity locomotive, all classes, actual cars, years 1920-1921, means."

W. B. Lanigan, Freight Traffic Manager, C.P.R.:—"Well, that is reducing to get the common factor, your locomotive capacity, 100%. One hundred per cent. means the tractive drawbar power of 20,000 lb., "on a level piece of land."

The Chief Commissioner:—"20,000 lb." Mr. Lanigan:—"Yes, per horsepower." H. J. Symington, representing Manitoba:—"Drawbar capacity 20,000 lb."

Mr. Lanigan:—"Drawbar tractive capacity 20,000 lb."

Mr. McGeer:—"Per horsepower." Mr. Lanigan:—"No, per 100% engines, isn't it?"

Chief Commissioner Carvell:—"No, it is a little more than that."

Mr. Symington:—"I should think so." Mr. Lanigan:—"Mr. Lloyd" (Assistant Comptroller) "can tell you, he worked in the mechanical department."

The Chief Commissioner:—"I can tell you. A 100% engine on a level road would start, I should think, 700 or 800 tons anyway, wouldn't it, Mr. Lloyd?"

Mr. Lloyd:—"A 100% engine on the level will start 3,000 tons, and it exerts 7 lb. of tractive effort to every ton behind it."

At the same hearing it was stated by J. M. R. Fairbairn, D.Sc., Chief Engineer, C.P.R., that the construction of the Connaught tunnel cut out so many complete circles of curvature, which moved Commissioner Lawrence to ask, "what the width of those circles" was. While we have no definite information on the matter, we suspect that if the "width" had been given, the circles might have been considered unduly wide, which would, no doubt, materially affect the "drawbar tractive capacity per horsepower on a level piece of land" of the locomotives under discussion.

G.T.R. Coal Supplies.—The Minister of Militia and Defence stated in the House of Commons, on April 3, in answer to E. M. Macdonald, Pictou, N.S., that 1,828,000 net tons of coal were imported into Canada, during the calendar year 1921, for and on account of the G.T.R., the cost at the mines being \$4,725,000, and the cost delivered in Canada, with duty and charges, \$11,250,000. Of this total \$963,000 was for duty.

New Westminster Bridge.—The British Columbia Government which owns the railway and passenger traffic bridge across the Fraser River at New Westminster, is having the passenger deck resurfaced with asphalt. M. P. Cotton has the contract. The estimated cost is \$75,000.

Mainly About Railway People Throughout Canada.

R. B. Angus, who has been a director of the C.P.R. Co. since its inception, and who has been very ill recently, was reported, April 24, to be considerably improved.

E. R. Bruce, Director of Exhibits, Colonization and Development Department, C.P.R., sailed from Vancouver at the end of March, on the s.s. Empress of Russia, to take charge of the C.P.R. exhibits at the Peace Exposition at Tokyo, Japan, which was opened March 10 and continues to July. Canada is being given considerable publicity at this exposition by a very large illuminated map of the Dominion to attract attention to the great possibility of commercial development and its resources and industrial raw material. It shows the general location of these resources, each one being indicated by electric lamps, different colors being used for each. The map was designed and prepared by the C.P.R. Colonization and Development Department in co-operation with the Dominion Interior Department, the cost being divided. The Prince of Wales will attend the exposition and will be the guest of honor at the Canadian exhibit.

A. B. Buckworth, General Manager, Pacific Great Eastern Ry., Vancouver, B.C., was confined to his home for a few days at the end of March, owing to an injured knee, having been thrown from his motor car when travelling over a bad piece of road near Squamish.

A. V. Clark, who has been appointed Managing Director, Canadian Pacific Railway Company (France), entered C.P.R. service in England in April 1906, in the Passenger Department, and from 1908 to 1910, was London Traveller, and handled all the passenger arrangements for the Eucharistic Conference and also for the British Association's meeting in Canada. He was subsequently chief clerk, General Passenger Department, London, Eng., and from 1911 to 1912, was chief assistant, Passenger Department, Antwerp, Belgium, and from 1912 to July 1, 1913, Assistant to the General Representative for Austria, in Vienna. On the outbreak of war, he was interned with others of the C.P.R. staff in Vienna, and was eventually released on parole. He returned to London for three years and acted as secretary to the European General Manager, Sir George McLaren Brown until 1920, when he was appointed Special Continental Representative.

Francis G. J. Comeau, whose appointment as General Freight and Passenger Agent, Dominion Atlantic Ry., Halifax, N.S., was mentioned in our last issue, was born at Meteghan River, N.S., March 10, 1859, and entered railway service July 1, 1881, since when he has been, to Nov. 1, 1881, station agent, Windsor & Annapolis Ry., Horton Landing, N.S.; Nov. 1, 1881 to May 1, 1885, station agent, Western Counties Ry., at various points; May 1, 1885 to Jan. 1, 1890, assistant agent, same road, Yarmouth, N.S.; Jan. 1, 1890 to Jan. 1, 1897, station agent, same road, Yarmouth, N.S.; Jan. 1, 1897 to Jan. 1, 1900, General Agent, Dominion Atlantic Ry., Yarmouth, N.S.; Jan. 1, 1900 to March 1, 1922, General Freight Agent, same road, Halifax, N.S., and also from May 1, 1916, District Freight Agent, C.P.R., Halifax, N.S.

Harry H. Disher, who has been appointed Purchasing Agent, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., was born there, Feb. 5, 1883, and entered

T.H. & B.R. service Sept. 10, 1903, since when he has been, to June 12, 1904, stenographer, Trainmaster's office; June 13, 1904 to Oct. 31, 1911, chief clerk, Trainmaster's office; Nov. 1, 1911 to July 31, 1920, chief clerk, Purchasing Department; Aug. 1, 1920 to April 1, 1922, acting Purchasing Agent, all at Hamilton, Ont.

W. P. Hinton, formerly Vice President and General Manager, Grand Trunk Pacific Ry., Winnipeg, and from Aug. 23, 1920, Consulting Officer to the Receiver, the Minister of Railways and Canals, G. T.P.R., who was relieved of his duties by the Minister from Feb. 28, is reported to have announced at Calgary, Alta., Apr. 17, that he had been appointed Vice President and General Manager, Cadomin Collieries, in the Rocky Mountain district, south of Edson, Alta., and would take up his new duties at once.

J. L. Englehart, Chairman, Timiskaming & Northern Ontario Ry. Commission, who died April 6, 1921, left an estate of \$2,056,805, on which \$437,737.19 succession duty has been paid to the Ontario Government.

Charles E. Field, who died at Brockville, Ont., April 10, aged 86, is stated in a press report to have been at one time engaged in railway construction in Western Canada in partnership with the late H. B. Abbott. He is said to have built the first railway across Montreal Island, to have gone to Winnipeg in 1879 and later sailed for the Port Frances, Ont., via Joe Fogelberg, who died at Minneapolis, Minn., recently, aged 77, was one of the contractors on the construction of the railway from St. Paul, Minn., towards Winnipeg, in 1866.

Grant Hall, Vice President, A. D. MacTie, Vice President, Eastern Lines, and W. B. Lanigan, Freight Traffic Manager, C.P.R., were the principal guests at a dinner given by the Three Rivers, Que., Board of Trade, April 20.

Grant Hall, Vice President, and Sir Edmund Osler, another of the C.P.R. directors, were honorary pall bearers at the funeral of their co-director, Sir John Craig Eaton, in Toronto, April 3.

D. B. Hanna, President, Canadian National Ry., was a guest of the Midday Luncheon Club, at Springfield, Ill., on April 28, and spoke at length on government railway operation.

Mrs. Hays, widow of the late C. M. Hays, formerly President, G.T.R., and Miss Mary Hays, returned to Montreal early in April, after spending some two months at Pasadena, California.

J. W. King, a former General Manager, Dominion Atlantic Ry., Kentville, N.S., died there March 23, aged 85. He was born in Scotland and entered Dominion Atlantic Ry. service in Dec. 1875, as audit clerk, and was appointed Traffic Superintendent and Assistant Manager in July 1877, and in July 1889, was appointed General Manager, succeeding the late Peter Innes. He retired from the company's service in March 1890. He was responsible for the incorporation of Kentville as a town, and was its first mayor. The funeral, which took place March 27, was attended by the Mayor, A. H. Chesley, General Accountant, Dominion Atlantic Ry., and the corporation, as well as by other D.A.R. officials.

Angus Macmurey, K.C., Solicitor, C.P.R., Toronto, and Mrs. Macmurey, returned early in April from Europe.

J. A. McGillivray, of the maintenance of way department, Canadian National Ry., St. John, N.B., was given a club bag by the local staff, April 4, on his retirement on pension, after 40 years continuous service with Canadian government railways.

S. J. McLean, LL.D., Assistant Chief Commissioner, Board of Railway Commissioners, addressed the Canadian Railway Club, at Montreal, April 11, on the Commission and the nature of its work.

J. D. McMillan, Superintendent, G.T.R., Belleville, was given a gold and enamelled scarf pin by the Governor General, as an appreciation of the services rendered on the latter's recent trip in Ontario.

F. W. Peters, General Superintendent, British Columbia District, C.P.R., returned to Vancouver towards the end of March, after a short pleasure trip to China and Japan.

J. K. L. Ross, one of the C.P.R. directors, returned to Montreal, early in April, from Europe.

Lord and Lady Shaughnessy, and the Hon. Marguerite Shaughnessy, who went to Cannes, France, after attending the Princess Mary's wedding in London, are expected to return to Montreal in May.

G. K. Wark, Vice President, Brotherhood of Locomotive Firemen and Engineers, died at Grace Hospital, Toronto, Apr. 24, aged 60. He was born at Quebec, Que., but had lived in Toronto since 1890. He was at one time in C.P.R. service, and was Chairman of the Canadian Railway Board of Adjustment No. 1, until his death.

W. H. Winterrowd, Chief Mechanical Engineer, C.P.R., Montreal, read a paper on refrigerator cars, before the Engineering Institute of Canada's Montreal branch, on March 20.

Canadian Pacific Railway Baggage Traffic in 1921.

Mail, Baggage and Milk Traffic Department handled the following traffic in 1921: passengers' baggage forwarded, 2,600,231 pieces; bicycles forwarded, 10,680; dogs forwarded, 19,767; baby carriages forwarded, 26,732; corpses forwarded, 2,838; baggage received, 2,826,157 pieces; total passengers' baggage handled, 5,486,455 pieces; cans of milk forwarded, 1,614,791; parcels checked, 981,450; hotel supplies forwarded, 30,735 pieces; company's supplies forwarded, 604,356 pieces; other articles forwarded, 14,887; grand total of pieces handled, 8,732,674, compared with 9,784,856 in 1920, the falling off in baggage traffic coinciding with the decrease in passenger traffic compared with 1920.

The following collections were made in 1921: from excess baggage, \$433,508.43; storage charges, \$71,857.85; carriage of bicycles, \$4,806.44; carriage of dogs, \$10,245.32; carriage of baby carriages, \$13,933.80; carriage of corpses, \$32,753.46; from special delivery, \$12,952.30; from duplicates for lost checks, \$1,203.80; total collections from passengers' baggage traffic, \$587,261.40; collections from milk traffic, \$273,448.77; from parcels, \$112,056.65; carriage of hotel supplies, \$11,110.72; carriage of other articles, \$37,325.84; total collections from all traffic, \$1,021,263.38. The total collections in 1920 were \$1,056,387.61.

Grand Trunk Railway President and Vice Presidents' Salaries and Positions.

The following questions were asked in the House of Commons April 6 by W. F. Garland, Carleton, Ont., and answered by the Minister of Railways:—

Q. What salary is paid Howard G. Kelley for his services as President of, or in any other capacity in connection with, the Grand Trunk Ry. Co. and the Grand Trunk Pacific? A. Salary, \$30,000 a year, all chargeable to G.T.R. System, i.e., G.T.R. Co. of Canada and subsidiary companies within the system. No portion of the amount is chargeable to the G.T. Pacific properties, and Mr. Kelley receives nothing whatever from or on behalf of those properties at present. Director's fee, G.T.R. Co. of Canada, \$2,000 a year.

Q. What connection has the said H. G. Kelley with, and what offices does he hold in, and what salary is he paid by, other companies connected with, controlled or operated by, the G.T.R. Co., and what is the total amount that is paid the said Kelley by such companies, or by the G.T.R. for such services? A. H. G. Kelley holds office in the following companies as shown:—Grand Trunk Ry. Co. of Canada, Director and President; Atlantic & St. Lawrence Rd. Co., director and President; Portland Elevator Co., director and President; New England Elevator Co., director and President; Champlain & St. Lawrence Railroad Co., director and President; United States & Canada Rd. Co., director and President; Vermont & Province Line Rd. Co., director and President; International Bridge Co., director and President; St. Clair Tunnel Co., director and President; Grand Trunk Western Ry. Co., director and President; Grand Trunk Junction Ry. Co., director and President; Chicago & Kalamazoo Terminal Rd. Co., director and President; Pontiac, Oxford & Northern Rd. Co., director and President; Detroit & Huron Ry. Co., director and President; Detroit, Grand Haven & Milwaukee Rd. Co., director and President; Grand Rapids Terminal Rd. Co., director and President; Toledo, Saginaw & Muskegon Ry. Co., director and President; Chicago, Detroit & Canada Grand Trunk Junction Rd. Co., director and President; Michigan Air Line Ry., director and President; Bay City Terminal Ry. Co., director and President; Grand Trunk-Milwaukee Ferry Co., director and President; Detroit & Toledo Shore Line R.T.R. Co., director and Vice President; Detroit Terminal Rd. Co., director; Belt Railway Co. of Chicago, director; Chicago & Western Indiana Rd. Co., director; Central Vermont Ry. Co., director and Chairman of Board; Central Vermont Transportation Co., director and Chairman of Board; Southern New England Rd. Corporation, director and Chairman of Board; Southern New England Ry. Co., director and Chairman of Board; Bethel, Granite Ry. Co., director and Chairman of Board; Southern Vermont Ry. Co., director and Chairman of Board; Montreal & Vermont Jct. Rd. Co., director and Chairman of Board; Montreal & Province Line Ry. Co., director and Chairman of Board; Stread, Sheppard & Chamby Rd. Co., director and Chairman of Board; Canada Atlantic Transit Co., director and President; Canada Atlantic Transit Co., of United States, director and President; Erie, London & Tillsonburg Ry. Co., director and President; Pembroke Southern Ry. Co., director and President; Toronto Belt Line Ry. Co., director and President;

Magnetawan River Ry. Co., director and President; Ottawa Terminals Ry. Co., director and President; Canadian Express Co., director; Canadian National Express Co., director; Whipple Car Co., director and President; Montreal & Southern Railway Ry. Co., director and President; Montreal Warehousing Co., director and President; Ontario Car Ferry Co., director and President; Toronto Terminals Ry. Co., director and President; Lachine, Jacques Cartier & Maisonneuve Ry. Co., director and President. The Minister of Railways, receiver—Grand Trunk Pacific Ry. Co., director and President; Grand Trunk Pacific Branch Lines Co., director and President; Grand Trunk Pacific Saskatchewan Ry. Co., director and President; Grand Trunk Pacific Development Co., director and President; Grand Trunk Pacific Coast Steamship Co., director and President; Grand Trunk Pacific Dock Co. of Seattle, director and President; Grand Trunk Pacific Telegraph Co., director and President; Grand Trunk Pacific Terminals Elevator Co., director and President. The only company from or on behalf of which Mr. Kelley receives a salary—apart from the Grand Trunk Ry. Co. of Canada, is the Detroit & Toledo Shore Line Rd. Co. From this company he receives a salary as Vice President of \$2,500 a year, but this he in turn remits to the G.T.R. Co. of Canada. He receives a fee of \$10, and in two instances \$20 (from a few of the companies named above for their infrequent directors' meetings. In the majority of cases, however, no salary or fee of any kind is received.

Q. What salaries are paid Frank Scott, W. H. Biggar, W. D. Robb, J. E. Dalrymple and R. S. Logan for their services in any capacity in connection with the G.T.R., and the Grand Trunk Pacific? A. Frank Scott, \$18,000 a year; W. H. Biggar, \$20,000; W. D. Robb, \$18,000; J. E. Dalrymple, \$18,000; R. S. Logan, \$14,000. These amounts are all chargeable to G.T.R. System, i.e., the G.T.R. Co. of Canada and component companies in the system. No portion whatever of these salaries is charged to the G.T. Pacific properties.

Q. What connection have the said Scott, Biggar, Robb, Dalrymple and Logan with, and what offices do they hold in, and what salary is he paid by, other companies connected with, controlled or operated by, the G.T.R. Co., and what is the total amount that is paid to each by such companies or by the G.T.R. for such services? A. Frank Scott holds office in following companies:—Grand Trunk Ry. Co. of Canada, Vice President and Treasurer; Atlantic & St. Lawrence Rd. Co., director and Treasurer; Portland Elevator Co., director, Treasurer and Assistant Clerk; New England Elevator Co., director, Treasurer and Assistant Clerk; Champlain & St. Lawrence Rd. Co., Secretary and Treasurer; United States & Canada Rd. Co., director, Secretary and Treasurer; Vermont & Province Line Rd. Co., director, Assistant Clerk and Treasurer; International Bridge Co., director and Treasurer; St. Clair Tunnel Co., director and Treasurer; Grand Trunk Western Ry. Co., director and Vice President and Treasurer; Grand Trunk Jct. Ry. Co., director and Treasurer; Chicago & Kalamazoo Terminal Ry. Co., director and Treasurer; Pontiac, Oxford & Northern Rd. Co., director and Treasurer; Detroit & Huron Ry. Co., Treasurer; Detroit,

Grand Haven & Milwaukee Ry. Co., director, Vice President and Treasurer; Grand Rapids Terminal Rd. Co., director and Treasurer; Toledo, Saginaw & Muskegon Ry. Co., director and Treasurer; Chicago, Detroit & Canada G.T. Jct. Rd. Co., director and Treasurer; Michigan Air Line Ry., director and Treasurer; Bay City Terminal Ry. Co., director and Treasurer; Detroit Terminal Ry. Co., director; Grand Trunk Milwaukee Car Ferry Co., director; Central Vermont Ry. Co., director and Vice President; Bethel Granite Ry. Co., director and Vice President; Central Vermont Transportation Co., director and Vice President; Southern New England Ry. Co., director; Southern New England Rd. Corporation, director; Southern Vermont Ry. Co., director; Montreal & Vermont Jct. Rd. Co., director; Canada Atlantic Transit Co., director and Secretary-Treasurer; Canada Atlantic Transit Co. of United States, director, Treasurer and Asst.; Erie, London & Tillsonburg Ry. Co., director, Secretary and Treasurer; Pembroke Southern Ry. Co., director, Secretary and Treasurer; Toronto Belt Line Ry. Co., director, Secretary and Treasurer; Magnetawan River Ry. Co., director, Secretary and Treasurer; Ottawa Terminals Ry. Co., director, Secretary and Treasurer; Canadian Express Co., director, Secretary and Treasurer; Whipple Car Co., director, Vice President and Treasurer; Montreal Stock Yards Co., director; Montreal & Southern Counties Ry. Co., director, Vice President and Treasurer; Montreal Warehousing Co., director; Ontario Car Ferry Co., director, Secretary and Treasurer; Lachine, Jacques Cartier & Maisonneuve Ry. Co., director, Secretary and Treasurer; Rail & River Coal Co., director and Vice President; the Minister of Railway, receiver—Grand Trunk Pacific Ry. Co., director and Vice President; Grand Trunk Pacific Branch Lines Co., director and Treasurer; Grand Trunk Pacific Saskatchewan Ry. Co., director and Treasurer; Grand Trunk Pacific Development Co., Treasurer; Grand Trunk Pacific Coast Steamship Co., director and Treasurer; Grand Trunk Pacific Telegraph Co., Treasurer; Grand Trunk Pacific Terminal Elevator Co., director; also director of all the above mentioned G.T. P. companies of which Minister of Railways is now receiver.

W. H. Biggar holds office in following companies, as shown:—Grand Trunk Ry. Co. of Canada, Vice President and General Counsel; Central Vermont Ry. Co., director and Vice President; Montreal Stock Yards Co., director; Rail & River Coal Co., director.

Co., director and Vice President; Grand Trunk Pacific Saskatchewan Ry. Co., director; Grand Trunk Pacific Terminals Elevator Co., director; Canada Atlantic Transit Co., director; Canadian Express Co., director; Montreal Stock Yards Co., director; Montreal Warehousing Co., director; Ontario Car Ferry Co., director; Oshawa Ry. Co., director and President; Thous-

and Islands Ry. Co., director and President.

R. S. Logan holds office in following companies, as shown:—Grand Trunk Ry. Co. of Canada, Vice President; Lachine, Jacques Cartier & Maisonneuve Ry., director and Vice President.

Canadian Pacific Railway Freight House and Offices, Windsor, Ont.

Due to increasing business, now so large as to severely tax the L.C. freight handling facilities at Windsor, Ont., the C.P.R. is about to build a larger freight house there. The new house will be located at Caron Ave., with entrances from Elliott St. and Janette Ave., and adequate trackage will be laid to provide for loading and switching cars. The building will consist of an office portion 40 x 60 ft., and a freight shed 40 x 304 ft., and it is probable that the shed portion will be enlarged by the addition of another 100 ft. The entire building will be on concrete foundations, and the office portion will have a basement under the whole of it.

As shown by the accompanying plan, the ground floor of the office portion of the building will contain a general office

Apart from the G.T.R. Co. of Canada, no salary is paid Messrs. Scott, Biggar, Robb, Dalrymple and Logan by or on behalf of any of the companies mentioned above. Directors' fees, amounting principally to \$10, are paid by a few of the companies named for their meetings.

dation walls 14 in. thick, will be of the C.P.R. standard type. It will have a plain sloping roof, set on two interior supporting columns, the center of one 15 ft. 4 in. from the low side of the shed, and of the other 31 ft. 4 in. from the low side. The total width of the building will be 37 ft. 8 in. from inside to inside of foundation walls. Transversely, the supporting columns will be 16 ft. apart center to center, and the same distance apart longitudinally, as shown by the plan. The columns will be set on longitudinal sills 8 x 14 in. and on the sills will be laid joists, 3 x 12 in., a 17 ft. from the low side of the shed, making a joint with a 24 ft. length over the sill nearest to the low side of the house. These joists will be laid at 16 in. centers. On top of the joists, 1

In addition to space for l.c. freight, the shed will contain an office for the cartage foreman, 7½ ft. x 18 ft., and an office 7½ x 12 ft. for the shed foreman, adjoining the stairs leading to the basement under the office portion of the building. Near the center of the shed will be the bond room, 32 x 16 ft., partitioned off and entered by sliding doors.

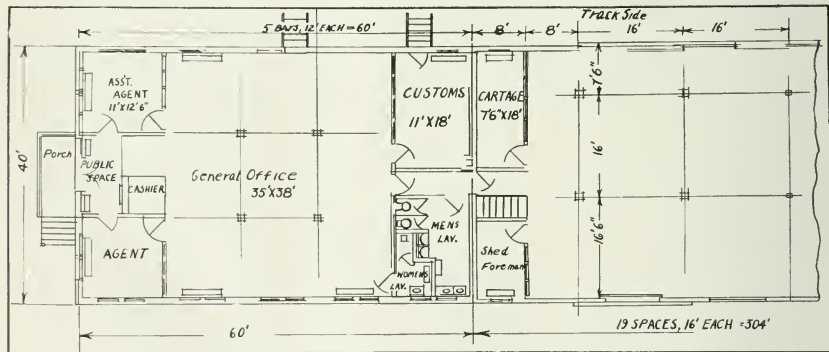

Tenders for the erection of this building were invited early in April, and it is expected that construction will be completed in July.

Canadian Railway and Marine World is indebted to J. M. R. Fairbairn, D.Sc., Chief Engineer, C.P.R., for the information on which the foregoing article is based. The work will be under the general supervision of Lt.-Col. Blair Ripley, C.B.E., D.S.O., District Engineer, Ontario District, C.P.R. Jas. A. Irvine, Division Engineer, London Division, London, Ont., will be in direct charge.

Board of Railway Commissioners' Traffic Orders.

Canadian National Rys. Standard Mileage Freight Tariffs.

32,233. March 27.—Re application of Canadian National Rys., under section 330 of the Railway Act, 1919, for ap-

Ground floor, freight house and offices, Canadian Pacific Railway, Windsor, Ont.

35 x 38 ft., an agent's office 11 x 12½ ft., assistant freight agent's office, cashier's cage, and space for customers. In addition, there will be a customs officials office 11 x 18 ft. The office portion will be provided with men's and women's lavatories and toilet facilities, and all of the office floors will be of hardwood.

The basement under the office portion of the building will contain a freight handlers' rest room, a room for storage of records, furnace room and coal cellar, and a lavatory for freight handlers reached by stairs from the freight shed. The basement will have a concrete floor, and the partitions between the freight handlers' rest room, the records room and the furnace room will be of terra cotta brick or concrete blocks. A corridor will extend between the freight handlers' rest room and the furnace room and coal chute and coal bins will be installed.

The freight shed portion of the building, 40 x 304 ft., set on concrete founda-

tion, and g. hardwood flooring will be laid longitudinally, on top of which again the hardwood wearing surface, of ¾ in. material, will be laid transversely, with tar paper between the two layers of flooring. The upright columns will be surmounted by purlins 8 x 14 in. running longitudinally and supporting the roof rafters, of 3 x 12 in. section. The roof will be of 1¼ in. tongued and grooved planks, covered with tar and gravel. The roof will have a slope of ¾ in. in 12 in. and will be cantilevered 7½ ft. over the front post line, and supported externally by 3 x 8 in. bracing at the front, or high side, and internally by 2 x 6 in. bracing at the lower side. The shed will be equipped with continuous mill type sliding doors, there being two runways for the doors to operate past each other. By this means the doors may be opened at any point throughout their length so as to give a clear space for trucking into or out of cars without post interference. The doors will be 8 x 10 in. high and 16 ft. wide.

proval of Standard Mileage Freight Tariffs, C.R.C., no. E. 390 and E. 393, upon the report and recommendation of the Board's Assistant Chief Traffic Officer, the Board orders that the Standard Mileage Freight Tariffs, C.R.C. no. E. 390 in so far as it applies to the Halifax & Southwestern Ry. and C.R.C. no. E. 393, be approved.

Express Rates on Butter.
32,235. March 16.—Re application of the National Dairy Council of Canada, for a reduction in express rate on butter from Silverdale and Renton, Ont., to Hamilton, Ont. Upon hearing the application at Ottawa, Sept. 20, 1921, the applicant and the express companies being represented at the hearing and what was alleged, the Board orders that the application be refused.

The Imperial Parliament has passed an estimate providing for the payment of £1a000a000 to the Dominion Government for rails and track material supplied for war purposes during 1916.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Board of Railway Commissioners.—W. E. CAMPBELL, Chairman, Canadian Freight Association, Western Lines, Winnipeg, from which position he has been given leave of absence, has been appointed rate expert, to assist the board in an advisory capacity. The appointment was authorized by Dominion order in council, 610, March 21, as follows:—The committee of the Privy Council have had before them a report, dated March 16, 1922, from the Minister of Railways, stating that, in view of the great importance of the question of railway rates in Canada, the Chairman of the Board of Railway Commissioners has recommended the appointment of a railway expert to assist the Board in an advisory capacity, and has mentioned W. E. Campbell, now Secretary, Canadian Freight Association, Western Section, Winnipeg, as a suitable appointee and \$550 a month as an appropriate salary. Attention is drawn to The Railway Act, 1919, reading as follows:—"21. The Governor in council may, from time to time, or as the occasion requires, appoint one or more experts, or persons having technical or special knowledge of the matters in question, to assist in an advisory capacity in respect of any matter before the Board." The Minister, therefore, recommends the appointment of W. E. Campbell, at a salary of \$550 a month, as a rate expert to assist the Board in an advisory capacity. The committee concur in the foregoing recommendation and submit the same for approval.

The following questions were asked in the House of Commons recently by F. W. Bowen, Durham, Ont., the answers being given by the Minister of Railways. Q. Has W. E. Campbell been appointed recently to advise the Minister of Railways, or Deputy Minister of Railways, or the Board of Railway Commissioners, in regard to traffic matters, or has he been appointed in any capacity, and for what duties? A. He has been appointed as a rate expert to assist the Board of Railway Commissioners in an advisory capacity.

Q. Is such appointment permanent, or temporary, and if the latter, for what period? A. Is employed by the month for such period as may be found necessary.

Q. Is W. E. Campbell the gentleman who has held the position of Secretary of Canadian Freight Association, Western Lines, and if so, has he resigned such position? A. Was Secretary of the Association in question until Sept. 18, 1921, when he was appointed Chairman. At present he is on leave of absence from his late duties.

Q. Is his appointment for the special purpose of advising the Government regarding the Crownsnest Pass agreement? A. No.

The Civil Service Commission has given notice that applications will be received from persons qualified to fill the position of the Board's Chief Traffic Officer, at a salary of \$6,500 a year. Duties To be responsible under the Board for the conduct of all traffic matters involving rates and practices pertaining to the service of railway, express, telegraph,

and telephone companies; to direct the work of the Board's traffic branch; to investigate and prepare important reports and to advise the Board on traffic matters; and to perform other related work as required. Qualifications—Education equivalent to graduation from a university of recognized standing; at least five years of experience in an administrative and constructive capacity in an important railway and freight or traffic department; wide knowledge of the structure, classification and application of railway freight and passenger tariffs; ability to meet and discuss traffic matters with railway and public service officials; executive ability of a high order. While a definite age limit has not been fixed for this competition, age may be a determining factor when making a selection. Examination—A rating on education and experience will be given from the sworn statements submitted by applicants on their application forms. To those who qualify, an oral examination may be given if necessary.

Canadian National Rys.—L. E. CROWDER has been appointed Locomotive Foreman, Gravelbourg, Sask., vice H. N. Lukes, transferred.

J. C. FULMORE, Roadmaster, Maritime District, Moncton Division, Spring Hill Subdivision, from Truro to Sackville, has applied for retirement on the provident fund.
